"There seems no human thought so primitive
as to have lost its bearing on our own thought, nor
so ancient as to have broken its connexion with
our own life."

TYOR, *Primitive Culture*.

PREFACE

O comprehensive a title as the one selected for the present work would be a vain assumption if the author's object was not really to embrace in a series of studies the whole cycle of Masonic history and science. Anything short of this would not entitle the work to be called THE HISTORY OF FREEMASONRY.

Freemasonry as a society of long standing, has of course its history, and the age of the institution has necessarily led to the mixing in this history of authentic facts and of mere traditions or legends.

We are thus led in the very beginning of our labors to divide our historical studies into two classes. The one embraces the Legendary History of Freemasonry, and the other its authentic annals.

The Legendary History of Freemasonry will constitute the subject of the first of the five parts into which this work is divided. It embraces all that narrative of the rise and progress of the institution, which beginning with the connection with it of the antediluvian patriarchs, ends in ascribing its modern condition to the patronage of Prince Edwin and the assembly at York.

This narrative, which in the 15th and up to the end of the 17th century, claimed and received the implicit faith of the Craft, which in the 18th century was repeated and emended by the leading writers of the institution, and which even in the 19th century has had its advocates among the learned and its credence among the unlearned of the Craft, has only recently and by a new school been placed in its true position of an apocryphal story.

And yet though apocryphal, this traditionary story of Freemasonry which has been called the *Legend of the Craft*, or by some the *Legend of the Guild*, is not to be rejected as an idle fable. On the contrary, the object of the present work has been to show that these Masonic legends contain the germs of an historical, mingled

often with a symbolic, idea, and that divested of certain evanescences in the shape of anachronisms, or of unauthenticated statements, these Masonic legends often, nay almost always, present in their simple form a true philosophic spirit.

To establish this principle in the literature of Freemasonry, to divest the legends of the Craft of the false value given to them as portions of authentic history by blind credulity, and to protect them from the equally false estimate that has been bestowed upon them by the excessive incredulity of unphilosophic sceptics, who view them only as idle fables without more meaning than what they attach to monkish legends—in one word, to place the Legendary History of Freemasonry in the just position which it should occupy but has never yet occupied, is the object of the labors expended in the composition of the first part of this work.

The second part of the work will pass out of the field of myth and legend and be devoted to the authentic or recorded history of Freemasonry.

Rejecting as wholly untenable and unsupported by historical evidence, the various hypotheses of the origin of the institution in the Pagan mysteries, in the Temple of Solomon, or in the Crusades, an attempt has been made to trace its birth to the Roman Colleges of Artificers, which present us with an almost identical organization of builders and architects. Following the progress of the Roman Masons of the Colleges, through their visits to the different provinces of the Empire, where they went, accompanying the legions in their victorious excursions, we will find that the art of building was communicated by them to the Italians, the Spaniards, the Gauls, and the Britons.

In this way the knowledge of Operative Masonry and its practice in guilds, sodalities, and confraternities was preserved by these peoples after the extinction of the Roman Empire.

We next find this sodality emerging in the 10th century from Lombardy, and under the name of "Traveling Freemasons," perambulating all Europe and re-establishing confraternities of Stonemasons in Germany, France, England, Scotland, and other countries.

The narrative of the progress of this fraternity of builders from Como, which was evidently an outshoot from the ancient Roman Colleges, is treated with great particularity, because without the aid

of any mythical or legendary instrumentality we are thus enabled to connect it continuously with the modern system of Operative Masonry.

The merging of Operative into Speculative Masonry in the beginning of the 18th century is an historical incident based on the most authentic records. Its details, derived from records of whose genuineness there never has been a doubt, will complete and perfect the history of Freemasonry from its rise to its present condition.

Thus we may imagine the growth of that magnificent tree, beneath whose wide-spreading branches the fraternity now recline. In the far remote reign of Numa, the philosophic and religious king of Rome (or if his personality be doubted by the disciples of Niebuhr), in the times represented by his name, we find the germ of the institution in those organized confraternities of craftsmen, whom history records as flourishing with varying success and popularity through the times of the Kingdom, the Republic, and the Empire of Rome.

The seeds of a co-operative association of builders, based on the principles of fraternity, were carried with the legions of Rome into the various provinces that had been conquered by the soldiers of the Empire, and as colonies of Romans were there established, the Latin language, the manners and customs of the Roman people and their skill in the arts were introduced among the natives.

Of these arts, the most important was that of architecture, and by means of monuments still remaining, as well as other historical evidences, we are enabled to follow the gradual growth of the operative societies out of the Roman guilds and then that of the speculative institution out of the operative societies.

The hypothesis sought to be sustained in investigating the history of Freemasonry, in the present work, may be succinctly stated as follows:

Operative Masonry is the basis on which Speculative Freemasonry is founded—that is to say, the lodges of Freemasons of the present day are the successors of the lodges of Operative Masons which existed all over Europe during the Middle Ages and up to the beginning of the 18th century.

But the Operative Masonry that gave birth to the modern speculative order was not the mere craft or trade or art of building. The men who practiced it were not mere cutters and layers of stone. There were large numbers of workmen who belonged to a lower

class of the trade or profession, who were never looked upon with any respect, with whom companionship was denied, and who were employed only in subordinate positions. These men were called cowans, rough layers, foreigners or similar titles intimating degradation of class and inferiority of skill.

No relation can be traced between the Operative Masons of this class and the Speculative Masons, who have represented Freemasonry since the beginning of the 18th century. The Operative Masons, between whom and the modern Freemasons there is a relation of succession, were a higher class of artists. They were possessed of secrets connected with peculiar skill in their craft. But above all, they were distinguished for the adoption of what might, in our modern phrase, be called the co-operative principle in the practice of their Craft. Perhaps it may more properly be called, a principle of sodality. It was shown in the formation of a company, a society, a guild, a corporation, or a confraternity, call it by what name you please, in which there was an association of skill, of labor, and of interests. This principle has been called the guild spirit, and it is this spirit which constitutes the essential characteristic of the Masonic institution.

If we propose to establish a chain of historical continuity, which shall extend from the first appearance of any association in which the origin of modern Freemasonry is sought to be found, to the present day, when the institution has assumed its well-recognized form, there are two elements which must be well marked in every link of the chain.

In the first place, there must be an operative element. Freemasonry can be traced only to an association of builders or architects. Every ceremony in the ritual, every symbol in the philosophy of Speculative Freemasonry, indicates—nay, positively proves—that it has been derived from and is closely connected with the art of building. The first Freemasons were builders, they could have been nothing else. To seek for them in a mystical, religious association as the ancient pagan Mysteries, or in an institution of chivalry as in the Knights of the Crusades would be a vain and unprofitable task. As well might one look for the birthplace of the eagle in the egg of the crow as to attempt to trace the origin of Freemasonry to anything other than an association of builders.

In the second place there must be a guild spirit. The builders

who have come together must not have associated temporarily for the mere purpose of accomplishing a certain task, each man wholly independent of the others, and arbitrarily exercising only his own skill. There must be a permanent organization, a community of interest, a division of labor, a spirit of fraternity, an organization looking beyond the present moment. A certain number of Masons, brought together to construct an edifice, who after its construction would be ready to disperse, each Mason on his own footing to seek fresh employment under new masters and with new companions, could never, under such circumstances, be concentrated into such organizations as would, in the lapse of time, give rise to the lodges of modern Speculative Freemasons.

The hypothesis, then, which is advanced in the present work and on which its authentic historical part is constructed, is that there was from the earliest days of Rome an organization of workmen under the name of the *Collegium Artificum*, or *Collegium Fabrorum*, that is, the College of Artificers, or the College of Workmen. That this college consisted of builders and architects, that it was regularly organized into an association, which was marked with all the peculiarities that afterward distinguished the guilds or incorporations of the Middle Ages. That this college, flourishing greatly under the later empire, sent its members, imbued with the skill in architecture and the spirit of confraternity which they had acquired in the home organization, into the various provinces which the Roman legions penetrated and conquered. And, finally, that in all these provinces, but principally in Northern Italy, in Gaul, and in Britain, they established similar colleges or associations, in which they imparted to the natives their knowledge of the art of building and impressed them with their spirit of fraternal co-operation in labor.

From these colleges of workmen sprang in the course of time, and after the fall of the empire and the transition of the provinces into independent and sovereign states, organizations of builders, of masons and architects, who in Italy assumed the name and title of Traveling Freemasons, in Gaul that of the *Mestrice des Maçons*, in Germany that of the *Steinmetzen*, in England that of the *Guilds and Companies*, and in Scotland that of the *Lodges and Incorporations*. All these were associations of builders and architects, who were bound together by regulations which were very similar to and evidently derived from those by which the Roman Colleges had

been governed, with others suggested by change of conditions and circumstances.

The associations, though mainly made up of professional workmen, sometimes admitted, as the Roman Colleges had done, non-professionals, men of wealth, distinction, or learning into their ranks as honorary members.

About the close of the 17th century the number of these non-professional members was greatly increased, which fact must have produced a gradual and growing influence on the organizations.

Finally, during the second decade of the 18th century, these non-professional members completely changed the character of the Masonic organizations known at that time under the name of Lodges. The operative element was entirely eliminated from them, and the Lodges became no longer companies of builders, but fraternities of speculative philosophers.

The new institution of Speculative Freemasonry retained no other connection with or relation to the operative organization, than the memory of its descent, and the preservation of the technical language and the tools of the art, all of which were, however, subjected to new and symbolic interpretations.

This transition of the operative into the speculative organizations occurred in London in the year 1717, at which time the Grand Lodge of Free and Accepted Masons was established.

From England the change passed over into other countries and Lodges were everywhere instituted under the authority of the Grand Lodge of London. The history of Freemasonry from that time is to be found in the recorded annals of the various Lodges and Grand Lodges which sprung up in the course of time from the parent stem, the common mother of all the speculative Lodges of the world.

Scotland might seem at first to be an exception to this cosmopolitan maternity, but though the growth of the speculative out of the operative element was there apparently an independent act of transition, yet it cannot be denied that the influence of the English society was deeply felt in the sister kingdom and exhibited especially in the adoption of the three degrees, in the organization of the Grand Lodge on a similar model, and in the establishment of the office of Grand Master, a title of entirely modern and English origin.

Such is the plan of the history that has been pursued in the present work, a plan which materially and essentially differs from that of any preceding writer. Iconoclasts have composed monographs in which they have attacked particular fallacies and denounced special forgeries, but the history of Masonry as a whole has not before been written with the same spirit of candor that has been or should always be exercised in the composition of history.

Doubtless the well-settled and carefully nourished prejudices of some will be shocked by any attempt to expose the fallacies and falsehoods which have too long tarnished the annals of Freemasonry. But such an attempt cannot, if it be successfully pursued, but command the approval of all who believe with Cicero that history is "the witness of time, the light of truth, and the life of memory."

ALBERT G. MACKEY, M.D.

PART ONE
PREHISTORIC MASONRY

PREHISTORIC MASONRY

CHAPTER I

TRADITION AND HISTORY IN MASONRY

IN the study of Freemasonry there are two kinds of statements which are presented to the mind of the inquiring scholar, which are sometimes concurrent, but much oftener conflicting, in their character.

These are the historical and the traditional, each of which appertains to Freemasonry as we may consider it in a different aspect.

The historical statement relates to the Institution as we look at it from an exoteric or public point of view; the traditional refers only to its esoteric or secret character.

So long as its traditional legends are confined to the ritual of the Order; they are not appropriate subjects of historical inquiry. They have been invented by the makers of the rituals for symbolic purposes connected with the forms of initiation. Out of these myths of Speculative Masonry its philosophy has been developed; and, as they are really to be considered as merely the expansion of a philosophic or speculative idea, they can not properly be posited in the category of historical narratives.

But in the published works of those who have written on the origin and progress of Masonry, from its beginning to the present time, the legendary or traditional has too much been mingled with the historical element. The effect of this course has been, on adversely prejudiced minds, to weaken all claims of the Institution to an historical existence. The doctrine of "false in one thing, false in all," has been rigidly applied, and those statements of the Masonic historian which are really authentic have been doubted or re-

jected, because in other portions of his narrative he has been too credulous.

Borrowing the technical language of archaeology, I should say that the history of Masonry¹ may be divided into two periods—the prehistoric and the historic. The former is traditional, the latter documentary. Each of these divisions must, in any historical inquiry, be clearly defined. There is also another division, into esoteric and exoteric history. The first is exclusively within the arcana of the Order, and can not, as I have said, be the subject of historical investigation. The second properly comes within the sphere of historical study, and is subjected to all the laws of historical criticism.

When we are treating of Freemasonry as one of the social organizations of the world—as one of those institutions which are the results of civilization, and which have sprung up in the progress of society; and, finally, when we are considering what are the influences that the varying conditions of that society have produced upon it, and what influences it has reciprocally produced upon these varying conditions—we are then engaged in the solution of a historical problem, and we must pursue the inquiry in a historical method and not otherwise. We must discard all speculation, because history deals only with facts.

If we were treating the history of a nation, we should assert nothing of it as historical that could not be traced to and be verified by its written records. All that is conjectured of the events that may have occurred in the earlier period of such a nation, of which there is no record in contemporaneous or immediately subsequent times, is properly thrown into the dim era of the prehistoric age. It forms no part of the authentic history of the nation, and can be dignified, at its highest value, with the title of historical speculation only, which claims no other credence than that which its plausibility or its probability commands.

Now, the possibility or the probability that a certain event may have occurred in the early days of a nation's existence, but of which event there is no record, will be great or little, as dependent on certain other events which bear upon it, and which come within the era of its records. The event may have been possible, but not probable, and then but very little or no importance would be im-

¹ In the progress of this work I shall use the terms *Masonry* and *Freemasonry* without discrimination, except on special, and at the time specified, occasions.

puted to it, and it would at once be relegated to the category of myths. Or it may have been both possible and highly probable, and we may be then permitted to speculate upon it as something that had exerted an influence upon the primitive character or the subsequent progress of the nation. But, even then, it would not altogether lose its mythical character. Whatever we might predicate of it would only be a plausible speculation. It would not be history, for that deals not in what may have been, but only in that which actually has been.

The progress in these latter days of what are called the exact sciences has led, by the force of example and analogy, to a more critical examination of the facts, or, rather, the so-called facts, of history.

Voltaire said, in his *Life of Charles XII of Sweden*, that "incredulity is the foundation of history." Years passed before the axiom in all its force was accepted by the learned. But at length it has been adopted as the rule of all historical criticism. To be credulous is now to be unphilosophical, and scholars accept nothing as history that can not be demonstrated with almost mathematical certainty.

Niebuhr began by shattering all faith in the story of Rhea Sylvia, of Romulus and Remus, and of the maternal wolf, which, with many other incidents of the early Roman annals, were consigned by him to the region of the mythical.

In later times, the patriotic heart of Switzerland has been made to mourn by the discovery that the story of William Tell, and of the apple which he shot from the head of his son, is nothing but a mediaeval fable which was to be found in a great many other countries, and the circumstances of which, everywhere varying in details, still point to a common origin in some early symbolic myth.

It is thus that many narratives, once accepted as veracious, have been, by careful criticism, eliminated from the domain of history; and such works as Goldsmith's *Histories of Greece and Rome* are no longer deemed fitting text-books for schools, where nothing but truth should be taught.

The same rules of critical analysis which are pursued in the separation of what is true from what is false in the history of a nation should be applied to the determination of the character of all statements in Masonic history. This course, however, has, unhappily,

not been generally pursued. Many of its legends are unquestionably founded, as I shall endeavor hereafter to show, on a historical basis; but quite as many, if not more, are made up out of a mixture of truth and fiction, the distinctive boundaries of which it is difficult to define; while a still greater number are altogether mythical, with no appreciable element of truth in their composition. And yet, for nearly two centuries, all of these three classes of Masonic legendary lore have been accepted by the great body of the Fraternity, without any discrimination, as faithful narratives of undoubted truthfulness.

It is this liberal acceptance of the false for the true, and this ready recognition of fables as authentic narratives whereby imaginative writers have been encouraged to plunge into the realms of absurdity instead of confining themselves to the domain of legitimate history, that have cast an air of romance over all that has hitherto been written about Freemasonry. Unjustly, but very naturally, scholars have been inclined to reject all our legends in every part as fabulous, because they found in some the elements of fiction.

But, on the other hand, the absurdities of legend-makers, and the credulity of legend-readers, have, by a healthy reaction, given rise to a school of iconoclasts (to whom there will soon be occasion to refer), which sprang up from a laudable desire to conform the principles of criticism which are to govern all investigations into Masonic history to the rules which control profane writers in the examination of the history of nations.

As examples of the legends of Masonry which have tempted the credulity of many and excited the skepticism of others, those almost universally accepted legends may be cited which attribute the organization of Freemasonry in its present form to the era of King Solomon's temple—the story of Prince Edwin and the Grand Lodge congregated by him at the city of York in the 10th century—and the theory that the three symbolic degrees were instituted as Masonic grades at a period very long anterior to the beginning of the 18th century.

These statements, still believed in by all Masons who have not made the history of the Order an especial study, were, until recently, received by prominent scholars as veracious narratives. Even Dr. Oliver, one of the most learned as well as the most prolific of Masonic authors, has, in his numerous works, recognized them as his

toric truths without a word of protest or a sign of doubt, except, perhaps, with reference to the third legend above mentioned, of which he says, with a cautious qualification, that he has "some doubts whether the Master's degree, as now given, can be traced three centuries backwards."¹

But now comes a new school of Masonic students, to whom, borrowing a word formerly used in the history of religious strifes, has been given the name of "iconoclasts." The word is a good one. The old iconoclasts, or image-breakers of the 8th century, demolished the images and defaced the pictures which they found in the churches, induced by erroneous but conscientious views, because they thought that the people were mistaking the shadow for the substance, and were worshipping the image or the picture instead of the Divine Being whom it represented.

And so these Masonic iconoclasts, with better views, are proceeding to destroy, by hard, incisive criticism, the intellectual images which the old, unlettered Masons had constructed for their veneration. They are pulling to pieces the myths and legends, whose fallacies and absurdities had so long cast a cloud upon what ought to be the clear sky of Masonic history. But they have tempered their zeal with a knowledge and a moderation that were unknown to the iconoclasts of religion. These shattered the images and scattered the fragments to the four winds of heaven, or they burnt the picture so that not even a remnant of the canvas was left. Whatever there was of beauty in the work of the sculptor or painter was forever destroyed. Every sentiment of aesthetic art was overcome by the virulence of religious fanaticism. Had the destructive labors of these iconoclasts been universal and long continued, no foundation would have been left for building that science of Christian symbolism, which in this day has been so interesting and so instructive to the archaeologist.²

Not so have the Masonic iconoclasts performed their task of critical reformation. They have shattered nothing; they have destroyed nothing. When in the course of their investigations into true Masonic history, they encounter a myth or a legend, replete, ap-

¹ "Dissertation on the State of Masonry in the Eighteenth Century."

² Thus the Emperor Leo, the Isaurian, caused all images and pictures to be removed from the churches and publicly burnt—an act of vandalism not surpassed by that Saracen despot who (if the story be true) ruthlessly committed the books of the Alexandrian library to the flames as fuel for the public baths.

parently, with absurdities or contradictions, they do not consign it to oblivion as something unworthy of consideration, but they dissect it into its various parts; they analyze it with critical acumen; they separate the chaff from the wheat; they accept the portion that is confirmed by other and collateral testimony as a legitimate contribution to history; what is undoubtedly fictitious they receive as a myth, and either reject it altogether as an unmeaning addition to a legend, or give it an interpretation as the expression of some symbolic idea which is itself of value in a historical point of view.

That lamented archaeologist, Mr. George Smith, late of the British Museum, in speaking of the cuneiform inscriptions excavated in Mesopotamia, and the legends which they have preserved of the old Babylonian empire, said:¹ "With regard to the supernatural element introduced into the story, it is similar in nature to many such additions to historical narratives, especially in the East; but I would not reject those events which may have happened, because, in order to illustrate a current belief, or add to the romance of the story, the writer has introduced the supernatural."

It is on this very principle that the iconoclastic Masonic writers, such as Hughan and Woodford, are pursuing their researches into the early history of Freemasonry. They do not reject those events related in the old legends, which have certainly happened, because in them they find also mythical narratives. They do not yield to the tendency which George Smith says is now too general, "to repudiate the earlier part of history, because of its evident inaccuracies and the marvelous element generally combined with it."² It is in this way, and in this way only, that early Masonic history can be rightly written. Made up, as it has been for centuries past, of a commingled tissue of historical narrative and legendary invention, it has been heretofore read without judicious discrimination. Either the traditional account has been wholly accepted as historical, or it has been wholly rejected as fabulous, and thus, in either case, numerous errors have been the consequence.

As an example of the error which inevitably results from pursuing either of these methods of interpretation, one of which may be distinguished as the school of gross credulity, and the other as that of great skepticism, let us take the legend of the Temple origin of

¹ "Chaldean Account of Genesis," p. 302.

² *Ibidem*.

Masonry—that is to say, the legend which places the organization of the Institution at the time of the building of the temple at Jerusalem.

Now, the former of these schools implicitly receives the whole legend as true in all its details, and recognizes King Solomon as the first Grand Master, with Hiram of Tyre and Hiram as his Wardens, who, with him, presided over the Craft, divided into three degrees, the initiation into which was the same as that practiced in the lodges of the present day, or at least not very unlike it.

Thus Dr. Anderson, who was the first to publicly promulgate this legend and the theory founded on it, says, in the second edition of his "Constitutions," that Hiram Abif, "in Solomon's absence, filled the chair as Deputy Grand Master, and, in his presence, was the Senior Grand Warden";¹ and, again, that "Solomon partitioned the Fellow Crafts into certain lodges, with a Master and Wardens in each";² and, lastly, that "Solomon was Grand Master of all Masons at Jerusalem. King Hiram was Grand Master at Tyre, and Hiram Abif had been Master of Work."³ The modern rituals have made some change in these details, but we evidently see here the original source of the legend as it is now generally believed by the Fraternity.

Indeed, so firmly convinced of its truth are the believers in this legend, that the brand of heterodoxy is placed by them on all who deny or doubt it.

On the contrary, the disciples of the latter school, whose skepticism is as excessive as is the credulity of the former, reject as fabulous everything that tends to connect Freemasonry with the Solomonic temple. To the King of Israel they refuse all honor, and they contemptuously repudiate the theory that he was a Masonic dignitary, or even a Freemason at all. One of these Pyrrhonists has gone so far as to defile the memory of the Jewish monarch with unnecessary and unmerited abuse.

Between these two parties, each of which is misdirected by an immoderate zeal, come the iconoclasts—impartial inquirers, who calmly and dispassionately seek for truth only. These disavow, it is true, the authenticity of the Temple legend in its present form. They deny that there is any proof which a historian could, by applying the just canons of criticism, admit as competent evidence, that Freemasonry was organized at the building of the temple of Solomon,

¹ Anderson, "Constitutions," 2d ed., chap. iii., p. 12. ² Ibid., p. 13. ³ Ibid., p. 15.

and hence they look for its origin at some other period and under different circumstances.

But they do not reject the myth connected with the temple as being wholly unworthy of consideration. On the contrary, they respect this legend as having a symbolic significance, whose value can not be overestimated. They trace its rise in the Old Constitutions; they find it plainly alluded to in the *Legend of the Craft*; and they follow it in its full development in the modern rituals. They thus recognize the influence that the story of the temple and its builders has exerted on the internal construction of the Order, and hence they feel no disposition to treat it, notwithstanding its historical inaccuracy, with contumely.

Knowing what an important part the legends and symbols of Freemasonry have performed in the progress of the Institution, and how much its philosophic system is indebted to them for all that is peculiar to itself, they devote their literary energies, not to the expurgation of this or any other myth or legend, but to the investigation of the questions how and when it arose, and what is its real significance as a symbol, or what foundation as a narrative it may have in history. And thus they are enabled to add important items to the mass of true Masonic history which they have been accumulating.

In short, the theory of the iconoclastic school is that truth and authenticity must always, and in the first place, be sought; that nothing must be accepted as historical which has not the internal and external evidences of historical verity, and that in treating the legends of Masonry—of almost every one of which it may be said, "*Se non vero, è ben trovato*"—*if it is not true, it is well invented*—we are not to reject them as altogether fabulous, but as having some hidden and occult meaning, which, as in the case of all other symbols, we must diligently seek to discover. But if it be found that the legend has no symbolic significance, but is simply the distortion of a historical fact, we must carefully eliminate the fabulous increment, and leave the body of truth to which it had been added, to have its just value.

Such was the method pursued by the philosophers of antiquity; and Plato, Anaxagoras, and Cicero explained the absurdities of the ancient mythologists by an allegorical mode of interpretation.

To this school I have for years been strongly attached, and in the composition of this work I shall adopt its principles. I do not fear

that the claims of Freemasonry to a time-honored existence will be injured by any historical criticism, although the era in which it had its birth may not be admitted to be as remote as that assigned to it by Anderson or Oliver.

Iconoclastic criticism can not depreciate, but will rather elevate, the character of the Institution. It will relieve it of absurdities, will often explain the cause of anachronisms, will purify the fabulous element, and confine it within the strict domain of history.

It was a common reproach against the great Niebuhr that he had overthrown the whole fabric of early Roman history, and yet Dr. Arnold, the most competent of critics, has said of him that he had built up much more than he had destroyed, and fixed much that modern skepticism had rejected as fabulous on firmer historic grounds.

Following such a method as that pursued by the most learned of modern historians, it will be necessary, for a faithful and comprehensible investigation of the history of Masonry, to discriminate between the two periods into which it is naturally divided,

The PREHISTORIC and

The HISTORIC.

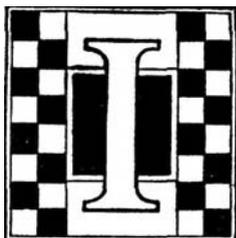

The HISTORIC embraces the period within which we have authentic documents in reference to the existence of the Order, and will be considered in the second part of this book.

The PREHISTORIC embraces the period within which we have no authentic memorials, and when we have to depend wholly on legends and traditions.

The legendary history of Masonry will, therefore, be commenced in the next chapter.

CHAPTER II

THE LEGENDARY HISTORY OF FREEMASONRY

IN the history of every ancient nation there is a prehistoric and a historic period.

The prehistoric period is that which has no records to prove the truth of the events that have been attributed to it. It is made up of myths and legends, founded — some of them, in all probability — on a distortion of historical facts, and some of them indebted entirely to imagination for their invention.

The historic period is that which begins with the narration of events which are supported by documents, either contemporary with the events or so recently posterior to them as to have nearly all the validity of contemporary evidence.

Just such a division of periods as this we find in the history of Freemasonry.

The prehistoric period, more commonly styled the legendary history, embraces the supposed history of the rise and progress of the Institution in remote times, and details events said to have occurred, but which have no proof of their occurrence other than that of oral tradition, unsupported by that sort of documentary evidence which is essentially necessary to give a reliable character to an historical statement.

The historic period of Freemasonry commences with the time when written or printed records furnish the necessary testimony that the events narrated did actually occur.

In treating of the history of nations, scholars have found great difficulty in precisely defining the point of separation between the prehistoric and the historic periods. As in natural history, it is almost impossible to define the exact line of demarkation between any two consecutive classes of the kingdoms of nature so as to distinguish the highest species of a vegetable from the lowest of an

animal organization, so in political history it is difficult to tell when the prehistoric period ends and the historic begins.

In Freemasonry we meet with the same embarrassment, and this embarrassment is increased according to the different standpoints from which we view the institution.

If we adopt the theory (as has been done by a few writers too iconoclastic in their views) that Speculative Masonry never was anything but that which its present organization presents, with Grand Lodges, Grand Masters, and a ritual of distinct degrees, then we are compelled to place the commencement of the historic era at that period which has been called the *Revival* in the second decade of the 18th century.

If, with more liberal views, we entertain the opinion that Speculative Masonry was founded on, and is the offspring of, the Operative system of the Stonemasons, then we must extend our researches to at least the Middle Ages, where we shall find abundant documentary evidence of the existence and character of the Operative parent to which the Freemasonry of the present day, by a well-marked transition, has succeeded.

Connecting the written history of the Operative Masons with that of its speculative offshoot, we have an authentic and continuous history that will carry us back to a period many centuries anterior to the time of the so-called Revival in the year 1717.

If I were writing a history of Speculative Masonry merely, I should find myself restricted to an era, somewhere in the 17th century, when there is documentary evidence to show that the transition period began, and when the speculative obtruded into the Operative system.

But as I am really writing a history of Freemasonry, of which the Operative and the Speculative systems are divisions, intimately connected, I am constrained to go farther, and to investigate the rise and the progress of the Operative art as the precursor and the founder of the Speculative science.

The authentic details of the condition of Operative Masonry in the Middle Ages, of its connection, if it had any, with other organizations, and its transmutation at a later period into Speculative Masonry, will constitute the historic narrative of Freemasonry.

Its prehistoric narrative will be found in the myths and legends which were, unfortunately, for a long time accepted by the great

body of the Craft as a true history, but which, though still credited by many, are yet placed by most modern Masonic scholars in their proper category.

These legends, some of which are preserved in the rituals, and some are becoming almost obsolete, have a common foundation in that traditional narrative which is known as the *Legend of the Craft*,¹ and which must first be understood before we can with satisfaction attempt to study the legendary history of the Institution.

But this legend is of such length and of so much importance that it demands for its consideration a separate and distinct chapter.

I, by no means, intend to advance the proposition that all the myths and legends now taught in the Lodges, or preserved in the works of Masonic writers, are to be found in the *Legend of the Craft*, but only the most important—those that are still recognized by the more credulous portion of the Fraternity as genuine and authentic narratives—receive their first notice in the *Legend of the Craft*, although they are indebted for their present, fuller form, to a development or enlargement, subsequently made in the course of the construction of the modern ritual.

¹The Rev. Bro. Woodford calls it the "Legend of the Guild." But I prefer the title here used, because it does not lead to embarrassing questions as to the relation of the mediaeval Guilds to Freemasonry.

CHAPTER III

THE OLD MANUSCRIPTS

ANDERSON tells us, in the second edition of the *Book of Constitutions*, that in the year 1719, "at some private Lodges several very valuable manuscripts concerning the Fraternity, their Lodges, Regulations, Charges, Secrets, and Usages, were too hastily burnt by some scrupulous Brothers, that these papers might not fall into strange hands."¹

Fortunately, this destruction was not universal. The manuscripts to which Anderson alludes were undoubtedly those Old Constitutions of the Operative Masons, several copies of which, that had escaped the holocaust described by him, have since been discovered in the British Museum, in old libraries, or in the archives of Lodges, and have been published by those who have discovered them.²

These are the documents which have received the title of "Old Records," "Old Charges," or "Old Constitutions." Their general character is the same. Indeed, there is so much similarity, and almost identity, in their contents as to warrant the presumption that they are copies of some earlier document not yet recovered.

The earliest of these documents is a manuscript poem, entitled the *Constitutiones artis geometries secundum Euclydem*, which is preserved in the British Museum, and which was published in 1840 by Mr. Halliwell, in his *Early History of Freemasonry in England*. The date of this manuscript is supposed to be about the year 1390. A second and enlarged edition was published in 1844.

The next of the English manuscripts is that which was published

¹ Anderson's "Constitutions," 1738, p. 111.

² Among these writers we must not omit to mention Bro. William James Hughan, *facile princeps* of all Masonic antiquarians, who made, in 1872, a valuable contribution to this literature, under the title of "The Old Charges of the British Freemasons," the value of which is enhanced by the learned Preface of Bro. A. F. A. Woodford.

in 1861 by Bro. Matthew Cooke from the original in the British Museum, and which was once the property of Mrs. Caroline Baker, from whom it was purchased in 1859 by the Curators of the Museum. The date of this manuscript is supposed to be about 1490.

All the English Masonic antiquarians concur in the opinion that this manuscript is next in antiquity to the Halliwell poem, though there is a difference of about one hundred years in their respective dates. It is, however, mere guesswork to say that there were not other manuscripts in the intervening period. But as none have been discovered, they must be considered as non-existent, and it is impossible even to conjecture, from any groundwork on which we can stand, whether, if such manuscripts did ever exist, they partook more of the features of the Halliwell or of the Cooke document, or whether they presented the form of a gradual transmission from the one to the other.

The Cooke MS. is far more elaborate in its arrangement and its details than the Halliwell, and contains the *Legend of the Craft* in a more extended form.

In the absence of any other earlier document of the same kind, it must be considered as the matrix, as it were, in which that Legend, in the form in which it appears in all the later manuscripts, was moulded.

In the year 1815, Mr. James Dowland published, in the *Gentleman's Magazine*,¹ the copy of an old manuscript which had lately come into his possession, and which he described as being "written on a long roll of parchment, in a very clear hand, apparently early in the 17th century, and very probably is copied from a manuscript of an earlier date." Although not as old as the Halliwell and Cooke MSS., it is deemed of very great value, because it comes next to them in date, and is apparently the first of that series of later manuscripts, so many of which have, within the past few years, been recovered. It is evidently based on the Cooke MS., though not an exact copy of it. But the later manuscripts comprising that series, at the head of which it stands, so much resemble it in details, and even in phraseology, that they must either have been copies made from it, or, what is far more probable, copies of some older and common original, of which it also is a copy.

¹ *Gentleman's Magazine*, vol. 85, p. 489, May, 1815.

The original manuscript which was used by Dowland for the publication in the *Gentleman's Magazine* is lost, or can not now be found. But Mr. Woodford and other competent authorities ascribe the year 1550 as being about its date.

Several other manuscript Constitutions, whose dates vary from the middle of the 16th to the beginning of the 18th century, have since been discovered and published, principally by the industrious labors of Brothers Hughan and Woodford in England, and Brother Lyon in Scotland.

The following list gives the titles and conjectural dates of the most important of these manuscripts:¹

Halliwell MS	supposed, 1390.
Cooke MS.	" 1490.
Dowland MS	" 1500.
Landsdowne MS	" 1560.
York MS., No. 1	" 1600.
Harleian MS., No. 2054	" 1625.
Grand Lodge MS.	" 1632.
Sloane MS., No. 3848	certain, 1646.
Sloane MS., No. 3323	" 1659.
Harleian MS., No. 1942	supposed, 1660.
Aitcheson-Haven MS.	certain, 1666.
Edinburgh-Kilwinning MS.	supposed, 1670.
York MS., No. 5	" 1670.
York MS., No. 6	" 1680.
Lodge of Antiquity MS	certain, 1686.
York MS., No. 2	" 1693.
Alnwick MS.	" 1701.
York MS., No. 4	" 1704.
Papworth MS.	supposed, 1714.

All of these manuscripts begin, except the Halliwell poem, with an invocation to the Trinity. Then follows a descant on the seven liberal arts and sciences, of which the fifth, or Geometry, is said to be Masonry. This is succeeded by a traditional history of Masonry, from the days of Lamech to the reign of King Athelstan of England. The manuscripts conclude with a series of "charges," or regulations, for the government of the Craft while they were of a purely operative character.

¹ I have relied on the excellent authority of Rev. A. F. A. Woodford for the dates. See Hughan's "Old Charges of the British Freemasons," p. xii.

The traditional history which constitutes the first part of these "Old Records" is replete with historical inaccuracies, with anachronisms, and even with absurdities. And yet it is valuable, because it forms the germ of that system of Masonic history which was afterward developed by such writers as Anderson, Preston, and Oliver, and from whose errors the iconoclasts of the present day are successfully striving to free the Institution, so as to give its history a more rational and methodic form.

This traditional history is presented to us in all the manuscripts, in an identity of form, or, at least, with very slight verbal differences. These differences are, indeed, so slight that they suggest the strong probability of a common source for all these documents, either in the oral teaching of the older Masons, or in some earlier record that has not yet been recovered. The tradition seems always to have secured the unhesitating belief of the Fraternity as a true relation of the origin and the progress of Masonry, and hence it has received the title of the *Legend of the Craft*.

From the zealous care with which many manuscripts containing this legend were destroyed in 1719 by "scrupulous brothers" who were opposed to its publication, we might believe that it formed a part of the esoteric instructions of the Guild of Operative Masons. If so, it lost this secret character by the publication of Roberts's edition of the "Constitutions" in 1722.

In the earlier German and French Masonic records, such as the *Ordnung der Steinmetzen* at Strasburg in 1462, and the *Reglements sur les Arts et Metiers* at Paris in the 12th century, there is no appearance of this legend. But it does not follow from this that no such legend existed among the French and German Masons. Indeed, as it is well known that early English Operative Masonry was derived from the continent, it is natural to suppose that the continental Masons brought the legend into England.

There is, besides, internal evidence in the English manuscripts of both French and German interpolations. The reference in the Legend to Charles Martel connects it with the French Masonry of the 12th century, and the invocation to the "Four Crowned Martyrs"¹ in the Halliwell MS. is undoubtedly of German origin.²

¹ Die heiligen Vier gekrönten, "Ordnung der Steinmetz, zu Strasburg, 1459," and in all the other German Constitutions.

² Findel thinks that this invocation to the Four Crowned Martyrs "must be regarded

The importance of this Legend in the influence that it exerted for a long period on the Craft as the accredited history of the Institution makes it indispensably necessary that it should form a part of any work that professes to treat of the history of Masonry.

For this purpose I have selected the Dowland MS., because it is admitted to be the oldest of those that assumed that general form which was followed in all the subsequent manuscripts, between which and it there is no substantial difference.

as a most decided proof of the identity of the German and English Stonemasons, and of their having one common parentage." ("Geschichte der Frei Maurerei." Lyon's translation, p. 31.) Woodford does not concur with this view, but I think without good reason.

CHAPTER IV

THE LEGEND OF THE CRAFT

HE might of the Father of Kings,¹ with the wisdom of his glorious Son, through the grace of the goodness of the Holy Ghost, there bene three persons in one Godheade, be with us at our beginninge, and give us grace so to governe us here in this mortall life liveinge, that we may come to his kingdome that never shall

have endinje. Amen.

"Good Bretheren and Followes: Our purpose is to tell you how and in what manner this worthy science of Masonrye was begunne, and afterwards how it was favoured by worthy Kings and Princes, and by many other worshippingfull men. And also to those that be willinge, wee will declare the charge that belongeth to any true Mason to keepe for in good faith. And yee have good heede thereto; it is well worthy to be well kept for a worthy craft and a curious science.

"For there be Seaven liberall Sciences, of the which seaven it is one of them. And the names of the Seaven Seyences bene these: First is Grammere, and it teacheth man to speake truly and write truly. And the second is Rhethoricke; and teacheth a man to speake faire in subtile termes. And the third is Dialectyke; and teacheth a man for to discern or know truth from false. And the fourth is Arithmeticke; and that teacheth a man for to reckon and to accompte all manner of numbers. And the fifth is called Geometrie; and that teacheth mett and measure of earth and of all other things; of the which science is called Masonrye. And the sixth science is called Musicke; and that teacheth a man of songe and voice, of tongue and orgaine, harpe and trompe. And the seaventh science is called Astronomye; and that teacheth a man the course of

¹ In the Landsdowne, and most of the other MSS., the formula is "the Father of the Heavens," or "of Heaven."

the sunn, moone and starrs. These be the Seaven liberall Sciences, the which bene all founded by one Science, that is to say Geometrie. And this may a man prove, that the science of the work is founded by Geometrie, for Geometrie teacheth a man mett and measure, ponderation and weight, of all manner of things on earth, for there is no man that worketh any science, but he worketh by some mett or measure, nor no man that buyeth or selleth, but he buyeth or selleth by some measure or by some weight, and all these is Geometric. And these use merchants and all craftsmen, and all other of the Seaven Sciences, and in especiall the plowman and tillers of all manner of grounds, graynes, vynes, flowers and setters of other fruits; for Grammere or Retricke, neither Astronomie nor none of all the other Seaven Sciences can no manner find mett nor measure without Geometrie. Wherefore methinketh that the science of Geometrie is most worthy, and that findeth¹ all other.

"How that these worthy Sciences were first begunne, I shall you tell. Before Noye's flood, there was a man called Lameche, as it is written in the Byble in the iijth chapter of Genesis; and this Lameche had two wives, and the one height Ada, and that other height Sella; by his first wife Ada he gott two sons, and that one Jabell and thother Tuball, and by that other wife Sella he got a son and a daughter. And these four children founden the beginning of all sciences in the world. And this elder son Jabell found the science of Geometrie, and he departed flocks of sheep and lambs in the field, and first wrought house of stone and tree,² as is noted in the chapter above said. And his brother Tuball found the science of musicke, songe of tonge, harp and orgaine. And the third brother, Tuball Cain, found smithcraft of gold, silver, copper, iron and Steele; and the daughter found the craft of Weaving. And these children knew well that God would take vengeance for synn, either by fire or by water; wherefore they writt their science that they had found in two pillars of stone, that they might be found after Noye's flood. And that one stone was marble, for that would not burn with fire; and

¹Used in its primitive Anglo-Saxon meaning of "to invent, to devise." Geometry invented or devised all the other sciences.

²This is an instance of the inaccuracy of these old records in historical lore. So far from Jabal being the first who "wrought house of stone and tree," he was the originator of the nomadic life, in which such buildings are never used. He invented tents, made most probably of skins, to be the temporary residence of a pastoral people, led by the exigency of a want of food to remove their flocks from time to time to new pastures.

that other stone was clepped laterns,¹ and would not drown in noe water.

"Our intent is to tell you trulie how and in what manner these stones were found that these sciences were written in. The great Hermarynes, that was Cuby's son, the which Cub was Sem's son, that was Noy's son. This Hermarynes afterwards was called Harmes, the father of wise men; he found one of the two pillars of stone, and found the science written there, and he taught it to other men. And at the making of the Tower of Babylon there was Masonrye first made much of. And the Kinge of Babylon that height Nemrothe,² was a mason himself; and loved well the science, and it is said with masters of histories. And when the City of Nyneve and other cities of the East should be made, Nemrothe, the King of Babylon, sent thither three score Masons at the roagation of the King of Nyneve, his cosen. And when he sent them forth, he gave them a charge on this manner. That they should be true each of them to other, and that they should love truly together, and that they should serve their lord truly for their pay; soe that the master may have worshipp and all that long to him. And other moe charges he gave them. And this was the first time that ever Masons had any charge of his science.

"Moreover when Abraham and Sara his wife went into Egipt, there he taught the Seaven Sciences to the Egiptians; and he had a worthy scoller that height Ewclyde,³ and he learned right well and was a master of all the vij Sciences liberall. And in his days it befell that the lord and the estates of the realme had soe many sonns that they had gotten, some by their wives and some by other ladyes of the realme; for that land is a hott land and a plentifulous of generacion. And they had not competent livelode to find with their children, wherefor they made much care, and then the king of the land made a great Counsell and a Parliament, to witt, how they might find their children honestly as gentlemen; and they could find no manner of good way. And then they did crye through all the realme, if there were any man that informe them, that he should come to them, and he should be soe rewarded for his travail, that he should hold him pleased.

¹ This word is a corruption of the Latin "later," *brick*.

² Nimrod.

³ Bro. Matthew Cooke, in his Notes to the MS. which he was the first to publish, and which thence bears his name, protests against being held responsible for the chronology which makes Abraham and Euclid contemporaries. It will hereafter be seen that this legend of Euclid is merely a symbol.

"After that this crye was made, then came this worthy clarke Ewclyde and said to the king and all his great lords, 'If yee will take me your children to governe, and to teach them one of the Seaven Scyences, wherewith they may live honestly as gentlemen should, under a condition, that yee will grant me and them a commission that I may have power to rule them after the manner that the science ought to be ruled.' And that the kinge and all his Counsell granted to him anone and sealed their commission. And then this worthy Doctor tooke to him these lord's sonns, and taught them the scyence of Geometrie in practice, for to work in stones all manner of worthy worke that belongeth to buildinge churches, temples, castells. towres, and mannors, and all other manner of buildings; and he gave them a charge in this manner.

"The first was that they should be true to the Kynge, and to the Lord that they owe. And that they should love well together and be true each one to other. And that they should call each other his fellowe or else brother and not by servant nor his knave, nor none other foul name. And that they should deserve their paie of the lord or of the master that they serve. And that they should ordaine the wisest of them to be master of the worke and nether for love nor great lynneage, ne riches ne for no favour to lett another that hath little conning for to be master of the lord's worke, wherethrough the lord should be evill served and they ashamed. And also that they should call their governors of the worke, Master, in the time that they worke with him. And other many moe charges that longe to tell. And to all these charges he made them to sweare a great oath that men used in that time; and ordayned them for reasonable wages, that they might live honestly by. And also that they should come and semble together every yeare once, how they might worke best to serve the lord for his profitt and to their own worshipp; and to correct within themselves him that had trespassed against the science. And thus was the seyence grounded there; and that worthy Mr. Ewclyde gave it the name of Geometric And now it is called through all this land, Masonrye.

"Sythen longe after,¹ when the children of Israeli were coming into the land of Beheast,² that is now called amongst us, the country of

¹ Since then long after—long after that time.

² The Land of Promise, or the Promised Land. "Beheste Promissio," says the Promptorium Parvulorum.

Jhrlm. Kinge David began the Temple that they called *Templum D'ni*, and it is named with us the Temple of Jerusalem. And the same Kinge David loved Masons well and cherished them much, and gave them good paie. And he gave the charges and the manners as he had learned of Egipt given by Ewclyde, and other charges moe that ye shall heare afterward. And after the decease of Kinge David, Solomon, that was David's sonn, performed out the Temple that his father begonne; and sent after Masons into divers countries and of divers lands; and gathered them together, so that he had fourscore thousand workers of stone, and were all named Masons. And he chose out of them three thousand that were ordayned to be masters and governors of his worke. And furthermore there was a Kinge of another region that men called Iram,¹ and he loved well Kinge Solomon and he gave him tymber to his worke. And he had a sonn that height Aynon,² and he was a Master of Geometrie, and was chief Master of all his Masons, and was Master of all his gravings and carvinge, and of all manner of Masonrye that longed to the Temple; and this is witnessed by the Bible, *in libro Regum*, the third chapter. And this Solomon confirmed both charges and the manners that his father had given to Masons. And thus was that worthy Science of Masonrye confirmed in the country of Jerusalem, and in many other kingdoms.

"Curious craftsmen walked about full wide into divers countryes, some because of learning more craft and cunning, and some to teach them that had but little cunnyng. And soe it befell that there was one curious Mason that height Maymus Grecus,³ that had been at the making of Solomon's Temple, and he came into France, and there he taught the science of Masonrye to men of France. And there was one of the Regal line of France that height Charles Martell;⁴ and he was a man that loved well such a science, and drew to this Maymus Grecus that is above-said, and learned of him the science, and tooke upon him the charges and manners; and afterwards by the

¹ It is scarcely necessary to explain that this is meant for Hiram.

² The true origin and meaning of this name, for which some of the modern Speculative Masons have substituted Hiram Abif, and others Adoniram, will be hereafter discussed.

³ This name has been a Sphinxian enigma which many a Masonic Œdipus has failed to solve. I shall recur to it in a subsequent page.

⁴ The introduction of this monarch into the Legend leads us to an inquiry into an interesting period of French Masonic history that will be hereafter discussed.

grace of God, he was elect to be Kinge of Fraunce. And when he was in his estate, he tooke Masons, and did helpe to make men Masons that were none; and set them to worke, and gave them both the charge and the manners and good paie, as he had learned of other Masons; and confirmed them a charter from yeare to yeare, to hold their semble when they would; and cherished them right much; and thus came this science into Fraunce.

"England in all this season stood voyd, as for any charge of Masonrye unto St. Albones¹ tyme. And in his days the King of England that was a Pagan, he did wall the towne about, that is called Saint Albones. And Saint Albones was a worthy Knight and Stewart with the Kinge of his household, and had governance of the realme, and also of the makeing of the town walls; and loved well Masons and cherished them much. And he made their paie right good, standing as the realme did; for he gave them ij.s. vj.d. a weeke and iij.d. to their nonesynches.² And before that time, through all this land, a Mason tooke but a penny a day and his meate, till Saint Albones amended it, and gave them a chartour of the Kinge and his Counsell for to hold a general councell, and gave it the name of Assemble; and thereat he was himselfe, and helped to make Masons and gave them charges as you shall heare afterward.

"Right soon after the decease of Saint Albone, there came divers wars into the realme of England of divers Nations soe that the good rule of Masonrye was destroyed unto the tyme of Kinge Athelstone's days that was a worthy Kinge of England and brought this land into good rest and peace; and builded many great works of Abbyes and Toures, and other many divers buildings; and loved well Masons. And he had a sonne that height Edwinne, and he loved Masons much more than his father did. And he was a great practiser in Geometrie; and he drew him much to talke and to commune with Masons, and to learn of them science; and afterwards for love that he had to Masons, and to the science, he was made Mason, and he gatt of the Kinge his father, a Chartour and Commission to hold every yeare

¹ St. Alban, the protomartyr of England. Of his connection with the Legend, more hereafter.

² A corruption of the old English word *noonskun*, from which comes our modern *luncheon*. It meant the refreshment taken at noon, when laborers desist from work to *shun* the heat. It may here mean food or subsistence in general. St. Alban gave his Masons two shillings a week and three pence for their daily food. (See *Nonesynches* in Mackey's "Encyclopædia of Freemasonry.")

once an Assemble, wher that ever they would, within the realme of England; and to correct within themselves defaults and trespasses that were done within the science. And he held himselfe an Assemble at Yorke,¹ and these he made Masons, and gave them charges, and taught them the manners, and commanded that rule to be kept ever after, and tooke then the chartour and commission to keepe, and made ordinance that it should be renewed from kinge to kinge.

"And when the Assemble was gathered he made a cry that all old Masons and young that had any writeinge or understanding of the charges and the manners that were made before in this land, or in any other, that they should show them forth. And when it was proved, there were founden some in French, and some in Greek, and some in English and some in other languages; and the intent of them all was founden all one. And he did make a booke thereof, and how the science was founded. And he himselfe bad and commanded that it should be readd or tould, when that any Mason should be made for to give him his charge. And fro that day into this tyme manners of Masons have been kept in that form as well as men might governe it. And furthermore divers Assembles have benee put and ordayned certain charges by the best advice of Masters and fellows."

Then follow the charges that are thus said to have been enacted at York and at other General Assemblies, but which properly constitute no part of the Legend, at least no part connected with the legendary details of the rise and progress of the Institution. The Legend ends with the account of the holding of an Assembly at York, and other subsequent ones, for the purpose of enacting laws for the government of the Order.

¹This part of the Legend which refers to Prince Edwin and the Assembly at York is so important that it demands and will receive a future comprehensive examination.

CHAPTER V

THE HALLIWELL POEM AND THE LEGEND

HERE is one manuscript which differs so much from all the others in its form and in its contents as to afford the strongest internal evidence that it is derived from a source entirely different from that which gave origin to the other and later documents.

I allude to what is known to Masonic antiquaries as the Halliwell MS. As this is admitted to be the oldest Masonic document extant, and as some very important conclusions in respect to the early history of the Craft are about to be deduced from it, a detailed account of it will not be deemed unnecessary.

This work was first published in 1840 by Mr. James Orchard Halliwell, under the title of "A Poem on the Constitutions of Masonry,"¹ from the original manuscript in the King's Library of the British Museum. Mr. Halliwell, who subsequently adopted the name of Phillips, is not a member of the Brotherhood, and Woodford appropriately remarks that "it is somewhat curious that to Grandidier and Halliwell, both non-Masons, Freemasonry owes the impetus given at separate epochs to the study of its archaeology and history."²

Halliwell says that the manuscript formerly belonged to Charles Theyer, a well-known collector of the 17th century. It is undoubtedly the oldest Masonic MS. extant. Messrs. Bond and Egerton of the British Museum consider its date to be about the middle of the 15th century. Kloss³ thinks that it was written between the years 1427 and 1445. Dr. Oliver⁴ maintains that it is a transcript of the Book of Constitutions adopted by the General Assembly, held

¹In a brochure entitled "The Early History of Freemasonry in England." A later improved edition was published in 1844.

²In Kenning's "Encyclopaedia," *voc. Halliwell*.

³"Die Freimaur in ihrer wahren Bedeutung." S. 12.

⁴*American Quart. Rev. of Freemasonry*, vol. i., p. 547.

in the year 926, at the City of York. Halliwell himself places the date of the MS. at 1390. Woodford¹ concurs in this opinion. I am inclined to think that this is the true date of its transcription.

The manuscript is in rhymed verse, and consists of 794 lines. At the head of the poem is the inscription: "*Hie incipiunt constitutiones artis gemetricæ secundum Eucludem.*" The language is more archaic than that of Wicliffe's version of the Bible, which was written toward the end of the 14th century, but approaches very nearly to that of the Chronicles of Robert of Gloucester, the date of which was at the beginning of the same century. Therefore, if we admit that the date of 1390, attributed by Halliwell and Woodford to the transcription in the British Museum, is correct, we may, I think, judging by the language, safely assign to the original the date of about 1300. Further back than this, philology will not permit us to go.

Lines 1-86 of this MS. contain the history of the origin of geometry, or Masonry, and the story of Euclid is given at length, much like that which is in the *Legend of the Craft*. But no other parts of that Legend are referred to, except the portion which records the introduction of Masonry into England. From the narrative of the establishment of Masonry in Egypt by Euclid, the poem passes immediately to the time when the "craft com ynto Englund." Here the legendary story of King Athelstan and the Assembly called by him is given, with this variation from the common Legend, that there is no mention of the city of York, where the Assembly is said to have been held, nor of Prince Edwin, who summoned it.

Lines 87-470 contain the regulations which were adopted at that Assembly, divided into fifteen articles and the same number of points. There is a very great resemblance, substantially, between these regulations and the charges contained in the subsequent or second set of Manuscript Constitutions. But the regulations in the Halliwell poem are given at greater length, with more particularity and generally accompanied with an explanation or reason for the law.

After an interpolation, to be referred to hereafter, the poem proceeds under the title of "*Ars quatuor coronatorum,*" *The Art of*

¹ Preface to Hughan's "Old Charges," p. vii.

the Four Crowned Ones, a title never applied to Masonry in the later and purely English manuscripts. We have first an invocation to God and the Virgin, and then the Legend of the Four Crowned Martyrs, which ends on line 534.

Now this Legend of the Four Crowned Martyrs¹—*die Vier Gekrönten*—is found in none of the purely English manuscripts, but is of German origin, and peculiar to the German Steinmetzen or Stone Masons of the Middle Ages. Its introduction in this manuscript is an evidence of the German origin of the document, and, as Findel² says, "must be regarded as a most decided proof of the identity of the German and English Stone Masons, and of their having one common parentage."

The details of this Legend close at the 534th line, and the poem then proceeds to give a small and imperfect portion of what is known in our later manuscripts as the *Legend of the Craft*.

I am persuaded that all this part of the poem has been dislocated from its proper place, and that in the original the lines from 535 to 576 formed a portion of the *Legend of the Craft*, as it must have been inserted in the introductory part of the second manuscript. I think so, first, because in all other manuscripts the Legend forms the exordium and precedes the charges; secondly, because it has no proper connection with or sequence to the Legend of the Four Crowned Martyrs which precedes it, and which terminates on the 354th line; and lastly, because it is evidently an interruption of the religious instructions which are taken up on line 577, and which naturally follow line 534. The writer having extolled the Christian steadfastness and piety of the four martyrs whose feast he tells us is on the eighth day after Allhalloween, proceeds on line 576 to admonish his readers to avoid pride and covetousness and to practice virtue. There is here a regular and natural connection, which, however, would be interrupted by the insertion between the two clauses of an imperfect portion of a legend which has reference to the very beginning of the history of Masonry. Hence I conclude that all that part of the Legend which described the events that were connected with Noah's flood and the Tower of Babel is an interpolation, and belongs to another manuscript and to another place.

¹ See the full details of this Legend in Mackey's "Encyclopædia of Freemasonry," art. *Four Crowned Martyrs*.

² "History of Freemasonry," Lyon's Trans., p. 31.

In fact, the copyist had two manuscripts before him, and he transcribed sometimes from one and sometimes from the other, apparently with but little judgment, or, rather, he copied the whole of one and then interpolated it with extracts from the other without respect to any congruity of subjects.

The rest of the poem is occupied with instructions as to behavior when in church, when in the company of one's superiors, and when present at the celebration of the mass. The whole ends with what we find in no other manuscript, the now familiar Masonic formula, "Amen, so mote it be."

Line 471 furnishes, I think, internal evidence that the poem was originally composed of two distinct works, written, in all probability, by two different persons, but in the copy which we now have, combined in one by the compiler or copyist. Mr. Woodford also is of the opinion that there are two distinct poems, although the fact had not attracted the attention of Halliwell. The former gentleman says that "it seems to be in truth two legends, and not only one." This is evident, from the fact that this second part is prefaced by the title, "*Alia ordinacio artis gemetriæ*" that is, "*Another Constitution of the art of geometry.*" This title would indicate that what followed was a different *Ordinacio* or Constitution and taken from a different manuscript. Besides, line 471, which is the beginning of the other or second Constitution, does not fall into its proper place in following line 470, but is appropriately a continuation of line 74. To make this evident, I copy lines 70-74 from the poem, and follow them by lines 471-474, whence it will be seen that the latter lines are an appropriate and natural continuation of the former.

- Line 70. He sende about ynto the londe
 71. After alle the masonus of the crafte,
 72. To come to hym ful evene stragfte
 73. For to amende these defaultys alle
 74. By good counsel gef it hyt mytgh falle.

 471. They ordent ther a semble to be y-holde
 472. Every yer, whersever they wolde
 473. To amende the defautes, gef any where fonde
 474. Amonge the craft withynne the londe.

The second manuscript seems to have been copied from line 471, as far as line 496. There, I suppose, the charges or regulations to

have followed, which having been given from the first manuscript the copyist omitted, as a needless repetition, but went on immediately with the "ars quatuor coronatorum." This ended at line 534. It is now evident that he went back to a preceding part of the second manuscript and copied the early account of Masonry from line 535 to 576. The bare reading of these lines will convince the reader that they are not in their proper place, and must have formed a part of the beginning of the second poem.

Line 577 appropriately follows line 534, when the interpolation is left out, and then the transcription is correctly made to the end of the poem. The first manuscript was apparently copied correctly, with the exception of the two interpolations from the second MS. There is a doubt whether the Legend of the Crowned Martyrs belonged to the first or to the second poem. If to the first, then we have the whole of the first poem, and of the second only the interpolations. This is, however, a mere conjecture without positive proof. Yet it is very probable.

On the whole, the view I am inclined to take of this manuscript is as follows:

1. There were two original manuscripts, out of which the copyist made a careless admixture.

2. The first MS. began with line 1 and went on to the end at line 794. But this is only conjectural. It may have ended, or rather the copying ceased, at line 470.

3. If the conjecture just advanced be correct, then from a second MS. the copyist made interpolations, in the following way.

4. The beginning of the second MS. is lost. But from very near the commencement, which probably described the antediluvian tradition of Lamech, the copyist had selected a portion which begins with line 535 and ends at line 576. He had previously interpolated the lines from 471 to 496.

5. We have, then, the whole of the first manuscript, from the 1st line to the 794th, with the addition of two interpolations from the second, consisting only of 68 lines, namely: from line 471 to 496, and from line 535 to 576.

6. The first manuscript is deficient in any references to antediluvian Masonry, but begins with the foundation of Masonry in Egypt, as its title imports. This deficiency was, in part, supplied by the second interpolation (535-596). This part begins with the building

of Babel. But it is evident from the words, "many years after," that there was a preceding part to this manuscript that has not been copied. The "many years after" refer to some details that had been previously made. The account of the Seven Sciences, found in all later manuscripts, is not given in the first poem. It is inserted in this from the second.

7. So of the poem in the form we now have it, the parts copied from the second MS. consist only of 68 lines, which have been interpolated in two places into the first MS.—namely, lines 471-496, and lines 535-576; and these have been dislocated from their proper places. All the rest of the poem constitutes the original first manuscript. If I hesitate at all in coming to the positive conclusion that the first and last parts of the poem were composed by the same author, it is because the latter is written in a slightly different metre. This, therefore, leaves the question where the first poem ends and where the second begins, still open to discussion.

The variations which exist between the Halliwell poem, or, rather, poems, and other Masonic manuscripts of later date, are very important, because they indicate a difference of origin, and, by the points of difference, suggest several questions as to the early progress of Masonry in England.

1. The form of the Halliwell MS. differs entirely from that of the others. The latter are in prose, while the former is in verse. The language, too, of the Halliwell MS. is far more antiquated than that of the other manuscripts, showing that it was written in an earlier stage of the English tongue. It belongs to the Early English which succeeded the Anglo-Saxon. The other manuscripts were written at a later period of the language.

2. The Halliwell MS. is evidently a Roman Catholic production, and was written when the religion of Rome prevailed in England. The later manuscripts are all Protestant in their character, and must have been written after the middle of the 16th century, at least, when Protestantism was introduced into that country by Edward VI. and by Queen Elizabeth.¹

The different religious character of the two sets of manuscripts

¹ Edward VI. reigned from 1547—1553; Elizabeth reigned from 1558-1603; the interval was occupied by the Roman Catholic reign of Mary. But the archaic style of the "Halliwell MS." forbids any theory of its having been written during that intermediate period.

is very patent. We see ecclesiastical influence very strongly manifested in the Halliwell MS. So marked is this that Mr. Halliwell supposes that it was written by a priest, which, I think, is not impossible, although not for the reason he assigns, which is founded on his incorrect translation of a single word.¹

But the Roman Catholic character of the poem is proven by lines 593-692, which are occupied in directions how the mass is to be heard; and, so ample are these directions as to the ritual observance of this part of the Roman Catholic worship, that it is very probable that they were written by a priest.

In the subsequent manuscripts we find no such allusions. Freemasonry, when these documents were written, was Christian in its character, but it was Protestant Christianity. The invocation with which each one begins is to the Trinity of Father, Son, and Holy Ghost; but no mention is made, as in the Halliwell MS. of the Virgin and the saints. The only reference to the Church is in the first charge, which is, "that you shall be a true man to God and the holy Church, and that you use no heresy nor error by your understanding or teaching of discreet men"—a charge that would be eminently fitting for a Protestant Christian brotherhood.

On referring to the first charge adopted after the revival in 1717 by the Grand Lodge of England, we find that then, for the first time, the sectarian character was abandoned, and the toleration of a universal religion adopted.

Thus it is said in that charge: "Though in ancient times Ma-

¹ A philological note may, here, be not uninteresting. Mr. Halliwell, in support of his assertion that the writer of the poem was a priest, quotes line 629: "And, when the Gospel *me* rede schal"—where he evidently supposes that *me* was used instead of *I*, and that the line was to be translated—"when I shall read the Gospel." But in none of the old manuscripts is the flagrant blunder committed of using the accusative *me* in place of the nominative *Y* or *I*. The fact is, that the Anglo-Saxon *man*, signifying *one*, or *they*, like the French *on* in "on dit," as "man dyde," *one* or *they* did, or *it* was done, gave way in Early English to *me*, used in the same sense. Examples of this may be found in the writers who lived about the time of the composition of the "Halliwell MS." A few may suffice. In the *Ayenbite of Imwyt* is the following line: "Ine the ydele wordes *me* zeneyeth ine vif maneres," that is, "In the idle word *one* sinneth in five ways." Again, in Robert of Gloucester's Chronicle are these phrases: "By this tale *me* may yse," *i.e.*: "By this tale *may be seen*," Story of Lear, line 183. "And best *me* may to hem truste," *i.e.*: "And they *may be trusted* best," *ib.*, 1. 184. "The stude that he was at yslawe *me* cleputh yet Morgan," *i.e.*: "The place where he was slain *is called* Morgan still," *ib.*, 1. 213. And the line in the Halliwell poem, which Mr. Halliwell supposed to mean, "And when *I* shall read the Gospel," properly translated, is, "And when the Gospel *shall be read*." It furnishes, therefore, no proof that the writer was a priest.

sons were charged in every country to be of the religion of that country or nation, whatever it was, yet 'tis now thought more expedient only to oblige them to that religion in which all men agree, leaving their particular opinions to themselves."¹

Now, comparing the religious views expressed in the oldest Masonic Constitution of the 14th century, with those set forth in the later ones of the 16th and 17th, and again with those laid down in the charge of 1717, we find an exact record of the transitions which from time to time took place in the religious aspect of Freemasonry in England and in some other countries.

At first it was Roman Catholic in its character, and under ecclesiastical domination.

Then, after the Reformation, rejecting the doctrines of Rome and the influence of the priesthood, it retained its Christian character, but became Protestant in its peculiar views.

Lastly, at the time of the so-called Revival, in the beginning of the 18th century, when Speculative Masonry assumed that form which it has ever since retained, it abandoned its sectarian character, and adopted a cosmopolitan and tolerant rule, which required of its members, as a religious test, only a belief in God.

¹ Anderson's "Constitutions," 1st ed., 1723, p. 50.

CHAPTER VI

THE ORIGIN OF THE HALLIWELL POEM

ALL these facts concerning the gradual changes in the religious character of the Institution, which by a collation of the old manuscripts we are enabled to derive from the *Legend of the Craft*, are corroborated by contemporaneous historical documents, as will be hereafter seen, and thus the "Legend," notwithstanding the many absurdities and anachronisms which deface it, becomes really valuable as an historical document.

But this is not all. In comparing the Halliwell poem with the later manuscripts, we not only find unmistakable internal evidence that they have a different origin, but we learn what that origin is.

The Halliwell poem comes to us from the Stonemasons of Germany. It is not, perhaps, an exact copy of any hitherto undiscovered German document, but its author must have been greatly imbued with the peculiar thoughts and principles of the German "Steinmetzen" of the Middle Ages.

The proof of this is very palpable to any one who will carefully read the Halliwell poem, and compare its idea of the rise and progress of Geometry with that exhibited in the later manuscript Constitutions.

These latter trace the science, as it is always called, from Lamech to Nimrod, who "found" or invented the Craft of Masonry at the building of the Tower of Babel, and then to Euclid, who established it in Egypt, whence it was brought by the Israelites into Judea, and there again established by David and Solomon, at the building of the Temple. Thence, by a wonderful anachronism it was brought into France by one Namus Grecus, who had been a workman at the Temple, and who organized the Science in France under the auspices of Charles Martel. From France it was carried to England in the time of St. Alban. After a long interruption in consequence of the

Danish and Saxon wars, it finally took permanent root at York, where Prince Edwin called an Assembly, and gave the Masons their charges under the authority of a Charter granted by King Athelstan.

It will be observed that nowhere in this later Legend is there any reference to Germany as a country in which Masonry existed. On the contrary, the Masonry of England is supposed to have been derived from France, and due honor is paid to Charles Martel as the founder of the Order in that kingdom.

Hence we may rationally conclude that the *Legend of the Craft* was modified by the influence of the French Masons, who, as history informs us, were brought over into England at an early period.

In this respect, authentic history and the Legend coincide, and the one corroborates the other.

Different from all this is the Legend of the Halliwell poem, the internal evidence clearly showing a Germanic origin, or at least a Germanic influence. The Rev. Bro. Woodford objects to this view, because, as he says, "the Legend was then common to both countries." But with all due respect, I can not but look upon this argument as a sort of *petitio principii*. The very question to be determined is, whether this community of belief, if it existed at that time, did not owe its origin to an importation from Germany. It is certain that in none of the later English manuscripts is there any allusion to the Four Crowned Martyrs, who were the recognized patrons of German Operative Masonry.

The variations of the Halliwell poem from the later manuscripts are as follows: It omits all reference to Lamech and his sons, but passing rapidly over the events at the Tower of Babel, the building of which it ascribes to Nebuchadnezzar, it begins (if we except a few lines interpolated in the middle of the poem) with the Legend of Euclid and the establishment of Masonry by him in Egypt.

There is no mention of King Solomon's Temple, whereas the history of the building of that edifice, as a Masonic labor, constitutes an important part of all the later manuscripts.

The Legend of the Four Crowned Martyrs, concerning whom all the later manuscripts are silent, is given at some length, and they are described as "gode masonus as on erthe schul go." These were the tutelar saints of the German Operative Masons of the Middle

Ages, but there is no evidence that they were ever adopted as such by the English brotherhood.

There is no allusion in the Halliwell poem to Charles Martel, and to the account of the introduction of Masonry into England from France, during his reign, which forms a prominent part of all the later manuscripts.

Neither is there any notice of the Masonry in England during the time of St. Alban, but the poem attributes its entrance into that country to King Athelstan.

Lastly, while the later manuscripts record the calling of the Assembly at the city of York by Prince Edwin, the Halliwell makes no mention of York as the place where the Assembly was called, nor of Edwin as presiding over it. This fact demolishes the theory of Dr. Oliver, that the Halliwell poem is a copy of the so-called Old York Constitutions.

From all these considerations, I think that we are justified in assigning to the Halliwell poem and to the other later manuscripts two different sources. The former is of Germanic, and the latter of French origin. They agree, however, in a general resemblance, diversified only in the details. This suggests the idea of a common belief, upon which, as a foundation, two different structures have been erected.

CHAPTER VII

THE LEGEND, THE GERM OF HISTORY

THE *Legend of the Craft*, as it has been given in the fourth chapter of this work from the exemplar in the Dowland MS., appears to have been accepted for centuries by the body of the Fraternity as a truthful history. Even at the present day, this Legend is exerting an influence in the formation of various parts of the ritual. This influence has even been extended to the adoption of historical views of the rise and progress of the Institution, which have, in reality, no other foundation than the statements which are contained in the Legend.

For these reasons, the *Legend of the Craft* is of great importance and value to the student of Masonic history, notwithstanding the absurdities, anachronisms, and unsupported theories in which it abounds.

Accepting it simply as a document which for so long a period claimed and received the implicit faith of the Fraternity whose history it professed to give—a faith not yet altogether dead—it is worthy of our consideration whether we can not, by a careful examination of its general spirit and tenor, irrespective of the bare narrative which it contains, discover some key to the true origin and character of that old and extensive brotherhood of which it is the earliest record.

I think that we shall find in it the germ of many truths, and the interpretation of several historic facts concerning which it makes important suggestions.

In the first place, it must be remarked that we have no way of determining the precise period when this Legend was first composed, nor when it was first accepted by the Craft as a history of the Institution. The earliest written record that has been discovered among English Masons bears a date which is certainly not later than about the end of the 14th century. But this by no means proves that no

earlier exemplar ever existed, of which the *Constitutions*, which have so far been brought to light, may only be copies.

On the contrary, we have abundant reason to believe that all the *Old Records* which have been published are, with the exception of the Halliwell MS., in fact derived from some original text which however, has hitherto escaped the indefatigable researches of the investigators.

If, for instance, we take the Sloane MS., No. 3,848, the assumed date of which is A.D. 1646, and the Harleian MS., No. 2,054, the date of which is supposed to be A.D. 1650, and if we carefully collate the one with the other, we must come to the conclusion either that the latter was copied from the former, or that both were copied from some earlier record, for whose exhumation from the shelves of the British Museum, or from the archives of some old Lodge, we may still confidently hope.

The resemblances in language and ideas, and the similarity of arrangement that are found in both documents, very clearly indicate a common origin, while the occasional verbal discrepancies can be safely attributed to the carelessness of an inexpert copyist. Brother Hughan,¹ who is high authority, styles the Harleian, from its close resemblance, "an indifferent copy" of the Sloane. The Rev. A. F. A. Woodford,² who assigns the earlier date of 1625 to the original Harleian, says it "is nearly a verbatim copy of Dowland's form, slightly later, and must have been transcribed either from an early, and almost contemporary, copy of Dowland's, or it is really a copy of Dowland's itself." These opinions by experts strengthen the view I have advanced, that there was a common origin for all of these manuscripts.

If we continue the collation of the manuscripts of later date, as far, even, as the Papworth, which is supposed to have been transcribed about the year 1714, the same family likeness will be found in all. It is true, that in the transcription of the later manuscripts—those, for example, that were copied toward the end of the 17th and the beginning of the 18th centuries—the language has been improved, some few archaisms have been avoided, and more recent words substituted for them. Scriptural names have been sometimes spelt with a greater respect for correct orthography, and a feeble

¹ "Old Charges of the Brit. Freemasons," p. 8.

² Preface to Hughan's "Old Charges," p. xi.

attempt has been made to give a modern complexion to the document. But in all of them there is the same misspelling of words, the same violations of the rules of grammar, the same arrangement of the narrative, and a preservation and repetition of all the statements, apocryphal and authentic, which are to be found in the earliest exemplars.

I have said that the *Legend of the Craft*, as set forth in the later manuscripts, was for centuries accepted by the Operative Masons of England, with all its absurdities of anachronism, as a veritable history of the rise and progress of Masonry from the earliest times, and that the influence of this belief is still felt among the Speculative Masons of the present day, and that it has imbued the modern rituals with its views.

This fact gives to this Legend an importance and a value irrespective of its character as a mere Legend. And its value will be greatly enhanced if we are able to show that, notwithstanding the myths with which it abounds, the *Legend of the Craft* really contains the germ of historical truth. It is, indeed, an historical myth—one of that species of myths so common in the mythology of antiquity, which has a foundation in historical truth, with the admixture of a certain amount of fiction in the introduction of personages and circumstances, that are either not historical, or are not historically treated. Indeed, it may be considered as almost rising into the higher class of historical myths, in which the historical and truthful greatly predominate over the fictitious.¹

In the contemplation of the Legend of the Mediaeval Masons from this point of view, it would be well if we should govern ourselves by the profound thought of Max Müller,² who says, in writing on a cognate subject, that "everything is true, natural, significant, if we enter with a reverent spirit into the meaning of ancient art and ancient language. Everything becomes false, miraculous, and unmeaning, if we interpret the deep and mighty words of the seers of old in the shallow and feeble sense of modern chroniclers."

Examined in the light of this sentiment, which teaches us to look upon the language of the myth, or Legend, as containing a deeper meaning than that which is expressed upon its face, we shall

¹ For a classification of myths into the historical myth and the mythical history, see the author's treatise on the "Symbolism of Freemasonry," p. 347.

² "Science of Language," 2d series, p. 578.

find in the *Legend of the Craft* many points of historical reference, and, where not historical, then symbolical, which will divest it of much of what has been called its absurdities.

It is to an examination of the Legend in this philosophic spirit that I now invite the reader. Let it be understood that I direct my attention to the Legend contained in the later manuscripts, such as the Dowland, Harleian, Sloane, etc., of which a copy has been given in preceding pages of this work, and that reference is made only as occasion may require to the Halliwell MS. for comparison or explanation. This is done because the Legend of the later manuscripts is undoubtedly the one which was adopted by the English Masons, while that of the Halliwell MS. appears to have been of exotic growth, which never took any extensive root in the soil of English Masonry.

In the subsequent chapters devoted to this subject, which may be viewed as Commentaries on the *Legend of the Craft*, I shall investigate the signification of the various subordinate Legends into which it is divided.

CHAPTER VIII

THE ORIGIN OF GEOMETRY

THE manuscript begins with an invocation to the Trinity. This invocation is almost identical with that which prefaces the Harleian, the Sloane, the Landsdowne, and, indeed, all the other manuscripts, except the Halliwell and the Cooke. From this fact we may justly infer that there was a common exemplar, an "editio princeps," whence each of these manuscripts was copied. The very slight verbal variations, such as "Father of Kings" in the Dowland, which is "Father of Heaven" in the others, will not affect this conclusion, for they may be fairly attributed to the carelessness of copyists. The reference to the Trinity in all these invocations is also a conclusive proof of the Christian character of the building corporations of the Middle Ages—a proof that is corroborated by historical evidences. As I have already shown, in the German Constitutions of the Stonemasons, the invocation is "In the name of the Father, Son, and Holy Ghost, in the name of the blessed Virgin Mary, and also in honor of the Four Crowned Martyrs"—an invocation that shows the Roman Catholic spirit of the German Regulations; while the omission of all reference to the Virgin and the Martyrs gives a Protestant character to the English manuscripts.

Next follows a descant on the seven liberal arts and sciences, the nature and intention of each of which is briefly described. In all of the manuscripts, even in the earliest—the Halliwell—will we find the same reference to them, and, almost literally, the same description. It is not surprising that these sciences should occupy so prominent a place in the Old Constitutions, as making the very foundation of Masonry, when we reflect that an equal prominence was given to them in the Middle Ages as comprehending the whole body of human knowledge. Thus Mosheim¹ tells us that in the 11th century they

¹ "Ecclesiast. Hist. XI. Cent.," part ii., chap. i.

were taught in the greatest part of the schools; and Holinshed, who wrote in the 16th century, says that they composed a part of the curriculum that was taught in the universities. Speculative Masonry continues to this day to pay an homage to these seven sciences, and has adopted them among its important symbols in the second degree. The connection sought to be established in the old manuscripts between them and Masonry, would seem to indicate the existence of a laudable ambition among the Operative Masons of the Middle Ages to elevate the character of their Craft above the ordinary standard of workmen—an elevation that, history informs us, was actually effected, the Freemasons of the Guild holding themselves and being held by others as of higher rank and greater acquirements than were the rough Masons who did not belong to the corporation of builders.

The manuscript continues by a declaration that Geometry and Masonry are identical. Thus, in enumerating and defining the seven liberal arts and sciences, Geometry is placed as the fifth, "the which science," says the Legend, "is called Masonry."¹

Now, this doctrine that Geometry and Masonry are identical sciences, has been held from the time of the earliest records to the present day by all the Operative Masons who preceded the 18th century, as well as by the Speculative Masons after that period.

In the ritual of the Fellow Craft's degree used ever since, at least from the middle of the last century, the candidate is informed that "Masonry and Geometry are synonymous terms." The Lodge-room, wherever Speculative Masonry has extended, shows, by the presence of the hieroglyphic letter in the East, that the doctrine is still maintained.

Gadicke, the author of a German *Lexicon of Freemasonry*, says, that as Geometry is among the mathematical sciences the one which has the most especial reference to architecture, we can, therefore, under the name of Geometry, understand the whole art of Freemasonry.

Hutchinson, speaking of the letter G, says that it denotes Geometry, and declares that as a symbol it has always been used by artificers—that is, architects—and by Masons.²

¹ Dowland MS. The Halliwell poem expresses the same idea in different words:

"At these lordys prayers they counterfetyd gemetry,
And gaf hyt the name of Masonry." (Lines 23, 24.)

² "Spirit of Freemasonry," lect. viii., p. 92, 2d edit.

The modern ritual maintains this legendary idea of the close connection that exists between Geometry and Masonry, and tells us that the former is the basis on which the latter, as a superstructure, is erected. Hence we find that Masonry has adopted mathematical figures, such as angles, squares, triangles, circles, and especially the 47th proposition of Euclid, as prominent symbols.

And this idea of the infusion of Geometry into Masonry as a prevailing element—the idea that is suggested in the Legend—was so thoroughly recognized, that in the 18th century a Speculative Mason was designated as a "Geometrical Mason."

We have found this idea of Geometry as the fundamental science of Masonry, set forth in the *Legend of the Craft*. It will be well to see how it was developed in the Middle Ages, in the authentic history of the Craft. Thus we shall have discovered another link in the chain which unites the myths of the Legend with the true history of the Institution.

The Operative Masons of the Middle Ages, who are said to have derived the knowledge of their art as well as their organization as a Guild of Builders from the Architects of Lombardy, who were the first to assume the title of "Freemasons," were in the possession of secrets which enabled them everywhere to construct the edifices on which they were engaged according to the same principles, and to keep up, even in the most distant countries, a correspondence, so that every member was made acquainted with the most minute improvement in the art which had been discovered by any other.¹ One of these secrets was the knowledge of the science of symbolism,² and the other was the application of the principles of Geometry to the art of building.

"It is certain," says Mr. Paley,³ "that Geometry lent its aid in the planning and designing of buildings"; and he adds that "probably the equilateral triangle was the basis of most formations."

The geometrical symbols found in the ritual of modern Freemasonry may be considered as the débris of the geometrical secrets of the Mediaeval Masons, which are now admitted to be lost.⁴ As

¹ Hope, "Historical Essay on Architecture."

² M. Maury ("Essai sur les Legendes Pieures du Moyen-Aye") gives many instances of the application of symbolism by these builders to the construction of churches.

³ "Manual of Gothic Architecture," p. 78.

⁴ Lord Lindsay, "Sketches of the History of Christian Art," ii., 14.

these founded their operative art on the knowledge of Geometry, and as the secrets of which they boasted as distinguishing them from the "rough Masons" of the same period consisted in an application of the principles of that science to the construction of edifices, it is not surprising that in their traditional history they should have so identified architecture with Geometry, and that with their own art of building, as to speak of Geometry and Masonry as synonymous terms. "The fifth science," says the Dowland MS., is "called Geometry, . . . the which science is called Masonrye." Remembering the tendency of all men to aggrandize their own pursuits, it is not surprising that the Mediaeval Masons should have believed and said that "there is no handycraft that is wrought by man's hand but it is wrought by Geometry."

In all this descant in the old manuscripts on the identity of Geometry and Masonry, the *Legend of the Craft* expresses a sentiment the existence of which is supported by the authentic evidence of contemporaneous history.

CHAPTER IX

THE LEGEND OF LAMECH'S SONS AND THE PILLARS

THE traditional history of Masonry now begins, in the *Legend of the Craft*, with an account of the three sons of Lamech, to whom is attributed the discovery of all sciences. But the most interesting part of the Legend is that in which the story is told of two pillars erected by them, and on which they had inscribed the discoveries they had made, so that after the impending destruction of the world the knowledge which they had attained might be communicated to the post-diluvian race.

This story is not mentioned in the Bible, but is first related by Josephus in the following words:

"They also [the posterity of Seth] were the inventors of that peculiar sort of wisdom which is concerned with the heavenly bodies and their order. And that their inventions might not be lost before they were sufficiently known, upon Adam's prediction that the world was to be destroyed at one time by the force of fire, and at another time by the violence and quantity of water, they made two pillars, the one of brick, the other of stone; they inscribed their discoveries on them both, that in case the pillar of brick should be destroyed by the flood, the pillar of stone might remain and exhibit those discoveries to mankind, and also inform them that there was another pillar of brick erected by them. Now this remains in the land of Siriad to this day."¹

Although this traditional narrative has received scarcely any estimation from scholars, and Josephus has been accused either of "incredible audacity or frivolous credulity,"² still it has formed the

¹ Josephus, "Antiquities of the Jews," B. I., ch. ii., Whiston's trans.

² "Incredibili audaciâ aut futili credulitate usus est," is the language of Hornius in his "*Geographia Vetus*." But Owen ("Theologomena," lib. iv., c. ii., 6), although inclined to doubt the story, thinks it not impossible if we suppose hieroglyphics like those of the Egyptians to have been used for the inscriptions, instead of letters.

foundation on which the Masonic Legend of the pillars has been erected. But in passing from the Jewish historian to the Legend-maker of the Craft, the form of the story has been materially altered. In Josephus the construction of the pillars is attributed to the posterity of Seth; in the Legend, to the children of Lamech. Whence was this important alteration derived?

The Dowland and all subsequent manuscripts cite the fourth chapter of Genesis as authority for the Legend. But in Genesis no mention is made of these pillars. But in the Cooke MS., which is of an earlier date, we can trace the true source of the Legend in its Masonic form, which could not be done until that manuscript was published.

To the Cooke MS. has been accorded the date of 1490. It differs materially in form and substance from the Halliwell MS., which preceded it by at least a century, and is the first of the Old Constitutions in which anything like the present form of the Legend appears.

The way in which the Legend of Lamech is treated by it, enables us to discover the true source whence this part of the *Legend of the Craft* was derived.

It must be remarked, in the first place, that the Halliwell poem, the earliest of the old manuscripts, the date of which is not later than the close of the 14th century, contains no allusion to this Legend of Lamech and his children. The Cooke MS. is the first one in which we find the details. The Cooke MS. is assigned, as has been before said, to the end of the 15th century, about the year 1490. In it the Legend of the pillars is given (from line 253 to 284) in the following words:

"And these iii brothern [the sons of Lamech] aforesayd, had knowlyche that God wold take vengans for synne other by fyre or watir, and they had greter care how they myght do to saue the sciens that they founde, and they toke her [their] conseil to gedyr and by all her [their] witts they seyde that were ij manner of stonn of suche vertu that the one wolde neuer brenne [burn] and that stonn is called marbyll and that other stonn that woll not synke in watir, and that stone is namyd laterus,¹ and so they deuysyd to wryte all the sciens that they had Found² in this ij stonys if that god wolde

¹ From the Latin "later," a *brick*.

² It is to be regretted that in nearly all the recent printed copies of the old manu-

take vengeans by fyre that the marbyll scholde not brenne. And yf god sende vengeans by watir that the other scholde not droune, and so they prayed her elder brother jobell that wold make ij pillers of these ij stones, that is to sey of marbill and of laterus, and that he wolde write in the ij pylers alle the sciens and crafte that alle they had founde, and so he did."

Comparing this Legend with the passage that has been cited from Josephus, it is evident that the Legend-maker had not derived his story from the Jewish historian. The latter attributes the building of the pillars to the children of Seth, while the former assigns it to the children of Lamech. How are we to explain this change in the form of the Legend? We can only solve the problem by reference to a work almost contemporary with the legendist.

Ranulph Higden, a Benedictine monk of St. Werburg's Abbey, in Chester, who died in the latter half of the 14th century, wrote a Universal history, completed to his own times, under the title of *Polychronicon*.

The *Polychronicon* was written in the Latin language, but was translated into English by Sir John Trevisa. This translation, with several verbal alterations, was published in London by William Caxton in 1482, about ten years before the date of the Cooke MS. With this work, the compiler of the Legend in the Cooke M S. appears to have been familiar. He cites it repeatedly as authority for his statements.

Thus he says: "Ye schal understonde that amonge all the craftys of the world of mannes crafte Masonry hath the most notabilite and moste parte of this sciens Gemetry as his notid and seyed in storiall as in the bybyll and in the master of stories. And in policronico a cronycle prynted."

Now the Legend of Lamech's children is thus given in Caxton's edition of the translation of Higden's *Polychronicon*.¹

scripts, the editors have substituted the double *ff* for the capital *F* which is in the original. The scribes or amanuenses of the Middle Ages were fond of employing capital letters often when there was really no use for them, but they never indulged in the folly of unnecessarily doubling initial letters. What the modern editors of the manuscripts have mistaken for a double *ff* was really the *ff* or **ff** the capital *F* of the scribes. This is not of much importance, but even in small things it is well to be accurate. Bro. Hughan, in his edition of the "Old Charges," is, as we might expect, generally correct in this particular. But sometimes, perhaps inadvertently, he has printed the double instead of the capital letter.

¹ Book II., ch. v.

"Caym Adams fyrste sone begate Enoch, he gate Irad, he gate Manayell, he gate Matusale, he gate Lameth. This Lameth toke twey wyves, Ada and Sella, and gate tweyne sons on Ada. Iabell that was fader of them that woned in tentes and in pauylons. And Tuball that was fader of organystre and of harpers. And Lameth gate on Sella Tubal cayn that was a smith worchyng with hamer, and his sister Noema, she found fyrst weuyng crafte.

"*Josephus*. Jabell ordayned fyrste flockes of beestes and marks to know one from another. And departed kyddes from lambes and yonge from the olde. *Petrus* Tubalcayn founde fyrst smythes crafte. Tuball had grete lykyng to here the hamers sowne. And soo he vused them moche in the accordé of melodye, but he was not finder of the instruments of musyke. For they were founde longe afterwarde."

The reader will at once perceive whence the composer of the Legend in the Cooke MS. derived his information about the family of Lamech. And it will be equally plain that the subsequent writers of the Old Constitutions took the general tone of their Legend from this manuscript.

The *Polychronicon*, after attributing the discovery of music to Pythagoras, proceeds to descant upon the wickedness of mankind immediately after the time of Seth, and repeats the biblical story of the intermarriage of the sons of God and the daughters of men, which he explains as signifying the sons of Seth and the daughters of Cain. Then follows the following passage:

"*Josephus*. That tyme men wyste as Adam and sayde, that they sholde be destroyed by fyre or elles by water. Therefore bookes that they hadde made by grete trauaille and studye, he closed them in two grete pylers made of marbill and of brent tyle. In a pyler of marbill for water and in a pyler of tyle for fyre. For it should be sauved by that maner to helpe of mankynde. Men sayth that the pyler of stone escaped the floode, and yet is in Syrya."

Here we find the origin of the story of the two pillars as related in the *Legend of the Craft*. But how can we account for the change of the constructors of these pillars from the children of Seth, as stated in *Josephus*, and from him in the *Polychronicon*, to the children of Lamech, as it is given in the Legend?

By the phrase "That tyme men wyste," or "at that time men

knew," with which Trevisa begins his translation of that part of Higden's work, he undoubtedly referred to the "tyme" contemporary with the children of Seth, of whom he had immediately before been speaking. But the writer of the Legend engaged in recounting the narrative of the invention of the sciences by the children of Lamech, and thus having his attention closely directed to the doings of that family, inadvertently, as I suppose, passed over or omitted to notice the passage concerning the descendants of Seth, which had been interposed by the author of the *Polychronicon*, and his eye, catching the account of the pillars a little farther on, he applied the expression, "that tyme," not to the descendants of Seth, but to the children of Lamech, and thus gave the Masonic version of the Legend.

I have called this ascription of the pillars to the children of Lamech a "Masonic version," because it is now contained only in the *Legend of the Craft*, those who do not reject the story altogether as a myth, preferring the account given by Josephus.

But, in fact, the error of misinterpreting Josephus occurred long before the *Legend of the Craft* was written, and was committed by one of the most learned men of his age.

St. Isidore, Bishop of Seville, who died in the year 636, was the author of many works in the Latin language, on theology, philosophy, history, and philology. Among other books written by him was a *Chronicon*, or Chronicle, in which the following passage occurs, where he is treating of Lamech:

"In the year of the world 1642, Lamech being 190 years old, begat Noah, who, in the five hundredth year of his age, is commanded by the Divine oracle to build the Ark. In these times, as Josephus relates, those men knowing that they would be destroyed either by fire or water, inscribed their knowledge upon two columns made of brick and of stone, so that the memory of those things which they had wisely discovered might not be lost. Of these columns the stone one is said to have escaped the Flood, and to be still remaining in Syria."¹

It is very evident that in some way the learned Bishop of Seville had misunderstood the passage of Josephus, and that to him the sons of Lamech are indebted for the honor of being considered the con-

¹ "Opera Isidori," ed. Matrii, 1778, tom, i., p. 125.

structors of the pillars. The phrase "his temporibus," *in these times*, clearly refers to the times of Lamech.

It is doubtful whether the author of the *Legend of the Craft* was acquainted with the works of Isidore, or had read this passage. His *Etymologies* are repeatedly cited in the Cooke manuscript, but it is through Higden, whose *Polychronicon* contains many quotations from the *Libri Etymologiarum* of the Spanish Bishop and Saint. But I prefer to assume that the Legend-maker got his ideas from the *Polychronicon* in the method that I have described.

In the last century a new Legend was introduced into Masonry, in which the building of these pillars was ascribed to Enoch. But this Legend, which is supposed to have been the invention of the Chevalier Ramsay, is altogether modern, and has no connection with the *Legend of the Craft*.

In borrowing the story of the antediluvian pillars from Josephus, through the *Polychronicon*, though they have made some confusion in narrating the incidents, the Old Operative Masons were simply incorporating into their *Legend of the Craft* a myth which had been universal among the nations of antiquity, for all of them had their memorial columns. Sesostris, the great Egyptian king and conqueror, sometimes called Sethos, or Seth, and who, Whiston thinks, has been confounded by Josephus with the Adamic Seth, erected pillars in all the countries which he conquered as monuments of his victories.

The *Polychronicon*, with which we see that the old Masons were familiar, had told them that Zoroastres, King of Bactria, had inscribed the seven liberal arts and sciences on fourteen pillars, seven of brass and seven of brick. Hercules was said to have placed at the Straits of Gades two pillars, to show to posterity how far he had extended his conquests.

In conclusion, it should be observed that the story of the pillars as inserted in the *Legend of the Craft* has exerted no influence on the modern rituals of Freemasonry, and is never referred to in any of the ceremonies of Ancient Craft Masonry. The more recent Legend of the pillars of Enoch belongs exclusively to the higher and more modern degrees. The only pillars that are alluded to in the primitive degrees are those of Solomon's temple. But these develop so important a portion of the symbolism of the Institution as to demand our future consideration in a subsequent part of this work.

CHAPTER X

THE LEGEND OF HERMES

THE next part of the *Legend of the Craft* which claims our attention is that which relates to Hermes, who is said to have discovered one of the pillars erected by the sons of Lamech, and to have communicated the sciences inscribed on it to mankind. This may, for distinction, be called "*The Legend of Hermes*"

The name has suffered cruel distortion from the hands of the copyists in the different manuscripts. In the Dowland MS. it is *Hermarynes*; in the Lansdowne, *Herminerus*; in the York, *Hermarines*; in the Sloane, 3,848, *Hermimes* and *Hermenes*, who "was afterwards called Hermes"; and worst and most intolerable of all, it is in the Harleian, *Hermaxmes*. But they all evidently refer to the celebrated Hermes Trismegistus, or the thrice great Hermes. The Cooke MS., from which the story in the later manuscripts is derived, spells the name correctly, and adds, on the authority of the *Polychronicon*, that while Hermes found one of the pillars, Pythagoras discovered the other. Pythagoras is not mentioned in any of the later manuscripts, and we first find him referred to as a founder in Masonry in the questionable manuscript of Leland, which fact will, perhaps, furnish another argument against the genuineness of that document.

As to Hermes, the Legend is not altogether without some historical support, although the story is in the Legend mythical, but of that character which pertains to the historical myth.

He was reputed to be the son of Taut or Thoth, whom the Egyptians deified, and placed his image beside those of Osiris and Isis. To him they attributed the invention of letters, as well as of all the sciences, and they esteemed him as the founder of their religious rites.

Hodges says, in a note on a passage of Sanchoniathon,¹ that "Thoth was an Egyptian deity of the second order. The Græco-Roman mythology identified him with Hermes or Mercury. He was reputed to be the inventor of writing, the patron deity of learning, the scribe of the gods, in which capacity he is represented signing the sentences on the souls of the dead." Some recent writers have supposed that Hermes was the symbol of Divine Intelligence and the primitive type of Plato's "Logos."

Manetho, the Egyptian priest, as quoted by Syncellus, distinguishes three beings who were called Hermes by the Egyptians. The first, or Hermes Trismegistus, had, before the deluge, inscribed the history of all the sciences on pillars; the second, the son of Agathodemon, translated the precepts of the first; and the third, who is supposed to be synonymous with Thoth, was the counsellor of Osiris and Isis. But these three were in later ages confounded and fused into one, known as Hermes Trismegistus. He was always understood by the philosophers to symbolize the birth, the progress, and the perfection of human sciences. He was thus considered as a type of the Supreme Being. Through him man was elevated and put into communication with the gods.

The Egyptians attributed to him the composition of 36,525 books on all kinds of knowledge.² But this mythical fecundity of authorship has been explained as referring to the whole scientific and religious encyclopaedia collected by the Egyptian priests and preserved in their temples.

Under the title of Hermetic books, several works falsely attributed to Hermes, but written, most probably, by the Neo-Platonists, are still extant, and were deemed to be of great authority up to the 16th century.³

It was a tradition very generally accepted in former times that this Hermes engraved his knowledge of the sciences on tables or pillars of stone, which were afterward copied into books.

Manetho attributes to him the invention of *stylæ*, or pillars, on which were inscribed the principles of the sciences. And Jamblichus

¹ Cory's "Ancient Fragments," edited by E. Richmond Hodges, Lond., 1876, p. 3.

² Jamblichus, citing Selencos, "de Mysteriis," segm. viii., c. 1.

³ Rousse, Dictionnaire *in voc.* The principal of these is the "Pœmander," or of the Divine Power and Wisdom.

says that when Plato and Pythagoras had read the inscriptions on these columns they formed their philosophy.¹

Hermes was, in fact, an Egyptian legislator and priest. Thirty-six books on philosophy and theology, and six on medicine, are said to have been written by him, but they are all lost, if they ever existed. The question, indeed, of his own existence has been regarded by modern scholars as extremely mythical. The Alchemists, however, adopted him as their patron. Hence Alchemy is called the Hermetic science, and hence we get Hermetic Masonry and Hermetic Rites.

At the time of the composition of the *Legend of the Craft*, the opinion that Hermes was the inventor of all the sciences, and among them, of course, Geometry and Architecture, was universally accepted as true, even by the learned. It is not, therefore, singular that the old Masons, who must have been familiar with the Hermetic myth, received it as something worthy to be incorporated into the early history of the Craft, nor that they should have adopted him, as they did Euclid, as one of the founders of the science of Masonry.

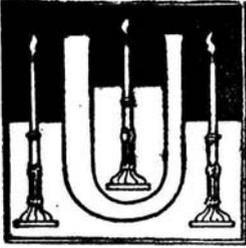

The idea must, however, have sprung up in the 15th century, as it is first broached in the Cook MS. And it was, in all probability, of English origin, since there is no allusion to it in the Halliwell poem.

The next important point that occurs in the *Legend of the Craft* is its reference to the Tower of Babel, and this will, therefore, be the subject of the next chapter.

¹ Juxta antiquas Mercurii columnas, quas Plato quondam, et Pythagoras cum lectitasent, philosophiam constituerunt. Jamblichus, "de Mysteriis," segm. i., c. 2.

CHAPTER XI

THE TOWER OF BABEL

NLIKE the legend of Hermes, the story of the Tower of Babel appears in the Halliwell poem, which shows, if my theory of the origin of that poem be correct, that the Legend was not confined at an early period to the English Masons. In the second of the two poems, which I have heretofore said are united in one manuscript, the legend of Babel, or Babylon, is thus given:¹

"Ye mow here as y do rede,
That many years after, for gret drede,
That Noee's flod was alle y-ronne,²
The tower of Bebyloine was begonne,
Also playne werk of lyme and ston,
As any mon schulde toke uppon,
Seven myle the heyghte shadweth the sonne.
King Nabugodonosor let hyt make
To gret strenthe for monus³ sake
Thaygh such a flod agayne schulde come,
Over the werke hyt schulde not nome,⁴
For they hadde so hye pride, with strange bost,
Alle that werke therfore was y-lost;
An angele smot hem so with dyveres speche,
That never won wyste what other schuld reche."⁵

The statements of this Halliwell Legend are very meagre, nor is it possible to say with any certainty whence the writer derived his details. From neither the Book of Genesis, nor Berosus, nor Josephus could he have derived the information which has given its peculiar form to the legend. The anachronism of making Nebuchadnezzar, who lived about sixteen centuries after the event, the builder of the

¹ Lines 535-550.

² Rain—Ang.-Sax. *rinan*, to rain—That Noah's flood would still rain.

³ Men's sake.

⁴ Get—should not get over the work—cover it.

⁵ Say.

tower is worthy of notice. It would appear that the writer of the poem had a general acquaintance with the well-known tradition of Babel, and that in loosely giving an account of it, he had confused the time and place of the erection and the supposed name of the builder. At all events, the subsequent Masonic legendists did not accept the Halliwell writer as authority, or, more probably, were wholly unacquainted with his poem. It did not exert any influence over the subsequent manuscripts.

The next time that the Babel legend appears is in the Cooke MS., written at least a century after the Halliwell. The legend, as there given, is in the following words:

"Hit is writen in the bibull Genesis, Cap. 1^{mo}, wo [how] that Cam, Noe's sone, gate Nembrothe, and he wax a myghty man upon the erthe, and he wax a stronge man, like a Gyant, and he was a grete kyng, and the bygynyng of his kyngdom was [the] trew kyngdom of Babilon and Arach and Archad and Calan¹ and the lond of Sennare. And this same Cam² he gan the towre of babilon, and he taught to his werkemen the craft of mesurie,³ and he had with him mony masonys mo than xl. thousand, and he louyd and chereshed them well, and hit is wryten in Policronicon and in the master of stories and in other stories mo, and this a part wytne [the] bybull in the same x. chapter where he seyeth that asure [Assur] was nye kynne to Nembrothe⁴ gede [went] owt of the londe of Senare, and he bylded the City Nunyve and Plateas and other mo. Thus he seyeth, 'De terra ilia et de Sennare egressus est Asure et edifiavit Nunyven et Plateas civitates et Cale et Iesu quoque inter Nunyven et hæc est Civitas Magna.'

"Reson wolde [requires] that we schold telle openly how and in what manner that the charges of masoncraft was fyrst foundyd and ho gaf [who gave] fyrste the name to hit of masonri. And ye schyll know well that hit [is] told and writen in Policronicon and in Methodus episcopus and Martyrus that Asur that was a worthy lord

¹ The names of cities.

² The word *Nembroth* had been first written in the manuscript, then erased, and the "Cam" (for Ham) inserted. But this correction is itself incorrect and incongruous with the rest of the legend.

³ Mesuri—measure. The author of the manuscript had previously maintained that *measure* and geometry were identical. So here "the craft of mesuri" means the craft of geometry, and geometry was always supposed to be the same as Masonry.

⁴ *Cam* originally written, then erased and *Nembrothe* inserted.

of Sennare, sende to Nembroth the kyng to sende hym masons and workemen of crafte that myght helpe hym to make his Cite that he was in wyll to make. And Nembroth sende hym xxx C. (3,000) of masons. And whan they scholde go and [he] sende hem forth he callyd hem by for hym [before him] and seyde to hem, ye must go to my cosyn Asure to helpe hym to bilde a cyte, but loke that ye be well governyd, and I shall give you a charge profitable for you and me. . . .

"And they resceyved the charge of him that was here [their] maister and here lorde, and went forth to Asure and bilde the cite of Nunyve in the country of Plateas and other cites mo, that men call Cale and lesen that is a gret cite bi twene Cale and Nunyve. And in this manner the craft of masonry was fyrst preferryd [brought forward] and charygd for a sciens."

We next meet with the Legend in the later manuscripts, in a form differing but little from that of the Cooke MS. The Dowland, which is the earliest of these manuscript Constitutions, and the date of which is supposed to be about the year 1550, has already been printed in this work. But for the convenience of the reader, in comparing the three forms of the Legend, so much of it as refers to the Babel legend is again inserted. It is in these words, which, it may be remarked, are very closely followed by all the subsequent manuscripts up to the beginning of the 18th century:

"At the makinge of the Tower of Babylon, there was Masonrye first made much of. And the Kinge of Babylon that height Nera-rothe was a mason himselfe, and loved well the science as it is said with masters of histories. And when the City of Ninyve and other citties of the East should be made, Nemrothe the Kinge of Babylon sent thither three score masons at the rogation of the Kinge of Nyneve, his cosen. And when he sent them forth he gave them a charge in this manner. . . . And this was the first tyme that ever Masons had any charge of his science."

In comparing the three forms of the Babylonish legend, which have here been cited, namely, as given in the Halliwell, the Cooke, and the Dowland MSS., we shall readily detect that there was a gradual growth of the details until the legend eventually took the shape which for a long time was accepted by the Craft.

In the Halliwell poem the legend is very brief, and by its abrupt termination would impress the opinion upon the reader that Ma-

sonry had no part in the building of the Tower of Babel, the only effect of which was to produce a confusion of languages and the dispersion of mankind. It was only "many years after" that the "craft of geometry," or Masonry, was taught by Euclid. In fact, the whole tendency of the Halliwell legend is to trace the origin of Masonry to Euclid and the Egyptians. In his account of the Tower of Babel, the writer of the Halliwell poem seems to have been indebted only to the Scriptural narrative, although he has confounded Nebuchadnezzar, the repairer of Babylon, with Nimrod, its original founder.

But the writer of the Cooke MS. took his details of the legend from another source. Only a few years before the composition of this manuscript, Caxton had published, and thus placed in the hands of the English Masons, Trevisa's translation of Ranulph Higden's *Polychronicon*, or Universal History. Of this book, rich in materials for legendary composition, the writer of the Cooke MS. readily availed himself. This he honestly acknowledges in several places. And although he quotes as other authorities Herodotus, Josephus, and Methodius, it is very evident that he knows nothing of these historians except from the citations from them made by the monk Higden in the *Polychronicon*.

The English Masons were probably already acquainted with the legend in the imperfect form in which it is given in the Halliwell poem. But for the shape which it assumed from the time of the composition of the Cooke MS., and which was adopted in the Dowland and all the later manuscripts, the Craft were, I think, undoubtedly indebted to the *Polychronicon* of the Monk of Chester, through its translation by Trevisa and its publication by Caxton.

There are two other forms of the Babylonian legend, of later date, which must be read before we can thoroughly understand the growth of that legend.

In 1723 Anderson published, by authority of the Grand Lodge of England, the *Constitutions of the Free-Masons*. Dr. Anderson was, no doubt, in possession of, or had access to, many sources of information in the way of old manuscripts which have since been lost, and with these, assisted in some measure by his own inventive genius, he has extended the brief *Legend of the Craft* to 34 quarto pages. But as this work was of an official character, and was written and published under the sanction of the Grand Lodge, and freely dis-

tributed among the Lodges and Masons of the time, the form of the Legend adopted by him was accepted by the Fraternity for a very long period as authentic. The Andersonian legend of the Tower of Babel molded, therefore, the belief of the English Craft for at least the whole of the 18th century.

Before giving any citations from the Andersonian version of the legend, it will be necessary to refer to another copy of the Old Constitutions.

Dr. Krause, the author of a learned Masonic work, entitled *The Three Oldest Documents of the Brotherhood of Freemasons*, published in that work in 1810 a German translation of a document which he calls the *York Constitutions*.¹

Of this document Krause gives the following account. He says that Bro. Schneider, of Altenberg, had written communication from Bro. Böttger, who stated that in the year 1799 he had seen at London a copy of the York Constitutions in a very old manuscript, consisting of 107 leaves in large folio, almost one-third of which he had been unable to read, because it was written in the early English language, and hence he was forced to employ a learned Englishman as an interpreter. Schneider made diligent inquiries after this manuscript, and eventually received a certified Latin translation, made in 1806, from which, in 1808, he composed a German version.

This document Krause supposes to be a genuine exemplar of the Constitutions enacted at York in 926. The original manuscript has, however, never been found; it is not referred to in any of the records of the old Grand Lodge of York, and seems to have remained in mysterious obscurity until seen in 1799 by this Bro. Böttger while on a visit to London.

For these reasons, Findel deems it a spurious document. Bro. Woodford, than whom there is none more competent to judge of questions of this kind, does not assent to this opinion, but, having his doubts, thinks the matter should remain in abeyance for the present. Bro. Hughan, another accomplished critic, believes that it is probably a compilation of the early part of the last century.

When the reader shall have collated the extracts about to be given from Anderson's *Constitutions* and the Krause MS., he will, I think, concur with me, that either Anderson had seen the latter

¹ "Die drei ältesten Kunsturkunden der Freimaurerbrüderschaft," vol. iii., p. 5.

manuscript, or that the author of it had been familiar with the work of Anderson. The general similarity of ideas, the collocation of certain words, and the use of particular phrases, must lead to the conclusion that one of the two writers was acquainted with the production of the other. Which was the earlier one is not easily determined, nor is it important, since they were almost contemporaneous documents, and, therefore, they both show what was the form assumed by the legend in the early part of the 18th century.¹

The Anderson version of the Babylon legend is as follows:²

"About 101 years after the Flood we find a vast number of 'em [the offspring of the sons of Noah], if not the whole race of Noah, in the vale of Shinar, employed in building a city and large tower, in order to make themselves a name and to prevent their dispersion. And tho' they carried on the work to a monstrous height, and by their vanity provoked God to confound their devices, by confounding their speech, which occasioned their dispersion; yet their skill in Masonry is not the less to be celebrated, having spent above 53 years in that prodigious work, and upon their dispersion carried the mighty knowledge with them into distant parts, where they found the good use of it in the settlement of their kingdoms, commonwealths, and dynasties. And tho' afterwards it was lost in most parts of the earth it was especially preserved in Shinar and Assyria, where Nimrod, the founder of that monarchy, after the dispersion built many splendid cities, as Ereck, Accad, and Calneh in Shinar, from whence afterwards he went forth into Assyria and built Nineveh, Rehoboth, Caleh, and Rhesin.

"In these parts, upon the Tigris and the Euphrates, afterwards flourished many learned Priests and Mathematicians, known by the names of Chaldees and Magi, who preserved the good science, Geometry, as the kings and great men encouraged the Royal Art."

The Krause MS., or the reputed *York Constitutions*, gives the Babylonian legend as follows:³

¹ The oftener I read this document, and the more I reflect on its internal evidence, the more I become convinced that it was written after the first edition of Anderson's "Constitutions," and, perhaps, after the second. Indeed, I am almost prepared to assign any part of the 18th century for the date of its composition.

² "Constitutions," 1st edition, p. 3.

³ See it in Hughan's "Old Charges of the British Freemasons," p. 80. It must be remembered that it is there an English version of the German which had been translated from a Latin translation of the original old English—*ut dicitur*. I have corrected a few errors in the translation in the "Old Charges" by a collation with the German of Krause

"Two generations after Noah, his descendants, proud of their knowledge, built on a plain, in the land of Shinar, a great city and a high tower of lime, stones, and wood, in order that they might dwell together, under the laws which their ancestor, Noah, had made known, and that the names of Noah's descendants might be preserved for all time. This arrogance, however, did not please the Lord in heaven, the lover of humility, therefore he caused a confusion of their speech before the tower was finished, and scattered them in many uninhabited lands, whither they brought with them their laws and arts, and then founded kingdoms and principalities, as the Holy Books often testify. Nimrod, in particular, built a town of considerable size; but Noah's son, Shem, remained in Ur, in the land of the Chaldeans, and propagated a knowledge of all the arts and sciences abroad, and taught also Peleg, Serug, Nahor, Terah, and Abraham, the last of whom knew all the sciences, and had knowledge, and continued to instruct the sons of free-born men, whence afterwards the numerous learned priests and mathematicians who have been known under the name of the wise Chaldeans."

We have now five different documents presenting three different forms of the Legend of the Tower of Babel:

1. *The Halliwell poem.* This Legend briefly recounts the facts of the building of the tower and the subsequent interruption of the work by the confusion of tongues and the dispersion of the builders. By an anachronism, Nebuchadnezzar is designated as the monarch who directed the construction. Not a word is said about the Institution of Masonry at that time. In fact, the theory of the Halliwell MS. seems rather to be that Masonry was, "many years after," taught for the first time in Egypt by Euclid.

The form of the Legend was never accepted by the Operative Masons of the Guild, certainly not after the end of the 15th century.

2. *The Cooke and later manuscripts.* This form of the Legend ascribes the origin of Masonry to the era of the building of the tower. Nimrod is made the Grand Master and makes the first charge—that is, frames the first Constitution that the Masons ever had. Asshur, the son of Shem, is also represented as a great Mason, the builder of the city of Nineveh, and to whom Nimrod sent workmen to assist him. From Babylon, Masonry was carried next into Egypt.

This form of the Legend, first presented in the Cooke MS., and

followed almost literally in the Dowland and all the succeeding manuscript Constitutions, seems to have embodied the prevailing belief of the Fraternity until about the end of the 17th or the beginning of the 18th century.

3. *The Andersonian* and the *York Constitutions*. In these the form of the Legend is greatly improved. The idea that Masonry was first established with appropriate laws at the Tower of Babel under the superintendence of Nimrod is still preserved. But Asshur no longer appears as a builder of cities, assisted by "his cosen," but is transformed, and correctly too, into the kingdom of Assyria, where Nimrod himself built Nineveh and other cities. And the next appearance of Masonry is said to be, not in Egypt, as in the preceding manuscripts, but is said to have been propagated after the dispersion by the Magi in the land of the Chaldeans.

This form of the Legend prevailed during perhaps the whole of the 18th century. It became the settled conviction of the Masons of that period that Masonry was instituted at the Tower of Babel by Nimrod and thence propagated to the Chaldeans.

Thus, in Smith's *Use and Abuse of Freemasonry*,¹ published in 1783, it is said that after the Flood the Masons were first called Noachidae, and afterwards sages or wise men, Chaldeans, etc. And Northouck, who, in 1784, by order of the Grand Lodge, published an edition of the *Constitutions* far superior to that of Anderson, says² that Nimrod founded the empire of Babylon, and that "under him flourished those learned mathematicians whose successors were styled *Magi*, or wise men."

But about the end of the last century, or, perhaps, still later, about the beginning of the present, this legendary account of the origin of Freemasonry began to be repudiated, and another one, in contradiction of the old manuscripts, was substituted for it.

Masonry was no longer believed to have originated at the Tower of Babel; the Temple of Jerusalem was considered as the place of its birth; and Solomon and not Nimrod was called the "first Grand Master."

Accepting this Legend, as we do the other Legends of Masonry, which, in the language of Oliver,³ "are entitled to consideration, though their authenticity may be denied and their aid rejected," we

¹ *Op. cit.*, p. 29.

² *Op. cit.*, p. II.

³ "Historical Landmarks," vol. i., lect. i., p. 53.

say that at the present day the Babylonish legend has assumed the present form.

Before the Flood there was a system of religious instruction which, from the resemblance of its legendary and symbolic character to that of Freemasonry, has been called by some authors "antediluvian Masonry." This system was preserved by Noah, and after the deluge was communicated by him to his immediate descendants. This system was lost at the time of the dispersion of mankind, and corrupted by the pagans in their Mysteries. But subsequently it was purified, and Freemasonry, as we now have it, was organized by the King of Israel at the time of the building of the temple.

This idea is well exemplified in the American ritual, which was, we have every reason to believe, invented about the end of the last century.

In this ritual, much of which is, however, being lost or becoming obsolete, from the necessary imperfections of oral transmission, the aspirant is supposed to represent one who is travelling from the intellectual blindness of the profane world into the brightness of Masonry, in whose arena he expects to find the light and truth, the search for which is represented by his initiation. This symbolic journey is supposed to begin at the Tower of Babel, where, in the language of the ritual, "language was confounded and Masonry lost," and to terminate at the Temple of Solomon, where "language was restored and Masonry found."

Hence, according to this latest form of the Legend, the Tower of Babel is degraded from the prominent place which was given to it in the older forms as the birth-place of Masonry, and becomes simply the symbol of the darkness and ignorance of the profane world as contradistinguished from the light and knowledge to be derived from an initiation into the system of Speculative Masonry.

But the old Masons who framed the *Legend of the Craft* were conforming more than these modern ritualists to the truth of history when they assigned to Babylon the glory of being the original source of the sciences. So far from its being a place of intellectual darkness, we learn from the cuneiform inscriptions that the Ancient Babylonians and their copyists, the Assyrians, were in possession of a wonderful literature. From the ruins of Babylon, Nineveh, and other ancient cities of the plain of Shinar tablets of terra cotta have been excavated, inscribed with legends in cuneiform

characters. The interpretation of this once unknown alphabet and language has yielded to the genius and the labors of such scholars as Grotefend, Botta, Layard, and Rawlinson.

From the fragments found at Kouyunjik, the modern Arabic name for the site of Nineveh, the late Mr. George Smith conjectured that there were in the Royal Library at Nineveh over ten thousand inscribed tablets, including almost every subject in ancient literature, all of which literature was borrowed by the Assyrians from Babylonian sources.¹

Speaking of this literature, Smith says that "at an early period in Babylonian history a great literary development took place, and numerous works were produced which embodied the prevailing myths, religion, and science of that day. Written, many of them, in a noble style of poetry, and appealing to the strongest feelings of the people on one side, or registering the highest efforts of their science on the other, these texts became the standards for Babylonian literature, and later generations were content to copy these writings instead of making new works for themselves."²

We see, therefore, that the Masons of the present day are wrong when they make Babel or Babylon the symbol of intellectual darkness, and suppose that there the light of Masonry was for a time extinguished, to be re-illuminated only at the Temple of Solomon.

And, again, the *Legend of the Craft* vindicates its character, and correctly clothes an historical fact in symbolic language, when it portrays Babylonia, which was undoubtedly the fountain of all Semitic science and architecture, as also the birth-place of Operative Masonry.

CHAPTER XII

THE LEGEND OF NIMROD

THE universal sentiment of the Masons of the present day is to confer upon Solomon, King of Israel, the honor of being their "first Grand Master." But the *Legend of the Craft* had long before, though there was a tradition of the temple extant, bestowed, at least by implication, that title upon Nimrod, the King of Babylonia and Assyria. It had attributed the first organization of a fraternity of craftsmen to him, in saying that he gave a charge to the workmen whom he sent to assist the King of Nineveh in building his cities. That is to say, he framed for them a Constitution, and, in the words of the Legend, "this was the first tyme that ever Masons had any charge of his science." It was the first time that the Craft were organized into a fraternity working under a Constitution or body of laws; and as Nimrod was the autocratic maker of these laws, it results as a necessary consequence, that their first legislator, legislating with dictatorial and unrestricted sovereign power, was also their first Grand Master.

This view of the early history of Masonry, presented to us by the *Legend of the Craft*, which differs so much from the modern opinion, although it has almost become obsolete, is worthy of at least a passing consideration.

Who was this Nimrod, who held so exalted a position in the eyes of the old legendists, and why had they assigned to him a rank and power which modern Craftsmen have thought to belong more justly to the King of Israel?

The answers to these questions will be an appropriate commentary on that part of the *Legend of the Craft* which contains the story of this old Assyrian monarch.

The estimation of the character of Nimrod which has been almost universally entertained by the ancients as well as the moderns,

obtains no support from the brief account of him contained in the Book of Genesis.

Josephus portrays him as a tyrant in his government of his people, vainglorious of his great power, a despiser and hater of God, and instigated by this feeling, the builder of a tower through which he would avenge himself on God for having destroyed the world.

For this view of the character of Nimrod, Josephus was in all probability indebted to the legends of the orientalist, which had clustered around the name of Nimrod, just as in ancient times legends always did cluster around great and mighty men.

Thus in the ancient chronicles he was represented as of gigantic stature, ten or twelve cubits in height. To him was attributed the invention of idolatry, and he is said to have returned to Chaldea after the destruction of the Tower of Babel, and to have persuaded the inhabitants to become fire-worshippers. He built a large furnace and commanded that all who refused the idolatrous worship should be cast into it. Among his victims were Abraham or Abram, the patriarch, and his father Terah. The latter was consumed, but the former by the interposition of a miracle came out unhurt. It is hardly necessary to say that such legends are altogether mythical and of no historical value.

The Scriptural account of Nimrod is a very brief and unsatisfactory one. It is merely that:

"Cush begat Nimrod; he began to be a mighty one in the earth. He was a mighty hunter before the Lord; wherefore it is said, Even as Nimrod the mighty hunter before the Lord. And the beginning of his kingdom was Babel, and Erech, and Accad, and Calneh, in the land of Shinar. Out of that land went forth Ashur and builded Nineveh, and the city Rehoboth, and Calah, and Resen between Nineveh and Calah: the same is a great city."¹

The most learned commentators have differed as regards the translation of the 11th verse. The Septuagint, the Vulgate, Luther's and our own recognized version say—"Out of that land went forth Ashur, and builded Nineveh." Higden, in the *Polychronicon*, which I have already said was the source of the Masonic Legend, adopts the same version. And the Cooke and the later manuscripts assign the building of Nineveh and the other cities of Assyria to Ashur, the son of Shem, and the kinsman of Nimrod, who assisted

¹ Genesis x. 8-12.

OPERATIVE MASONS OF THE 10th CENTURY

him with workmen. Such was the legend until the beginning of the 18th century.

But the best modern Hebrew scholars, such as Borhart, Le Clerc, Gesenius, and a great many others, insist that *Ashur* is not the name of a person, but of a country, and that the passage should be rendered: "Out of that land he (Nimrod) went forth to Assyria and builded Nineveh, and the city Rehoboth, and Calah, and Resen, between Nineveh and Calah." This is the form of the legend that was adopted by Dr. Anderson and by the author of the Krause document, and after the publication of Anderson's work it took the place of the older form.

The Craft have in both forms of the legend recognized Nimrod as a great Mason, nor have the vituperations of Josephus and the scandalous legends of the orientalisists had the slightest effect on their apparent estimation of that mighty monarch, the founder of nations and the builder of cities.

And now, in the latter part of the 19th century, comes a learned scholar,¹ well acquainted with the language of the ancient Babylonians and Assyrians, and with the complicated cuneiform alphabet in which it is clothed, and visiting the remains of the ruined cities which Nimrod had built, finds the fragments of twelve tablets which contain the history of a Babylonian monarch to whom he gave the provisional name of Izdubar and whom he identified with Nimrod. If this identification be correct, and there is certainly strong internal evidence in favor of it, we have in these tablets a somewhat connected narrative of the exploits of the proto-monarch of Babylon, which places his character in a more favorable light than that which had hitherto been received as the popular belief founded on the statement of Josephus and the oriental traditions.

The Izdubar legends, as Mr. Smith has called the inscriptions on these tablets, represent Nimrod as a mighty leader, a man of great prowess in war and in hunting, and who by his ability and valor had united many of the petty kingdoms into which the whole of the valley of the Euphrates was at that time divided, and thus established the first empire in Asia.² He was, in fact, the hero of the ancient

¹ The late George Smith, of the British Museum, the author of "Assyrian Discoveries," of the "Chaldean Account of Genesis," and many other writings in which he has given the learned result of his investigations of the cuneiform inscriptions.

² Smith, "Chaldean Account of Genesis," p. 174.

Babylonians, and therefore it was only natural that they should consecrate the memory of him who as a powerful and beneficent king had first given them that unity which secured their prosperity as a nation.¹

If we now refer to the *Legend of the Craft*, we shall find that the old Masonic legendist, although of course he had never seen nor heard of the discoveries contained in the cuneiform inscriptions, had rejected the traditional estimate of Nimrod's character, as well as the supposed results of the destruction of the Tower of Babel, and had wisely selected Babylon as the first seat and Nimrod (whoever may have been meant by that name) as the founder of the sciences, and especially of architecture.

In this there is a conformity of the legendary account with the facts of history, not usual with legendists.

"We must give," says Canon Rawlinson,² "the Babylonians credit for a genius and a grandeur of conception rarely surpassed, which led them to employ the labor whereof they had the command, in works of so imposing a character. With only 'brick for stone,' and at first only 'slime for mortar,' they constructed edifices of so vast a size that they still remain, at the present day, among the most enormous ruins in the world, impressing the beholder at once with awe and admiration."

The *Legend of the Craft* continually confounds Masonry, Geometry, and Architecture, or rather uses them as synonymous and convertible terms. It is not, therefore, surprising that it should have selected Babylon as the birth-place, and Nimrod as the founder of what they called "the science." The introduction of his name into the Legend, may be attributed, says the Rev. Bro. Woodford,³ "to an old assumption that rulers were patrons of the building sodalities." I rather imagine that the idea may be traced to the fact that Nimrod was supposed to be a patron of architecture and the builder of a great number of cities. The mediaeval Operative Masons were always ready to accept any distinguished architect or builder as a patron and member of the Craft. Thus the history of Masonry compiled by Dr. Anderson, out of the *Old Records*, is nothing but a history of architecture, and almost every king, prelate, or nobleman who had erected a palace, a church, or a castle, is called a distinguished Freemason and a patron of the Institution.

CHAPTER XIII

THE LEGEND OF EUCLID

HAVING disposed of the establishment of Masonry in Babylon, the *Legend of the Craft* next proceeds by a rapid transition to narrate the history of its introduction into Egypt. This Egyptian episode, which in reference to the principal action in it has been called the "Legend of Euclid," is found in all the old manuscripts.

It forms the opening feature of the Halliwell poem, being in that document the beginning of the history of Masonry; it is told with circumstantial minuteness in the Cooke MS., and is apparently copied from that into all the later manuscripts, where the important details are essentially the same, although we find a few circumstances related in some which are omitted in others.

Divesting the narrative of the archaic language of the manuscripts, the legend may be given as follows:

Once on a time, to use the story-teller's style, Abraham and his wife went to Egypt. Now Abraham was very learned in all the seven arts and sciences, and was accompanied by Euclid, who was his scholar, and to whom he had imparted his knowledge. At that time the lords or rich men of Egypt were in sore distress, because having a very numerous progeny of sons, for whom they could find no occupation, they knew not how they could obtain for them a livelihood.

In this strait they held a council and made proclamation that if any one could suggest a remedy, he should lay his plans before them, when he should be suitably rewarded.

Upon this Euclid presented himself and offered to supply these sons with an honest means of living, by teaching them the science of Geometry, provided they should be placed by their fathers under his exclusive control, so that he might have the power of ruling them according to the laws of the Craft.

To this proposition the Egyptian nobles gladly consented, and granted Euclid all the power that he had asked, and secured the grant to him by a sealed commission.

Euclid then instructed them in the practical part of Geometry, and taught them how to erect churches, castles, towers, and all other kinds of buildings in stone. He also gave them a code of laws for their government.

Thus did Euclid found in the land of Egypt the science which he named Geometry, but which has ever since been called Masonry.

I have said that while all the manuscripts agree in the prominent circumstances of this legend, there are in some of them a few discrepancies as to some of the minor details.

Thus the Halliwell poem makes no allusion to Abraham, but imputes the founding of Masonry to Euclid alone, and it will be remembered that the title of that poem is, "The Constitutions of the art of Geometry according to Euclid."

The Cooke MS. is far more full in details than either the Halliwell poem or the manuscripts that succeeded it. It says that Abraham taught Geometry to the Egyptians, and that Euclid was his scholar. But a few lines after, quoting St. Isidore as its authority, it says that Euclid was one of the first founders of Geometry, and that in his time there was an inundation of the Nile, and he taught them to make dykes and walls to restrain the water, and measured the land by means of Geometry, and divided it among the inhabitants, so that every man could enclose his own property with ditches and walls. In consequence of this the land became fertile, and the population increased to such a degree, that there was found a difficulty in finding for all employment that would enable them to live. Whereupon the nobles gave the government of their children to Euclid, who taught them the art of Geometry, so called because he had with its aid measured the land,¹ when he built the walls and ditches to separate each one's possession.

The needless repetitions and confusion of details in the Cooke MS. show that the author had derived the information on which he constructed his legend from various sources—partly from the authority of St. Isidore, as he is quoted in Higden's *Polychronicon*, and partly from the tradition of the Craft.

¹ Geometry from the Greek *γη* (ge) *land* and *μετρον* (metron) *measure*.

The later manuscripts have copied the details of the Legend as contained in the Cooke codex, but with many omissions, so as to give it the form in which it was known to the Craft in the 16th and 17th centuries.

Thus the Dowland MS., whose date is supposed to be about 1550, gives the story almost exactly as it is in the Halliwell poem, except that it adds Abraham and Sarah as *dramatis personæ*, making it in this respect coincide with the Cooke MS., and probably with the form of the original Legend.

In this it is followed by the York, No. 1 (1600), the Grand Lodge (1632), the Sloane (1646), the Lodge of Hope (1680), the Alnwick (1701), and even the Papworth MS., as late as 1714.

The Landsdowne MS. (1560), and the Antiquity (1686), have the Legend in a very imperfect form, and either did not copy or greatly curtailed the Dowland MS., as they but slightly refer to Egypt and to Euclid, and not at all to Abraham.

As to the reputation for great learning which the legendists have given to Abraham, although the Bible dwells only on his piety, they found their authority in Josephus, as well as in Isidore.

Josephus says that among the Egyptians he was esteemed as a very wise man, and that besides reforming their customs, he taught them arithmetic and astronomy.

It is evident, as has been already noticed, that the *Legend of the Craft* has been indebted for much of its materials to the *Antiquities* of Josephus, and the *Etymologies* of St. Isidore, and the *Polychronicon* of Ranulph Higden—the first two at second hand, in all probability through the citations of those works which are made in the third.

The Krause MS., which is said to have been translated from the English into the Latin, and afterward into German, and published by Dr. Krause,¹ gives the Legend in an entirely different form.

Notwithstanding that I have declared my belief that this document is spurious with a date of not earlier than the second decade, or more probably toward the middle of the 18th century, yet, as an indication of the growth and the change of the Legend at that period, it will be worth while to compare its form with that in the

¹ "Die drei ältesten Kunsturkunden," iii, 59-113.

older manuscripts, at least so far as relates to the Egyptian episode, which is in the following words:

"Abraham was skilled in all the sciences and continued to teach them to the sons of the freeborn, whence afterwards came the many learned priests and mathematicians who were known by the name of the Chaldean Magi. Afterwards, Abraham continued to propagate these sciences and arts when he came to Egypt, and found there, especially in Hermes, so apt a scholar, that the latter was at length called the Trismegistus of the sciences, for he was at the same time priest and natural philosopher in Egypt; and through him and a scholar of his the Egyptians received the first good laws and all the sciences in which Abraham had instructed him. Afterwards Euclid collected the principal sciences and called them Geometry. But the Greeks and Romans called them altogether Architecture.

"But in consequence of the confusion of languages, the laws and arts and sciences could not formerly be propagated until the people had learned to make comprehensible by signs that which they could not understand by words. Wherefore, Mizraim, the son of Cham, brought the custom of making himself understood by signs with him into Egypt, when he colonized a valley of the Nile. This art was afterwards extended into all distant lands, but only the signs that are given by the hands have remained in architecture; for the signs by figures are as yet known to but few.

"In Egypt the overflowings of the Nile afforded an opportunity to use the art of measurement, which had been introduced by Mizraim, and to build bridges and walls as a protection against the water; They used burnt stone and wood and earth for these purposes. Therefore when the heathen kings had become acquainted with this, they were compelled to prepare stone and lime and bricks and therewith to erect buildings, by which, through God's will, however, they became only the more experienced artists and were so celebrated that their art spread as far as Persia."

If the reader compares this legend of the Krause manuscript with that which is given by Dr. Anderson in the first edition of his *Constitutions*, he will be constrained to admit that both documents are derived from the same source, or that one of them is an abridged or an expository copy of the other. It is evident that the statement in Anderson is merely a synopsis of that more detailed narrative contained in the Krause Legend, or that it is an

expansion of the statement in the first edition of the *Constitutions*.

If the Krause MS. was written before Anderson compiled his history, it could not have been long anterior, and must have been composed between 1714, the date of the Papworth MS., which contains the Legend in its mediaeval form, and 1723, when Anderson published his work. Within this period the Masons sought to modify the old *Legend of the Craft*, so as to deprive it of its apparent absurdities, and to omit its anachronisms so as to give it the appearance of an authentic historical narrative.

Instead, therefore, of having the date of 926, which has been ascribed to it by Dr. Krause, his manuscript is, as Bro. Hughan thinks it, "a compilation of the early part of the last century." It is, however, important, as I have said, because it shows how the old Legend was improved and divested of its anachronisms.

It is certainly a very absurd anachronism to make Euclid the contemporary of Abraham, who lived more than two thousand years before him. Nor is it less absurd to suppose that Euclid invented Masonry in Egypt, whence it was carried to India, and practiced by King Solomon, since the great geometrician did not flourish until six centuries and a half after the construction of the Temple.

Considered, then, as an historical narrative, the Legend of Euclid is a failure. And yet it has its value as the symbolical development of certain historical facts.

The prominent points in this Legend being, of course, those on which the old believers of it most strenuously dwelt, are:

1. That Geometry is the groundwork of Masonry;
2. That Euclid was the most distinguished of all geometricians; and,
3. That the esoteric method of teaching this as well as all the other sciences which was pursued by the priests of Egypt, was very analogous to that which was adopted by the Operative Masons of the Middle Ages, in imparting to their disciples the geometric and architectural secrets, which constituted what they called the Mystery of the Craft.

The Legend, in fact, symbolizes the well-recognized fact, that in Egypt, in early times—of which there is no historical objection to make Abraham the contemporary—there was a very intimate connection between the science of Geometry and the religious system of the

Egyptians; that this religious system embraced also all scientific instruction; that this instruction was secret, and communicated only after an initiation,¹ and that in that way there was a striking analogy between the Egyptian system and that of the mediaeval Masons. And this fact of an analogy, the latter sought to embody in the apparent form of an historical narrative, but really in the spirit of a symbolic picture.

Thus considered, the *Legend of the Craft*, in its episode of Euclid and his marvelous doings in the land of Egypt, is divested of its absurdity, and it is brought somewhat nearer to the limits of historical verity than the too literal reader would be disposed to admit.

¹ Kendrick confirms this statement in his "Ancient Egypt," where he says: "When we read of foreigners (in Egypt) being obliged to submit to painful and tedious ceremonies of initiation, it was not that they might learn the secret meaning of the rites of Osiris, or Isis, but that they might partake of the knowledge of astronomy, physick, *geometry*, and theology."—(Vol. i., p. 383.)

CHAPTER XIV

THE LEGEND OF THE TEMPLE

FROM this account of the exploits of Abraham and his scholar Euclid, and of the invention of Geometry, or Masonry in Egypt, the *Legend of the Craft* proceeds, by a rapid stride, to the narrative of the introduction of the art into Judea, or as it is called in all of them, "the land of behest," or the land of promise.

Here it is said to have been principally used by King Solomon, in the construction of the temple at Jerusalem. The general details connected with the building of this edifice, and the assistance given to the King of Israel, by Hiram, King of Tyre, are related with sufficient historical accuracy, and were probably derived either directly or at second hand, through the *Polychronicon*, from the first Book of Kings, which, in fact, is referred to in all the manuscripts as a source of information.¹

The assumption that Freemasonry, as it now exists, was organized at the Temple of Solomon, although almost universally accepted by Masons who have not made Masonry a historical study, but who derive their ideas of the Institution from the mythical teachings of the ritual, has been utterly rejected by the greater part of the recent school of iconoclasts, who investigate the history of Freemasonry by the same methods which they would pursue in the examination of any other historical subject.

The fact, however, remains, that in the *Legend of the Craft* the Temple is prominently and definitely referred to as a place where Masons congregated in great numbers, and where Masonry was confirmed or established, and whence it traveled into other countries.²

¹"As it is said in the Bible, in the third book of Kings," are the words of the Cooke MS. In the canon of Scripture as then used, the two books of Samuel were called the first and second of Kings. The third book of Kings was then the first according to the present canon.

²"And thus was that worthy Science of Masonry confirmed in the country of Jerusalem, and in many other kingdoms."—*Dowland MS.*

Considering the *Legend of the Craft* as merely a narrative of the rise and progress of architecture in its connection with a peculiar architectural association, it was natural that in such a narrative some reference should be made to one of the most splendid specimens of ancient architectural art that the ancient world had exhibited. And since this Temple was, by its prominence in the ritual of Jewish worship, intimately connected with both the Jewish and Christian religions, we shall be still less surprised that an association not only so religious, but even ecclesiastical as mediaeval Masonry was, should have considered this sacred edifice as one of the cradles of its Institution.

Hence we find the Temple of Jerusalem occupying a place in the *Legend of the Craft* which it has retained, with many enlargements, to the present day.

But there is a difference in the aspect in which this subject of the Temple is to be viewed, as we follow the progress of the Order in its transition from an Operative to a Speculative Institution.

Originally referred to by the legendists as a purely historical fact, whose details were derived from Scripture, and connected by a sort of *esprit du corps*, with the progress of their own association, it was retained during and after the development of the Order into a Speculative character, because it seemed to be the very best foundation on which the religious symbolism of that Order could be erected.

But notwithstanding that the masses of the Institution, learned as well as unlearned, continue to accept the historical character of this part of the Legend, the Temple is chiefly to be considered in a symbolic point of view. It is in this aspect that we must regard it, and in so doing we shall relieve the Legend of another charge of absurdity. It is true that we are unable now to determine how much of true history and how much of symbolism were contemplated by the authors of the Legend, when they introduced the Temple of Jerusalem into that document as a part of their traditional narrative. But there is a doubt, and we can not now positively assert that the mediaeval Freemasons had not some impression of a symbolic idea when they incorporated it into their history.

The Temple might, indeed, from its prominence in the ritual, be almost called the characteristic symbol of Speculative Masonry. The whole system of Masonic Symbolism is not only founded on

the Temple of Jerusalem, but the Temple idea so thoroughly permeates it that an inseparable connection is firmly established, so that if the Temple symbol were obliterated and eliminated from the system of Freemasonry—if that system were purged of all the legends and myths that refer to the building of the Solomonic Temple, and to the events that are supposed to have then and there occurred, we should have nothing remaining by which to recognize and identify Speculative Masonry, as the successor of the Operative System of the Middle Ages. The history of the Roman Empire with no account of Julius Caesar, or of Pompey, or that of the French Revolution, with no allusion to Louis XVI., or to Robespierre, would present just as mutilated a narrative as Freemasonry would, were all reference to the Temple of Solomon omitted.

Seeing, then, the importance of this symbol, it is proper and will be interesting to trace it back through the various exemplars of the *Legend of the Craft* contained in the Old Constitutions, because it is to that Legend that modern Freemasonry owes the suggestion at least, if not the present arrangement and formulas of this important symbol.

In the oldest Constitution that we have, the one known as the Halliwell MS., whose date is supposed not to be later than the end of the 14th century, there is not the least allusion to the Temple of Solomon, which is another reason why I ascribe to that document, as I have before said, an origin different from that of the other and later manuscripts.

The word *temple* occurs but once in the entire poem, and then it is used to designate a Christian church or place of worship.¹ But in the Cooke MS., written, as it is estimated, about a century afterward, there are ample references to the Solomonic Temple, and the statement made in the *Legend of the Craft* is for the first time enunciated.

After this, there is not a Constitution written in which the same narrative is not repeated. There does not appear in any of them, from the Landsdowne MS. in 1560 to the Papworth in 1701, any enlargement of the narrative or any development of new occur-

¹ "He made the bothe halle and eke bowre,
And hye *tempuls* of gret honoure,
To sport hym yn bothe day and nighth,
And to worschepe hys God with all hys myght."

(Lines 63-66).

rences. Each of them dilates, in almost the same words, upon the Temple of Solomon as connected with Masonry in many words, and gives elaborate details of the construction of the edifice, of the number of Masons employed, how they were occupied in performing other works of Masonry, and, finally, how one of them left Jerusalem and extended the art into other countries. We thus see that up to the end of the 17th century the *Legend of the Craft* in all its essential details continued to be accepted as traditionary history.

In the beginning of the 18th century the Legend began to assume a nearer resemblance to its present form. The document already referred to as the Krause MS., and which Dr. Krause too hastily supposed was a copy of the original *York Constitutions* of 926, is really, as I have heretofore shown, a production of the early part of the 18th century. In this document the Legend is given in the following words:

"Although, by architecture great and excellent buildings had already been everywhere constructed, they all remained far behind the holy Temple, which the wise King Solomon caused to be erected in Jerusalem, to the honor of the true God, where he employed an uncommonly large number of workmen, as we find in the Holy Scriptures; and King Hiram of Tyre also added a number to them. Among these assistants who were sent was King Hiram's most skilful architect, a widow's son, whose name was Hiram Abif, and who afterwards made the most exquisite arrangements and furnished the most costly works, all of which are described in the Holy Scriptures. The whole of these workmen were, with King Solomon's approval, divided into certain classes, and thus at this great building was first founded a worthy Society of Architects."

Whether the author of the Krause MS. had copied from Anderson, or Anderson from him, or both from some other document which is no longer extant, is a question that has already been discussed. But the description of the Temple and its connection with the history of Masonry, are given by Dr. Anderson with much of the features of the Krause form of the Legend, except that the details are more copious. Now, what was taught concerning the Temple by Anderson in his History contained in the first edition of the *Constitutions*, although afterward polished and perfected by Preston and other ritual makers, is substantially the same as that which is taught at the present day in all the Lodges.

Therefore, notwithstanding that Dr. Krause asserts,¹ that "the Temple of Solomon is no symbol, certainly not a prominent one of the English system," I am constrained to believe that it was one of the prominent symbols alluded to in the Mediaeval Legend, and that the symbol of the Temple upon which so much of the symbolism of Modern Speculative Masonry depends, was, in fact, suggested to the revivalists by the narrative contained in the *Legend of the Craft*.

Whether the Operative Masons of the Middle Ages, who seem to have accepted this Legend as authentic history, had also, underlying the narrative, a symbolic interpretation of the Temple and of certain incidents that are said to have occurred in the course of its erection, as referring to this life and the resurrection to a future one, or whether that interpretation was in existence at the time when the *Legend of the Craft* was invented, and was subsequently lost sight of, only to be recovered in the beginning of the 18th century, are questions that will be more appropriately discussed in succeeding pages of this work, when the subject of the myths and symbols of Freemasonry is under consideration.

But it is evident that between the narrative in the Legend concerning the Temple, with its three builders, the Kings of Israel and Tyre, and Solomon's Master of the Works, and the symbolism of Modern Speculative Masonry in allusion to the same building and the same personages, there has been a close, consecutive connection.

Hence, again, we find that the *Legend of the Craft* is of value in reference to the light which it throws on the progress of Masonic science and symbolism, which otherwise it would not possess, if it were to be considered as a mere mythical narrative without any influence on history.

Before concluding this subject, it will be necessary to refer to the name of the chief builder of the Temple, and whose name has undergone that corruption in all the manuscripts to which all proper names have been subjected in those documents.

Of course, it is known, from the testimony of Scripture, that the real name and title of this person, as used in reference to King Solomon and himself, was *Hiram Abif* that is, "his father Hiram."²

¹ "Die drei ältesten Kunstskunden," vol. i., p. 155, note 41.

² When the King of Tyre speaks of him, it is as *Hiram Abi*, that is, "My father Hiram," 2 Chron. ii. 13.

This Hebrew appellative is found for the first time in Masonic documents in Anderson's *Constitutions*, and in the Krause MS., both being of the date of the early part of the 18th century. Previous to that period we find him variously called in all the Old Manuscripts, from the Dowland in 1550 to the Alnwick in 1701, Aman, Amon, Aynone, Aynon, Anon, and Ajuon. Now, of what word are these a corruption?¹

The Cooke MS. does not give any name, but only says, that "the King's son of Tyre was Solomon's Master Mason." All the other and succeeding manuscripts, without exception, admit this relation. Thus the Dowland, in which it is followed by all the others, says that King Hiram "had a son that was called AYNON, and he was a Master of Geometry, and was chief Master of all Solomon's Masons."

The idea was thus established that this man was of royal dignity, the son of a King, and that he was also a ruler of the Craft.

Now, the Hebrew word *Adon* denotes a lord, a prince, a ruler or master. It is, in short, a title of dignity. In the Book of Kings we meet with Adoniram, who was one of the principal officers of King Solomon, and who, during the construction of the Temple, performed an important part as the chief or superintendent of the levy of thirty thousand laborers who worked on Mount Lebanon.

The old Masons may have confounded this person with Hiram from the similarity of the terminational syllables. The modern Continental Masons committed the same error when they established the Rite of Adonhiram or Adoniram, and gave to Hiram Abif the title of Adon Hiram, or the Lord or Master Hiram. If the Old Masons did this, then it is evident that they abbreviated the full name and called him *Adon*.

But I am more inclined to believe that the author of the first or original old manuscript, of which all the rest are copies, called the chief builder of Solomon *Adon*, Lord and Master, in allusion to his supposed princely rank and his high position as the chief builder or Master of the Works at the Temple.

¹The Papworth MS., whose supposed date is 1714, rejects all these words and calls him *Benaim*, which is a misspelling of *Bonaim*, *builders*, and that a grammatical error for *Boneh*, the Builder. The writer had evidently got an inkling of the new form which the Legend was beginning to assume. Anderson, it will be recollected, speaks of the "Bonai, or builders in stone."

The corruption from *Adon* to *Aynon*, or *Amon*, or even *Ajuon*, is not greater than what occurs in other names in these manuscripts, as where *Hermes* is transmuted into *Hermarines*, and *Euclid* into *Engtet*. Indeed the copyists of these mediaeval documents appear to have had a Gallic facility in corrupting the orthography of all foreign names, very often almost totally destroying their identity.

As to the real meaning of Hiram Abif, either as a historic or symbolic character, that topic will be thoroughly considered in another part of this work, when the subject of Masonic Symbols comes to be considered. The topic of the corruption of the name in the old manuscripts, and its true signification, will again be treated when I come to investigate the "Legend of Hiram Abif."

The Legend of the Temple could not be appropriately completed without a reference to Solomon, King of Israel, and some inquiry as to how he became indebted for the important place he has held in mediaeval Freemasonry.

The popularity of King Solomon among the Eastern nations is a familiar fact, known not only to Oriental scholars, but even to those whose knowledge on the subject is confined to what they have learned from their youthful reading of the *Arabian Nights' Entertainments*. Among the Arabians and the Persians, the King of Israel was esteemed as a great magician, whose power over the genii and other supernatural beings was derived from his possession of the Omnic Name, by the use of which he accomplished all his wonderful works, the said name being inscribed on his signet-ring.

It is not singular, seeing the communication which took place before and after the Crusades between the East and the West, that the wise son of David should have enjoyed an equal popularity among the poets and romancers of the Middle Ages.

But among them the character that he sustains is not that of a great magician, so much as that of a learned philosopher. Whenever a Norman romancer or a Provençal minstrel composed a religious morality, a pious declamation, or a popular proverb, it was the name of Solomon that was often selected to "point the moral or adorn the tale."

Unlike the Orientalists, whose tendencies were always toward the mystical, the mediaeval writers most probably derived their opinion of the King of Israel, from the account of him and of his writ-

ings in the Bible. Now, there he is peculiarly distinguished as a proverbialist.

Proverbs are the earliest outspoken thought of the people, and they precede, in every nation, all other forms of literature. It was therefore to be expected, that at the awakening of learning in the Middle Ages, the romancers would be fascinated by the proverbial philosophy of King Solomon, rather than by his magical science, on which the Eastern fabulists had more fondly dwelt.

Legrand D'Aussy, in his valuable work *On the Fables and Romances of the 12th and 13th Centuries*, gives two interesting specimens from old manuscripts, of the use made by their writers of the traditional reputation of King Solomon.

The first of these is a romance called "The Judgment of Solomon." It is something like the Jewish story of the two mothers. But here the persons upon whom the judgment is to be passed are two sons of the Prince of Soissons. The claim advanced was for a partition of the property. To determine who was better entitled to be the heir, by the reverence he might exhibit for the memory of his father, Solomon required each to prove his knightly dexterity by transfixing a mark with his lance, and that mark was to be the body of his dead father. The elder readily complied with the odious condition. The younger indignantly refused. To him Solomon decreed the heritage.

We see here how ready these romancers of the Middle Ages were to invent a narrative and fit it into the life of their favorite Solomon. The makers of the Masonic *Legend of the Craft*, who were their contemporaries, promptly followed their example. There is in that Legend, as we have seen, some anachronisms, but none more absurd than that which makes a Prince of Soissons, who could not have been earlier than the time of Clovis, in the 6th century, the contemporary of a Jewish monarch who lived at least sixteen centuries before Soissons was known as a kingdom.

But it shows us the spirit of the age and how Legends were fabricated. We are thus prepared to form a judgment of the Masonic myths.

The Middle Ages also attributed to King Solomon a very familiar acquaintance with the science of astrology. In so doing they by no means borrowed the Oriental idea that he was a great magician; for astrology formed no part of Eastern occult magic. The

mediaeval astrologer was deemed a man of learning, just as at this day is the astronomer. Astrology was, in fact, the astronomy of the Middle Ages. Solomon's astrological knowledge was therefore only a part of that great learning for which he had the reputation.

In the collection of unpublished *Fabliaux et Contes*, edited by M. Meon, is a poem entitled, "Le Lunaire que Salemon fist"; that is, "The Lunary which Solomon made."

The lunary or lunarium was a table made by astrologers to indicate the influence exerted by the moon on human affairs.

The poem, which consists of 910 lines, written in the old French or Norman language, contains directions for the conduct of life, telling what is to be done or what omitted on every day of the month. The concluding lines assign, without hesitation, the authorship to Solomon, while it pays the mediaeval tribute to his character:

"Here is ended the lesson
 Made by the good King Solomon,
 To whom in his life God gave
 Riches and honor and learning,
 More than to any other born
 Or begotten of woman."

The canonical book of Proverbs gave the writers of the Middle Ages occasion to have an exalted opinion of Solomon as a maker of those pithy sayings—a characteristic of his genius of which the Orientals seem to have been unmindful.

One of the most remarkable works of mediaeval literature is a poem by the Comte de Bretagne, entitled "Proverbs of Marcol and Solomon."

This Marcol is represented as a commentator, or rather, perhaps, a rival of King Solomon. The work is a poem divided into stanzas of six lines each. The first three lines contain a proverb of Solomon; the next three another proverb on the same subject, and in response, by Marcol.

There is another mediaeval poem in the collection of M. Meon, entitled "Of Marco and Solomon." The responsive style is the same as that of the Comte de Bretagne, but the one hundred and thirty-seven proverbs which it contains are all new.

But still more apposite to the present inquiry is the fact that among the mediaeval writers Solomon bore the reputation of an

artisan of consummate skill. He was like the Volund or Wieland of the Scandinavian and Teutonic myths—the traditional smith who fabricated the decorations of chambers, the caparison of war-horses, and the swords and lances of cavaliers. In the poems of the Middle Ages, whenever it becomes necessary to speak of any of these things as having been made with exquisite and surpassing skill, it is said to be "the work of Solomon"—*l'uevre Salemon*.

But enough has been said to show that King Solomon was as familiar to the romancers of the Middle Ages as he was to the Jews of Palestine or to the Orientalists of Arabia and Persia. Philip de Thuan, who, in the 12th century, wrote his *Bestiary*, a sort of natural history spiritualized, says that by Solomon was signified any wise man—*Sacez par Salemuon sage gent entendum*.

Now, about the same time that these fable-makers and song-writers of the 12th, 13th, and 14th centuries were composing these stories about King Solomon, the makers of the Masonic *Legend of the Craft* were inventing their myths about the same monarch and the Temple which he erected.

This is a concurrence of time which suggests that possibly the popularity of King Solomon with the romancers of the Middle Ages made the incorporation of his name in the Masonic Legend less difficult to those who framed that mythical story.

We might, indeed, be led to suspect that the use of Solomon in their Legends and traditions was first suggested to the Stonemasons and to the cognate associations, such as the "Compagnons de la Tour" of France, from the frequent references to it by the contemporary romancers.

But the subsequent myths connected with Solomon as the head of the association of Masons at the Temple were, at a much later period, borrowed, in great part, from the Talmudists, and have no place among the song-writers and fabulists of the Middle Ages.

CHAPTER XV

THE EXTENSION OF THE ART INTO OTHER COUNTRIES

THE *Legend of the Craft* next proceeds to narrate how Masonry was extended "into divers countryes," some of the Masons traveling to increase their knowledge of their art, and others to extend that which they already possessed.

This subject is very briefly treated in the different manuscripts. The Halliwell poem says nothing of the progressive march of Masonry, except that it details almost as an episode the persecution of the "Four Crowned Martyrs" as Christian Masons, in the reign of the Roman Emperor Diocletian, and we should almost be led to infer from the tenor of the poem that Masonry was introduced directly into England from Egypt.

The Cooke MS. simply says that from Egypt Masonry "went from land to land and from kingdom to kingdom," until it got to England.

The later manuscripts are a little more definite, although still brief. They merely tell us that skillful craftsmen largely traveled into various countries, some that they might acquire more knowledge and skill, and others to teach those who had but little skill.

There is certainly nothing that is mythical or fabulous in this statement. Every authentic history of architecture concurs in the statement that at an early period the various countries of Europe were perambulated by bodies of builders in search of employment in the construction of religious and other edifices. The name, indeed, of "Traveling Freemasons" which was bestowed upon them, is familiar in architectural historical works.¹

Indeed, as Mr. George Godwin says, "There are few points in the Middle Ages more pleasing to look back upon than the existence

¹ See Hope's "Historical Essay on Architecture."

of the associated Masons; they are the bright spot in the general darkness of that period, the patch of verdure when all around is barren."¹ But this interesting subject will be more fully discussed in another part of this work, when we come to treat of the authentic history of Masonry. This portion of the Legend can not be said to belong to the prehistoric period.

It is sufficient, for the present, to have shown that in this part, as elsewhere, the *Legend of the Craft* is not a merely fictitious narrative, but that the general statement of the extension of Freemasonry throughout Europe at an early period is confirmed by historical evidence.

On examining the *Legend of the Craft*, it will be found to trace the extension of Masonry through its successive stages of progress from Babylon and Assyria to Egypt, from Egypt to Judea, from Judea to France, and from France to England. Accepting Masonry and the art of building as synonymous terms, this line of progress will not be very adverse, with some necessary modifications, to that assumed to be correct by writers on architecture. But, as I have just said, the consideration of this subject belongs not to the prehistoric, but to the historic period of the Society.

¹ "The Builder," vol. ix., p. 463.

CHAPTER XVI

THE LEGEND OF CHARLES MARTEL AND NAMUS GRECUS

THE Legend, now approaching the domain of authentic history, but still retaining its traditional character, proceeds to narrate, but in a very few words, the entrance of Masonry into France.

This account is given in the following language in the Dowland manuscript:

"And soe it befell that there was one curious Mason that height MAYMUS GRECUS, that had been at the making of Solomon's temple, and he came into France, and there he taught the science of Masonrye to men of France. And there was one of the Regal lyne of Fraunce, that height CHARLES MARTELL; and he was a man that loved well such a science, and drew to this MAYMUS GRECUS that is above said, and learned of him the science, and tooke upon him the charges and manners; and afterwards, by the grace of God, he was elect to be Kinge of France. And whan he was in his estate, he tooke Masons and did helpe to make men Masons that were none; and he set them to worke, and gave them both the charge and the manners and good paie, as he had learned of other Masons; and confirmed them a Charter from yeare to yeare, to holde their semble wher they would; and cherished them right much; and thus came the science into France."

This Legend is repeated, almost word for word, in all the later manuscripts up to the year 1714.

It is not even alluded to in the earliest of all the manuscripts—the Halliwell poem—which is another proof that that document is of German origin.

The Cooke MS. has the Legend in the following words:

"Sumtyme ther was a worthye kyng in Frauns, that was clepyd Carolus secundus that ys to sey Charlys the secunde. And this Charlys was elyte [elected] kyng of Frauns by the grace of God and by lynage [lineage] also. And sume men sey that he was elite

[elected] by fortune the whiche is fals as by cronycle he was of the kynges blode Royal. And this same kyng Charlys was a mason bifor that he was kyng. And after that he was kyng he lovyd masons and cherschid them and gaf them chargys and mannerys at his devise the whiche sum ben yet used in fraunce and he ordeynyd that they scholde have a semly [assembly] onys in the yere and come and speke togedyr and for to be reuled by masters and felows of thynges amysse."¹

The absence of all allusion to *Namus Grecus* (a personage who will directly occupy our attention) in the Cooke document is worthy of notice.

When Dr. Anderson was putting the *Legend of the Craft* into a modern shape, he also omitted any reference to *Namus Grecus* but he preserved the spirit of the Legend, so far as to say, that according to the old records of Masons, Charles Martel "sent over several expert craftsmen and learned architects into England at the desire of the Saxon kings."²

I think it will be proved, when in the course of this work the authentic history of Masonry comes to be treated, that the statement in the *Legend of the Craft* in relation to the condition of the art in France during the administration of Charles Martel is simply a historical fact. In claiming for the "Hammerer" the title of King of France, while he assumed only the humble rank of Duke of the Franks and Mayor of the Palace, the legendists have only committed a historical error of which more experienced writers might be guilty.

The introduction of the name of *Namus Grecus*, an unknown Mason, who is described as being the contemporary of both Solomon and of Charles Martel, is certainly an apparent anachronism that requires explanation.

This *Namus Grecus* has been a veritable sphinx to Masonic antiquaries, and no *Œdipus* has yet appeared who could resolve the riddle. Without assuming the sagacity of the ancient expounder of enigmas, I can only offer a suggestion for what it may be considered worth.

I suppose *Grecus* to be merely an appellative indicating the fact that this personage was a Greek. Now, the knowledge of his exist-

¹ Cooke MS., lines 576-601.

² "Constitutions," ed. 1723, p. 30.

ence at the court of Charles Martel was most probably derived by the English legendist from a German or French source, because the *Legend of the Craft* is candid in admitting that the English Masons had collected the writings and charges from other countries. Prince Edwin is said to have made a proclamation that any Masons who "had any writing or understanding of the charges and the manners that were made before in this land [England] or in any other, that they should shew them forth." And there were found "some in French, some in Greek, some in English, and some in other languages."

Now, if the account and the name of this Greek architect had been taken from the German, the text would most probably have been "ein Maurer *Namens Grecus*"; or, if from the French, it would have been "un Maçon *nommé Grecus*." The English legendist would, probably, mistake the words *Namens Grecus*, or *nommé Grecus*, each of which means "he was named Grecus," or, literally, "a Mason by the name of Grecus," for the full name, and write him down as *Namus Grecus*. The *Maymus* in the Dowland MS. is evidently a clerical error. In the other manuscripts it is *Namus*. The corrected reading, then, would be—"there was a Mason named (or called) a Greek."

It can not be said that it is not probable that any legendist would have fallen into such an error when we remember how many others as great, if not greater, have been perpetrated in these *Old Records*. See, for instance, in these manuscripts such orthographical mistakes as *Hermarines* for *Hermes*, and *Englet* for *Euclid*; to say nothing of the rather ridiculous blunder in the Leland MS., where *Pythagore*, the French form of *Pythagoras*, has suffered transmutation into *Peter Gower*. So it is not at all unlikely that *Namens Grecus*, or *nommé Grecus*, should be changed into *Namus Grecus*.

The original Legend, in all probability meant to say merely that in the time of Charles Martel, a Greek artist, who had been to Jerusalem, introduced the principles of Byzantine architecture into France.

Now, history attests that in the 8th century there was an influx of Grecian architects and artificers into Southern and Western Europe, in consequence of persecutions that were inflicted on them by the Byzantine Emperors. The Legend, therefore, indulges in no spirit of fiction in referring to the advent in France, at that period, of one of these architects.

It is also a historical fact that Charles the Great of France was a liberal encourager of the arts and sciences, and that he especially promoted the cultivation of architecture on the Byzantine or Greek model in his dominions.

Dr. Oliver, in the second edition of the *Constitutions*, repeats the Legend with a slight variation. He says that "Ethelbert, King of Mercia, and general monarch, sent to Charles Martel, the Right Worshipful Grand Master of France (father of King Pippin), who had been educated by Brother *Mimus Græcus*; he sent over from France (about A.D. 710) some expert Masons to teach the Saxons those laws and usages of the ancient fraternity, that had been happily preserved from the havock of the Goths."

Pritchard, in his *Masonry Dissected*, gives, upon what authority I know not, the Legend in the following form:

Euclid "communicated the art and mystery of Masonry to Hiram, the Master Mason concerned in the building of Solomon's Temple in Jerusalem, where was an excellent and curious Mason, whose name was *Mannon Grecus*, who taught the art of Masonry to one Carolus Marcil in France, who was afterwards elected King of France."

Upon this change of the name to *Mannon Grecus*, Krause suggests a derivation as follows: In using this name he thinks that Pritchard intended to refer to the celebrated scholastic philosopher Mannon, or Nannon, who was probably celebrated in his time for his proficiency in the language and literature of Greece. Nannon lived in the reign of Charles the Bold, and was the successor of Erigena in the direction of the schools of France.

I think the derivation of the name offered by Dr. Krause is wholly untenable though ingenious, for it depends upon a name not found in any of the old manuscripts, and besides, the philosopher did not live in the time of Charles Martel, but long afterward.

Between his derivation and mine, the reader may select, and probably will be inclined to reject both.

As far as the Legend regards Charles Martel as the patron of architecture or Masonry in France, one observation remains to be made.

If there has been an error of the legendists in attributing to Charles Martel the honor that really belonged to his successor, Charles the Great, it is not surprising when we consider how great

was the ignorance of the science of chronology that prevailed in those days. However, it must be remarked, that at the present day the French Masonic writers speak of Charles Martel as the founder of Masonry in France.

The error of making the Greek architect a contemporary both of Solomon and of Charles Martel, is one which may be explained, either as the expression of a symbolic idea, alluding to the close connection that had existed between Oriental and Byzantine architecture, or may be excused as an instance of blundering chronology for which the spirit of the age, more than the writer of the Legend, is to be blamed. This objection will not, however, lie if we assume that *Namus Grecus* meant simply a Greek architect.

But this whole subject is so closely connected with the authentic history of Masonry, having really passed out of the prehistoric period, that it claims a future and more elaborate consideration in its proper place.

CHAPTER XVII

THE LEGEND OF ST. ALBAN

HE *Legend of the Craft* now proceeds to narrate the history of the introduction of Masonry into England, in the time of St. Alban, who lived in the 3d century.

The Legend referring to the protomartyr of England is not mentioned in the Halliwell poem, but is first found in the Cooke MS., in the following words: "And sone after that come seynt Adhabell into Englund, and he convertyd seynt Albon to cristendome. And seynt Albon lovyd well masons, and he gaf hem fyrst her charges and maners fyrst in Englund. And he ordeyned conveyent¹ to pay for their travayle."²

The later manuscripts say nothing of St. Adhabell, and it is not until we get to the Krause MS. in the beginning of the 18th century, that we find any mention of St. Amphibalus, who is described in that document as having been the teacher of St. Alban. But St. Amphibalus, of which the Adhabell of the Cooke MS. is undoubtedly a corruption, is so apocryphal a personage, that I am rejoiced that the later legendists have not thought proper to follow the Cooke document and give him a place in the Legend.

In fact, *amphibalum* was the ecclesiastical name of a cloak, worn by priests of the Romish Church over their other vestments.³ It was a vestment ecclesiastically transmuted into a saint, as the hand-

¹ Cooke translates this "convenient times," supplying the second word. But a more correct word is *suitable* or *proper*, which is an old meaning of *convenient*. "He ordained suitable pay for their labor," and this agrees with the later manuscripts which impress the fact that St. Alban "made their pay right good."

² Cooke MS., lines 602-611.

³ It is significant that among the spurious relics sent, when fearing the Danish invasion, in the reign of Edward the Confessor, by the Abbot of St. Albans, to the monks of Ely, was a very rough, shagged old *coat*, which it was said had been usually worn by St. Amphibalus.

kerchief on which Christ left the image of His face when, as it is said, it was handed to Him on His way to Calvary, by a pious Jewess, became from the Greco-Latin *vera icon*, "the true image," converted into St. Veronica. The Masonic are not the only legendists who draw deeply on our credulity.

Of St. Alban, ecclesiastical history furnishes only the following meager details, and even of these some are apocryphal, or at least lack the stamp of authenticity.

He was born (so runs the tradition) in the 3d century, in Hertfordshire, England, near the town of Verulanium. Going to Rome, he served for seven years as a soldier under the Emperor Diocletian. He then returned with a companion and preceptor Amphibalus, to Britain, and betook himself to Verulanium. When the persecutions of the Christians commenced in Britain, Amphibalus was sought for, as one who had apostatized to the new religion; but as he could not be found, St. Alban voluntarily presented himself to the judge, and after undergoing torture was imprisoned. Soon after this, the retreat of Amphibalus having been discovered, both he and St. Alban suffered death for being Christians. Four centuries after his martyrdom, Offa, King of the Mercians, erected a monastery at Holmehurst, the hill where he was buried, and soon after the town of St. Albans arose in its vicinity.

When the Christian religion became predominant in England, the Church paid great honors to the memory of the protomartyr. A chapel was erected over his grave, which, according to the Venerable Bede, was of admirable workmanship.

The Masonic Legend contains details which are not furnished by the religious one. According to it, St. Alban was the steward of the household of Carausius, he who had revolted from the Emperor Maximilian, and usurped the sovereignty of England. Carausius employed him in building the town walls. St. Alban, thus receiving the superintendence of the Craft, treated them with great kindness, increased their pay, and gave them a charter to hold a general assembly. He assisted them in making Masons, and framed for them a constitution—for such is the meaning of the phrase, "gave them charges."

Now, there is sufficient historical evidence to show that architecture was introduced into England by the Roman artificers, who followed, as was their usage, the Roman legions, habilitated them-

selves in the conquered colonies, and engaged in the construction not only of camps and fortifications, but also when peace was restored in the building of temples and even private edifices. Architectural ruins and Latin inscriptions, which still remain in many parts of Britain, attest the labors and the skill of these Roman artists, and sustain the statement of the Legend, that Masonry, which, it must be remembered, is, in the *Old Records*, only a synonym of architecture, was introduced into England during the period of its Roman colonization.

As to the specific statement that St. Alban was the patron of Masons, that he exercised the government of a chief over the Craft, and improved their condition by augmenting their wages, we may explain this as the expression of a symbolical idea, in which history is not altogether falsified, but only its dates and personages confused.

Carausius, the Legend does not mention by name. It simply refers to some King of England, of whose household St. Alban was the steward. Carausius assumed the imperial purple in the year in which St. Alban suffered martyrdom. The error of making him the patron of St. Alban is not, therefore, to be attributed to the legendist, but to Dr. Anderson, who first perpetrated this chronological blunder in the second edition of his *Constitutions*. And though he states that "this is asserted by all the old copies of the *Constitutions*"¹ we fail to find it in any that are now extant.

This "Legend of St. Alban," as it has been called, is worthy of a farther consideration.

The foundation of this symbolical narrative was first laid by the writer of the Cooke MS., or, rather, copied by him from the tradition existing among the Craft at that time. Its form was subsequently modified and the details extended in the Dowland MS., for tradition always grows in the progress of time. This form and these details were preserved in all the succeeding manuscript Constitutions, until they were still further altered and enlarged by Anderson, Preston, and other Masonic historians of the last century.

With the gratuitous accretions of these later writers we have no concern in any attempted explanation of the actual signification of the Legend. Its true form and spirit are to be found only in the Dowland MS. of the middle of the 16th century, and in those which

¹ Anderson, "Constitutions," 2d edit., p. 57.

were copied from it, up to the Papworth, at the beginning of the 18th. To these, and not to anything written after the period of the Revival, we must direct our attention.

Admitting that on the conquest of England by the Roman power, the architects who had accompanied the victorious legions introduced into the conquered colony their architectural skill, it is very likely that some master workmen among them had been more celebrated than others for their skill, and, indeed, it is naturally to be supposed that to such skillful builders the control of the Craft must have been confided. Whether there were one or more of these chief architects, St. Alban, if not actually one of them, was, by the lapse of time and the not unusual process by which legendary or oral accretions are superimposed on a plain historical fact, adopted by the legendists as their representative. Who was the principal patron of the Architects or Masons during the time of the colonization of England by the Romans, is not so material as is the fact that architecture, with other branches of civilization, was introduced at that era into the island by its conquerors.

This is an historical fact, and in this point the *Legend of the Craft* agrees with authentic history.

But it is also an historical fact that when, by the pressure of the Northern hordes of barbarians upon Rome, it was found necessary to withdraw all the legions from the various colonies which they protected from exterior enemies and restrained from interior insurrection, the arts and sciences, and among them architecture, began to decline in England. The natives, with the few Roman colonists who had permanently settled among them, were left to defend themselves from the incursions of the Picts on the north, and the Danish and Saxon pirates in the east and south. The arts of civilization suffered a depression in the tumult of war. Science can not flourish amid the clang and clash of arms. This depression and suspension of all architectural progress in England, which continued for some centuries, is thus expressed in the quaint language of the Legend:

"Right soone after the decease of Saint Albone, there came divers wars into the realme of England of divers Nations, soe that the good rule of Masonrye was destroyed unto the tyme of Kinge Athelstone's days."

There is far more of history than of fiction in this part of the Legend.

The next point of the *Legend of the Craft* to which our attention is to be directed, is that which relates to the organization of Masonry at the city of York, in the 10th century. This part of the Legend is of far more importance than any of those which have been considered. The prehistoric here verges so closely upon the historic period, that the true narrative of the rise and progress of Masonry can not be justly understood until each of these prehistoric and historic elements has been carefully relegated to its appropriate period. This will constitute the subject matter of the next chapter.

CHAPTER XVIII

THE YORK LEGEND

THE suppression of all architectural art and enterprise having lasted for so long a period in Britain, the *Legend of the Craft* next proceeds to account for its revival in the 10th century and in the reign of Athelstan, whose son Edwin called a meeting, or General Assembly, of the Masons at York in the year 926, and there revived the Institution, giving to the Craft a new code of laws.

Now, it is impossible to attach to this portion of the Legend, absolutely and without any reservation, the taint of fiction. The convocation of the Craft of England at the city of York, in the year 926, has been accepted by both the Operative Masons who preceded the Revival, and by the Speculatives who succeeded them, up to the present day, as a historical fact that did not admit of dispute. The two classes of Legends—the one represented by the Halliwell poem, and the other by the later manuscripts—concur in giving the same statement. The Cooke MS., which holds an intermediate place between the two, also contains it. But the Halliwell and the Cooke MSS., which are of older date, give more fully the details of what may be called this revival of English Masonry. Thoroughly to understand the subject, it will be necessary to collate the three accounts given in the three different sets of manuscripts.

The Halliwell poem, whose conjectural date is about 1390, contains the account in the following words. I will first give it, relieved of its archaisms, for the convenience of the reader inexperienced in early English, and then follow with a quotation of the original language:

"This craft came into England, as I tell you, in the time of good King Athelstane's reign. He made them both hall and also chamber, and lofty churches of great honour, to recreate him in both day and night and to worship his God with all his strength. This good lord

loved this craft full well; and purposed to strengthen it in every part, on account of several defects which he discovered in the craft. He sent about into the land after all the masons of the craft to come straight to him, to amend all these defects by good counsel, if it could be done. Then he permitted an assembly to be made of various lords according to their rank, dukes, earls, and barons also, knights, squires, and many more, and the great burgesses of that city, they were all there in their degree; these were there, each one in every way to make laws for the society of these masons. There they sought by their wisdom how they might govern it. There they invented fifteen articles, and there they made fifteen points."¹ The original is as follows:

"Thys craft com ynto England as y you say,
 Yn tyme of good kynge Athelston's day;
 He made the both halle and eke boure,
 And hye tempus of gret honoure,
 To sportyn hym yn bothe day and nyghth,
 And to worschepe his God with alle hys myghth.
 Thys goode lorde loved thys craft ful wel,
 And purposud to strenthyn hyt ever del,
 For dyvers defaultys that yn the craft he fonde;
 He sende aboute ynto the londe
 After alle the masonus of the crafte
 To come to hym ful evene strayfte,
 For to amende these defaultys alle
 By good counsel gef hyt mygth falle.
 A semblé thenne he cowthe let make
 Of dyvers lordis in here state
 Dukys, erlys and barnes also,
 Knygthys, sqwyers and mony mo,
 And the grete burges of that syté,
 They were ther alle yn here degré;
 These were there uchon algate,
 To ordeyne for these masonus estate,
 Ther they sowgton ly here wytte
 How they mygthyn governe hytte:
 Fyftene artyculus they there sowgton,
 And fyftene poyntys ther they wroghton."

One hundred years afterward we find the Legend, in the Cooke MS., as follows:

"And after that was a worthy kynge in Englond that was callyd

¹ Halliwell MS., lines 61-87.

ANTHONY SAVER

First Grand Master of Speculative Freemasons, 1717

Athelstone, and his yongest sone lovyd well the sciens of Gemetry, and he wyst well that handcraft had the practyke of Gemetry so well as masons, wherefore he drew him to conseil and lernyd [the] practyke of that sciens to his speculatyfe.¹ For of speculatyfe he was a master, and he lovyd well masonry and masons. And he bicorne a mason hymselfe. And he gaf hem [gave them] charges and names² as it is now usyd in Englund and in other countries. And he ordeyned that they schulde have resonabull pay. And purchesed [obtained] a fre patent of the kyng that they schulde make a ssembly when they saw resonably tyme a [to] cume togedir to her [their] counsell of the whiche charges, manors & semble as is write and taught in the boke of our charges wherefor I leve it at this tyme."³

In a subsequent part of the manuscript, which appears to have been taken from the aforesaid "boke of charges," with some additional details, are the following words:

"After that, many yens, in the tyme of Kyng Adhelstane, wiche was sum tyme kyng of Englonde, bi his counsell and other gret lordys of the lond by comyn [common] assent for grete default y-fennde [found] among masons thei ordeyend a certayne reule amongys hem [them]. On [one] tyme of the yere or in iii yere as nede were to the kyng and gret lordys of the londe and all the comente [community], fro provynce to provynce and fro countre to countre congregacions schulde be made by maisters, of all maisters masons and felaus in the forsayd art. And so at such congregacions, they that be made masters schold be examined of the articuls after written & be ransacked [examined] whether they be abull and kunnyng to the profyte of the lordys hem to serve [to serve them] and to the honour of the forsayd art."⁴

Sixty years afterward we find this Legend repeated in the Dowland MS., but with some important variations. This Legend has already been given in the *Legend of the Craft*, but for the convenience of immediate comparison with the preceding documents it will be well to repeat it here. It is in the following words:

"Right soone after the decease of Saint Albone there came divers

¹ Cooke calls particular attention to this word as of much significative import. I think it simply means that the king added a practical knowledge of Masonry or architecture to his former merely speculative or theoretical acquaintance with the art.

² This is evidently an error of the pen for *maners*, i.e., *usages*.

³ Cooke MS., lines 611-642.

⁴ Cooke MS., lines 693-719.

warrs into the realme of England of divers Nations, soe that the good rule of Masonrye was destroyed unto the tyme of Kinge Athelstones days that was a worthy Kinge of England, and brought this land into good rest and peace and builded many great works of Abbyes and Towres and other many divers buildings and loved well Masons. And he had a Sonn that height Edwinne, and he loved Masons much more than his father did. And he was a great practiser in Geometry, and he drew him much to talke and to commune with Masons and to learne of them science, and afterwards for love that he had to Masons and to the science he was made Mason,¹ and he gatt of the Kinge his father a Chartour and Commission to hold every yeare once an Assemble wher that ever they would within the realme of England, and to correct within themselves defaults and trespasses that were done within the science. And he held himselfe an Assemble at Yorke, and there he made Masons and gave them charges and taught them the manners, and commanded that rule to be kept ever after. And tooke them the Chartour and Commission to keepe and made ordinance that it should be renewed from kinge to kinge.

"And when the Assemble was gathered he made a cry that all old Masons and young, that had any writeings or understanding of the charges and the manners that were made before in this land, or in any other, that they should shew them forth. And when it was proved there was founden some in Frenche and some in Greek and some in English and some in other languages; and the intent of them all was founden all one. And he did make a booke thereof, and how the science was founded. And he himselfe bad and commanded that it should be readd or tould, when that any Mason should be made, for to give him his Charge. And fro that day into this tyme manners of Masons have beene kept in that forme as well as men might governe it. And furthermore divers Assembles have beene put and ordayned certain charges by the best advice of Masters and Fellowes."

It will be remarked that in neither of the two oldest manuscripts,

¹The next MS. in date, the Lansdowne, names the place where he was made as Windsor. This statement is not found in any of the other manuscripts except the Antiquity MS. It may here be observed that nothing more clearly proves the great carelessness of the transcribers of these manuscripts than the fact that although they must have all been familiar with the name of Edwin, one of them spells it *Ladrian* and another *Hoderine*.

the Halliwell and the Cooke, is there any mention of Prince Edwin, or of the city of York. For the omission I shall hereafter attempt to account. As to that of the latter I agree with Bro. Woodford, that as the fact of the Assembly is stated in all the later traditions, and as a city is mentioned whose burgesses were present, we may fairly understand both of the oldest manuscripts also to refer to York.¹ At all events, their silence as to the place affords no sufficient evidence that it was not York, as opposed to the positive declaration of the later manuscripts that it was.

We see, then, that all the old Legends assert expressly, or by implication, that York was the city where the first General Masonic Assembly was held in England, and that it was summoned under the authority of King Athelstan.

The next point in which all the later manuscripts, except the Harleian,² agree is, that the Assembly was called by Prince Edwin, the King's son.

The Legend does not here most certainly agree with history, for there is no record that Athelstan had any son. He had, however, a brother of that name, who died two years before him.

Edward the Elder, the son of Alfred the Great, died in the year 925, leaving several legitimate sons and one natural one, Athelstan. The latter, who was the eldest of the sons of Edward, obtained the throne, notwithstanding the stain on his birth, in consequence of his age, which better fitted him to govern at a time when the kingdom was engaged in foreign and domestic wars.

All historians concur in attributing to Athelstan the character of a just and wise sovereign, and of a sagacious statesman. It has been said of him that he was the most able and active of the ancient princes of England. What his grandfather, the great Alfred, commenced in his efforts to consolidate the petty monarchies into which the land was divided, into one powerful kingdom, Athelstan, by his energy, his political wisdom, and his military prowess, was enabled to perfect, so that he has been justly called the first monarch of all England.

Although engaged during his whole reign in numerous wars, he

¹ "On the Connection of York with the History of Freemasonry in England." By A. F. Woodford, A.M., in Hughan's "Masonic Sketches and Reprints," p. 168.

² The Harleian MS. makes no mention of Prince Edwin, but attributes the organization of Masonry at York to King Athelstan himself.

did not neglect a cultivation of the employments of peace, and encouraged by a liberal patronage the arts and especially architecture.

The only stain upon his character is the charge that having suspected his brother Edwin of being engaged in a conspiracy against his throne, he caused that prince to be drowned. Notwithstanding the efforts of Preston to disprove this charge, the concurrent testimony of all the old chroniclers afford no room to doubt its truth. But if anything could atone for this cruel act of state policy, it would be the bitter anguish and remorse of conscience which led the perpetrator to endure a severe penance of seven years.

Of Edwin, the Saxon historians make no mention, except when they speak of his untimely death. If we may judge of his character from this silence, we must believe that he was not endued with any brilliant qualities of mind, nor distinguished by the performance of any important act.

Of all the half-brothers of Athelstan, the legitimate children of Edward the Elder, Edmund seems to have been his favorite. He kept him by his side on battle-fields, lived single for his sake, and when he died in 941, left to him the succession to the throne.

But there is another Edwin of prominent character in the annals of Saxon England, to whom attention has been directed in connection with this Legend, as having the best claim to be called the founder or reviver of English Masonry.

Of Edwin, King of Northumbria, it may be said, that in his narrow sphere, as the monarch of a kingdom of narrow dimensions, he was but little inferior in abilities or virtues to Athelstan.

At the time of his birth, in 590, Northumbria was divided into two kingdoms, that of Bernicia, north of the Humber, and that of the Deira, on the south of the same river. Of the former, Ethelfrith was King, and of the latter, Ella, the father of Edwin.

Ella died in 593, and was succeeded by Edwin, an infant of three years of age.

Soon after, Ethelfrith invaded the possessions of Edwin, and attached them by usurpation to his own domains.

Edwin was sent to Wales, whence when he grew older he was obliged to flee, and passed many years in exile, principally at the Court of Redwald, King of East Anglia. By the assistance of this monarch he was enabled to make war upon his old enemy, Ethelfrith, who, having been slain in battle, and his sons having fled into

Scotland, Edwin not only regained his own throne, but that of the usurper also, and in the year 617 became the King of Northumbria, of which the city of York was made the capital.

Edwin was originally a pagan, but his mind was of a contemplative turn, and this made him, says Turner, more intellectual than any of the Saxon Kings who had preceded him. He was thus led to a rational consideration of the doctrines of Christianity, which he finally accepted, and was publicly baptized at York, on Easter day, in the year 627. The ceremony was publicly performed in the Church of St. Peter the Apostle, which he had caused to be hastily constructed of wood, for the purposes of divine service, during the time that he was undergoing the religious instructions preliminary to his receiving the sacrament.

But as soon as he was baptized, he built, says Bede, under the direction of Paulinus, his religious instructor and bishop, in the same place, a much larger and nobler church of stone.

During the reign of Edwin, and of his successors in the same century, ecclesiastical architecture greatly flourished, and many large churches were built. Edwin was slain in battle in 633, having reigned for seventeen years.

The Venerable Bede gives us the best testimony we could desire as to the character of Edwin as ruler, when he tells us that in all of his dominions there was such perfect peace that a woman with a newborn babe might walk from sea to sea without receiving any harm. Another incident that he relates is significant of Edwin's care and consideration for the comforts of his people. Where there were springs of water near the highways, he caused posts to be fixed with drinking vessels attached to them for the convenience of travelers. By such acts, and others of a higher character, by his encouragement of the arts, and his strict administration of justice, he secured the love of his subjects.

So much of history was necessary that the reader might understand the argument in reference to the true meaning of *the York Legend*, now to be discussed.

In the versions of the Legend given by Anderson and Preston, the honor of organizing Masonry and calling a General Assembly is attributed to Edwin the brother, and not to Edwin the son of Athelstan. These versions are, however, of no value as historical documents, because they are merely enlarged copies of the original Legend.

But in the Roberts *Constitutions*, printed in 1722, and which was claimed to have been copied from a manuscript about five hundred years old, but without any proof (as the original has never been recovered), the name of Edwin is altogether omitted, and Athelstan himself is said to have been the reviver of the institution. The language of this manuscript, as published by J. Roberts, is as follows:¹

"He [Athelstan] began to build many Abbies, Monasteries, and other religious houses, as also Castles and divers Fortresses for defence of his realm. He loved *Masons* more than his father; he greatly study'd *Geometry*, and sent into many lands for men expert in the science. He gave them a very large charter to hold a yearly assembly, and power to correct offenders in the said science; and the king himself caused a General Assembly of all *Masons* in his realm, at *York*, and there were made many *Masons*, and gave them a deep charge for observation of all such articles as belonged unto *Masonry* and delivered them the said Charter to keep."

In the omission of all reference to Prince Edwin, the Harleian and Roberts manuscripts agree with that of Halliwell.

There is a passage in the Harleian and Roberts MSS. that is worthy of notice. All the recent manuscripts which speak of Edwin as the procurer of the Charter, say that "he loved Masons much more than his father did"—meaning Athelstan. But the Harleian and Roberts MSS., speaking of King Athelstan, use the same language, but with a different reference, and say of King Athelstan, that "he loved Masons more than his father"—meaning King Edward, whose son Athelstan was.

Now, of the two statements, that of the Harleian and Roberts MSS. is much more conformable to history than the other. Athelstan was a lover of Masons, for he was a great patron of architecture, and many public buildings were erected during his reign. But it is not recorded in history that Prince Edwin exhibited any such attachment to Masonry or Architecture as is attributed to him in the old records, certainly not an attachment equal to that of Athelstan. On the contrary, Edward, the son of Alfred and the father of Athelstan, was not distinguished during his reign for any marked patronage of

¹The book was republished by Spencer in 1870. The Roberts "Constitutions" and the Harleian MS. No. 1942, are evidently copies from the same original, if not one from the other. The story of Athelstan is, of course, identical in both, and the citation might as well have been made from either.

the arts, and especially of architecture; and it is, therefore, certain that his son Athelstan exhibited a greater love to Masons or Architects than he did.

Hence there arises a suspicion that the Legend was originally framed in the form presented to us by the Halliwell poem, and copied apparently by the writers of the Harleian and Roberts MSS., and that the insertion of the name of Prince Edwin was an after-thought of the copiers of the more recent manuscripts, and that this insertion of Edwin's name, and the error of making him a son of Athelstan, arose from a confusion of the mythical Edwin with a different personage, the earlier Edwin, who was King of Northumbria.

It may also be added that the son of Athelstan is not called Edwin in all of the recent manuscripts. In one Sloane MS. he is called *Ladrian*, in another *Hegme*, and in the Lodge of Hope MS. *Hoderine*. This fact might indicate that there was some confusion and disagreement in putting the name of Prince Edwin into the Legend. But I will not press this point, because I am rather inclined to attribute these discrepancies to the proverbial carelessness of the transcribers of these manuscripts.

How, then, are we to account for this introduction of an apparently mythical personage into the narrative, by which the plausibility of the Legend is seriously affected?

Anderson, and after him Preston, attempts to get out of the difficulty by calling Edwin the brother, and not the son, of Athelstan. It is true that Athelstan did have a younger brother named Edwin, whom some historians have charged him with putting to death. And in so far the Legend might not be considered as incompatible with history. But as all the manuscripts which have to this day been recovered which speak of Edwin call him the king's son and not his brother, notwithstanding the contrary statement of Anderson,¹ I prefer another explanation, although it involves the charge of anachronism.

The annals of English history record a royal Edwin, whose de-

¹ Anderson says in the second edition of the "Book of Constitutions" that in all the Old Constitutions it is written Prince Edwin, the king's brother—a statement that is at once refuted by a reference to all the manuscripts from the Dowland to the Papworth, where the word is always *son*. So much for the authority of the old writers on Masonic history.

votion to the arts and sciences, whose wise statesmanship, and whose patronage of architecture, must have entitled him to the respect and the affection of the early English Masons. Edwin, King of Northumbria, one of the seven kingdoms into which England was divided during the Anglo-Saxon heptarchy, died in 633, after a reign of sixteen years, which was distinguished for the reforms which he accomplished, for the wise laws which he enacted and enforced, for the introduction of Christianity into his kingdom, and for the improvement which he effected in the moral, social, and intellectual condition of his subjects. When he ascended the throne the northern metropolis of the Anglican Church had been placed at York, where it still remains. The king patronized Paulinus, the bishop, and presented him with a residence and with other possessions in that city. Much of this has already been said, but it will bear repetition.

To this Edwin, and not to the brother of Athelstan, modern Masonic archaeologists have supposed that the *Legend of the Craft* refers.

Yet this opinion is not altogether a new one. More than a century and a half ago it seems to have prevailed as a tradition among the Masons of the northern part of England. For in 1726, in an address delivered before the Grand Lodge of York by its Junior Grand Warden, Francis Drake, he speaks of it as being well known and recognized, in the following words:

"You know we can boast that the first Grand Lodge ever held in England was held in this city [York]; where Edwin, the first Christian King of the Northumbers, about the six hundredth year after Christ, and who laid the foundation of our Cathedral,¹ sat as Grand Master."

Bro. A. F. A. Woodford, a profound Masonic archaeologist, accepts this explanation, and finds a confirmation in the facts that the town of Derventio, now Auldby, six miles from York, the supposed seat of the pseudo-Edwin, was also the chief seat and residence of Edwin, King of Northumbria, and that the buildings, said in one of the manuscripts to have been erected by the false Edwin, were really erected, as is known from history, by the Northumbrian Edwin.

I think that with these proofs, the inquirer will have little or no

¹ Bede (L. 2., c. 13) and Rapin (p. 246) both confirm this statement that the foundations of the York Cathedral, or Minster, were laid in the reign of Edwin.

hesitation in accepting this version of the Legend, and will recognize the fact that the writers of the later manuscripts fell into an error in substituting Edwin, the son (as they called him, but really the brother) of Athelstan, for Edwin, the King of Northumbria.

It is true that the difference of dates presents a difficulty, there being about three hundred years between the reigns of Edwin of Northumbria, and Athelstan of England. But that difficulty, I think, may be overcome by the following theory which I advance on the subject:

The earlier series of manuscripts, of which the Halliwell poem is an exemplar, and, perhaps, also the Harleian and the Roberts MSS.,¹ make no mention of Edwin, but assign the revival of Masonry in the 10th century to King Athelstan.

The more recent manuscripts, of which the Dowland is the earliest, introduce Prince Edwin into the Legend and ascribe to him the honor of having obtained from Athelstan a charter, and of having held an Assembly at York.

There are, then, two forms of the Legend, which, for the sake of distinction, may be designated as the older and the later. The older Legend makes Athelstan the reviver of Masonry in England, and says nothing at all of Edwin. The later takes this honor from Athelstan and gives it to Prince Edwin, who is called his son.

The part about Edwin is, then, an addition to the older legend, and was interpolated into it by the later legendists, as will be evidently seen if the following extract from the Dowland MS. be read, and all the words there printed in italics be omitted. So read, the passage will conform very substantially with the corresponding one in the Roberts MS., which was undoubtedly a copy from some older manuscript which contained the legend in its primitive form, wherein there is no mention of Prince Edwin. Here is the extract to be amended by the omission of words in italics:

"The good rule of Masonry was destroyed unto the tyme of Kinge Athelstone dayes that was a worthy Kinge of England, and brought this land into good rest and peace; and builded many great works of Abbyes and Towres, and other many divers buildings and loved well Masons. *And he had a sonn that height Edwinne,* and

¹The fact that the Legend in the Roberts "Constitutions" agrees in this respect with the older legend, and differs from that in all the recent manuscripts, gives some color to the claim that it was copied from a manuscript five hundred years old.

he loved Masons much more than his father did. And he was a great practiser in Geometry; and he drew him much to talke and to commune with Masons, and to learne of them science; and afterward for love that he had to Masons and to the science he was made a Mason and he gatt¹ [*i.e.*, he gave] *of the Kinge his father* a Charter and commission to hold every year once an Assemble, wher that ever they would, within the realme of England; and to correct within themselves defaults and trespasses that were done within the science. And he held himselfe an Assemble at Yorke, and there he made Masons, and gave them charges, and taught them the manners, and commanded that rule to be kept ever after, and tooke then the Chartōur and Commission to keepe, and made ordinance that it should be renewed from Kinge to Kinge."

The elimination of only thirteen words relieves us at once of all difficulty, and brings the Legend into precise accord with the tradition of the older manuscripts.

Thus eliminated it asserts:

1. That King Athelstan was a great patron of the arts of civilization — "he brought the land into rest and peace." This statement is sustained by the facts of history.

2. He paid especial attention to architecture and the art of building, and adorned his country with abbeys, towns (*towers* is a clerical error), and many other edifices. History confirms this also.

3. He was more interested in, and gave a greater patronage to, architecture than his father and predecessor, Edward—another historical fact.

4. He gave to the Masons or Architects a charter as a guild, and called an assembly of the Craft at York. This last statement is altogether traditional. Historians are silent on the subject, just as they are on the organization of a Grand Lodge in 1717. The mere silence of historians as to the formation of a guild of craftsmen or a private society is no proof that such guild or society was not formed. The truth of the statement that King Athelstan caused an assembly of Masons to be held in the year 926 at the city of York, depends

¹ This word is used in the sense of *given* or *granted*, in an undoubted historical document, Athelstan's charter to the town of Beverly.

"Yat I, the Kynge Adelston,
Has *gaten* and given to St. John
Of Beverlae, etc."

solely on a tradition, which has, however, until recently, been accepted by the whole Masonic world as an undoubted truth.

But that the city of York was the place where an assembly was convened by Athelstan in the year 926 is rendered very improbable when we refer to the concurrent events of history at that period of time.

In 925 Athelstan ascended the throne. At that time Sigtryg was the reigning King of Northumbria, which formed no part of the dominions of Athelstan. To Sigtryg, who had but very recently been converted from Paganism to Christianity, Athelstan gave his sister in marriage. But the Northumbrian king having apostatized, his brother-in-law resolved to dethrone him, and prepared to invade his kingdom. Sigtryg having died in the meantime, his sons fled, one into Ireland and the other into Scotland, and Athelstan annexed Northumbria to his own dominions.

This occurred in the year 926, and it is not likely that while pursuing the sons of Sigtryg, one of whom had escaped from his captors and taken refuge in the city of York, whose citizens he vainly sought to enlist in his favor, Athelstan would have selected that period of conflict, and a city within his newly-acquired territory, instead of his own capital, for the time and place of holding an assembly of Masons.

It is highly improbable that he did, but yet it is not absolutely impossible. The tradition may be correct as to York, but, if so, then the time should be advanced, by a few years, to that happy period when Athelstan had restored the land "into good rest and peace."

But the important question is, whether this tradition is mythical or historical, whether it is a fiction or a truth. Conjectural criticism applied to the theory of probabilities alone can aid us in solving this problem.

I say, therefore, that there is nothing in the personal character of Athelstan, nothing in the recorded history of his reign, nothing in the well-known manner in which he exercised his royal authority and governed his realm, that forbids the probability that the actions attributed to him in the *Legend of the Craft* actually took place.

Taking his grandfather, the great Alfred, as his pattern, he was liberal in all his ideas, patronized learning, erected many churches, monasteries, and other edifices of importance throughout his dominions, encouraged the translation of the Scriptures into Anglo-Saxon,

and, what is of great value to the present question, gave charters to many guilds or operative companies as well as to several municipalities.

Especially is it known from historical records that in the reign of Athelstan the *frith-gildan*, free guilds or sodalities, were incorporated by law. From these subsequently arose the craft-guilds or associations for the establishment of fraternal relations and mutual aid, into which, at the present day, the trade companies of England are divided.

There would be nothing improbable in any narrative which should assert that he extended his protection to the operative Masons, of whose art we know that he availed himself in the construction of the numerous public and religious edifices which he was engaged in erecting. It is even more than plausible to suppose that the Masons were among the sodalities to whom he granted charters or acts of incorporation.

Like the Rev. Bro. Woodford, whose opinion as a Masonic archaeologist is of great value, I am disposed to accept a tradition venerable for its antiquity and for so long a period believed in by the craft as an historical record in so far as relates to the obtaining of a charter from Athelstan and the holding of an assembly. "I see no reason, therefore," he says, "to reject so old a tradition that under Athelstan the operative Masons obtained his patronage and met in General Assembly."¹

Admitting the fact of Athelstan's patronage and of the Assembly at some place, we next encounter the difficulty of explaining the interpolation of what may be called the episode of Prince Edwin.

I have already shown that there can be no doubt that the framers of the later legend had confounded the brother, whom they, by a mistake, had called the son of Athelstan, with a preceding king of the same name, that is, with Edwin, King of Northumbria, who, in the 7th century, did what the pseudo-Edwin is supposed to have done in the 10th. That is to say, he patronized the Masons of his time, introduced the art of building into his kingdom, and probably held an Assembly at York, which was his capital city.

Now, I suppose that the earlier Masons of the south of England, who framed the first *Legend of the Craft*, such as is presented to

¹"The Connection of York with the History of Freemasonry in England," inserted in Hughan's "Unpublished Records of the Craft," p. 168.

us in the old poem, first published by Mr. Halliwell in 1840, and also in the Harleian manuscript and in the one printed by Roberts in 1722, were unacquainted with the legend of Edwin of Northumbria, although, if we may believe Bro. Drake, it was a well-known tradition in the north of England. The earlier legends of the south, therefore, gave the honor of patronizing the Masons and holding an Assembly at York in 926 to Athelstan alone. This was, therefore, the primitive *Legend of the Craft* among the Masons of London and the southern part of the kingdom.

But in time these southern Masons became, in consequence of increased intercourse, cognizant of the tradition that King Edwin of Northumbria had also patronized the Masons of his kingdom, but at an earlier period. The two traditions were, of course, at first kept distinct. There was, perhaps, a reluctance among the Masons of the south to diminish the claims of Athelstan as the first reviver, after St. Alban, of Masonry in England, and to give the precedence to a monarch who lived three hundred years before in the northern part of the island.

This reluctance, added to the confusion to which all oral tradition is obnoxious, coupled with the fact that there was an Edwin, who was a near relation of Athelstan, resulted in the substitution of this later Edwin for the true one.

It took years to do this—the reluctance continuing, the confusion of the traditions increasing, until at last the southern Masons, altogether losing sight of the Northumbrian tradition as distinct from that of Athelstan, combined the two traditions into one, and, with the carelessness or ignorance of chronology so common in that age, and especially among uncultured craftsmen, substituted Edwin, the brother of Athelstan,¹ for Edwin, the King of Northumbria, and thus formed a new *Legend of the Craft* such as it was perpetuated by Anderson, and after him by Preston, and which has lasted to the present day.

Therefore, eliminating from the narrative the story of Edwin, as it is told in the recent Legend, and accepting it as referring to Edwin of Northumbria, and as told in the tradition peculiar to the Masons of the northern part of England, we reach the conclusion that there were originally two traditions, one extant in the northern

¹ To the same carelessness or ignorance are we to attribute the legendary error of making Edwin the son of Athelstan.

part of England and the other in the southern part. The former Legend ascribed the revival of Masonry in England to Edwin, King of Northumbria in the 7th century, and the latter to Athelstan, King of England in the 10th. There being little communication in those days between the two parts of the kingdom, the traditions remained distinct. But at some subsequent period, not earlier than the middle of the 16th century, or the era of the Reformation,¹ the southern Masons became acquainted with the true Legend of the York Masons, and incorporated it into their own Legend, confounding, however, the two Edwins, either from ignorance, or more probably, from a reluctance to surrender the pre-eminence they had hitherto given to Athelstan as the first reviver of Masonry in England.

We arrive, then, at the conclusion, that if there was an Assembly at York it was convened by Edwin, King of Northumbria, who revived Masonry in the northern part of England in the 7th century; and that its decayed prosperity was restored by Athelstan in the 10th century, not by the holding of an Assembly at the city of York, but by his general patronage of the arts, and especially architecture, and by the charters of incorporation which he freely granted to various guilds or sodalities of workmen.

With these explanations, we are now prepared to review and to summarize the *Legend of the Craft*, not in the light of a series of absurd fictions, as too many have been inclined to consider it, but as an historical narrative, related in quaint language, not always grammatical, and containing several errors of chronology, misspelling of names, and confusion of persons, such as were common and might be expected in manuscripts written in that uncultured age, and by the uneducated craftsmen to whom we owe these old manuscripts.

¹ I assign this era because the Halliwell poem, which is the exemplar of the older Legend, is evidently Roman Catholic in character, while the Dowland, and all subsequent manuscripts which contain the later Legend, are Protestant, all allusions to the Virgin, the saints, and crowned martyrs being omitted.

CHAPTER XIX

SUMMARY OF THE LEGEND OF THE CRAFT

THE *Legend of the Craft*, as it is presented to us in what I have called the later manuscripts, that is to say, the Dowland and those that follow it up to the Papworth, begins with a descant on the seven liberal arts and sciences.¹ I have already shown that among the schoolmen contemporary with the legendists these seven arts and sciences were considered, in the curriculum of education, not so much as the foundation, but as the finished edifice of all human learning. The *Legend* naturally partook of the spirit of the age in which it was invented. But especially did the Masons refer to these sciences, and make a description of them, the preface, as it were, to the story that they were about to relate, because the principal of these sciences was geometry, and this they held to be synonymous with Masonry.

Now, the intimate connection between geometry and architecture, as practiced by the Operative Freemasons of the Middle Ages, is well known, since the secrets, of which these Freemasons were supposed to be in possession, consisted almost solely in an application of the principles of the science of geometry to the art of building.

The *Legend* next proceeds to narrate certain circumstances connected with the children of Lamech. These details are said in the *Legend* to have been derived from the Book of Genesis but were probably taken at second-hand from the *Polychronicon*, or universal history of the monk Higden, of Chester. This part of the *Legend*, which is not otherwise connected with the Masonic narrative, appears to have been introduced for the sake of an allusion to the pillars on which the sons of Lamech are said to have inscribed an account of the sciences which they had discovered, so that the

¹ The Halliwell poem, although it differs from the later manuscripts in so many particulars, agrees with them in giving a descant on the arts and sciences.

knowledge of them might not be lost in consequence of the destruction of the world which they apprehended.

The story of the inscribed pillars was a tradition of every people, narrated, with variations, by every historian and implicitly believed by the multitude. The legendists of Masonry got the account from Josephus, perhaps through Higden, but altered it to suit the spirit of their own narrative.

We are next told that Hermes discovered one of these pillars and was, from the information that it contained, enabled to restore the knowledge of the sciences, and especially of Masonry, to the post-diluvian world. This was a tribute of the legendists to the universally accepted opinion of the ancients, who venerated the "thrice great Hermes" as the mythical founder of all science and philosophy. We are next told that Nimrod, "the mighty hunter before the Lord," availed himself of the wisdom that had been recovered by Hermes. He was distinguished for his architectural works and first gave importance to the art of Masonry at the building of the Tower of Babel. The Legend attributes to Nimrod the creation of the Masons into an organized body and he was the first who gave them a constitution or laws for their government. Masonry, according to the legendary account, was founded in Babylon, whence it passed over to the rest of the world.

In all this we find simply a recognition of the historical opinion that Chaldea was the birthplace of knowledge and that the Chaldean sages were the primitive teachers of Asia and Europe. The modern discoveries of the cuneiform inscriptions show that the Masonic legendists had, at a venture, obtained a more correct idea of the true character of Nimrod than that which had been hitherto entertained, founded on the brief allusion to him in Genesis and the disparaging account of him in the *Antiquities* of Josephus.

The monastic legends had made Abraham a contemporary of Nimrod, and the Book of Genesis had described the visit of the patriarch and his wife to the land of Egypt. Combining these two statements, the idea was suggested to the legendists that Abraham had carried into Egypt the knowledge which he had acquired from the Chaldeans and taught it to the inhabitants.

Thus it is stated that Egypt was, after Babylonia, the place where the arts and sciences were first cultivated and thence disseminated to other countries. Among these arts and sciences,

geometry, which we have seen was always connected in the Masonic mind with architecture, held a prominent place. He who taught it to the Egyptians was typically represented by the name of Euclid, because the old Masons were familiar with the fact that he was then esteemed, as he still is, as the greatest of geometers and almost the inventor of the science.

Accepting the allusion to Euclid, not as an historical anachronism, but rather as the expression of a symbolic idea, we can scarcely class the legendary statement of the condition of learning in Egypt as a pure and unadulterated fiction. It is an undoubted fact that Egypt was the primeval land whence science and learning flowed into Southern Europe and Western Asia. Neither can it be disputed that civilization had there ripened into maturity long before Greece or Rome were known. It is moreover conceded that the ancient Mysteries whence Masonry has derived, not its organization, but a portion of its science of symbolism, received its birth in the land of the Nile, and that the Mysteries of Osiris and Isis were the prototypes of all the mystical initiations which were celebrated in Asia and in Southern Europe. They have even been claimed, though I think incorrectly, as the origin of those in Gaul, in Britain, and in Scandinavia. By a rapid transition, the Legend passes from the establishment of Masonry or architecture (for it must be remembered that in legendary acceptance the two words are synonymous) to its appearance in Judea, the "Land of Behest," where, under the patronage and direction of King Solomon the Temple of Jerusalem was constructed. All that is said in this portion of the Legend purports to be taken from the scriptural account of the same transaction and must have the same historical value.

As to the error committed in the name and designation of him who is now familiarly known to Freemasons as Hiram Abif, a sufficient explanation has been given in a preceding chapter.

We next have an account of the travels of these Masons or architects who built the Temple into various countries, to acquire additional knowledge and experience, and to disseminate the principles of their art. The carelessness of chronology, to which I have already adverted, so peculiar to the general illiteracy of the age, has led the legendists to connect this diffusion of architecture among the various civilized countries of the world with the Tyrian and Jewish Masons; but the wanderings of that body of builders known as

the "Traveling Freemasons" of the Middle Ages, through all the kingdoms of Europe, and their labors in the construction of cathedrals, monasteries, and other public edifices are matters of historical record. Thus the historical idea is well preserved in the Legend of a body of artists who wandered over Europe, and were employed in the construction of cathedrals, monasteries, and other public edifices.

The Legend next recounts the introduction of architecture into France, and the influence exerted upon it by Grecian architects, who brought with them into that kingdom the principles of Byzantine art. These are facts which are sustained by history. The prominence given to France above Spain or Italy or Germany is, I think, merely another proof that the Legend was of French origin or was constructed under French influence.

The account of the condition of Masonry or architecture among the Britains in the time of St. Alban, or the 4th century, is simply a legendary version of the history of the introduction of the art of building into England during the Roman domination by the "Collegia Artificum" or Roman Colleges of Artificers, who accompanied the victorious legions when they vanquished Hesperia, Gaul, and Britain, and colonized as they vanquished them.

The decay of architecture in Britain after the Roman armies had abandoned that country to protect the Empire from the incursions of the northern hordes of barbarians, in consequence of which Britain was left in an unprotected state, and was speedily involved in wars with the Picts, the Danes, and other enemies, is next narrated in the Legend, and is its version of an historical fact.

It is also historically true that in the 7th century peace was restored to the northern parts of the island, and that Edwin, King of Northumbria, of which the city of York was the capital, revived the arts of civilization, gave his patronage to architecture, and caused many public buildings, among others the Cathedral of York, to be built. All of this is told in the Legend, although, by an error for which I have already accounted, Edwin, the Northumbrian king, was in the later Legend confounded with the brother of Athelstan.

The second decay of architecture in England, in consequence of the invasions of the Danes, and the intestine as well as foreign wars which desolated the kingdom until the reign of Athelstan, in the early part of the 10th century, when entire peace was restored, is

briefly alluded to in the Legend, therein conforming to the history of that troublous period.

As a consequence of the restoration of peace, the Legend records the revival of Masonry or architecture in the 10th century, under the reign of Athelstan, who called the Craft together and gave them a charter. I have already discussed this point and shown that the narrative of the Legend presents nothing improbable or incredible but that it is easily to be reconciled with the facts of contemporary history. We have only to reconcile the two forms of the Legend by asserting that Edwin of Northumbria revived Masonry in an Assembly convened by him at York, and that Athelstan restored its decayed prosperity by his general patronage, and by charters which he gave to the Guilds or corporations of handicraftsmen.

Passing in this summary method over the principal occurrences related in this *Legend of the Craft*, we relieve it from the charge of gross puerility, which has been urged against it, even by some Masonic writers who have viewed it in a spirit of immature criticism. We find that its statements are not the offspring of a fertile imagination or the crude inventions of sheer ignorance, but that, on the contrary, they really have a support in what was at the time accepted as authentic history, and whose authenticity can not, even now, be disproved or denied.

Dissected as it has here been by the canons of philosophical criticism, the *Legend of the Craft* is no longer to be deemed a fable or myth, but an historical narrative related in the quaint language and in the quainter spirit of the age in which it was written.

But after the revival of Freemasonry in the beginning of the 18th century, this Legend, for the most part misunderstood, served as a fundamental basis on which were erected, first by Anderson and then by other writers who followed him, expanded narratives of the rise and progress of Masonry, in which the symbolic ideas or the mythical suggestions of the ancient "Legend" were often developed and enlarged into statements for the most part entirely fabulous.

In this way, these writers, who were educated and even learned men, have introduced not so much any new legends, but rather theories founded on a legend, by which they have traced the origin and the progress of the institution in narratives without historic authenticity and sometimes contradictory to historic truth.

The mode in which these theories have been attempted to be supported by the citation of assumed facts have caused them to take, to some extent, the form of legends. But to distinguish them from the pure Legends which existed before the 18th century, I have preferred to call them theories.

Their chief tendency has been, by the use of unauthenticated statements, to confuse the true history of the Order. And yet they have secured so prominent a place in its literature and have exerted so much influence on modern Masonic ideas, that they must be reviewed and analyzed at length, in order that the reader may have a complete understanding of the legendary history of the institution. For of that legendary history, these theories, founded as they are on assumed traditions, constitute a part.

As having priority in date, the theory of Dr. Anderson will be the first to claim our attention.

CHAPTER XX

THE ANDERSONIAN THEORY

THE Legend or theory of Dr. Anderson is detailed first in the edition of the *Book of Constitutions* which was edited by him and published in the year 1723, and was then more extensively developed in the subsequent edition of the same work published in 1738.

Anderson was acquainted with the more recent *Legend of the Craft*, and very fully cites it from a manuscript or *Record of Freemasons, written in the reign of Edward IV.*, that is, toward the end of the 15th century. If Anderson's quotations from this manuscript are correct, it must be one of those that has been lost and not yet recovered. For among some other events not mentioned in the manuscripts that are now extant, he states that the charges and laws of the Freemasons had been seen and perused by Henry VI. and his council, and had been approved by them.

He does not appear to have met with any of the earlier manuscripts, such as those of Halliwell and Roberts, which contain the Legend in its older form, for he makes no use of the Legend of Euclid, passing over the services of that geometrician lightly, as the later manuscripts do,¹ and not ascribing to him the origin of the Order in Egypt, which theory is the peculiar characteristic of the older Legend.

But out of the later Legend and from whatever manuscripts containing it to which he had access, Anderson has formed a Legend of his own. In this he has added many things of his own creation and given a more detailed narrative, if not a more correct one, than that contained in the *Legend of the Craft*.

Anderson's Legend, or theory, of the rise and progress of Ma-

¹ In the slight mention that he makes of Euclid, Anderson has observed the true chronology and placed him in the era of Ptolemy Lagus, 300 years B.C.

sorry, as it is contained in the first edition of the *Book of Constitutions*, was for a long time accepted by the Craft as a true history of the Order, and it has exercised a very remarkable influence in the framing of other theories on this subject which from time to time have been produced by subsequent writers.

To the student, therefore, who is engaged in the investigation of the legendary history of Masonry, this Andersonian Legend is of great importance. While the *Legend of the Craft* in its pure form was very little known to the great body of Masonic writers and students until the manuscripts containing this Legend in its various forms were made common to the Masonic public by the labors of Halliwell, Cooke, and, above all, by Hughan and his earnest collaborators in Masonic archaeology, the Legend of Anderson was accessible and familiar to all, and for a century and a half was deemed an authentic history, and even at the present day is accepted by some over-credulous and not well-informed Masons as a real narrative of the rise and progress of Masonry.

Anderson, in his history of the origin of Masonry, mindful of the French proverb, to "*commencer par la commencement*," begins by attributing to Adam a knowledge of Geometry as the foundation of Masonry and Architecture, words which throughout his Legend he uses as synonymous terms.

These arts he taught to his sons, and Cain especially practiced them by building a city. Seth also was equally acquainted with them and taught them to his offspring. Hence the antediluvian world was well acquainted with Masonry,¹ and erected many curious works until the time of Noah, who built the Ark by the principles of Geometry and the rules of Masonry.

Noah and his three sons, who were all Masons, brought with them to the new world the traditions and arts of the antediluvians. Noah is therefore deemed the founder of Masonry in the post-diluvian world, and hence Anderson called a Mason a "true Noachida" or Noachite, a term used to the present day.

The descendants of Noah exercised their skill in Masonry in the attempted erection of the Tower of Babel, but were confounded in their speech and dispersed into various countries, whereby the

¹ Oliver has readily accepted this theory of an antediluvian Masonry and written several very learned and indeed interesting works on the subject.

knowledge of Masonry was lost.¹ It was, however, preserved in Shinar and Assyria, where Nimrod built many cities.

In those parts afterward flourished many priests and mathematicians under the name of Chaldees and Magi, who preserved the science of Geometry or Masonry, and thence the science and the art² were transmitted to later ages and distant climes. Mitzraim, the second son of Ham, carried Masonry into Egypt, where the overflowing of the banks of the Nile caused an improvement in Geometry, and consequently brought Masonry much into request.

Masonry was introduced into the Land of Canaan by the descendants of the youngest son of Ham, and into Europe, as he supposes, by the posterity of Japhet, although we know nothing of their works.

The posterity of Shem also cultivated the art of Masonry, and Abraham, the head of one branch of that family, having thus obtained his knowledge of Geometry and the kindred sciences, communicated that knowledge to the Egyptians and transmitted it to his descendants, the Israelites. When, therefore, they made their exodus from Egypt the Israelites were "a whole kingdom of Masons," and while in the wilderness were often assembled by their Grand Master Moses into "a regular and general Lodge."

On taking possession of Canaan, the Israelites found the old inhabitants were versed in Masonry, which, however, their conquerors greatly improved, for the splendor of the finest structures in Tyre and Sidon was greatly surpassed by the magnificence of the Temple erected by King Solomon in Jerusalem. In the construction of this edifice, Solomon was assisted by the Masons and carpenters of Hiram, King of Tyre, and especially by the King of Tyre's namesake Hiram or Hiram, to whom, in a note, Anderson gives the name of Hiram Abif, which name he has ever since retained among the Craft.³

¹ This part of the Legend has been preserved in the American rituals, wherein the candidate is said to come "from the lofty Tower of Babel, where language was confounded and Masonry lost," and to be proceeding "to the threshing-floor of Orneu the Jebusite (the Temple of Solomon) where language was restored and Masonry found."

² By the science is meant geometry, and by the art architecture—a distinction preserved in the Middle Ages; and the combination of them into "Geometrical Masonry," constitute the Mystery of the Freemasons of that period.

³ In the first edition of this Legend, Anderson makes no allusion to the death of Hiram Abif during the building of the Temple. He mentions it, however, in the second edition of the "Constitutions" published fifteen years afterward. But this does not absolutely prove

Anderson gives in this Legend the first detailed account of the Temple of Solomon that is to be found in any Masonic work. It is, however, only an appropriation of that contained in the Books of Kings and Chronicles, with some statements for which he was probably indebted to his own invention. It has exerted a considerable influence upon other Legends subsequently framed, and especially upon all the rituals, and indeed upon all the modern ideas of speculative Masons.¹

After the construction of the Temple, the Masons who had been engaged in it dispersed into Syria, Mesopotamia, Assyria, Chaldea, Babylonia, Media, Persia, Arabia, Africa, Lesser Asia, Greece, and other parts of Europe, where they taught the art to many eminent persons, and kings, princes, and potentates became Grand Masters, each in his own territory.

The Legend then passes on to Nebuchadnezzar, whom it calls a Grand Master, and asserts that he received much improvement in Masonry from the Jewish captives whom he brought to Babylon after he had destroyed that city and its Temple.

Afterward Cyrus constituted Zerubbabel the leader of the Jews, who, being released from their captivity, returned to Jerusalem and built the second Temple.

From Palestine, and after the erection of the Temple, Masonry was carried into Greece, and arrived at its height during the Jewish captivity, and in the time of Thales Milesius, the philosopher, and his pupil, Pythagoras, who was the author of the 47th Proposition of Euclid, which "is the foundation of all Masonry," Pythagoras traveled into Egypt and Babylon, and acquired much knowledge from the priests and the Magi, which he dispensed in Greece and Italy on his return.²

The Legend now speaks, parenthetically as it were, of the prog-

that he was at the time unacquainted with the tradition, but he may have thought it too esoteric for public record, for he says, in the very place where he should have referred to it, that he has left "what must not and cannot be communicated in writing."

¹The peculiar details of the doctrine of Anderson have not been always respected. For instance, it is a very prevalent opinion among the Craft at this day, that there was a Master Mason's Lodge at the Temple, over which Solomon presided as Master and the two Hiram as Wardens, a theory which is not supported by Anderson, who says that King Solomon was Grand Master of the Lodge at Jerusalem, King Hiram Grand Master of that at Tyre, and Hiram Abif Master of Work. Const., 1st ed., p. 14.

²It was probably this part of the Andersonian Legend which gave rise to a similar statement made in the spurious production known as the Leland MS.

ress of Masonry in Asia Minor, and of the labors of Euclid in Egypt, in the reign of Ptolemy Lagus, in the methodical digestion of Geometry into a science.

It next dwells upon the great improvement of Masonry in Greece, whose Masons arrived at the same degree of skill and magnificence as their teachers the Asiatics and Egyptians.

From Sicily, from Greece, from Egypt and Asia, Masonry was introduced into Rome, which soon became the center of learning, and disseminated the knowledge of Masonry among the nations which it conquered.

The Emperor Augustus became the Grand Master of the Lodge at Rome, and established the Augustan style of architecture. During the prosperous condition of the Roman Empire, Masonry was carefully propagated to the remotest regions of the world, and a Lodge erected in almost every Roman garrison.

But upon the declension of the empire, when the Roman garrisons were drawn away from Britain, the Angles and lower Saxons, who had been invited by the ancient Britons to come over and help them against the Scots and Picts, at length subdued the southern part of England, where Masonry had been introduced by the Romans, and the art then fell into decay.

When the Anglo-Saxons recovered their freedom in the 8th century Masonry was revived, and at the desire of the Saxon kings, Charles Martel, King of France, sent over several expert craftsmen, so that Gothic architecture was again encouraged during the Heph-tarchy.

The many invasions of the Danes caused the destruction of numerous records, but did not, to any great extent, interrupt the work, although the methods introduced by the Roman builders were lost.

But when war ceased and peace was proclaimed by the Norman conquest, Gothic Masonry was restored and encouraged by William the Conqueror and his son William Rufus, who built Westminster Hall. And notwithstanding the wars that subsequently occurred, and the contentions of the Barons, Masonry never ceased to maintain its position in England. In the year 1362, Edward III. had an officer called the King's Freemason, or General Surveyor of his buildings, whose name was Henry Yvele, and who erected many public buildings.

Anderson now repeats the *Legend of the Craft*, with the story

of Athelstan and his son Edwin, taking it, with an evident modification of the language, from a record of Freemasons, which he says was written in the reign of Edward IV. This record adds, as he says, that the charges and laws therein contained had been seen and approved by Henry VI. and the lords of his council, who must therefore, to enable them to make such a review, have been incorporated with the Freemasons. In consequence of this, the act passed by Parliament when the King was in his infancy, forbidding the yearly congregations of Masons in their General Assemblies, was never enforced after the King had arrived at manhood, and had perused the regulations contained in that old record.

The Kings of Scotland also encouraged Masonry from the earliest times down to the union of the crowns, and granted to the Scottish Masons the prerogative of having a fixed Grand Master and Grand Warden.¹

Queen Elizabeth discouraged Masonry, and neglected it during her whole reign. She sent a commission to York to break up the Annual Assembly, but the members of the commission, having been admitted into the Lodge, made so favorable a report to the Queen, of the Fraternity, that she no longer opposed the Masons, but tolerated them, although she gave them no encouragement.

Her successor, James I., was, however, a patron of Masonry, and greatly revived the art and restored the Roman architecture, employing Inigo Jones as his architect, under whom was Nicholas Stone as his Master Mason.

Charles I. was also a Mason, and patronized the art whose successful progress was unhappily diverted by the civil wars and the death of the king.

But after the restoration of the royal family, Masonry was again revived by Charles II., who was a great encourager of the craftsmen, and hence is supposed to have been a Freemason.

In the reign of James II., Masonry not being duly cultivated, the London Lodges "much dwindled into ignorance."

But on the accession of William, that monarch "who by most is reckoned as a Freemason," greatly revived the art, and showed himself a patron of Masonry.

¹From this it appears that Anderson was acquainted with the claim of the St. Clairs of Roslin to the hereditary Grand Mastership of Scotland, a point that has recently been disputed.

His good example was followed by Queen Anne, who ordered fifty new churches to be erected in London and its suburbs, and also by George I., her successor.

With an allusion to the opinion that the religious and military Orders of knighthood in the Middle Ages had borrowed many of their solemn usages from the Freemasons,¹ the Legend here ends.

Upon a perusal of this Legend, it will be found that it is in fact, except in the latter portions, which are semi-historical, only a running commentary on the later *Legend of the Craft*, embracing all that is said therein and adding other statements, partly derived from history and partly, perhaps, from the author's invention.

The second edition of the *Constitutions* goes more fully over the same ground, but is written in the form rather of a history than of a legend, and a review of it is not, therefore, necessary or appropriate in this part of the present work, which is solely devoted to the Legends of the Order.

In this second edition of Anderson's work, there are undoubtedly many things which will be repudiated by the skeptical student of Masonic history, and many which, if not at once denied, require proof to substantiate them. But with all its errors, this work of Anderson is replete with facts that make it interesting and instructive, and it earns for the author a grateful tribute for his labors in behalf of the literature of Masonry at so early a period after its revival.

¹It will be seen hereafter that the Chevalier Ramsay greatly developed this brief allusion of Anderson, and out of it worked his theory of the Templar origin of Freemasonry.

CHAPTER XXI

THE PRESTONIAN THEORY

THE Legend given by Preston in his *Illustrations of Masonry*, which details the origin and early progress of the Institution, is more valuable and more interesting than that of Anderson, because it is more succinct, and although founded like it on the *Legend of the Craft*, it treats each detail with an appearance of historical accuracy that almost removes from the narrative the legendary character which, after all, really attaches to it.

In accepting the *Legend of the Craft* as the basis of his story, Preston rejects, or at least omits to mention, all the earlier part of it, and begins his story with the supposed introduction of Masonry into England.

Commencing with a reference to the Druids, who, he says, it has been suggested, derived their system of government from Pythagoras, he thinks that there is no doubt that the science of Masonry was not unknown to them. Yet he does not say that there was an affinity between their rites and those of the Freemasons, which, as an open question, he leaves everyone to determine for himself.

Masonry, according to this theory, was certainly first introduced into England at the time of its conquest by Julius Caesar, who, with several of the Roman generals that succeeded him, were patrons and protectors of the Craft.

The fraternity were engaged in the creation of walls, forts, bridges, cities, temples, and other stately edifices, and their Lodges or Conventions were regularly held.

Obstructed by the wars which broke out between the Romans and the natives, Masonry was at length revived in the time of the Emperor Carausius. He, having shaken off the Roman yoke, sought to improve his country in the civil arts, and brought into his dominions the best workmen and artificers from all parts. Among the

first class of his favorites he enrolled the Masons, for whose tenets he professed the highest veneration, and appointed his steward, Albanus, the superintendent of their Assemblies. He gave them a charter, and commanded Albanus to preside over them in person as Grand Master. He assisted in the initiation of many persons into the mysteries of the Order.

In 680 some expert brethren arrived from France and formed a Lodge under the direction of Bennet, Abbot of Wirral, who was soon afterward appointed by Kenred, King of Mercia, inspector of the Lodges and general superintendent of the Masons.

Masonry was in a low state during the Heptarchy, but in 856 it was revived under St. Swithin, who was employed by Ethelwolf, the Saxon king, to repair some pious houses; and it gradually improved until the reign of Alfred, who was its zealous protector and who maintained a number of workmen in repairing the desolations of the Danes.

In the reign of Edward, his successor, the Masons continued to hold their Lodges under the sanction of Ethred, his sister's husband, and Ethelward, his brother.

Athelstan succeeded his father in 924 and appointed his brother Edwin, patron of Masons. The latter procured a charter from Athelstan for the Masons to meet annually in communication at York, where the first Grand Lodge of England was formed in 926, at which Edwin presided as Grand Master. The *Legend of the Craft*, in reference to the collection of old writings, is here repeated.

On the death of Edwin, Athelstan undertook in person the direction of the Lodges, and under his sanction the art of Masonry was propagated in peace and security.

On the death of Athelstan, the Masons dispersed and continued in a very unsettled state until the reign of Edgar, in 960, when they were again collected by St. Dunstan, but did not meet with permanent encouragement.

For fifty years after Edgar's death Masonry remained in a low condition, but was revived in 1041 under the patronage of Edward the Confessor, who appointed Leofric, Earl of Coventry, to superintend the Craft.

William the Conqueror, who acquired the crown in 1066, appointed Gundulph Bishop of Rochester, and Roger de Montgomery,

Earl of Shrewsbury, joint patrons of the Masons. The labors of the fraternity were employed, during the reign of William Rufus, in the construction of various edifices.

The Lodges continued to assemble under Henry I. and Stephen. In the reign of the latter, Gilbert de Clare, Marquis of Pembroke, presided over the Lodges.

In the reign of Henry II., the Grand Master of the Knights Templars employed the Craft in 1135 in building their Temple. Masonry continued under the patronage of this Order until 1199, when John succeeded to the throne and Peter de Colechurch was appointed Grand Master. Peter de Rupibus succeeded him, and Masonry continued to flourish during this and the following reign.

Preston's traditionary narrative, or his theory founded on Legends, may be considered as ending here.

The rest of his work assumes a purely historical form, although many of his statements need for authenticity the support of other authorities. These will be subjects of consideration when we come to the next part of this work.

At present, before dismissing the theory of Preston, a few comments are required which have been suggested by portions of the narrative.

As to the Legend of Carausius, to whom Preston ascribes the patronage of the British craft in the latter part of the 3d century, it must be remarked that it was first made known to the fraternity by Dr. Anderson in the 2d edition of his *Constitutions*. He says that the tradition is contained in all the old Constitutions and was firmly believed by the old English Masons. But the fact is that it is to be found in none of the old records that have as yet been discovered. They speak only of a king who patronized St. Alban and who made him the steward of his household and his Master of Works. Anderson designated this until then unnamed king as Carausius, forgetting that the Saint was martyred in the same year that the monarch assumed the throne. This was a strange error to be committed by one who had made genealogy his special study and had written a voluminous work on the subject of royal successions.

From Anderson, Preston appears to have borrowed the Legend, developing it into a minuter narrative, by the insertion of several additional circumstances, a prerogative which the compilers of Masonic as well as monastic Legends have always thought proper to exercise.

The advent of French Masons into England toward the end of the 7th century, brought thither by the Abbot Bennet or Benedict, which is recorded by Preston, is undoubtedly an historical fact. Lacroix says that England from the 7th century had called to it the best workmen among the French Masons, the *Maîtres de pierre*.

The Venerable Bede, who was contemporary with that period, says that the famous Abbot Benedictus Biscopius (the Bennet of Preston) went over to France in 675 to engage workmen to build his church, and brought them over to England for that purpose

Richard of Cirencester makes the same statement. He says that "Bennet collected Masons (coementarios) and all kinds of industrious artisans from Rome, Italy, France, and other countries where he could find them, and, bringing them to England, employed them in his works."

Preston is, however, in error as to the reign in which this event occurred. Kenred, or rather Coenred, did not succeed as King of Mercia until 704, and the Abbot Benedict had died the year before. Our Masonic writers of the last century, like their predecessors, the Legendists, when giving the substance of a statement, were very apt to get confused in their dates.

Of the Legend of the "weeping St. Swithin," to whom Preston ascribes the revival of Masonry in the middle of the 9th century, it may be remarked that as to the character of the Saint as a celebrated architect, the Legend is supported by the testimony of the Anglo-Saxon chroniclers.

Roger of Wendover, who is followed by Matthew of Westminster, records his custom of personally superintending the workmen when engaged in the construction of any building, "that his presence might stimulate them to diligence in their labors."

But the consideration of the condition of Masonry at that period, in England, belongs rather to the historical than to the legendary portion of this work.

On the whole, it may be said of Preston that he has made a considerable improvement on Anderson in his method of treating the early progress of Masonry. Still his narrative contains so many assumptions which are not proved to be facts, that his theory must, like that of his predecessor, be still considered as founded on legends rather than on authentic history.

CHAPTER XXII

THE HUTCHINSONIAN THEORY

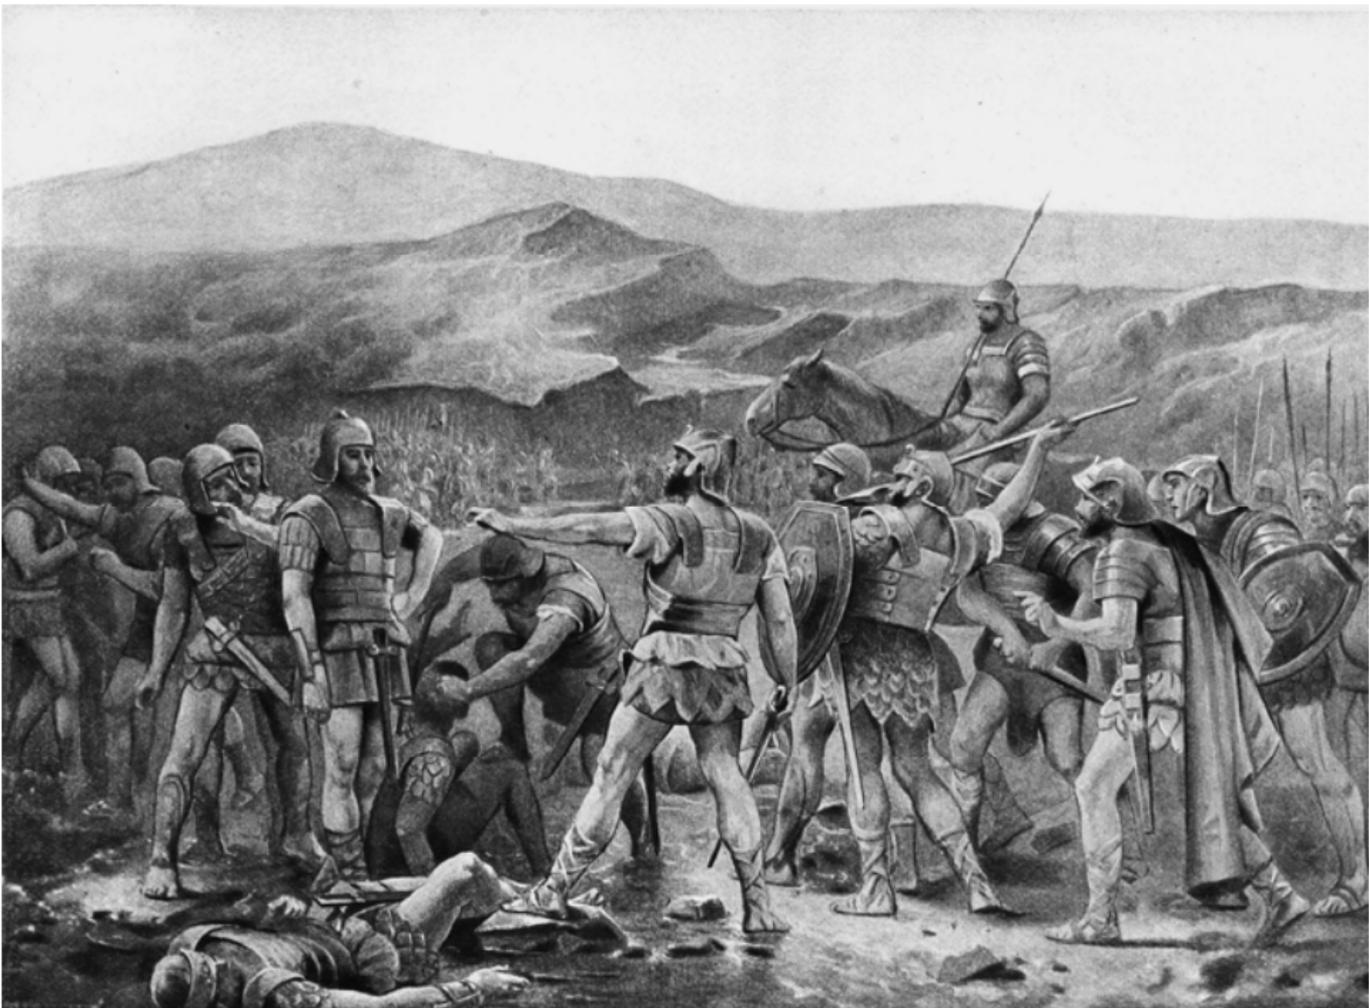

THE theory advanced by Bro. William Hutchinson as to the origin and the progress of Freemasonry, in his treatise, first published in the year 1775 and entitled *The Spirit of Masonry*, is so complicated and sometimes apparently so contradictory in its statements, as to require, for a due comprehension of his views, not only a careful perusal, but even an exhaustive study of the work alluded to. After such a study I think that I am able to present to the reader a correct summary of the opinions on the rise and progress of the Order which were entertained by this learned scholar.

Let it be said, by way of preface to this review, that however we may dissent from the conclusions of Hutchinson, he is entitled to our utmost respect for his scholarly attainments. To the study of the history and the philosophy of Masonry he brought a fund of antiquarian research, in which he had previously been engaged in the examination of the ecclesiastical antiquities of the province of Durham. Of all the Masonic writers of the 18th century, Hutchinson was undoubtedly the most learned. And yet the theory that he has propounded as to the origin of the Masonic Institution is altogether untenable and indeed, in many of its details, absurd.

Of all the opinions entertained by Hutchinson concerning the origin of Freemasonry, the most heterodox is that which denies its descent from and its connection, at any period, with an operative society. "It is our opinion," he says, "that Masons in the present state of Masonry were never a body of architects. . . . We ground a judgment of the nature of our profession on our ceremonies and flatter ourselves every Mason will be convinced that they have not relation to building and architecture, but are emblematical and imply moral and spiritual and religious tenets."¹

¹ "Spirit of Masonry," lect. xiii., p. 131.

THE PASSES OF THE JORDAN

In another place, while admitting that there were in former times builders of cities, towers, temples, and fortifications, he doubts "that the artificers were formed into bodies ruled by their own proper laws and knowing mysteries and secrets which were kept from the world."¹

Since he admits, as we will see hereafter, that Masonry existed at the Temple of Solomon, that it was there organized in what he calls the second stage of its progress, and that the builders of the edifice were Masons, one would naturally imagine that Hutchinson would here encounter an insuperable objection to his theory, which entirely disconnects Masonry and architecture. But he attempts to obviate this difficulty by supposing that the principles of Freemasonry had, before the commencement of the undertaking, been communicated by King Solomon to "the sages and religious men amongst his people,"² and that these "chosen ones of Solomon, as a pious and holy duty conducted the work." Their labors as builders were simply incidental and they were no more to be regarded by reason of this duty as architects by profession, than were Abel, Noah, Abraham, Jacob, Moses, and David by reason of the building of their altars, which were, like the Temple, works of piety and devotion.³

This theory, in which all connection between operative and speculative Masonry is completely severed, and in which, in fact, the former is entirely ignored, is peculiar to Hutchinson. No other writer, no matter to what source he may have attributed the original rise of speculative Masonry, has denied that there was some period in the history of its progress when it was more or less intimately connected with the operative art. While, therefore, it is plain that the opinion of Hutchinson is in opposition to that of all other Masonic writers, it is equally evident that it contradicts all the well-established facts of history.

But besides these opinions concerning the non-operative character of the Institution, Hutchinson has been scarcely less peculiar in his other views in respect to the rise and progress of Freemasonry and its relations to other associations of antiquity.

¹ "Spirit of Masonry," lect. x., p. 107.

² Hutchinson's language is here somewhat confused, but it seems that this is the only rational interpretation that can be given to it.

³ "Spirit of Masonry," lect. x., p. 108.

The Hutchinsonian theory may indeed be regarded as especially and exclusively his own. It is therefore worthy of consideration and review, rather in reference to the novelty of his ideas than in respect to anything of great value in the pseudo-historical statements that he has advanced.

The prominent thought of Hutchinson in developing his theory is that Masonry in its progress from the earliest times of antiquity to the present day has been divided into three stages, respectively represented by the three ancient Craft degrees.¹

He does not give a very lucid or satisfactory explanation of the reasons which induced him to connect each of these "stages of progress" with one of the symbolical degrees, and indeed the connection appears to be based upon a rather fanciful hypothesis.

The three stages into which he divides the progress of Masonry from its birth onwards to modern times are distinguished from each other, and distinctively marked by the code of religious ethics professed and taught by each. The first stage, which is represented by the Entered Apprentice degree, commences with Adam and the Garden of Eden and extends to the time of Moses.

The religious code taught in this first stage of Masonry was confined to a "knowledge of the God of Nature and that acceptable service wherewith He was well pleased."²

To Adam, while in a state of innocence, this knowledge was imparted, as well as that of all the science and learning which existed in the earliest ages of the world.

When our first parent fell, although he lost his innocence, he still retained the memory of all that he had been taught while in the Garden of Eden. This very retention was, indeed, a portion of the punishment incurred for his disobedience.

It, however, enabled him to communicate to his children the sciences which he had comprehended in Eden, and the knowledge that he had acquired of Nature and the God of Nature. By them these lessons were transmitted to their descendants as the cornerstone and foundation of Masonry, whose teachings at that early

¹ "It is known to the world, but more particularly to the brethren, that there are three degrees of Masons — Apprentices, Craftsmen, and Masters; their initiation, and the several advancements from the order of Apprentices, will necessarily lead us to observations in these distinct channels." — "Spirit of Masonry," lect. i., p. I.

² "Spirit of Masonry," lect. i., p. 6.

period consisted of a belief in the God of Nature and a knowledge of the sciences as they had been transmitted by Adam to his posterity. This system appears to have been very nearly the same as that afterward called by Dr. Oliver the "Pure Freemasonry of Antiquity."

All of the descendants of Adam did not, however, retain this purity and simplicity of dogma. After the deluge, when mankind became separated, the lessons which had been taught by the antediluvians fell into confusion and oblivion and were corrupted by many peoples, so that the service of the true God, which had been taught in the pure Masonry of the first men, was defiled by idolatry. These seceders from the pure Adamic Masonry formed institutions of their own, and degenerated, as the first deviation from the simple worship of the God of Nature, into the errors of Sabaism, or the adoration of the Sun, Moon, and Stars. They adopted symbols and allegories with which to teach esoterically their false doctrines. The earliest of these seceders were the Egyptians, whose priests secreted the mysteries of their religion from the multitude by symbols and hieroglyphics that were comprehensible to the members of their own order only. A similar system was adopted by the priests of Greece and Rome when they established their peculiar Mysteries. These examples of conveying truth by symbolic methods of teaching were wisely followed by the Masons for the purpose of concealing their own mysteries.

From this we naturally make the deduction, although Hutchinson does not expressly say so, that, according to his theory, Masonry was at that early period merely a religious profession "whose principles, maxims, language, learning, and religion were derived from Eden, from the patriarchs, and from the sages of the East," and that the symbolism which now forms so essential an element of the system was not an original characteristic of it, but was borrowed, at a later period, from the mystical and religious associations of the pagans.¹

¹Long after, Mr. Grote, in his "History of Greece," spoke of an hypothesis of an ancient and highly instructed body of priests having their origin either in Egypt or the East, who communicated to the rude and barbarous Greeks religious, physical, and historical knowledge under the veil of symbols. The same current of thought appears to have been suggested to the Masonic writer and to the historian of Greece, but each has directed it in a different way—one to the history of the Pagan nations, the other to that of Masonry.

Such, according to the theory of Hutchinson, was the "first stage" in the progress of Masonry represented by the Entered Apprentice degree, and which consisted simply of a belief in and a worship of the true God as the doctrine was taught by Adam and the patriarchs. It was a system of religious principles, with few rites and ceremonies and fewer symbols. The second stage in the progress of Masonry, which Hutchinson supposes to be represented by the Fellow Craft degree, commences at the era of Moses and extends through the whole period of the Jewish history to the advent of Christianity. According to the theory of Hutchinson, the Jewish lawgiver was, of course, in possession of the pure Masonry of the patriarchs which constituted the first stage of the institution, but was enabled to extend its ethical and religious principles in consequence of the instructions in relation to God and the duties of man which he had himself received by an immediate revelation. In other words, Masonry in its first stage was cosmopolitan in its religious teachings, requiring only a belief in the God of Nature as he had been revealed to Adam and his immediate descendants, but in the second stage, as inaugurated by Moses, that universal belief was exchanged for one in the Deity as He had made himself known on Mount Sinai. That is to say, the second or Mosaic stage of Masonry became Judaic in its profession.

But in another respect Masonry in its second stage assumed a different form from that which had marked its primitive state. Moses, from his peculiar education, was well acquainted with the rites, the ceremonies, the hieroglyphs, and the symbols used by the Egyptian priesthood. Many of these he introduced into Masonry, and thus began that system which, coming originally from the Egyptians and subsequently augmented by derivations from the Druids, the Essenes, the Pythagoreans, and other mystical associations, at last was developed into that science of symbolism which now constitutes so important and essential a characteristic of modern Freemasonry.

A third change in the form of Masonry, which took place in its Mosaic or Judaic stage, was the introduction of the operative art of building among its disciples. Instances of this occurred in the days of Moses, when Aholiab, Bezaleel, and other Masons were engaged in the construction of the Tabernacle, and subsequently in the time of Solomon, when that monarch occupied his Masons in the erection of the Temple.

But, as has already been shown in a preceding part of this chapter, Hutchinson does not conclude from these facts that Masonry was ever connected in its origin with "builders, architects, or mechanics." The occupation of these Masons as builders was entirely accidental, and did not at all interfere with or supersede their character as members of a purely speculative association.

But it may be as well to give, at this point, in his own words, his explanation of the manner in which the Masons became, on certain occasions, builders, and whence arose in modern times the erroneous idea that the Masonic profession consisted of architects.¹

"I presume," he says, "that the name of Mason in this society doth not denote that the rise or origin of such society was solely from builders, architects, or mechanics; at the times in which Moses ordained the setting up of the sanctuary, and when Solomon was about to build the Temple at Jerusalem, they selected from out of the people those men who were enlightened with the true faith, and, being full of wisdom and religious fervor, were found proper to conduct these works of piety. It was on those occasions that our predecessors appeared to the world as architects and were formed into a body, under salutary rules, for the government of those who were employed in these great works, since which period builders have adopted the name of Masons, as an honorary distinction and title to their profession. I am induced to believe the name of Mason has its derivation from a language in which it implies some indication or distinction of the nature of the society, and that it has not its relation to architects."²

Masonry was not organized at the Temple of Solomon, as is believed by those who adopt the Temple theory, but yet that building occupies, according to the views of Hutchinson, an important place in the history of the institution. It was erected during the second stage of the progress of Masonry, not, as we must infer from the language of our author, by the heathen operatives of Tyre, but solely by Israelitish Masons; or, if assisted by any, it was only by proselytes who on or before their initiation had accepted the Jewish faith.

¹In a subsequent lecture (xiii.) he attempts, in an historical argument, to show that the guild of Masons incorporated in the reign of Henry V., and the laws concerning "congregations and confederacies of Masons," passed in the succeeding reign, had no reference whatever to the speculative society.

²"Spirit of Masonry," lect. i., p. 2. In another place in this work the etymological ideas of Hutchinson and other writers will be duly investigated.

The language of Hutchinson is on this point somewhat obscure, yet I think that it admits only of the interpretation which has been given. He says: "As the sons of Aaron alone were admitted to the holy office and to the sacrificial rites, so none but devotees were admitted to this labour (on the temple). On this stage we see those religious who had received the truth and the light of understanding as possessed by the first men, embodied as artificers and engaged in this holy work as architects."¹

Still more explicit is the following statement, made in a subsequent part of the work: "Solomon was truly the executor of that plan which was revealed to him from above; he called forth the sages and religious men amongst his people to perform the work; he classed them according to their rank in their religious profession, as the priests of the Temple were stationed in the solemn rites and ceremonies instituted there. . . . The chosen ones of Solomon, as a pious and holy duty, conducted the work."²

Solomon did not, therefore, organize, as has very commonly been believed, a system of Masonry by the aid of his Tyrian workmen, and especially Hiram Abif, who has always been designated by the Craft as his "Chief Builder," but he practiced and transmitted to his descendants the primitive Masonry derived from Adam and modified into its sectarian Jewish form by Moses. The Masonry of Solomon, like that of the great lawgiver of the Israelites, was essentially Judaic in its religious ethics. It was but a continuation of that second stage of Masonry which, as I have already said, lasted, according to the Hutchinsonian theory, until the era of Christianity.

But the wisdom and power of Solomon had attracted to him the attention of the neighboring nations, and the splendor of the edifice which he had erected extended his fame and won the admiration of the most distant parts of the world, so that his name and his artificers became the wonder of mankind, and the works of the latter excited their emulation. Hence the Masons of Solomon were dispersed from Jerusalem into various lands, where they superintended the architectural labors of other princes, converted infidels, initiated foreign brethren into their mysteries, and thus extended the order over the distant quarters of the known world.³

¹ "Spirit of Masonry," lect. vii., p. 86.

³ *Ibid.*, lect. x., p. 108.

³ I have employed in this paragraph the very language of Hutchinson. However mythical the statements therein contained may be deemed by the iconoclasts, there

Hence we see that, according to the theory of Hutchinson, King Solomon, although not the founder of Masonry at the Temple and not our first Grand Master, as he has been called, was the first to propagate the association into foreign countries. Until his time, it had been confined to the Jewish descendants of the patriarchs.

The next or third stage of the progress of Masonry, represented by the Master's degree, commenced at the advent of Christianity. As Hutchinson in his description of the two preceding progressive classes of Masons had assigned to the first, as represented by the Apprentices, only the knowledge of the God of Nature as it prevailed in the earliest ages of the world, and to the second, as represented by the Fellow Crafts, the further knowledge of God as revealed in the Mosaic Legation, so to this third stage, as represented by Master Masons, he had assigned the complete and perfect knowledge of God as revealed in the Christian dispensation.

Masonry is thus made by him to assume in this third stage of its progressive growth a purely Christian character.

The introduction of rites and ceremonies under the Jewish law, which had been derived from the neighboring heathen nations, had clouded and obscured the service of God, and consequently corrupted the second stage of Masonry as established by Moses and followed by Solomon. God, perceiving the ruin which was overwhelming mankind by this pollution of His ordinances and laws, devised a new scheme for redeeming His creatures from the errors into which they had fallen. And this scheme was typified in the Third or Master's stage in the progressive course of Masonry.

Hence the Master's degree is, in this theory, exclusively a Christian invention; the legend receives a purely Christian interpretation, and the allegory of Hiram Abif is made to refer to the death or abolition of the Jewish law and the establishment of the new dispensation under Jesus Christ.

A few citations from the language of Hutchinson will place this theory very clearly before the reader.¹

The death and burial of the Master Builder, and the consequent loss of the true Word, are thus applied to the Christian dispensation. "Piety, which had planned the Temple at Jerusalem, was expunged."²

can be no doubt that they were accepted by the learned author as undeniably historical.

¹ They are taken from "Spirit of Masonry," lect. ix.

² The Master is slain.

The reverence and adoration due to the Divinity *was buried in the filth and rubbish* of the world.¹ Persecution had dispersed the few who retained their obedience,² and the name of the true God was almost lost and forgotten among men.³

"In this situation it might well be said 'That the guide to Heaven was lost and the Master of the works of righteousness was smitten.'"⁴

Again, "True religion was fled. 'Those who sought her through the wisdom of the ancients *were not able to raise her; she eluded the grasp, and their polluted hands were stretched forth in vain for her restoration.*'"⁵

Finally he explains the allegory of the Third degree as directly referring to Christ, in the following words: "The great Father of All, commiserating the miseries of the world, sent His only Son, who was innocence⁶ itself, to teach the doctrine of salvation, by whom *man was raised* from the death of sin unto the life of righteousness; from the tomb of corruption unto the chambers of hope; from the darkness of despair to the celestial beams of faith." And finally, that there may be no doubt of his theory that the third degree was altogether Christian in its origin and design, he explicitly says: "Thus the Master Mason represents a man under the Christian doctrine saved from the grave of iniquity and raised to the faith of salvation. As the great testimonial that we are risen from the state of corruption, we bear the emblem of the Holy Trinity as the insignia of our vows and of the origin of the Master's order."⁷

The christianization of the Third or Master's degree, that is, the interpretation of its symbols as referring to Christ and to Christian

¹ Burial and concealment in the rubbish of the Temple first, and then in an obscure grave.

² The confusion and consternation of the Craft.

³ The Master's word is lost.

⁴ In the 18th century it was supposed, by an incorrect translation of the Hebrew, that the substitute word signified "The Master is smitten." Dr. Oliver adopted that interpretation.

⁵ By "the wisdom of the ancients" is meant the two preceding stages of Masonry represented, as we have seen, by the Apprentices and the Fellow Craft. In the allegory of Hiram, the knowledge of each of these degrees is unsuccessfully applied to effect the raising.

⁶ Acacia. The Greek word *akakia* means innocence. Hence in the succeeding paragraph he calls Masons "true Acacians."

⁷ "Spirit of Masonry," lect. ix., p. 100.

dogmas, is not peculiar to nor original with Hutchinson. It was the accepted doctrine of almost all his contemporaries, and several of the rituals of the 18th century contain unmistakable traces of it. It was not, indeed, until the revisal of the lectures by Dr. Hemming, in 1813, that all references in them to Christianity were expunged. Even as late as the middle of the 19th century, Dr. Oliver had explicitly declared that if he had not been fully convinced that Freemasonry is a system of Christian ethics—that it contributes its aid to point the way to the Grand Lodge above, through the Cross of Christ—he should never have been found among the number of its advocates.¹

Notwithstanding that the Grand Lodge of England had authoritatively declared, in the year 1723, that Masonry required a belief only in that religion in which all men agree,² the tendency among all our early writers after the revival of 1717 was to Christianize the institution.

The interpretation of the symbols of Freemasonry from a Christian point of view was, therefore, at the period when Hutchinson advanced his theory, neither novel to the Craft nor peculiar to him.

The peculiarity and novelty of his doctrine consisted not in its Christian interpretation of the symbols, but in the view that he has taken of the origin and historical value of the legend of the Third degree.

At least from the time of Anderson and Desaguliers, the legend of Hiram Abif had been accepted by the Craft as an historical statement of an event that had actually occurred. Even the most skeptical writers of the present day receive it as a myth which possibly has been founded upon events that have been distorted in their passage down the stream of tradition.

Now, neither of these views appears to have been entertained by Hutchinson. We look in vain throughout his work for any reference to the legend as connected with Hiram Abif. In his lecture on "The Temple at Jerusalem," in which he gives the details of the labors of Solomon in the construction of that edifice, the name of Hiram does not once occur, except in the extracts that he makes from the *Book of Kings* and the *Antiquities* of Josephus. Indeed,

¹ "Antiquities of Masonry," chap. vi., p. 166, note.

² "Book of Constitutions," 1st ed., "Charges of a Freemason," I.

we must infer that he did not recognize Hiram Abif as a Mason, for he expressly says that all the Masons at the Temple were Israelites and believers in the Jewish faith.

In a subsequent lecture, on "The Secrecy of Masons," he, in fact, undervalues Hiram Abif as an architect, and says that he does not doubt that "Hiram's knowledge was in the business of a statuary and painter, and that he made graven images of stone and wood and molten images in metals," thus placing him in a subordinate position, and completely ignoring the rank given to him in all the Masonic rituals, as the equal and colleague of Solomon and the Master Builder of the Temple.¹

There is nowhere to be found in the work of Hutchinson any reference, however remote, to the circumstances of the death and raising of the "Widow's Son." He must have been acquainted with the legend, since it was preserved and taught in the lodges that he visited. But he speaks, in the most general terms, of the third degree as symbolizing the corruption and death of religion, and the moral resurrection of man in the new or Christian doctrine.

If he believed in the truth of his own theory—and we are bound to suppose that he did—then he could not but have looked upon the details of the Master's legend as absolutely false, for the legend and the theory can in no way be reconciled.

If I rightly understand the language of Hutchinson, which, it must be admitted, is sometimes confused and the ideas are not plainly expressed, he denies the existence of the third degree at the Temple.

That edifice was built, according to his theory, within the period of the second stage of the progress of Masonry. Now, that stage, which was inaugurated by Moses, was represented by the Fellow Craft's degree. It was not until the coming of Christ that the Master's degree with its rites and ceremonies came into existence, in the third stage of the progress of Masonry, which was represented by that degree. Indeed, in the following passage he explicitly makes that statement.

"The ceremonies now known to Masons prove that the testimonials and insignia of the Master's order, in the present state of

¹ Hutchinson has here ventured on a truth which, however, none of his successors have accepted. See hereafter the chapter in this work on "The Legend of Hiram Abif," in which I have advanced and endeavored to sustain the same view of the character of this celebrated artist.

Masonry, *were devised within the ages of Christianity*; and we are confident there are not any records in being, in any nation or in any language, which can show them to be pertinent to any other system or give them greater antiquity."¹

We can not explain this language with any respect for consistency and for the meaning of the words except by adopting the following explanation of the Hutchinsonian theory. At the building of the Temple, the Masonry then prevailing, which was the second or Fellow Crafts stage, was merely a system of religious ethics in which the doctrines of the Jewish faith, as revealed to Moses, had been superimposed upon the simple creed of the Patriarchs, which had constituted the first or Apprentice's stage of the institution. There was at that time no knowledge of the legend of Hiram Abif, which was a myth subsequently introduced in the Third or Master's stage of the progress of the Order. It was not until after the advent of Jesus Christ, "within the ages of Christianity," that the death and raising of the Master Builder was devised as a mythical symbol to constitute what Hutchinson calls "the testimonials and insignia of the Master's order."

The myth or legend thus fabricated was to be used as a symbol of the change which took place in the religious system of Masonry when the third stage of its progress was inaugurated by the invention of the Master's degree.

Here again Hutchinson differs from all the writers who preceded or who have followed him. The orthodox doctrine of all those who have given a Christian interpretation to the legend of the Third Degree is that it is the narrative of events which actually occurred at the building of the Temple of Solomon, and that it was afterward, on the advent of Christianity, adopted as a symbol, whereby the death and raising of Hiram Abif were considered as a type of the sufferings and death, the resurrection and ascension, of Christ.

No words of Hutchinson give expression to any such idea. With him the legend of Hiram the Builder is simply an allegory, invented at a much later period than that in which the events it details are supposed to have occurred, for the purpose of symbolizing

¹"Spirit of Masonry," lect. x., p. 1,062. It is "passing strange" that a man of Hutchinson's learning should, in this passage, have appeared to be oblivious of the mythical character of the ancient Mysteries.

the death and burial of the Jewish law with the Masonry which it had corrupted, and the resurrection of this defunct Masonry in a new and perfect form under the Christian dispensation.

Such is the Hutchinsonian theory of the origin and progress of Masonry. It is *sui generis*—peculiar to Hutchinson—and has been advanced or maintained by no other Masonic writer before or since. It may be summarized in a very few words:

1. Masonry was first taught by Adam, after the fall, to his descendants, and continued through the patriarchal age. It consisted of a simple code of ethics, teaching only a belief in the God of Nature. It was the Masonry of the Entered Apprentice.

2. It was enlarged by Moses and confirmed by Solomon, and thus lasted until the era of Christ. To its expanded code of ethics was added a number of symbols derived from the Egyptian priesthood. Its religion consisted in a belief in God as he had been revealed to the Jewish nation. It was the Masonry of the Fellow Craft.

3. The Masonry of this second stage becoming valueless in consequence of the corruption of the Jewish law, it was therefore abolished, and the third stage was established in its place. This third stage was formed by the teachings of Christ, and the religion it inculcates is that which was revealed by Him. It is the Masonry of the Master Mason.

4. Hence the three stages of Masonry present three forms of religion: first, the Patriarchal; second, the Jewish; third, the Christian.

Masonry, having thus reached its ultimate stage of progress, has continued in this last form to the present day. And now Hutchinson proceeds to advance his theory as to its introduction and growth in England. He had already accounted for its extension into other quarters of the world in consequence of the dispersion and travels of King Solomon's Masons, after the completion of the Temple. He thinks that during the first stage of Masonry—the Patriarchal—its principles were taught and practiced by the Druids. They received them from the Phœnicians, who visited England for trading purposes in very remote antiquity. The second stage—the Judaic—was with its ceremonials introduced among them by the Masons of Solomon, after the building of the Temple, but at what precise period he can not determine. The third and perfect form, as devel-

oped in the third stage, must have been adopted upon the conversion of the Druidical worshippers to Christianity, having been introduced into England, as we should infer, by the Christian missionaries who came from Rome into that country.

While Hutchinson denies that there was ever any connection between the Operative and the Speculative Masons, he admits that among the former there might have been a few of the latter. He accounts for this fact in the following manner:

After Christianity had become the popular religion of England, the ecclesiastics employed themselves in founding religious houses and in building churches. From the duty of assisting in this pious work, no man of whatever rank or profession was exempted. There were also a set of men called "holy werk folk," to whom were assigned certain lands which they held by the tenure of repairing, building, or defending churches and sepulchers, for which labors they were released from all feudal and military services. These men were stone-cutters and builders, and might, he thinks, have been Speculative Masons, and were probably selected from that body. "These men," he says, "come the nearest to a similitude of Solomon's Masons, and the title of Free and Accepted Masons, of any degree of architects we have gained any knowledge of." But he professes his ignorance whether their initiation was attended with peculiar ceremonies or by what laws they were regulated. That they had any connection with the Speculative Order whose origin from Adam he had been tracing, is denied.

Finally, he attributes the moral precepts of the Masonry of the present day to the school of Pythagoras and to the Basilideans, a sect of Christians who flourished in the 2d century. For this opinion, so far as relates to Pythagoras, he is indebted to the celebrated Leland manuscript, of whose genuineness he had not the slightest doubt. These precepts and the Egyptian symbols introduced by Moses with Jewish additions constitute the system of modern Masonry, which has, however, been perfected by a Christian doctrine.

Such is the theory of Hutchinson as to the origin and progress of Speculative Masonry. That it has been accepted as a whole by no other writer, is not surprising, as it not only is not supported by the facts of history, but is actually contradicted by every Masonic document that is extant.

It is, indeed, a mere body of myths, which are not clad with the slightest garment of probability.

And yet there are here and there some glimmerings of truth, such as the appropriation of his real character to Hiram Abif, and the allusions to the "holy werk folk," as showing a connection between Operative and Speculative Masonry, which, though not pushed far enough by Hutchinson, may afford valuable suggestions, if extended, to the searcher after historic truth in Freemasonry.

CHAPTER XXIII

THE OLIVERIAN THEORY

IN commendation of the Rev. Dr. Oliver as a learned and prolific writer on Freemasonry, too much can not be said. His name must ever be *clarum et venerabile* among the Craft. To the study of the history and the philosophy of the Institution he brought a store of scholarly acquirements, and a familiarity with ancient and modern literature which had been possessed by no Masonic author who had preceded him. Even Hutchinson, who certainly occupied the central and most elevated point in the circle of Masonic students and investigators who flourished in the 18th century, must yield the palm for erudition to him whose knowledge of books was encyclopedical.

In his numerous works on Freemasonry, of which it is difficult to specify the most important, the most learned, or the most interesting, Dr. Oliver has raised the Institution of Masonry to a point of elevation which it had never before reached, and to which its most ardent admirers had never aspired to promote it.

He loved it for its social tendencies, for he was genial in his inclination and in his habits, and he cherished its principles of brotherly love, for his heart was as expanded as his mind. But he taught that within its chain of union there was a fund of ethics and philosophy, and a beautiful science of symbolism by which its ethics was developed to the initiated, which awakened scholars to the contemplation of the fact never before so completely demonstrated, that Speculative Masonry claimed and was entitled to a prominent place among the systems of human philosophy.

No longer could men say that Freemasonry was merely a club of good fellows. Oliver had proved that it was a school of inquirers after truth. No longer could they charge that its only design was the cultivation of kindly feelings and the enjoyment of good cheer.

He had shown that it was engaged in the communication to its disciples of abstruse doctrines of religion and philosophy in a method by which it surpassed every other human scheme for imparting such knowledge.

But, notwithstanding this eulogium, every word of which is merited by its subject, and not one word of which would I erase, it must be confessed that there were two defects in his character that materially affect the value of his authority as an historian.

One was, that as a clergyman of the Church of England he was controlled by that clerical *esprit du corps* which sought to make every opinion subservient to his peculiar sectarian views. Thus, he gave to every symbol, every myth, and every allegory the interpretation of a theologian rather than of a philosopher.

The other defect, a far more important one, was the indulgence in an excessive credulity, which led him to accept the errors of tradition as the truths of history. In reading one of his narratives, it is often difficult to separate the two elements. He so glosses the sober facts of history with the fanciful coloring of legendary lore, that the reader finds himself involved in an inextricable web of authentic history intermixed with unsupported tradition, where he finds it impossible to discern the true from the fabulous.

The canon of criticism laid by Voltaire, that all historic certainty that does not amount to a mathematical demonstration is merely extreme probability, is far too rigorous. There are many facts that depend only on contemporaneous testimony to which no more precise demonstration is applied, and which yet leave the strong impression of certainty on the mind.

But here, as in all other things, there is a medium—a measure of moderation—and it would have been well if Dr. Oliver had observed it. But not having done so, his theory is founded not simply on the *Legend of the Craft*, of which he takes but little account, but on obscure legends and traditions derived by him, in the course of his multifarious reading, sometimes from rabbinical and sometimes from unknown sources.¹

¹He divides the legends of Masonry into two classes, neither of which embraces the incredible. He says that "many of them are founded in fact, and capable of unquestionable proof, whilst others are based on Jewish traditions, and consequently invested with probability, while they equally inculcate and enforce the most solemn and important truths."—"Historical Landmarks," vol. i., p. 399.

The theoretical views of Oliver as to the origin and progress of Masonry from a legendary point of view are so scattered in his various works that it is difficult to follow them in a chronological order. This is especially the case with the legends that relate to the periods subsequent to the building of the Temple at Jerusalem. Up to that era, the theory is enunciated in his *Antiquities of Freemasonry*, upon which I shall principally depend in this condensation. It was, it is true, written in the earlier part of his life, and was his first contribution to the literature of Masonry, but he has not in any of his subsequent writings modified the views he there entertained. This work may therefore be considered, as far as it goes, as an authoritative exposition of his theory. His *Historical Landmarks*, the most learned and most interesting of his works, if we except, perhaps, his *History of Initiation*, will furnish many commentaries on what he has advanced in his *Antiquities*, but as it is principally devoted to an inquiry into the origin and interpretation of the symbols and allegories of Masonry, we can not obtain from its pages a connected view of his theory.

Preston had introduced his history of Masonry by the assertion that its foundations might be traced "from the commencement of the world." Dr. Oliver is not content with so remote an origin, but claims, on the authority of Masonic traditions, that the science "existed before the creation of this globe, and was diffused amidst the numerous systems with which the grand empyreum of universal space is furnished."¹

But as he supposes that the globes constituting the universe were inhabited long before the earth was peopled, and that these inhabitants must have possessed a system of ethics founded on the belief in God, which he says is nothing else but Speculative Masonry, we may regard this opinion as merely tantamount to the expression that truth is eternal.

Passing by this empyreal notion as a mere metaphysical idea, let us begin with Oliver's theory of the mundane origin of the science of Masonry.

While in the Garden of Eden, Adam was taught that science which is now termed Masonry.² After his fall, he forfeited the gift of inspiration, but certainly retained a recollection of those degrees

¹ "Antiquities," Period L, ch. ii., p. 26.

² Oliver, "Antiquities," I., ii., 37.

of knowledge which are within the compass of human capacity, and among them that speculative science now known as Freemasonry.¹

These, in the course of time, he communicated to his children. Of these children, Seth and his descendants preserved and cultivated the principles of Masonry which had been received from Adam, but Cain and his progeny perverted and finally abandoned it. However, before his complete secession, the latter, with some of his descendants, reduced the knowledge he had received from Adam to practice, and built a city which he called Hanoch. The children of Lamech, the sixth in descent from Cain, also retained some faint remains of Masonry, which they exerted for the benefit of mankind.

It is in this way that Dr. Oliver attempts to reconcile the story of the children of Lamech, as detailed in the *Legend of the Craft*, with his theory, which really ousts Cain and all his descendants from the pale of Masonry. The sons of Lamech were Masons, but their Masonry had been greatly corrupted.

Dr. Oliver makes the usual division of Masonry into Operative and Speculative. The former continued to be used by the Cainites after they had lost all pretensions to the latter, and the first practical application of the art was by them in the building of the city of Hanoch, or, as it is called in Genesis, Enoch.

Thus Masonry was divided, as to its history, into two distinct streams, that of the Operative and that of the Speculative; the former cultivated by the descendants of Cain, the latter by those of Seth. It does not, however, appear that the Operative branch was altogether neglected by the Sethites, but was only made subordinate to their Speculative science, while the latter was entirely neglected by the Cainites, who devoted themselves exclusively to the Operative art. Finally they abandoned it and were lost in the corruptions of their race, which led to their destruction in the flood.

The Speculative stream, however, flowed on uninterruptedly to the time of Noah. Oliver does not hesitate to say that Seth, "associating himself with the most virtuous men of his age, they formed lodges and discussed the great principles of Masonry," and were called by their contemporaries the "Sons of Light."

Seth continued to preside over the Craft until the time of

¹ Oliver, "Antiquities," I, ii, 40.

Enoch, when he appointed that patriarch as his successor and Grand Superintendent.¹

Enoch, as Grand Master, practiced Masonry with such effect that God vouchsafed to reveal to him some peculiar mysteries, among which was the sacred WORD, which continues to this day to form an important portion of Masonic speculation, and for the preservation of which from the impending destruction of the world he constructed a subterranean edifice in which he concealed the sacred treasure. He also erected two pillars, one of brass and one of stone, on which he engraved the elements of the liberal sciences, including Masonry.² Enoch then resigned the government of the Craft to Lamech, who afterward surrendered it to Noah, in whose hands it remained until the occurrence of the flood.

Such is Oliver's legendary narrative of the progress of Masonry from the creation to the flood. The Craft were organized into lodges and were governed during that long period by only five Grand Masters—Adam, Seth, Enoch, Lamech, and Noah.

To the Institution existing at that time he gives the appropriate title of "Antediluvian Masonry," and also that of "Primitive Masonry."

Of its character he says that it had but few symbols or ceremonies, and was indeed nothing else but a system of morals or pure religion. Its great object was to preserve and cherish the promise of a Messiah.

On the renewal of the world by the subsidence of the waters of the deluge, it was found that though Enoch's pillar of brass had given way before the torrent of destruction, the pillar of stone had been preserved, and by this means the knowledge of the state of Masonry before the flood was transmitted to posterity.

Of the sons of Noah, all of whom had been taught the pure system of Masonry by their father, Shem and his descendants alone preserved it. Ham and Japhet having dispersed into Africa and Europe, their descendants became idolaters and lost the true principles

¹ Anderson gives the direction of the Craft, after Seth, successively to Enoch, Kainan, Mahalaleel, and Jared, whom Enoch succeeded. Const. 2d edit., p. 3.

² This legend of the vault of Enoch was not known to the mediaeval Masons. It forms, therefore, no part of the ritual of Ancient Craft Masonry. It is an invention of a later period, and is recognized only by the more modern "high degrees." The form of the legend as known to Anderson in 1722 was that he erected pillars on which the science of Masonry was inscribed.

of Masonry, which consisted in the worship of the one true God, The descendants of Japhet not only fell from the worship of God and embraced the adoration of idols, but they corrupted the form of Masonry by the establishment on its basis of a system of secret rites which are known in history as the "Mysteries."

This secession of the children of Japhet from the true system which their ancestor had received from Noah, has been called by Dr. Oliver "Spurious Freemasonry," while that practiced by the descendants of Shem he styles "Pure Freemasonry."

Of these two divisions the Spurious Freemasons were more distinguished for their cultivation of the Operative art, while the Pure Freemasons, although not entirely neglectful of Operative Masonry, particularly devoted themselves to the preservation of the truths of the Speculative science.

Shem communicated the secrets of Pure Freemasonry to Abraham, through whose descendants they were transmitted to Moses, who had, however, been previously initiated into the Spurious Masonry of the Egyptians.

Masonry, which had suffered a decay during the captivity of the Israelites in Egypt, was revived in the wilderness by Moses, who held a General Assembly, and, as the first act of the reorganized Institution, erected the Tabernacle.

From this time Masonry was almost exclusively confined to the Jewish nation, and was propagated through its judges, priests, and kings to the time of Solomon.

When Solomon was about to erect the Temple at Jerusalem, he called to his assistance the artists of Tyre, who were disciples of the Spurious Masonry and were skillful architects, as members of the Dionysiac fraternity of artificers.

By this association of the Tyrian Masons of the spurious order with the Jewish workmen who practiced the pure system, the two classes were united, and King Solomon reorganized the system of Freemasonry as it now exists.

For the subsequent extension of Masonry throughout the world and its establishment in England, Dr. Oliver adopts the legendary histories of both Anderson and Preston, accepting as genuine every mythical narrative and every manuscript. From the Leland manuscript he quotes as if he were citing an authority universally admitted to be authentic. Receiving the narrative of the General Assembly

which was called at York by Prince Edwin as an event of whose occurrence there can be no possible doubt, he claims that the Halliwell poem is a veritable copy of the Constitutions enacted by that Assembly.

On the subject of the religious character of Freemasonry, Dr. Oliver in the main agrees with Hutchinson, that it is a Christian Institution, and that all its myths and symbols have a Christian interpretation. He differs from Hutchinson in this, that instead of limiting the introduction of the Christian element to the time of Christ, he supposes it to have existed in it, from the earliest times. Even the Masonry of the patriarchs he believes to have been based upon the doctrine of a promised Messiah.

But his views will be best expressed in his own language, in a passage contained in the concluding pages of his *Historical Landmarks*: "The conclusion is therefore obvious. If the lectures of Freemasonry refer only to events which preceded the advent of Christ, and if those events consist exclusively of admitted types of the Great Deliverer, who was preordained to become a voluntary sacrifice for the salvation of mankind, it will clearly follow that the Order was originally instituted in accordance with the true principles of the Christian religion; and in all its consecutive steps bears an unerring testimony to the truth of the facts and of their typical reference to the founder of our faith."

He has said, still more emphatically, in a preceding part of the same work, that "Freemasonry contains scarcely a single ceremony, symbol, or historical narration which does not apply to this glorious consummation of the divine economy of the Creator towards his erring creatures"; by which economy he, of course, means the Christian dispensation and the Christian scheme of redemption.

If in the multifarious essays in which he has treated the subject Dr. Oliver meant to announce the proposition that in the very earliest ages of the world there prevailed certain religious truths of vast importance to the welfare and happiness of mankind, which had been communicated either by direct inspiration or in some other mode, and which have been traditionally transmitted to the present day, which truths principally consisted in an assertion of a belief in God and in a future life, such a proposition will hardly meet with a denial.

But if he also meant to contend that the transmission of these

truths to posterity and to the present age was committed to and preserved by an order of men, an association, or a society whose form and features have been retained in the Freemasonry of the present day, it will, I imagine, be admitted that such a proposition is wholly untenable. And yet this appears to be the theory that was entertained by this learned but too credulous scholar.

CHAPTER XXIV

THE TEMPLE LEGEND

THE Temple Legend is a name that I give to that legend or tradition which traces the origin of Freemasonry as an organized institution to the Temple of Solomon and to the builders, Jewish and Tyrian, who were employed in the construction of that edifice.

This is the legend that is now almost universally accepted by the great mass of the Masonic fraternity. Perhaps nine out of ten of the Freemasons of the present day—that is to say, all those who receive tradition with the undoubting faith that should be given to history only—conscientiously believe that Freemasonry, as we now see it, organized into lodges and degrees, with Grand Masters, Masters, and Wardens, with the same ritual observances, was first devised by Solomon, King of Israel, and assumed its position as a secret society during the period when that monarch was engaged in the construction of the Temple on Mount Moriah.¹

This theory is not a new one. It was probably at first suggested by the passage in the *Legend of the Craft* which briefly describes the building of the Temple and the confirmation by Solomon of the charges which his father David had given to the Masons.

There can be no doubt from this passage in the Legend that the Temple of Solomon occupied a prominent place in the ideas of the mediaeval Masons. How much use they made of it in their esoteric ceremonies we, of course, are unable to learn. It is, however, a

¹In a sermon by the Rev. A. N. Keigwin, at the dedication of the Masonic Temple in Philadelphia (1873), we find the following passage: "Historically, Masonry dates from the building of the Temple of Solomon. No one at the present day disputes this claim." I cite this out of hundreds of similar passages in other writers, to show how universal among such educated Masons is the belief in the Temple theory. It is, in fact, very true that only those scholars who have made the history of the Order an especial study have any doubts upon the subject.

significant coincidence, if nothing more, that there was a somewhat similar legend among the "Compagnons de la Tour," those mystical associations of workmen who sprang up in France about the 12th century, and who are supposed to have been an offshoot of dissatisfied journeymen from the body of oppressive Masters, who at that period constituted the ruling power of the corporate guilds of operative Masons and other crafts.

As the traditions of this society in reference to the Temple of Solomon are calculated to throw much light on the ideas which prevailed among the Masons in respect to the same subject, and as the Temple legends of the "Compagnons" are better known to us than those of the mediaeval operative Masons, and finally, as it is not at all unlikely that the ideas of the former were derived from those of the latter, it will not be inexpedient to take a brief view of the Temple legend of the Compagnonage.

The Compagnons de la Tour have three different legends, each of which traces the association back to the Temple of Solomon, through three different founders, which causes the Compagnonage to be divided into three distinct and, unfortunately, hostile associations. These are the Children of Solomon, the Children of Maître Jacques, and the Children of Père Soubise.

The Children of Solomon assert that they were associated into a brotherhood by King Solomon himself at the building of the Temple.

The Children of Maître Jacques and those of Père Soubise declare that both of these workmen were employed at the Temple, and after its completion went together to Gaul, where they taught the arts which they had learned at Jerusalem.¹

The tradition of Maître Jacques is particularly interesting. He is said to have been the son of a celebrated architect named Jacquain, who was one of the chief Masters of Solomon and a colleague of Hiram Abif. From the age of fifteen he was employed as a stone-cutter. He traveled through Greece, where he acquired a knowledge of architecture and sculpture. He then went to Egypt and thence to Jerusalem, where, being engaged in the construction of the Temple, he fabricated two pillars with such consummate skill that he was at once received as a Master of the Craft.

¹The reader will remember the story in the "Legend of the Craft" of one Namus Grecus, who came from Jerusalem and from the Temple in the time of Charles Martel and propagated Masonry in France.

It is not necessary to pursue the legend of the French Compagnonage any further. Sufficient has been told to show that they traced their origin to the Temple of Solomon and that the legend referred to events connected with that edifice.

Now, as these traveling Journeymen (for thus may we translate their French title) are known to have separated themselves in the 12th century from the corporations of Master Workmen in consequence of the narrow and oppressive policy of these bodies, making what in modern times would be called a "strike," it is reasonable to suppose that they carried with them into their new and independent organization many of the customs, ceremonies, and traditions which they had learned from the main body or Master's guilds of which they were an offshoot. Therefore, although we have not been able to find any legend or tradition of the mediaeval operative Masons which traced their origin to the Temple of Solomon, yet as we find such a tradition prevailing among an association of workmen who, as we know, were at one time identified with the Operative Masons and seceded from them on a question of policy, we have a reasonable right to believe that the legend of the Compagnons de la Tour, or Traveling Journeymen, which traced their origin to the Temple of Solomon, was derived by them from the Corporations of Masters or Guilds of Operative Masons, among whom it was an accepted tradition.

And therefore we have in this way the foundation for a reasonable belief that the Legend of the Temple origin of Masonry is older than the era of the Revival in the beginning of the 18th century, and that it had been a recognized doctrine among the operative Masons of the Middle Ages.

The absence of the Legend in any formal detail from all the old manuscripts does not prove that there was no such Legend, for being of an esoteric character, it may, from conscientious motives, or in obedience to some regulation, never have been committed to writing. This is, however, a mere supposition and can not in any way interfere with deductions drawn from positive data in reference to the Legend of the Third Degree. There may have been a Temple Legend, and yet the details narrated in it may have been very incomplete and not have included the events related in the former Legend.

The first reference in the old records to the Temple of Solomon

as connected with the origin of Freemasonry is to be found in the Cooke MS. and is in the following words:

"What tyme that the children of isrl dwellid in Egypte they lernyd the craft of masonry. And afterward they were driven out of Egypte they come into the lond of bihest (promise) and is now callyd Jerl'm (Jerusalem) and it was ocupied and chsrgys yholde. And the makyng of Salomonis tempull that kyng David began. Kyng David lovyd well masons and he gaf hem rygt nye as thay be nowe. And at the makyng of the temple in Salomonis tyme as hit is seyde in the bibull in the iij boke of Regum in teicio Regum capito quinto (1 Kings, Cap. 5) That Salomon had iiij score thowsand masons at his werke. And the kyngis sone of Tyry was his master mason, And (in) other cronyclos hit is seyde and in olde bokys of masonry that Salomon confirmed the charys that David his fadir had geve to masons. And Salomon hymself taught hem here (their) maners (customs) but lityll differans fro the maners that now ben usyd. And fro thens this worthy sciens was brought into Fraunce and into many other regions."¹

The Dowland MS., whose supposed date is some fifty or sixty years later than the Cooke, gives substantially the same Legend, but with the additional circumstances, that David learned the charges that he gave, from Egypt, where they had been made by Euclid; that he added other charges to these; that Solomon sent into various countries for Masons, whom he gathered together; that the name of the King of Tyre was Iram, and that of his son, who was Solomon's chief Master, was Aynon; and finally that he was a Master of Geometry and of carving and graving.

In this brief narrative, the first edition of which dates back as far as the close of the 15th century, we see the germs of the fuller Legend which prevails among the Craft at the present day. That there was an organization of Masons with "Charges and Maners," that is, laws and customs at the building of the Temple of Jerusalem, and that King Solomon was assisted in the work by the King of Tyre and by a skillful artist who had been sent to him by Hiram, are the two most important points in the theory of the Temple origin of Masonry, and both are explicitly stated in these early legends. We next find the Legend repeated, but with more

¹ Cooke MS., lines 539-575.

elaborate details, most of which, however, are taken from the Book of Kings as referred to in the *Legend of the Craft* by Anderson. in the first edition of the *Constitutions*, and with a few additional particulars in the second edition of the same work.

Preston, the next important Masonic writer after Anderson, does not indeed relate or refer to the Legend in any part of his *Illustrations of Masonry*, but the theory that Masonry found its origin at the Temple is to be deduced from the historical traditions contained in the third lecture of the Prestonian system, from which Webb derived it, and has perpetuated it among American Masons to the present day.

Hutchinson, who followed Preston, although, as has been seen, he inclined to a remoter origin of the Order, repeatedly refers in his *Spirit of Masonry*, and especially in his Sixth Lecture, to the Temple of Solomon as the place where "the true craftsmen were proved in their work," and where Solomon distinguished them into different ranks, giving to each appropriate signs and secret tokens, and organized them for the first time into an association of builders, the predecessors of the Masons being previous to that time sages who, though acquainted with the principles of geometry and architecture, were engaged solely in philosophical speculations. In this way Hutchinson gave the weight of his influence in favor of the Legend which ascribed the origin of operative and speculative Masonry to Solomon and to his Temple, although his views on this subject differ from those of other writers.

Dr. Oliver, one of the latest and the most prolific of the legendary writers, although in his own theory he seeks to trace the origin of Freemasonry to a much more remote antiquity, yet speaks so much in detail in most of his works, but principally in his *Antiquities* and in his *Historical Landmarks*, of the system which was for the first time organized at the building of the Solomonian Temple, that most readers who do not closely peruse his writings and carefully scan his views are under the impression that he had fully adopted the Legend of the Temple origin, and hence his authority has been lent to the popular belief.

Existing, as may be supposed from the analogy of a similar legend of the *Compagnons de la Tour*, among the craftsmen of the Middle Ages; transmitted to the Revival era of the beginning of the 18th century, and since then taught in all the rituals and sus-

tained by the best Masonic writers up to a recent period, this Legend of the Temple origin of Freemasonry, or, in plainer words, the theory that Freemasonry received at the time of the building of the Temple of Jerusalem that form and organization which it holds at the present day, has been and continues to be a dogma of faith implicitly believed by the masses of the fraternity.

It is well, therefore, that we should now see what precisely is the form and substance of this popular Legend. As received at the present day by the body of the Craft, it may be stated as follows:

When Solomon was about to commence the building of his Temple, his own people not being expert or experienced architects, he applied to his friend Hiram, the monarch of the neighboring kingdom of Tyre, for assistance. Hiram, in complying with his request, sent to him a numerous body of workmen, and at their head a distinguished artist called, as a mark of distinction, Hiram Abif,¹ equivalent to the title, "Hiram his father," who is described as "a cunning man endued with understanding."

King Solomon then proceeded to organize the institution into a form, which has been adopted as the model of that which exists at the present day in every country where Freemasonry exists. The Legend that contains the classification of the workmen at the Temple, which has been adopted in the rituals of modern Masonry, is derived partly from Scripture and partly from tradition. An examination of it will not be inappropriate.

There are two accounts, slightly conflicting, in the Scriptural narrative. In the Second Book of Chronicles, chapter ii., verses 17 and 18, are the following words:

"And Solomon numbered all the strangers that were in the land of Israel, after the number wherewith David his father had numbered them, and there were found an hundred and fifty thousand and three thousand and six hundred.

"And he set three score and ten thousand of them to be bearers of burdens and four score thousand to be hewers in the mountains and three thousand six hundred overseers to set the people at work."

The same numerical details are given in the second verse of the

¹ Of Hiram Abif a more detailed account will be given when we come to consider the legend connected with him.

same chapter. Again in the First Book of Kings, chapter v., verses 13 and 14, it is said:

"And King Solomon raised a levy out of all Israel; and the levy was thirty thousand men.

"And he sent them to Lebanon, ten thousand a month by courses; a month they were in Lebanon, and two months at home: and Adoniram was over the levy."

In the *Legend of the Craft* this enumeration was not strictly adhered to. The Cooke MS. says that there were "four score thousand masons at work," out of whom three thousand were chosen as Masters of the work. The Lansdowne MS. says that the number of Masons was twenty-four thousand. But this number must have been a clerical error of the copyist in which he is followed only by the Antiquity MS. All the other manuscripts agree with the Dowland and make the number of Masons eighty thousand, including the three thousand overseers or Masters of the Work.

This statement does not accord with that which is in the Book of Kings nor with that in Chronicles, and yet it is all that the *Legend of the Craft* furnishes.

Dr. Anderson, who was the first author after the Revival who made an enumeration and classification of the workmen at the Temple, abandoned the Legend altogether and made up his account from the Bible. This he published in the first edition of the *Constitutions* and tempered it with some traditional information, whence derived I do not know. But it is on this classification by Anderson that all the rituals that have been in use since his time are framed. Hence he may justly be considered as the author of the Legend of the Workmen at the Temple; for notwithstanding the historical element which it contains, derived from Scripture, there are so many traditional interpolations that it properly assumes a legendary character.

Anderson's account is that there were employed on the building three thousand six hundred Master Masons, to conduct the work according to Solomon's directions; eighty thousand hewers of stone in the mountains who he says were Fellow Craftsmen, and seventy thousand laborers who were not Masons, besides the levy of thirty thousand who worked under the superintendence of Adoniram, making in all one hundred and eighty-three thousand six hundred. For this great number, Anderson says Solomon was "much obliged"

to Hiram, King of Tyre, who sent his Masons and carpenters to Jerusalem.

Over this immense number of builders and laborers, Anderson says that King Solomon presided as Grand Master at Jerusalem, King Hiram in the same capacity at Tyre, and Hiram Abif was the Master of Work.

Fifteen years afterward, Anderson, in the second edition of his *Constitutions* somewhat modified these views and added certain other particulars. He promotes Hiram Abif from the position of *Magister Operis* or Master of the Work, to that of Deputy Grand Master in Solomon's absence and to that of Senior Grand Warden in his presence. He also says:

"Solomon partitioned the Fellow Crafts into certain Lodges with a Master and Wardens in each; that they might receive commands in a regular manner, might take care of their tools and jewels, might be paid every week, and be duly fed and clothed, etc., and the Fellow Crafts took care of their succession by educating Entered Apprentices."¹

Anderson adds in a marginal note that his authority for this statement is "the traditions of old Masons, who talk much of these things."

If such a tradition ever existed, it is now lost, for it can not be found in any of the old manuscripts which are the record of the Masonic traditions. It is admitted that similar usages were practiced by the Operative Masons of the Middle Ages, but we have no historical authority, nor even legendary, outside of Anderson's work, for tracing them to the Temple of Jerusalem.

Out of these materials the ritualists have manufactured a Legend; which exists in all the Masonic rituals and which must have been constructed in London, at a very early period after the Revival, to have secured such an universal acceptance among all the nations who derived their Masonry from the Grand Lodge of England. The Legend of the Temple origin of Masonry, as generally accepted by the Craft at the present day, is that there were one hundred and fifty-three thousand, three hundred workmen employed in the construction of the Temple. Three thousand three hundred of these were overseers, who were among as well as over the Craft, but who at

¹ "Constitutions," 2d edit., p. 13.

the completion of the Temple were promoted to the rank of Master Masons. The remaining workmen were divided into eighty thousand Fellow Crafts and seventy thousand Entered Apprentices.

Three Grand Masters presided over the large number of workmen, namely, Solomon, King of Israel; Hiram, King of Tyre, and Hiram Abif. These were the only persons who at the building of the Temple were Master Masons and in possession of the secrets of the Third Degree.

The statement in the ritual is that the workmen were divided into Lodges. The Lodge of Master Masons, for there could be only one of that degree, consisted of three members; the Lodges of Fellow Crafts, of which there must have been sixteen thousand, was composed of five members each; and the Lodges of Entered Apprentices, of which there must have been ten thousand, was composed of seven each.

But as this statement has neither historical authority nor logical possibility to support it, it must be considered, as it undoubtedly was originally intended to be considered, merely as a reference to the symbolic character of those sacred numbers in Masonry—three, five, and seven. In the same spirit of symbolic reference the steps of the winding stairs leading to the middle chamber were divided into a series of three, five, and seven, with the addition in the English ritual of nine and eleven. All of this is, therefore, to be rejected from the class of legends and referred to that of symbols.

Viewing then this Legend or theory of the origin of Masonry at the Temple, tracing it from the almost nude state in which it is presented in the *Legend of the Craft* through the extraneous clothing which was added by Anderson and I suppose by Desaguliers, to the state of tinsel ornamentation in which it appears in the modern ritual, we will come to the following conclusion:

In the *Legend of the Craft* we find only the following statement: That King Solomon was assisted in the building of the Temple by the King of Tyre, who sent him materials for the edifice and a skillful artist, on whose name scarcely any two of them agree, and whom Solomon appointed as his Master of the Work; that Solomon invited Masons from all lands and having collected them together at Jerusalem, organized them into a body by giving them a system of laws and customs for their government. Now, most of these facts are sustained by the historical authority of the Books of Kings and

Chronicles, and those that are not have the support of extreme probability.

That Solomon, King of Israel, built a Temple in Jerusalem is an historical fact that can not be doubted or denied. Richard Carlile, it is true, says, "My historical researches have taught me that that which has been called Solomon's Temple never existed upon earth; that a nation of people called Israelites never existed upon earth, and that the supposed history of the Israelites and their Temple is nothing more than an allegory."¹

But the measure of the moral and mental stature of Carlile has long been taken, and even among the most skeptical critics he remains alone in his irrational incredulity.

Doubtless there are Oriental exaggerations in respect to the amount of money expended and the number of workmen employed on the building, which have been overestimated. But the simple, naked fact that King Solomon built a temple remains uncontradicted, and is as historically true and undoubted as that of the construction of any other public edifice in antiquity.

It is equally historical that the King of Tyre gave assistance to Solomon in carrying out his design. However fiercely the skeptics may have attacked certain portions of the Bible, the Books of Kings and Chronicles have been placed upon the footing of other ancient historical records and subjected to the same canons of criticism.

Now we are distinctly told that Hiram, King of Tyre, "sent masons and carpenters to David to build him a house,"² we learn subsequently that the same Hiram (some say his son) was equally friendly with Solomon, and although there is no distinct mention either in Kings or Chronicles that he sent workmen to Jerusalem,³ except his namesake, the artificer, yet we may infer that he did so, from the friendship of the two kings, from the need of Solomon for expert workmen, and from the fact which we learn from the First Book of Kings, that the stones for the edifice were hewn by "Solomon's builders and Hiram's builders and the Giblym." The authorized version, on what authority I know not, translates this word "Giblym" as "stone-squarers." They were, however, the inhabitants

¹ "Manual of Freemasons," Part I., p. 4.

² 1 Chronicles, xiv., 1.

³ We are told in 1 Kings, v., and it is repeated in 2 Chron., ii., that Hiram sent his workmen to Lebanon to cut down trees. The timber they were to carry to Joppa, where Solomon was to receive it, and, presumably, the workmen were to return to the forest.

of the city of Gebal, called by the Greeks, Byblos, which was the principal seat of the worship and the mysteries of Adonis. The inhabitants were celebrated for their skill in stone-carving and in shipbuilding.

Thus we see that there were, according to the Scriptural account, three classes of Masons engaged at the building of the Temple. First there were the workmen of Solomon: these were of the "four score thousand hewers in the mountains"¹ who were taken by Solomon from "the strangers that were in the land of Israel"²—men whom Dr. Adam Clarke supposes to have been not pure Israelites, but proselytes to the Jewish religion so far as to renounce idolatry and to keep the precepts of Noah. But we must believe that among these four score thousand strangers were to be enumerated the workmen who came from Tyre, or there will be no place allotted to them in the distribution in the First Book of Kings. The three thousand three hundred who were "over the work," are said to have been chief officers of Solomon and therefore Israelites, and the remaining seventy thousand were mere laborers or bearers of burden—a class for whom Solomon need not have been indebted to the King of Tyre.

Secondly, there were the workmen of Hiram, King of Tyre. These I have already said were probably, and indeed necessarily, included in the number of four score thousand strangers or foreigners. The words in the original are *anoshim gherim*, men who are foreigners, for Gesenius defines the word *gherim*, to be "*sojourners, strangers, foreigners, men living out of their country.*"³

Thirdly, we have the Giblim, the inhabitants of the city of Gebal in Phœnicia, who came to Jerusalem, invited there by Solomon, to assist in the construction of the Temple, and who must also be reckoned among the four score thousand strangers.

Thus the *Legend of the Craft* is justified in saying that Solomon "sent after Masons into divers countries and of divers landes," and that he had "four score workers of stone and were all named Masons." For these were the foreigners or sojourners, whom he found in Jerusalem, many of whom had probably come there on his invitation, and the Tyrians who had been sent to him by King Hiram, and the Phœnicians, whom he had called out of Gebal on account of their well-known skill in stone-cutting. And all of these

¹ 1 Kings, v., 15.

² 2 Chron. ii., 17.

³ Lexicon, *in voce*.

amounted to eighty thousand, the number stated in the Books of Kings and Chronicles, and just the number mentioned in the *Legend of the Craft*.

It will be seen that the *Legend of the Craft* takes no notice of the levy of thirty thousand who worked under Adoniram on Mount Lebanon, nor of the seventy thousand who were employed as bearers of burdens. As the former were merely wood-cutters and the latter common laborers, the *Legend* does not class them among the Masons, any more than it does the three thousand three hundred who were, according to the Biblical account, officers of the court of Solomon, who were appointed merely to overlook the Masons and to see that they worked faithfully; perhaps also to pay them their wages, or to distribute their food, and to supervise generally their conduct.

In all this, the *Legend of the Craft* differs entirely from the modern rituals, which have included all these classes, and therefore reckon that at the building of the Temple there were one hundred and fifty-three thousand three hundred Masons, instead of eighty thousand. The *Legend* is certainly more in accord with the authority of the Bible than are the rituals.

The *Legend of the Craft* is also justified in saying that Solomon organized these Masons into what might be called a guild, that is, a society or corporation,¹ by giving them "charges and manners"—in other words, a code of laws and regulations. On this question the Bible account is silent, but it amounts to an extreme probability, the nearest approximation to historical evidence, that there must have been some regulations enacted for the government of so large a number of workmen. It is also equally probable that to avoid confusion these workmen must have been divided into sections, or what, in modern parlance, would be called "gangs," engaged in various parts of the building and in different employments. There must have been a higher and more skillful class occupied in directing the works of these several sections; there must have been others less skillful and yet competent to discharge the duties of stone-cutters and layers, and there must have been another and still inferior class who were only acquiring the rudiments of the profession.

Founded on these evident propositions, Anderson made his

¹The Latin original of the Krause MS. calls it "Societas architedonica"—an architectural society.

division of the workmen at the Temple into the three classes of Master Masons, Fellow Crafts, and Entered Apprentices. But he abandoned the *Legend* in calling the three thousand six hundred officers of King Solomon Master Masons, and making the whole number, exclusive of the seventy thousand laborers and the thirty thousand wood-cutters on Mount Lebanon, eighty-three thousand, and afterward stating that there were one hundred and eighty-three thousand Masons in all—a contradiction of his own previous statement as well as of the *Legend of the Craft* which states the whole number of Masons to have been eighty thousand.

The modern ritual may, however, be considered as having adopted the Temple of Jerusalem as a type of that abstruse symbol of a spiritual temple, which forms, as will be hereafter seen, one of the most important and most interesting symbolic lessons on which the philosophy of Speculative Masonry depends. But viewing it as an historical statement, it is devoid of all claims to credence. The facts stated in the ritual are an outgrowth of those contained in the *Legend of the Craft* which it has greatly altered by unauthorized additions, and it is in entire contradiction to those given in the Books of Kings and Chronicles.

The claim that Freemasonry took its origin at the building of the Temple is without any historical authority. The *Legend of the Craft*, upon which, to be consistent, all Masonic rituals should be founded, assigns its origin equally to two other periods—to that of the building of the Tower of Babel, when Nimrod was Grand Master, and to Egypt under the geometrician Euclid. Why the Temple of Solomon was exclusively selected by the modern Masons as the incunabulum of their Order can be only conjecturally accounted for.

I am not unwilling to believe, for reasons that have been already assigned, that the Operative or Stone Masons of the Middle Ages had some tradition or Legend of the origin of the Institution at the Temple of Solomon. If so, I am inclined to attribute their selection of this in preference to any other stately edifice of antiquity to these reasons.

The mediæval Masons were, as an association of builders, most intimately connected with the ecclesiastics of that age. Their principal home at one time was in the monasteries, they worked under the immediate patronage and supervision of bishops and abbots, and

were chiefly engaged in the construction of cathedrals and other religious edifices. Private houses at that early period were mostly built of wood, and the building of them was the business of carpenters. The *treow-wyr-hta*, literally the tree-workman, in modern phrase the carpenter, was one of the most important handicrafts of the early Anglo-Saxons. He was the builder of their ships as well as of their houses, and the trade is frequently spoken of in ancient Saxon documents. He was constantly employed in the construction of vessels for the carrying on of trade, or the erection of dwellings for the residences of the people.

To the stone-masons was exclusively entrusted the nobler vocation of building religious edifices.

Imbued, from their connection with the priests as well as from their peculiar employment, with religious sentiments, they naturally looked for the type of the great cathedrals which they were erecting, not to Pagan temples, however splendid might be their architecture, but rather to that Jewish cathedral which had been consecrated on Mount Moriah to the worship of the true God. Hence the brief notice of that building in the *Legend of the Craft* was either the suggestion of that esoteric Legend of the Temple which has not, from its necessarily oral character, been handed down to us, or if the written Legend was posterior in time to the oral one, then it was a brief record of it.

But I do not believe that this lost Legend of the stone-masons was ever intended to be historical. It was simply a symbol to illustrate the idea that the Temple at Jerusalem was the type of all Christian cathedrals.

This symbolic Legend, which I suppose to have existed among the stone-masons of the Middle Ages, was probably lost before the revival of Masonry in the year 1717. Anderson therefore framed a new Legend out of the *Legend of the Craft*, the Scriptural account, and his own invention.

Upon this Andersonian Legend, simple in the first edition of the *Constitutions*, but considerably expanded in the second, the modern ritualists have framed another Legend, which in many important details differs from Anderson's, from the *Legend of the Craft*, and from the account in the Bible.

This is the Legend now accepted and believed by the great body of the Craft to be historically true. That it has no claim to histori-

cal credence is evident from the fact that it is, in its most important details, unauthorized, and in fact contradicted by the Scriptural account, which is the only authentic memorial that we have of the transactions that took place at the building of the Solomonian Temple.

And moreover, the long period that elapsed between the building of the Temple, a thousand years before the Christian era, and the time, not earlier than the 3d century after Christ, during which we have no traces of the existence of such an architectural association connected with Jewish Masons and transmitted from them to the Christian architects, presents an extensive lacuna which must be filled by authentic records, before we can be enabled, as scholars investigating truth, to consent to the theory that the Freemasons of the present day are, by uninterrupted successions, the representatives of the Masons who wrought at King Solomon's Temple.

The Legend of the ritual is, in fact, a symbol—but a very important and a very interesting one, and as such will be fully discussed when the subject of Masonic symbols comes to be treated in a subsequent part of this work.

CHAPTER XXV

LEGEND OF THE DIONYSIAC ARTIFICERS

WE now approach a very interesting topic in the legendary history of Masonry. The reader has already seen in the last chapter that the Masons of the kingdom of Tyre were invited to join with the Jewish builders in the construction of the Temple. Who these Tyrian Masons were, what was their character, whence they came, and what was the influence exerted by them on the Jewish workmen with whom they were united in a common labor, are questions which can only be solved by a reference to what may be called the *Legend of the Dionysiac Artificers*.

This Legend was entirely unknown to the old Masons of the Middle Ages. There is no reference to it in any of the manuscripts. The brief allusion to the Dionysiaks of Asia Minor in Robison's anti-Masonic work does not necessarily connect them with the Masons of King Solomon.¹

The first writer who appears to have started the theory that the Masons sent by King Hiram to the King of Israel were members of the Dionysiac fraternity, is Sir David Brewster, who presented the Legend under the guise of an historic statement in the *History of Freemasonry*, published in the beginning of this century, and the authorship of which, although it was actually written by him, has been falsely attributed to Alexander Lawrie, the bookseller of Edinburgh and at the time the Grand Secretary of the Grand Lodge of Scotland. Brewster may therefore, I think, be fairly considered as the original framer of the Legend.

The origin of the mystical and architectural society which Brew-

¹ "Proofs of a Conspiracy," p. 20.

ster closely connects with the Masons of the Temple may be given in almost his own words:¹

Between 1055 and 1044 years before Christ, or something more than half a century anterior to the building of the Temple, the inhabitants of Attica, complaining of the narrowness of their territory and the unfruitfulness of the soil, went in quest of more extensive and fertile settlements. Being joined by a number of the inhabitants of the surrounding provinces of Greece, they sailed to Asia Minor and drove out the inhabitants of that portion of the western coast from Phocœa in the north to Miletus in the south. To this narrow strip of land they gave the name of Ionia, because the greatest number of the adventurers were natives of that Grecian state. After partly subduing and partly expelling the original inhabitants, they built several towns, of which one of the principal was Teos.

Prior to this emigration the Greeks had made considerable progress in the arts and sciences, which the adventurers carried with them into their new territory, and they introduced into Ionia the Mysteries of Pallas and Dionysus, before they had become corrupted by the licentiousness of the Athenians.

Especially popular, not only in Ionia but throughout Asia Minor, were the Mysteries of Dionysus, the Roman Bacchus. In these, as in all the religious Mysteries of antiquity, there was a funereal legend.

In the Dionysiac Mysteries the legend of initiation recounted or represented the death of the demi-god Dionysus, the search for and discovery of his body, and his subsequent restoration to life.

In the initiations the candidate was made to represent in his own person, the events connected with the slaying of the hero-god. After a variety of preparatory ceremonies, intended to call forth all his fortitude and courage, the aphanism or mystical death of Dionysus—torn to pieces by the Titans—was presented in a dramatic form and followed by the confinement or burial of the candidate, as the representative of Dionysus in the pastos, couch, or coffin, all of which constituted the first part of the ceremony of initiation. Then began the search for the remains of Dionysus, which was continued amid scenes of the greatest confusion and tumult, until at last, the search having been successful, the morning was turned to joy, light suc-

¹ Lawrie's "History of Freemasonry," 1st edit., p. 27.

ceeded to darkness, and the candidate was invested with the knowledge of the secret doctrine of the Mysteries—the belief in the existence of one God and a future and immortal state.¹

Now these Mysteries of Dionysus were very intimately connected with a society of architects. As this association, according to the Legend which we are now considering, had much to do with the organization of Masonry at the Solomonic Temple, it is necessary to take a brief notice of its origin and character.

It is an historical fact that at the time of the building of the Temple at Jerusalem, there existed at Tyre as well as in other parts of Asia Minor an association known as the *Dionysian Architects*, because they joined to the practice of operative architecture the observance of the religious rites of the Dionysiac Mysteries.

It has been already stated that the priests of Dionysus had devoted themselves to the study and the practice of architecture, and about one thousand years before the Christian era, or at the time that King Solomon began the construction of the Temple at Jerusalem, had emigrated from Greece and established themselves as a society or fraternity of builders in Asia Minor, and devoted themselves to the construction of temples and other public edifices.²

Hiram, who then reigned over the kingdom of Tyre, and who from his cultivation of the sciences has been styled the Augustus of his age, is said to have patronized these religious builders, and to have employed them in the magnificent works by which he adorned and strengthened his capital.

The internal government and the usages of this association were very similar to those exhibited by the Masonic society in the present day, and which the legendary theory supposes to have prevailed among the builders of the Solomonic Temple.

The fraternity was divided into communities called *synœcise*,³ having houses or dwellings in common, which might well be com-

¹ Le meurtre de Bacchus mis à mort et déchiré en pièces par les Titans, et son retour à la vie, ont été le sujet d'explications allegoriques tout-à-fait analogues à celles que l'on a données de l'enlèvement de Proserpine et du meurtre d'Osiris.—Sylvestre de Tracy in Sainte-Croix's "Recherches sur les Mysteres du Paganisme," T. ii., p. 86.

² Chandler says "the Dionysiasts were artificers or contractors for the Asiatic theaters, and were incorporated and settled at Teos, under the Kings of Pergamum." — "Travels in Asia Minor," vol. i., ch. xxviii., p. 123. [This was at a later period than the era of the Temple.]

³ "Antiquitates Asiaticæ Christianam Aeram Antecedentes," p. 139.

pared to the Masonic Lodges of the present day. Their plans of meeting were also called in Greek *koina*, which signifies communities, and each received a distinctive name, just as our Lodges do. Thus Chishull speaks in his account of the pre-Christian antiquities of Asia of a *koinon ton Attaliston*, or a "community of the Attalistæ," so called, most probably in honor of King Attalus, who was their patron.¹

There was an annual festival, like the General Assembly or Grand Lodge of the Masons, which was held with great pomp and ceremony. Chandler says (but he speaks of a later period, when they were settled at Teos) that it was the custom of their synod to hold yearly a General Assembly, at which they sacrificed to the gods and poured out libations to their deceased benefactors. They likewise celebrated games in honor of Bacchus, when the crowns which had been bestowed by any of the communities as rewards of merit were announced by heralds, and the wearers of them were applauded by the other members. These meetings, he adds, were solemnized with great pomp and festivity.²

The same traveler mentions a long decree made by one of the communities in honor of its magistrates, which he found inscribed on a slab in a Turkish burying-ground. The thanks of the community with a crown of olives are given as a recompense to these officers for their great liberality and trouble while in office; and to perpetuate their memory and to excite an emulation of their merit, it is besides enacted that the decrees be engraved, but at their expense, "so desirable," says Chandler, "was the testimony to the individuals and so frugal the usage in bestowing it."³

Of course as an architectural association the Dionysiacs used many of the implements employed by Operative Masons, and as a secret brotherhood they had a system of signs and tokens by which any one of the members could make himself known to the others. Professor Robison, who may be accepted on this point as authority, admits that they were "distinguished from the uninitiated or profane inhabitants by the science which they possessed and by many private signs and tokens by which they recognized each other."⁴

¹ Rollin's "Universal History" places Attalus in the rank of those princes who loved and patronized letters and the arts.

² Chandler, "Travels in Asia Minor," vol. i., ch. xxx., p. 126.

³ *Ibid.*, vol. i., ch. xxviii., p. 124.

⁴ "Proofs of a Conspiracy," p. 20.

Each of the *koina* or separate communities into which they were divided was under the direction of officers corresponding to a Master and Wardens.¹

The Masonic principle of charity was practiced among them and the opulent members were bound to provide for the wants and necessities of their poorer brethren.

The Legend which connects these architects with the building of the Temple at Jerusalem, assumes that Hiram Abif was a member of this secret association. Although the Scriptural narrative is adverse to this theory, since it states that he was simply a worker in metals and precious stones, yet we may reconcile it with possibility by supposing that such craftsmen were admitted into the association of the Dionysiacs because their decorative art was necessary for the completion and perfection of the temples and public buildings which they constructed. This is, however, merely conjectural.

The Legend, now connecting itself in part with history, proceeds to state that when Solomon was about to build a temple to Jehovah, he made his intention known to his friend and ally, Hiram, King of Tyre, and because he was well aware of the architectural skill of the Tyrian Dionysiacs, he besought that monarch's assistance to enable him to carry his pious design into execution. Hiram complied with his request and sent him the necessary workmen, who by their skill and experience might supply the mechanical deficiencies and ignorance of the Israelites.

With the body of builders he sent this Hiram Abif, who as "a curious and cunning workman," highly recommended by his patron, was entrusted by King Solomon with the superintendence of the construction and placed at the head of both the Tyrian and Jewish craftsmen as the chief builder and principal conductor of the work.

To this distinguished artist, on account of the large influence which his position gave him and the exalted personal virtues which are traditionally supposed to have characterized him, is to be attributed, according to the Legend, the intimate union of two peoples so dissimilar in manners and so antagonized in religion as the Jews and the Tyrians, which resulted in the organization of the Institution of Freemasonry.

Supposing Hiram Abif, as the Legend does, to have been con-

¹ Brewster in Lawrie's "History," p. 29.

nected with the Dionysiac fraternity, we may also suppose that he could not have been a very humble or inconspicuous member, if we may judge of his rank in the society, from the amount of talent which he is said to have possessed, and from the elevated position that he held in the affections and at the court of the King of Tyre.

He must therefore have been very familiar with all the ceremonial usages of the Dionysiac artificers and must have enjoyed a long experience of the advantages derived from the government and discipline which they practiced in the erection of the many sacred edifices which they had constructed. A portion of these ceremonial usages and of this discipline he would naturally be inclined to introduce among the workmen at Jerusalem. He therefore united them in a society, similar in many respects to that of the Dionysiac artificers. He inculcated lessons of charity and brotherly love; he established a ceremony of initiation to test experimentally the worth and fortitude of the candidate; adopted secret methods of recognition; and impressed the obligations of duty and the principles of morality by means of symbols and allegories.

Just at this point a difficulty must have arisen in reconciling the pagan symbolic instruction of the Tyrians with the religious notions of the Jews, which, however, the Legend ingeniously overcomes.

The most prominent symbol of Speculative Masonry, that, indeed, on which the whole of the ethical instructions is founded, is contained in the lesson of resurrection to a future life as developed in the allegorical Legend of the Master's Degree.

In the Pagan Mysteries, of which the Dionysia were a part, this doctrine was also illustrated by an allegorical legend. In the Mysteries of Dionysus which were practiced by the Tyrian architects the legend related to the death and subsequent resuscitation of Bacchus or Dionysus.

But it would have been utterly impossible to have introduced such a legend as the basis of any instructions to be communicated to Jewish initiates. Any allusion to the mythological fables of their Gentile neighbors would have been equally offensive to the taste and repugnant to the religious prejudices of a nation educated from generation to generation in the worship of a Divine Being, who, they had been taught, was jealous of his prerogatives, and who had made himself known to their ancestors as the JEHOVAH, the only God of time present, past, and future.

The difficulty of obtaining a legend on which the dogma of the Third Degree might be founded was obviated by substituting Hiram Abif, after his death (at which time only the system could have been perfected), in the place of Dionysus. The lesson taught in the Mysteries practiced by the Dionysiac artificers was thus translated into the Masonic initiation, the form of the symbolism remaining the same, but the circumstances of the legend necessarily varying.

By this union of the Dionysiacs with the Jewish workmen and the introduction of their mystical organization, the Masonic Order assumed at the building of the Temple that purely speculative form connected with the operative which it has ever since retained.

From its Jewish element it derived its religious character as a pure theism.

From its Tyrian element it borrowed its peculiar mystical character and its system of symbolism, which so much assimilated it to the ancient Pagan Mysteries, that a Legend has been framed (to be hereafter considered) which traces its origin directly to those secret associations of antiquity.

Upon the completion of the Temple, the workmen, invested with all the secrets which had been promised in their initiation, and thus becoming Master Masons, dispersed, that they might be enabled to extend their knowledge and to renew their labors in other lands.

Such is the Legend which seeks to attribute the present form of Freemasonry to the connection of the Dionysiac artisans of Tyre with the Jewish workmen at the building of the Temple. So much of the Legend as relates to the existence of a building sodality at Tyre (leaving out the question whether they were or were not Dionysiacs), some of whose members went to Jerusalem to assist in the construction of the Solomonic Temple, may, I think, be accepted as indisputably historic. What Were the real influences exerted by them on the Jewish people, is a question whose answer finds no place in the realm of history, but must be relegated to the doubtful domain of conjecture. Brewster has described the Dionysiacs as they existed in about the 3d century before Christ, and after their incorporation by King Attalus, as if they maintained the same condition in the reign of Hiram of Tyre seven hundred years before. For this statement there is no warrant in any historical record. The supposition that the Dionysiacs of Tyre and those of Teos were identical in organization, is simply a theory based on a mere assump-

tion. It is, however, certain that they who adopt the legendary theory that Freemasonry was first organized at the Temple of Solomon, will find much to sustain their theory in the Legend of the Dionysiac Artificers.

It is equally certain that those who deny the Temple theory will have to reject the Dionysiac, for the two are too closely connected to be arbitrarily dissevered.

But laying the subject of Freemasonry altogether aside, and considering the connection of the Tyrians and the Jews at the Temple as a mere historical question, it would present a very interesting study of history to determine what were the results of that connection, if there were any way of solving it except by mere conjecture.

The subsequent history of the association of Dionysiac Architects forms no part of the Legend which has just been recited; but it may be interesting to trace their progress. About seven hundred years after the building of the Temple at Jerusalem, they are said to have been incorporated by the King of Pergamum, an ancient province of Mysia, as a society exclusively engaged in the erection of public buildings such as theaters and temples. They settled at Teos, an Ionian city, on the coast of Asia Minor, where, notwithstanding its intestine troubles, they remained for several centuries. Among the works accomplished by them were a magnificent theater and a splendid temple of Dionysus, some ruins of which still remain.

But proving turbulent and seditious they were at length expelled from Teos and removed to the city of Ephesus. Thence they were transferred by King Attalus to the town of Myonessus. The Teians having sent an embassy to Rome to request that the Myonessians should not be permitted to fortify their city, the Dionysiacs removed to Lebedos, about fifteen miles from Teos, where they were joyfully welcomed.

In the 5th century of the Christian era the Emperor Theodosius abolished all mystical associations, but the Dionysiacs are said to have continued their existence until the time of the Crusades, when they passed over into Europe and were merged in the association of builders known as the *Traveling Freemasons* of the Middle Ages. This latter part of the narrative is, I think, merely legendary or traditional, and will find no support in authentic history. It is, however, an historical study to be examined hereafter.

CHAPTER XXVI

FREEMASONRY AND THE ANCIENT MYSTERIES

THE theory which ascribes the origin of Freemasonry as a secret society to the Pagan Mysteries of the ancient world, and which derives the most important part of its ritual and the legend of its Third Degree from the initiation practiced in these religious organizations, necessarily connects itself with the Legend of the Temple origin of the Institution, because we can only link the initiation in the Mysteries with that of Freemasonry by supposing that the one was in some way engrafted on the other, at the time of the building of the Temple and the union of the Jewish and Tyrian workmen.

But before we can properly appreciate the theory which associates Freemasonry with the Pagan Mysteries, we must make ourselves acquainted with the nature and the design as well as with something of the history of those mystical societies.

Among all the nations of antiquity in which refinement and culture had given an elevated tone to the religious sentiment, there existed two systems of worship, a public and a private one. "Each of the pagan Gods," says Warburton, "had (besides the public and open) a secret worship paid unto him, to which none were admitted but those who had been selected by preparatory ceremonies, called INITIATION. This secret worship was called the MYSTERIES."¹

The public worship was founded on the superstitious polytheism whose numerous gods and goddesses were debased in character and vicious in conduct. Incentive to virtue could not be derived from their example, which furnished rather excuses for vice. In the *Eunuchus* of Terentius, when Chærea is meditating the seduction of the virgin Pamphila, he refers to the similar act of Jupiter,

¹ "Divine Legation of Moses," B. I., sect. iv., p. 193.

who in a shower of gold had corrupted Danse, and he exclaims, "If a god, who by his thunders shakes the whole universe, could commit this crime, shall not I, a mere mortal, do so also?"¹ Plautus, Euripides, and other Greek and Roman dramatists and poets repeatedly used the same argument in defense of the views of their heroes, so that it became a settled principle of the ancient religion. The vicious example of the gods thus became an insuperable obstacle to a life of purity and holiness.²

The assurance of a future life of compensation constituted no part of the popular theology. The poets, it is true, indulged in romantic descriptions of an Elysium and a Tartarus, but their views were uncertain and unsatisfactory, as to any specific doctrine of immortality, and were embodied in the saying of Ovid³ that of the four elements which constituted the human organization, "the earth covers the flesh; the shade flits around the tomb; the spirit seeks the stars."

Thus did the poet express the prevalent idea that the composite man returned after death to the various primordial elements of which he had been originally composed. In such a dim and shadowy hypothesis there was no incentive for life, no consolation in death. And hence Alger, to whom the world has been indebted for a most exhaustive treatise on the popular beliefs of all nations, ancient and modern, on the subject of the future life, has after a full and critical examination of the question, come to the following conclusion:

"To the ancient Greek in general, death was a sad doom. When he lost a friend, he sighed a melancholy farewell after him to the faded shore of ghosts. Summoned himself, he departed with a lingering look at the sun and a tearful adieu to the bright day and the green earth. To the Roman death was a grim reality. To meet it himself he girded up his loins with artificial firmness. But at its ravages among his friends, he wailed in anguished abandonment. To his dying vision there was indeed a future, but shapes of distrust and shadow stood upon its disconsolate borders; and

¹ At quem Deum, qui templa caeli summa sonitu concutit;
Ego homuncio hoc non facerem?

—Act iii., sc. 5.

² Warburton, "Divine Legation," B. II., sect. iv.

³ Terra tegit carnem; tumulum circumvolat umbra; orcus habet manes; spiritus astra petit.

when the prospect had no horror, he still shrank from the popped gloom."¹

Yet as each nation advanced in refinement and intellectual culture the priests, the poets, and the philosophers² aspired to a higher thought and cherished the longing for and inculcated the consoling doctrine of an immortality, not to be spent in shadowy and inert forms of existence, but in perpetual enjoyment, as a compensation for the ills of life.

The necessary result of the growth of such pure and elevated notions must have been a contempt and condemnation of the absurdities of polytheism. But as this was the popular religion it was readily perceived that any open attempt to overthrow it and to advance, publicly, opinions so antagonistic to it would be highly impolitic and dangerous. Whenever any religion, whether true or false, becomes the religion of a people, whoever opposes it, or ridicules it, or seeks to subvert it, is sure to be denounced by popular fanaticism and to be punished by popular intolerance.

Socrates was doomed to drink the poisoned bowl on the charge that he taught the Athenian youth not to worship the gods who are worshipped by the state, but new and unknown deities. Jesus was suspended from the cross because he inculcated doctrines which, however pure, were novel and obnoxious to the old religion of his Jewish countrymen.

The new religious truths among the Pagan peoples were therefore concealed from common inspection and taught only in secret societies, admission to which was obtained only through the ordeal of a painful initiation, and the doctrines were further concealed under the veil of symbols whose true meaning the initiated only could understand. "The truth," says Clemens of Alexandria, "was taught involved in enigmas, symbols, allegories, metaphors, and tropes and figures."³

The secret associations in which the principles of a new and

¹ "Critical History of the Doctrine of a Future Life," p. 196.

² Many of the philosophers were, however, skeptics. The Stoics, for instance, and they were the leading sect, denied the survival of the soul after the death of the body; or, if any of them conceded its survival, they attributed to it only a temporary duration before it is dissolved and absorbed into the universe. Seneca ("Troades," l., 397) says "there is nothing after death, and death itself is nothing." *Post mortem nihil, est ipsaque mors nihil.*

³ "Stromat.," lib. v., p. 658.

purser theology were taught have received in history the name of the MYSTERIES.

Each country had its own Mysteries peculiar to itself. In Egypt were those of Osiris and Isis; in Samothrace those of the Cabiri; in Greece they celebrated at Eleusis, near Athens, the Mysteries of Demeter; in Syria of Adonis; in Phœnicia of Dionysus; and in Persia those of Mithras, which were the last to perish after the advent of Christianity and the overthrow of polytheism.

These Mysteries, although they differed in name and in some of the details of initiation, were essentially alike in general form and design. "Their end as well as nature," says Warburton, "was the same in all: to teach the doctrine of a future state."¹ Alger says: "The implications of the indirect evidence, the leanings and guidings of all the incidental clues now left us as to the real aim and purport of the Mysteries, combine to assure us that their chief teaching was a doctrine of a future life in which there should be rewards and punishments."²

Thomas Taylor, the Platonist, than whom no better modern authority on this subject could be cited, says that "the initiated were instructed in the doctrine of a state of future rewards and punishments,"³ and that the greater Mysteries "obscurely intimated, by mystic and splendid visions, the felicity of the soul both here and hereafter, when purified from the defilements of a material nature and constantly elevated to the realities of intellectual vision."⁴

All the ancient writers who were contemporary with these associations, and must have been familiar with their character, concur in the opinion that their design was to teach the doctrine of a future life of compensation.

Pindar says, "Happy the man who descends beneath the hollow earth having beheld these Mysteries. He knows the end, he knows the divine origin of life."

Sophocles says that "they are thrice happy who descend to the shades below, after having beheld these rites; for they alone have life in Hades, while all others suffer there every kind of evil."

¹ "Divine Legation," B. I., sect. iv., p. 194.

² "Crit. Hist. of the Doctrine of a Future Life," p. 454.

³ "Dissertation on the Eleusinian and Bacchic Mysteries" *apud Pamphleteer*, vol. viii, p. 40.

⁴ *Ibid.*, p. 53.

And lastly, Isocrates declares that "those who have been initiated in the Mysteries of Ceres entertain better hopes both as to the end of life and the whole of futurity."

It is then evident from all authorities that the great end and design of the initiation into these Mysteries was to teach the aspirant the doctrine of a future life—not that aimless, uncertain, and shadowy one portrayed by the poets and doubtfully consented to by the people, but that pure and rational state of immortal existence in which the soul is purified from the dross of the body and elevated to eternal life. It was, in short, much the same in its spirit as the Christian and Masonic doctrine of the resurrection.

But this lesson was communicated in the Mysteries in a peculiar form, which has in fact given rise to the theory we are now considering that they were the antetype and original source of Speculative Masonry. They were all dramatic in their ceremonies; each one exhibited in a series of scenic representations the adventures of some god or hero; the attacks upon him by his enemies; his death at their hands; his descent into Hades or the grave, and his final resurrection to renewed life as a mortal, or his apotheosis as a god.

The only important difference between these various Mysteries was, that there was to each one a different and peculiar god or hero, whose death and resurrection or apotheosis constituted the subject of the drama, and gave to its scenes the changes which were dependent on the adventures of him who was its main subject. Thus, in Samothrace, where the Mysteries of the Cabiri were celebrated, it was Atys, the lover of Cybele, who was slain and restored; in Egypt it was Osiris whose death and resurrection were represented; in Greece it was Dionysus, and in Persia Mithras.

But in all of these the material points of the plot and the religious design of the sacred drama were identical. The dramatic form and the scenic representation of the allegory were everywhere preserved.

This dramatic form of the initiatory rites in the Mysteries—this acted allegory in which the doctrine of the resurrection was shadowed forth by the visible representation of some fictitious event—was, as the learned Dr. Dollinger¹ has justly observed, "eminently calculated to take a powerful hold on the imagination and the heart,"

¹ "Jew and Gentile," I., p. 136, Darnell's Translation.

and to excite in the spectators alternately conflicting sentiments of terror and calmness, of sorrow and fear and hope."

As the Mysteries were a secret society, whose members were separated from the rest of the people by a ceremony of initiation, there resulted from this form of organization, as a necessary means of defense and of isolation, a solemn obligation of secrecy, with severe penalties for its violation, and certain modes of recognition known only to those who had been instructed in them.

There was what might be called a progressive order of degrees, for the neophyte was not at once upon his initiation invested with a knowledge of the deepest arcana of the religious system.

Thus the Mysteries were divided into two classes called the Lesser and the Greater Mysteries, and in addition there was a preliminary ceremony, which was only preparatory to the Mysteries proper. So that there was in the process of reception a system of three steps, which those who are fond of tracing analogies between the ancient and the modern initiations are prone to call degrees.

A brief review of these three steps of progress in the Mysteries will give the reader a very definite idea of the nature of this ancient system in which so many writers have thought that they had found the incunabulum of modern Freemasonry, and will enable him to appreciate at their just value the analogies which these writers have found, as they suppose, between the two systems. The first step was called the *Lustration*, or purification by water. When the neophyte was ready to be received into any of the ancient Mysteries, he was carried into the temple or other place appropriated to the ceremony of initiation, and there underwent a thorough cleansing of the body by water. This was the preparation for reception into the Lesser Mysteries and was symbolic of that purification of the heart that was absolutely necessary to prepare the aspirant for admission to a knowledge of and participation in the sacred lessons which were to be subsequently communicated to him. It has been sought to find in this preparatory ceremony an analogy to the first degree of Masonry. Such an analogy certainly exists, as will hereafter be shown, but the theory that the Apprentice's degree was derived from and suggested by the ceremony of Lustration in the Mysteries is wholly untenable, because this ceremony was not peculiar to the Mysteries.

An ablution, lustration, or cleansing by water, as a religious rite was practiced among all the ancient nations. More especially was

it observed among the Hebrews, Greeks, and Romans. With the Hebrews the lustration was a preliminary ceremony to every act of expiation or sin-offering. Hence the Jewish prophets continually refer to the ablution of the body with water as a symbol of the purification of the heart. Among the Greeks lustration was always connected with their sacrifices. It consisted in the sprinkling of water by means of an olive or a laurel branch. Among the Romans, the ceremony was more common than among the Greeks. It was used not only to expiate crime, but also to secure the blessing of the Gods. Thus, fields were lustrated before the corn was put into the ground; colonies when they were first established, and armies before they proceeded to battle. At the end of every fifth year, the whole people were thus purified by a general lustration. Everywhere the rite was connected with the performance of sacrifice and with the idea of a moral purification.

The next step in the ceremonies of the ancient Mysteries was called the *Initiation*. It was here that the dramatic allegory was performed and the myth or fictitious history on which the peculiar Mystery was founded was developed. The neophyte personated the supposed events of the life, the sufferings, and the death of the god or hero to whom the Mystery was dedicated, or he had them brought in vivid representation before him. These ceremonies constituted a symbolic instruction in the *initia*—the beginnings—of the religious system which it was the object of the Mysteries to teach.

The ceremonies of initiation were performed partly in the Lesser, but more especially and more fully in the Greater Mysteries, of which they were the first part, and where only the allegory of death was enacted. The Lesser Mysteries, which were introductory to the Greater, have been supposed by the theorists who maintain the connection between the Mysteries and Freemasonry to be analogous to the Fellow Craft's degree of the latter Institution.

There may be some ground for this comparison in a rather inexact way, for although the Lesser Mysteries were to some extent public, yet as they were, as Clemens of Alexandria¹ says, a certain groundwork of instruction and preparation for the things that were to follow, they might perhaps be considered as analogous to the Fellow Craft's degree.

¹ "Stromat.," v., p. 424.

The third and last of the progressive steps or grades in the Mysteries was *Perfection*. It was the ultimate object of the system. It was also called the autopsy, from a Greek word which signifies *seeing with one's own eyes*. It was the complete and finished communication to the neophyte of the great secret of the Mysteries; the secret for the preservation of which the system of initiation had been invented, and which, during the whole course of that initiation, had been symbolically shadowed forth.

The communication of this secret, which was in fact the explanation of the secret doctrine, for the inculcation of which the Mysteries in every country had been instituted, was made in the most sacred and private place of the temple or place of initiation.

As the *autopsy* or *Perfection* of the Mysteries concluded the whole system, the maintainers of the doctrine that Freemasonry finds its origin in the Mysteries have compared this last step in the ancient initiation to the Master's degree. But the analogy between the two as a consummation of the secret doctrine is less patent in the third degree, as it now exists, than it was before the disseverance from it of the Royal Arch, accepting, however, the Master's degree as it was constituted in the earlier part of the 18th century, the analogies between that and the last stage of the Mysteries are certainly very interesting, although not sufficient to prove the origin of the modern from the ancient systems. But of this more hereafter.

This view of the organization of the Pagan Mysteries would not be complete without some reference to the dramatized allegory which constituted so important a part of the ceremony of initiation, and in connection with which their relation to Freemasonry has been most earnestly urged.

It has been already said that the Mysteries were originally invented for the purpose of teaching two great religious truths, which were unknown to, or at least not recognized, in the popular faith. These were the unity of God and the immortality of the soul in a future life. The former, although illustrated at every point by expressed symbols, such, for instance, as the all-seeing eye, the eye of the universe, and the image of the Deity, was not allegorized, but taught as an abstract doctrine at the time of the autopsy or the close of the grade of *Perfection*. The other truth, the dogma of a future life, and of a resurrection from death to immortality, was communicated by an allegory which was dramatized in much the same way

in each of the Mysteries, although, of course, in each nation the person and the events which made up the allegory were different. The interpretation was, however, always the same.

As Egypt was the first country of antiquity to receive the germs of civilization, it is there that the first Mysteries are supposed to have been invented.¹ And although the Eleusinian Mysteries, which were introduced into Greece long after the invention of the Osiriac in Egypt, were more popular among the ancients, yet the Egyptian initiation exhibits more purely and more expressively the symbolic idea which was to be developed in the interpretation of its allegory. I shall therefore select the Osiriac, which was the most important of the Egyptian Mysteries, as the exemplar from which an idea may be obtained of the character of all the other Mysteries of paganism.

All the writers of antiquity, such as Plutarch, Diodorus Siculus, and Herodotus, state that the Egyptian Mysteries of Osiris, Isis, and Horus were the model of all the other systems of initiation which were subsequently established among the different peoples of the Old World. Indeed, the ancients held that the Demeter of the Greeks was identical with the Isis of the Egyptians, and Dionysus with Osiris. Their adventures were certainly very similar.

The place of Osiris in Egyptian history is unknown to us. The fragments of Sanchoniathon speak of Isiris, the brother of Chna or Canaan; in the lists of Manetho, he is made the fifth king under the dynasty of the demi-gods, being conjoined with Isis; but as the four preceding kings are named as Hephæstus, Helios, Agathodomon and Kronos, the whole is evidently a mere mythological fable, and we have as far to seek as ever. Herodotus is not more satisfactory, for he says that Osiris and Isis were two great deities of the Egyptians. Banier, however, in his *Mythology* thinks that he was the same as Mizraim, the son of Cham, and grandson of Noah. Bishop Cumberland concurs in this and adds that Cham was the first king of Egypt, that Osiris was a title appropriated by him, signifying Prince, and that Isis was simply Ishah, his wife. Lastly, Diodorus Siculus says that he was Menes, the first King of Egypt. Some later writers have sought to identify Osiris and Isis with the

¹ The first and original Mysteries of which we have any account were those of Isis and Osiris in Egypt, from whence they were derived by the Greeks—Warburton, "Divine Legation," I., p. 194. Diodorus says the same thing in the first book of his "History," I., xxxvi.

Iswara and Isi of India. There is certainly a great deal of etymological plausibility in this last conjecture.

The ubiquitous character of Osiris as a personality among the ancients is best shown in an epigram of Ausonius, wherein it is said that in Greece, at Eleusis, he was called Bacchus; the Egyptians thought that he was Osiris, the Mysians of Asia Minor named him Phœnceus or Apollo; the Indians supposed that he was Dionysus; the sacred rites of the Romans called him Liber; and the Arabians, Adonis.¹

But the only thing that is of any interest to us in this connection is that Osiris was the hero of the earliest of the Mysteries, and that his death and apotheosis—his change from a mortal king to an immortal God—symbolized the doctrine of a future life.

His historical character was that of a mild and beneficent sovereign, who had introduced the arts of civilization among his subjects, and had then traveled for three years for the purpose of extending them into other nations, leaving the government of his kingdom, during his absence, to his wife Isis. According to the legend, his brother Typhon had been a rival claimant for the throne, and his defeat had engendered a feeling of ill-will. During the absence of Osiris, he, therefore, formed a secret conspiracy with some of his adherents to usurp the throne.

On the return of Osiris from his travels he was invited by Typhon to a banquet, ostensibly given in his honor, at which all the conspirators were present. During the feast Typhon produced a chest, inlaid with gold, and promised to present it to that person of the company, whose body, upon trial, would be found most exactly to fit it. Osiris tried the experiment, but as soon as he had laid himself in the chest, Typhon closed and nailed down the lid.

The chest was then thrown into the river Nile, whence it floated into the sea, and, after being for some time tossed upon the waves, it was finally cast ashore at the town of Byblos, in Phœnicia, and left at the foot of a Tamarisk tree. Isis, the wife of Osiris, over-

—Ausonius, Ep. 30.

whelmed with grief for the loss of her husband, commenced a search for the body, being accompanied by her son, Anubis, and his nurse, Nepthe.

After many adventures Isis arrived on the shores of Phoenicia and in the neighborhood of Byblos, where she at length discovered the body at the foot of the Tamarisk tree. She returned with it to Egypt. It was received by the people with great demonstrations of joy, and it was proclaimed that Osiris had risen from the dead and had become a god.

The sufferings of Osiris, his death, his resurrection, and his subsequent office as judge of the dead in a future state, constituted the fundamental principles of the Egyptian religion. They taught the secret doctrine of a future life, and initiation into the mysteries of Osiris was initiation into the rites of the religion of Egypt. These rites were conducted by the priests, and into them many sages from other countries, especially from Greece, such as Herodotus, Plutarch, and Pythagoras, were initiated.

In this way it is supposed that the principles and general form of the Mysteries were conveyed into other countries, although they everywhere varied in the details. The most important of the Mysteries besides the Egyptian were those of Mithras in Persia, of Atys or of the Cabiri in Thrace, of Adonis in Syria, and of Dionysus in Greece. They extended even beyond the then more civilized parts of the world into the northern regions of Europe, where were practiced the Scandinavian rites of the Norsemen and the Druidical Mysteries of Gaul and Britain, though these were probably derived more directly from a primitive Aryan source.

But wherever they existed we find in them a remarkable unity of design and a similarity of ceremonies from which we are compelled to deduce a common origin, while the purity of the doctrines which they taught evidently show that this common origin was not to be sought in the popular theology.

In all of the Mysteries the ceremonies of initiation were of a funereal character. They allegorized in a dramatic form the sufferings, the death, and the resurrection of some god or hero. There was a death, most generally by violence,¹ to symbolize, as certain

¹ Thus Clemens of Alexandria describes the legend or allegory of the Cabiri Mysteries as the sacred mystery of a brother slain by his brethren, "frater trucidatus a fratribus."

interpreters of the Mysteries have supposed, the strife of certain antagonistic powers in nature, such as life and death, virtue and vice, light and darkness, or summer and winter.

The person thus slain was represented in the allegorical drama by the candidate. After the death followed the disappearance of the body, called by the Greeks the *aphanism*, and the consequent search for it. This search for the body, in which all the initiates joined, constituted what Faber calls "the doleful part," and was succeeded by its discovery, which was known as the *heuresis*.¹ This was accompanied by the greatest demonstrations of joy. The candidate was afterward instructed in the *aporrheta*, or secret dogmas of the Mysteries.

In all of the Pagan Mysteries this dramatic form of an allegory was preserved, and we may readily see in the groans and lamentations on the death of the god or hero and the disappearance of the body a symbol of the death of man, and in the subsequent rejoicings at his discovery and restoration, a symbol of the restoration of the spirit to eternal life.

In view of the purity of the lessons taught in the Mysteries and their inculcation of the elevated dogmas of the unity of God and the immortality of the soul, it is not surprising to read the encomiums passed upon them by the philosophers of antiquity.

The reader, if he has carefully considered the allegorical drama which was represented in the ancient Mysteries, and compared it with the drama which constitutes the principal portion of the initiation in Freemasonry, will be at no loss to account for the reasons which have led so many writers to attribute the origin of the Masonic system to these mystical associations of antiquity.

It has been a favorite theory with several German, French, and British scholars to trace the origin of Freemasonry to the Mysteries of Paganism, while others, repudiating the idea that the modern association should have sprung from them, still find analogies so remarkable between the two systems as to lead them to suppose that the Mysteries were an offshoot from the pure Freemasonry of the Patriarchs.

In my opinion there is not the slightest foundation in historical

¹ "Concerning Adonis, whom some call Osiris, there are two things remarkable: *aphanismos*, the death or loss of Adonis; and *heuresis*, the finding of him again."—Godvyn in "Moses and Aaron," lib. iv., c. 2.

evidence to support either theory, although I admit the existence of many analogies between the two systems, which can, however, be easily explained without admitting any connection in the way of origin and descent between them.

Of the theory that the Mysteries were an offshoot or imitation of the pure patriarchal Freemasonry, Hutchinson and Oliver are the most distinguished supporters.

While Hutchinson strongly contends for the direct derivation of Freemasonry from Adam, through the line of the patriarchs to Moses and Solomon, he does not deny that it borrowed much from the initiations and symbols of the Pagans.

Thus he unhesitatingly says, that "there is no doubt that our ceremonies and Mysteries were derived from the rites, ceremonies, and institutions of the ancients, and some of them from the remotest ages!"¹

But lest the purity of the genuine patriarchal Masonry should be polluted by borrowing its ceremonies from such an impure source, he subsequently describes, in that indefinite manner which was the peculiarity of his style, the separation of a purer class from the debasement of the popular religion, wherein he evidently alludes to the Mysteries. Thus he says:

"In the corruption and ignorance of after ages, those hallowed places² were polluted with idolatry; the unenlightened mind mistook the type for the original, and could not discern the light from darkness; the sacred groves and hills became the objects of enthusiastic bigotry and superstition; the devotees bowed down to the oaken log and the graven image as being divine. Some preserved themselves from the corruptions of the times, and we find those sages and select men to whom were committed, and who retained, the light of understanding and truth, unpolled with the sins of the world, under the denomination of Magi among the Persians; wise men, soothsayers, and astrologers among the Chaldeans; philosophers among the Greeks and Romans; Brahmins among the Indians; Druids and bards among the Britons; and with the people of God, Solomon shone forth in the fullness of human wisdom."³

Dr. Oliver expresses almost the same views, but more explicitly.

¹ "Spirit of Masonry," lect. ii., p. 15.

² "The highest hills and lowest valleys."

³ "Spirit of Masonry," lect. iv., p. 59.

He was, I think, the first to advance the theory that two systems of Masonry had come down the course of time, both derived from a common source, which he called the Pure and the Spurious Freemasonry of antiquity—the former descending without interruption from the Patriarchs, and especially from Noah, and which system was the progenitor of that which is now practiced, and the latter, being a schism, as it were, from the former, and impure and corrupted in its principles, and preserved in the Pagan Mysteries. He admits, however, that there were certain analogies between the two in their symbols and allegories. His own language on this subject, which is as follows, leaves no doubt of the nature of his views. In a note to his *History of Initiation*, an elaborate and learned work on certain of these Mysteries, he says:

"I have denominated the surreptitious initiations *earth-born*, in contra-distinction to the purity of Freemasonry, which was certainly derived from above; and to those who contend that Masonry is nothing more than a miserable relic of the idolatrous Mysteries (vide *Fab. Pag. Idol.*, vol. iii., p. 190), I would reply, in the words of an inspired apostle, 'Doth a fountain send forth at the same place sweet water and bitter? Can the fig tree bear olive berries or a vine figs? So can no fountain both yield salt water and fresh. The wisdom that is from above is first pure, then peaceable, full of mercy and good fruits' (James iii. 11, 12, 17). I wish to be distinct and intelligible on this point, as some misapprehensions are afloat respecting the immediate object of my former volume of Signs and Symbols; and I have been told that the arguments there used afford an indirect sanction to the opinion that Masonry is derived from the Mysteries. In answer to this charge, if it requires one, I only need reply to the general tenor of that volume, and to declare explicitly my firm opinion, founded on intense study and abstruse research, that the science which we now denominate Speculative Masonry, was coeval, at least, with the creation of our globe, and the far-famed Mysteries of idolatry were a subsequent institution founded on similar principles, with the design of conveying unity and permanence to the false worship, which it otherwise could never have acquired."¹

I do not know of any other prominent Masonic writer who en-

¹ "History of Initiation," lect. i., p. 13, notes.

tertains the theory of the common origin but diverse descent of the Mysteries and Freemasonry, although there are many who, subscribing with implicit faith to the teachings of Dr. Oliver as a Masonic historian, necessarily give their assent to his opinion on this subject.

There is another class of Masonic scholars who have advanced the theory that the Speculative Freemasonry of the present day is derived directly from and is a legitimate successor of the Mysteries of antiquity. They found this theory on the very many and striking analogies that are to be found in the organization, the design, and the symbols of the two systems, and which they claim can only be explained on the theory that the one is an offshoot from the other.

The Abbé Robin was, perhaps, the first writer who advanced this idea in a distinct form. In a work on the Ancient and Modern Initiations,¹ published in 1780, he traces the origin of the ancient systems of initiation to that early period when wicked men, urged by the terror of guilt, sought among the virtuous for intercessors with the Deity. The latter, he says, retired into solitary places to avoid the contagion of the growing corruption, and devoted themselves to a life of contemplation and to the cultivation of the arts and sciences. In order to associate with them in their labors and functions only such as had sufficient merit and capacity, they appointed strict courses of trial and examination. This, he thinks, must have been the source of the initiations which distinguished the celebrated Mysteries of antiquity. The Magi of Chaldea, the Brahmins and Gymnosophists of India, the Priests of Egypt, and the Druids of Gaul and Britain thus lived in sequestered places and obtained great reputation by their discoveries in astronomy, chemistry, and mechanics, by the purity of their morals, and by their knowledge of the science of legislation.

It was in these schools, says the abbé, that the first sages and legislators of antiquity were formed, where the doctrines taught were the unity of God and the immortality of the soul, and it was from these Mysteries that the exuberant fancy of the Greeks drew much of their mythology. From these ancient initiations he deduces the orders of Chivalry which sprang into existence in the Middle Ages,

¹ "Recherches sur les Initiations Anciennes et Modernes."

and certain branches of these, he thinks, produced the institution of Freemasonry.

The theory of the Abbé Robin therefore traces the institution of Masonry to the ancient Mysteries, but in an indirect way, through the orders of Chivalry. He might therefore more correctly be classed among those who maintain the doctrine of the Templar origin of Freemasonry.

But it is Alexander Lenoir, the French archaeologist, who has attempted in the most explicit and comprehensive manner to establish the doctrine of the direct descent of Freemasonry from the ancient Mysteries, and especially from the Egyptian. In the year 1814 he published an elaborate work on this subject.¹ In this he begins by affirming that we cannot expect to find in the Egyptian and Greek initiations those modes of recognition which are used by the Freemasons of the present day, because these methods, which are only conventional and had been orally communicated under the obligation of secrecy, can not be known to us, for they could not have been transmitted through the lapse of ages. Omitting, therefore, all reference to these as matters of no real importance, he confines himself to a comparison of the Masonic with the ancient rites of initiation. In this view he comes to the conclusion that Freemasonry in all the points that it essentially comprehends is in direct relation with the Mysteries of the ancient world, and that hence, abstracting certain particular usages practiced by the modern Freemasons, it is evident that Freemasonry in no respect differs from the ancient initiations of the Egyptians and the Greeks.

This theory has been embraced by nearly all the French Masonic writers except Rebold, who traces Masonry to the Roman Colleges of Artificers.

Unfortunately for the general acceptance of this theory, M. Lenoir has in the first place drawn his comparisons from the system of ceremonies of initiation which are practiced in the lodges of France, and especially from the "proofs and trials" of the Entered Apprentice's degree. But the tedious ceremonies and painful trials of the candidate as they are practiced in the French Rite constitute no part of the original English Masonry whence the French Masonry derives its existence, and were adopted as a pure innovation

¹ "La Franche-Maçonnerie rendue à sa véritable origine," etc. Par M. Alexander Lenoir. Paris, 1814.

long after the establishment of the Order in France by the Grand Lodge of England.

And again, the Egyptian initiations, with which they have been compared by Lenoir, were not those which were actually practiced by the priests of Egypt, or at least we have no authentic proof of that fact, but were most probably suggested by the imaginative details given by the Abbé Terrasson in his romance entitled *Sethas*, in which he pretends to portray the initiation of an Egyptian prince.

The truth is that Lenoir and those writers who have followed him and adopted his theory have not instituted a comparison between the original ceremonies of Masonic initiation and those of the ancient Mysteries, but merely a comparison between a recent system of ceremonies, certainly not earlier than the middle of the last century, and a fictitious system indebted for its birth to the inventive genius of a French abbé, and first promulgated in a work published by him in the year 1731.

As well might Mr. Turner or any other writer on Anglo-Saxon history have cited, as authentic materials for his description of the customs of the Anglo-Saxon, the romantic incidents given by Sir Walter Scott in his novel of *Ivanhoe*.

Hence all the references of the *voyages* of an Entered Apprentice in a French Lodge to the similar voyages of an Aspirant in the Mysteries of Osiris or Isis become nothing more than "the baseless fabric of a vision," which must fade and dissolve like an "insubstantial pageant" when submitted to the crucial test of authentic historical investigation.¹

The Rev. Mr. King, the author of a very interesting treatise on the Gnostics,² has advanced a theory much more plausible than either of those to which I have adverted. He maintains that some of the Pagan Mysteries, especially those of Mithras, which had been instituted in Persia, extended beyond the period of the advent of Christianity, and that their doctrines and usages were adopted by the secret societies which existed at an early period in Europe and

¹ "Many of the explanations given as to the ceremonies used in Egyptian initiations are modern inventions, abounding in absurdities and purely imaginary."—Tho. Pryer, "On the study of Masonic Antiquities," in *Freemasons' Quarterly Review*, 1847, p. 262. Wilkinson was of the same opinion. See "Manners and Customs of the Ancient Egyptians," vol. i.

² "The Gnostics and their Remains, Ancient and Mediaeval." By C. W. King, M.A., London, 1865, p. 47 *et seq.*

which finally assumed the form of Freemasonry. I have said that this theory is a plausible one. It is so because its salient points are sustained by historical evidence.

It is, for instance, a fact that some of the Mysteries of Paganism were practiced in Europe long after the commencement of the Christian era. They afforded a constant topic of denunciation to the fathers of the church, who feared and attacked what they supposed to be their idolatrous tendencies. It was not until the middle of the 5th century that they were proscribed by an edict of the Emperor Theodosius. But an edict of proscription is not necessarily nor always followed by an immediate abolition of the thing proscribed.

The public celebration of the Mysteries must, of course, have ceased at once when such celebration had been declared unlawful. But a private and secret observance of them may have continued, and probably did continue, for an indefinite time, perhaps even to as late a period as the end of the 5th or the beginning of the 6th century.

Mosheim tells us that in the 4th century, notwithstanding the zeal and severity of the Christian emperors, there still remained in several places, and especially in the remoter provinces, temples and religious rites consecrated to the Pagan deities; that rites instituted in honor of them were, in the 5th century, celebrated with the utmost freedom and impunity in the western empire; and that even in the 6th century remains of the Pagan worship were to be found among the learned and the officers of state.¹

During all this time it is known that secret associations, such as the Roman Colleges of Artificers, existed in Europe, and that from them ultimately sprang up the organizations of Builders, which, with Como in Lombardy as their center, spread over Europe in the Middle Ages, and whose members, under the recognized name of *Traveling Freemasons*, were the founders of Gothic architecture.

There is no forced or unnatural succession from them to the Guilds of Operative Masons, who undoubtedly gave rise, about the end of the 17th or the beginning of the 18th century, to the Speculative Order or the Free and Accepted Masons, which is the organization that exists at the present day.

¹ Mosheim, "Ecclesiast. History," Maelaine's Translation, vol. i., pp. 251, 332, 401.

There is, therefore, nothing absolutely untenable in the theory that the Mithraic Mysteries which prevailed in Europe until the 5th or perhaps the 6th century may have impressed some influence on the ritual, form, and character of the association of early Builders, and that this influence may have extended to the Traveling Freemasons, the Operative Guilds, and finally to the Free and Accepted Masons, since it can not be proved that there was not an uninterrupted chain of succession between these various organizations.

The theory of Mr. King can not, therefore, be summarily rejected. It may not be altogether true, but it has so many elements of truth about it that it claims our serious consideration.

But, after all, we may find a sufficient explanation of the analogy which undoubtedly exists between the rites of the ancient Mysteries and those of the modern Freemasons in the natural tendency of the human mind to develop its ideas in the same way when these ideas are suggested by the same or similar circumstances. The fact that both institutions have taught the same lessons by the same method of instruction may be attributed not to a direct and uninterrupted succession of organizations, each one a link of a long chain leading consequentially to another, but rather to a natural and usual coincidence of human thought.

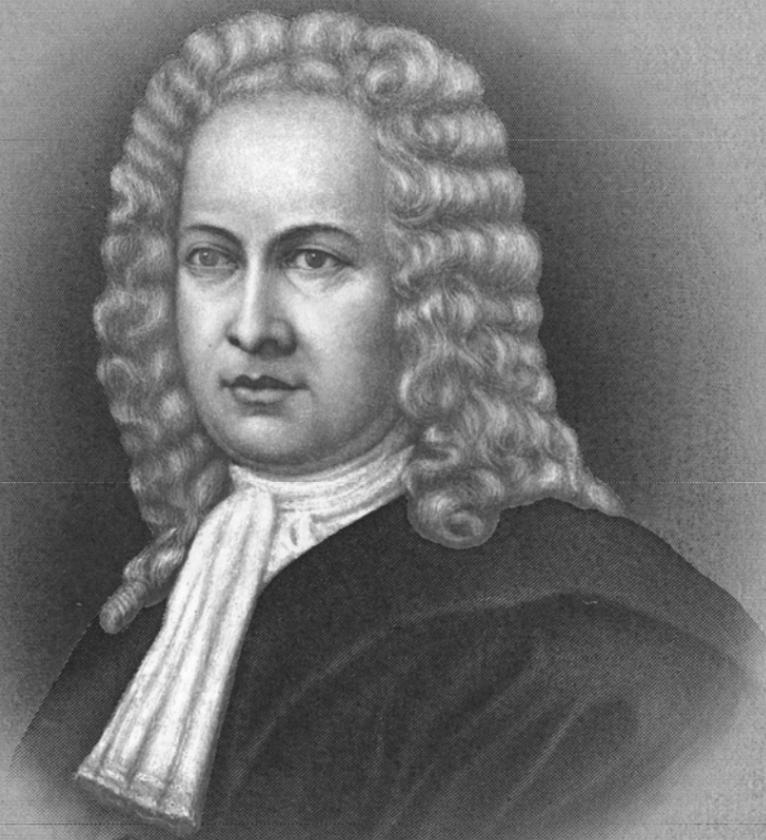

The believers in the lineal and direct descent of Freemasonry from the ancient Mysteries have of course discovered, or thought that they had discovered, the most striking and wonderful analogies between the internal organizations of the two institutions. Hence the most credulous of these theorists have not hesitated to compare the *Hierophant*, or the Explainer of the sacred rites in the Mysteries, with the *Worshipful Master* in a Masonic Lodge, nor to style the *Dadouchos*, or Torch-Bearer, and the *Hieroceryx*, or Herald of the Mysteries, *Wardens*, nor to assign to the *Epibomos*, or Altar-Server, the title and duties of a *Deacon*.

That there are analogies, and that many of them are very curious, can not be denied, but I shall attempt, before leaving this subject, to explain the reason of their existence in a more rational way than by tracing the modern as a succession from the ancient system.

The analogies existing between the ancient Mysteries and Freemasonry, upon which the theory of the descent of the one from the other has been based, consist in the facts that both were secret societies, that both taught the same doctrine of a future life, and that

DANIEL COXE

First Deputized Grand Master *in* North American Colonies, 1730

both made use of symbols and allegories and a dramatic form of instruction. But these analogies do not necessarily support the doctrine of descent, but may be otherwise satisfactorily explained.

Whether the belief in a personal immortality was communicated to the first man by a divine revelation, and subsequently lost as the intellectual state of future generations declined into a degraded state of religious conceptions; or whether the prehistoric man, created but little superior to the wild beast with whom he daily contended for dominion with insufficient weapons, was at first without any conception of his future, until it had by chance dawned upon some more elevated intellect and by him been communicated to his fellows as a consoling doctrine, afterward to be lost, and then in the course of time to be again recovered, but not to be universally accepted by grosser minds, are questions into which we need not enter here.

It is sufficient to know that there has been no period in the world's history, however dark, in which some rays of this doctrine have not been thrown upon the general gloom. The belief in a future life and an immortal destiny has always been so inseparably connected with elevated notions of God that the deep and reverent thinkers in all ages have necessarily subscribed to its truth. It has inspired the verses of poets and tempered and directed the discussions of philosophers.

As both the Mysteries of the ancients and the Freemasonry of the moderns were religious institutions, the conceptions of the true nature of God which they taught to their disciples must of course have involved the ideas of a future life, for the one doctrine is a necessary consequence of the other. To seek, therefore, in this analogy the proof of a descent of the modern from the ancient institution is to advance an utterly fallacious argument.

As to the secret character of the two institutions, the argument is equally untenable. Under the benighted rule of Pagan idolatry the doctrine of a future life was not the popular belief. Yet there were also some who aspired to a higher thought—philosophers like Socrates and Plato, who nourished with earnest longing the hope of immortality. Now, it was by such men that the Mysteries were originally organized, and it was for instruction in such a doctrine that they were instituted. But opposed as this doctrine was to the general current of popular thought, it became, necessarily and defen-

sively, esoteric and exclusive. And hence we derive the reason for the secret character of the Mysteries. "They were kept secret," says Warburton, "from a necessity of teaching the initiated some things improper to be communicated to all."¹ The learned bishop assigns another reason, which he sustains with the authority of ancient writers, for this secrecy. "Nothing," he says, "excites our curiosity like that which retires from our observation, and seems to forbid our search."²

Synesius, who lived in the 4th century, before the Mysteries were wholly abolished, says that they owed the veneration in which they were held to a popular ignorance of their nature.³

And Clemens of Alexandria, referring to the secrecy of the Mysteries, accounts for it, among other reasons, because the truth seen through a veil appears greater and more venerable.⁴

Freemasonry also teaches the doctrine of a future life. But although there was no necessity, as in the Pagan Mysteries, to conceal this doctrine from the populace; yet there is, for the reasons that have just been assigned, a proneness in the human heart, which has always existed, to clothe the most sacred subjects with the veil of mystery. It was this spirit that caused Jesus to speak to the Jewish multitudes in parables whose meaning his disciples, like initiates, were to comprehend, but which would be unintelligible to the people, so that "seeing they might not see, and hearing they might not understand."

The Mysteries and Freemasonry were both secret societies, not necessarily because the one was the legitimate successor of the other, but because both were human institutions and because both partook of the same human tendency to conceal what was sacred from the unhallowed eyes and ears of the profane. In this way may be explained the analogy between the two institutions which arises from their secret character and their esoteric method of instruction.

The symbolic form of imparting the doctrines is another analogy which may be readily explained. For when once the esoteric or secret system was determined on, or involuntarily adopted by the force of those tendencies to which I have referred, it was but natural that the secret instruction should be communicated by a method of symbolism, because in all ages symbols have been the cipher by which

¹ "Div. Legat.," I., p. 201. ² Ibid., I., p. 200. ³ "De Providentia." ⁴ "Stromat.," v., 419.

secret associations of every character have restricted the knowledge which they imparted to their initiates only.

Again, in the Mysteries, the essential doctrine of a resurrection from death to eternal life was always taught in a dramatic form. There was a drama in which the aspirant or candidate for initiation represented, or there was visibly pictured to him, the death by violence and then the resuscitation or apotheosis—the resurrection to life and immortality of some god or hero, in whose honor the peculiar mystery was founded. Hence in all the Mysteries there were the *thanatos*, the death or slaying of the victim; the *aphanism*, the concealment or burial of the body by the slayers; and the *heuresis*, the finding of the body by the initiates. This drama, from the character of the plot, began with mourning and ended with joy.

The traditional "*heureka*" sometimes attributed to Pythagoras when he discovered the forty-seventh problem, and sometimes to Archimedes when he accidentally learned the principle of specific gravity, was nightly repeated to the initiates when, at the termination of the drama of the Mysteries, they had found the hidden body of the Master.

Now, the recognized fact that this mode of inculcating a religious or a philosophical idea by a dramatic representation was constantly practiced in the ancient world, for the purpose of more permanently impressing the conception, would naturally lead to its adoption by all associations where the same lesson was to be taught as that which was the subject of the Mysteries. The tendency to dramatize an allegory is universal, because the method of dramatization is the most expedient and has been proved to be the most successful. The drama of the third or Master's degree of Freemasonry is, as respects the subject and the development of the plot and the conduct of the scenes, the same as the drama of the ancient Mysteries. There is the same *thanatos*, or death; the same *aphanism*, or concealment of the body, and the same *heuresis*, or discovery of it. The drama of the Master's degree begins in sorrow and ends in joy. Everything is so similar that we at once recognize an analogy between Freemasonry and the ancient Mysteries; but it has already been explained that this analogy is the result of natural causes, and by no means infers a descent of the modern from the ancient institution.

Another analogy between the Mysteries and Freemasonry is

the division of both into steps, classes, or degrees—call them what you may—which is to be found in both. The arrangement of the Masonic system into three degrees certainly bears a resemblance to the distribution of the Mysteries into the three steps of Preparation, Initiation, and Perfection which have been heretofore described.

But this analogy, remarkable as it may at first view appear, is really an accidental one, which in no way shows an historical connection between the two institutions.

In every system of instruction, whether open or secret, there must be a gradual and not an immediate attainment of that which is intended to be imparted. The ancient adage that "no one suddenly becomes wicked" might with equal truth be read that "no one suddenly becomes learned." There must be a series of gradual approaches to the ultimate point in every pursuit of knowledge, like the advancing parallels of a besieging army in its efforts to attain possession of a beleaguered city. Hence the ladder, with its various steps, has from the earliest times been accepted as a symbol of moral or intellectual progress from an inferior to a superior sphere.

In this progress from the simplest to the most profound arena of initiation—from the inception to the full accomplishment of the instruction whereby the mind was to be gradually purged of many errors, by preparatory steps, before it could bear the full blaze of truth—both the Mysteries and Freemasonry have obeyed a common law of intellectual growth, independently of any connection of the one with the other institution.

The fact that there existed in both institutions secret modes of recognition presents another analogy. It is known that in the Mysteries, as in Freemasonry, there was a solemn obligation of secrecy, with penalties for its violation, which referred to certain methods of recognition known only to the initiates. But this may safely be attributed to the fact that such peculiarities are and always will be the necessary adjuncts of any secret organization, whether religious, social, or political. In every secret society isolated from the rest of mankind, we must find, as a natural outgrowth of its secrecy and as a necessary means of defense and isolation, an obligation of secrecy and methods of recognition. On such analogies it is, therefore, scarcely worth while to dilate.

Thus, then, I have traced the analogies between the ancient

Mysteries and modern Freemasonry in the following points of resemblance.

1. The *Preparation*, which in the Mysteries was called the *Lustration*. It was the first step in the Mysteries, and is the Entered Apprentice's degree in Freemasonry. In both systems the candidate was purified for the reception of truth by washing. In one it was a physical ablution; in the other a moral cleansing; but in both the symbolic idea was the same.

2. The *Initiation*, which in the ancient system was partly in the Lesser Mysteries, but more especially in the Greater. In Masonry it is partly in the Fellow Craft's, but more especially in the Master's degree.

3. The *Perfection*, which in the Mysteries was the communication to the aspirant of the true dogma—the great secret symbolized by the *Initiation*. In Freemasonry it is the same. The dogma communicated in both is, in fact, identical. This *Perfection* came in the Mysteries at the end of the Greater Mysteries. In Masonry it is communicated at the close of the Master's degree. In the Mysteries the communication was made in the *sacceum* or holiest place. In Masonry it is made in the Master's Lodge, which is said to represent the holy of holies of the Temple.

4. The secret character of both institutions.

5. The use of symbols.

6. The dramatic form of the initiation.

7. The division of both systems into degrees or steps.

8. And the adoption by both of secret methods of recognition.

These analogies, it must be admitted, are very striking, and, if considered merely as coincidences, must be acknowledged to be very singular.

It is not, therefore, surprising that scholars have found it difficult to resolve the following problem:

Is modern Freemasonry a lineal and uninterrupted successor of the ancient Mysteries, the succession being transmitted through the Mithraic initiations which existed in the 5th and 6th centuries; or is the fact of the analogies between the two systems to be attributed to the coincidence of a natural process of human thought, common to all minds and showing its development in symbolic forms?

For myself, I can only arrive at what I think is a logical con-

clusion; that if both the Mysteries and Freemasonry have taught the same lessons by the same method of instruction, this has arisen not from a succession of organizations, each one a link of a long chain of historical sequences leading directly to another, until Hiram is simply substituted for Osiris, but rather from those usual and natural coincidences of human thought which are to be found in every age and among all peoples.

It is, however, hardly to be denied that the founders of the Speculative system of Masonry, in forming their ritual, especially of the third degree, derived many suggestions as to the form and character of their funereal legend from the rites of the ancient initiations.

But how long after Freemasonry had an organized existence this funereal legend was devised, is a question that must hereafter be entitled to mature consideration.

CHAPTER XXVII

DRUIDISM AND FREEMASONRY

R. PRESTON, in commencing his history of Masonry in England, asserts that there are convincing proofs that the science of Masonry was not unknown to the early Britons even before the time of the invasion of the Romans. Hence he suggests the probability that the Druids retained among them many usages similar to those of Masons; but he candidly admits that this is a mere conjecture.¹

Hutchinson thinks it probable that many of the rites and institutions of the Druids were retained in forming the ceremonies of the Masonic society.²

Paine, who knew, by the way, as little of Masonry as he did of the religion of the Druids, dogmatically asserts that "Masonry is the remains of the religion of the ancient Druids, who, like the Magi of Persia and the priests of Heliopolis in Egypt, were priests of the sun."³

The learned Faber, a much more competent authority than Paine, expresses the opinion that the Druidical Bards "are probably the real founders of English Freemasonry."⁴

Godfrey Higgins, whose inventive genius, fertile imagination, and excessive credulity render his great work, the *Anacalypsis*, altogether unreliable, says that he has "no doubt that the Masons were Druids, Culidei, or Chaldei, and Casideans."⁵

Dr. Oliver, it is true, denies that the Masons of the present day were derived from the Druids. He thinks that the latter were a branch of what he calls the Spurious Freemasonry, which was a secession from the Pure Freemasonry of the Patriarchs. But he finds many analogies in the rites and symbols of the two institu-

¹ "Illustrations of Masonry," B. IV., sec. i., p. 121, Oliver's ed.

⁴ "Pagan Idolatry."

⁵ "Anacalypsis," vol. i., p. 718.

tions which indicate their common origin from a primitive system, namely, the ancient Mysteries of the Pagans.

The theory of those who find a connection either in analogy or by succession between the Druids and the Freemasons accounts for this connection by supposing that the Druids derived their system either from Pythagoras or from the ancient Mysteries through the Phoenicians, who visited Britain at an early period for commercial purposes.

But before we can profitably discuss the relations of Druidism to Freemasonry, or be prepared to determine whether there were any relations whatever between the two, it will be necessary to give a brief sketch of the history and character of the former. This is a topic which, irrespective of any Masonic reference, is not devoid of interest.

Of all the institutions of antiquity, there is none with which we are less acquainted than that of the Druidism of Britain and Gaul. The investigations of recent archaeologists have tended to cast much doubt on the speculations of the antiquaries of the 17th and 18th centuries. Stukely, for instance, one of the most learned of those who have sought to establish out of the stone monuments of England a connected history of Druidism, has been said by Ferguson, in his work on *Rude Stone Monuments*, to have been indebted more to a prolific imagination than to authentic facts for the theory which he has sought to establish.

The skepticism of Ferguson is, however, not less objectionable in a critical inquiry than the credulity of Stukely. There is evidently a middle way between them.

Ferguson can not deny the existence of Druids in Gaul and Britain, since the fact is stated by Caesar. He supposes that there were two distinct races in the island; the original inhabitants, who were of Turanian origin, and, being more uncivilized, were driven by the other race, who were Celts, into the fastnesses of the Welsh hills long before the Roman invasion. Among the former he thinks that the religion of Druidism, consisting of tree and serpent worship, may have been practiced. And he accounts for the error of the classical writers in describing the priests of the latter race as Druids by attributing it to the confounding of the two races by the "uncritical Romans."¹

¹ "Tree and Serpent Worship," p. 29.

Very recently a bold and very skeptical theory has been advanced by Dr. Ignaz Goldziher, in his work on *Mythology Among the Hebrews*,¹ which aims at a total annihilation of Druidism as a system of secret initiation among the ancient Britons (whose Druidism was only a national religion), and attributes its invention to the modern Welsh, who created it for the purpose of elevating and strengthening their own nationality in their rivalry with the English. He says:

"The Cymri of Wales, becoming alive to the opposition in nationality between themselves and the English, felt the need of finding a justification of this opposition in the oldest prehistoric times. It was then first suggested to them that they were descendants of the ancient, renowned Celtic nation; and to keep alive this Celtic national pride they introduced an institution of New Druids, a sort of secret society like the Freemasons. The New Druids, like the old ones, taught a sort of national religion, which, however, the people having long become Christian and preserved no independent national traditions, they had mostly to invent themselves. Thus arose the so-called Celtic mythology of the god Hu and the goddess Ceridolu (Ceridwen), etc.—mere poetical fictions which never lived in popular belief."

The questions involved in this difference of opinion are as yet not critically decided, and I shall therefore content myself with giving the views of the history and religion of the Druids as they have been generally received and believed, without confusing the subject with the contending speculations which have been fostered by the credulity or the imagination of one side and impugned by the skepticism of the other.

The Druids, which word signifies magicians,² were the priests of the religion of the ancient Britons, among whom they exercised almost unlimited influence and authority. They presided over and directed the education of the youths; they decided without appeal all judicial controversies; they were exempted from all taxes and legal impositions; and whoever refused to submit to their decisions on any question was subjected to excommunication, by which he was forbidden access to the altars or the performance of religious

¹ Ably translated from the German by Mr. Russell Martineau, of the British Museum, with valuable additions. For the passage quoted, see p. 252.

² In Anglo-Saxon *dry* is a magician; and *drycroft*, magic.

rites, and was debarred from all intercourse with his relatives, his friends, or his countrymen. Hence no superstition was ever more terrible than that of the priest-ridden Britons.

The Druids were under the chief authority of an Archdruid, which office was for life, but originally elective. They were divided into three orders, the highest being the *Druids*, below which were the *Prophets* and the *Vates* or *Bards*. They held an annual assembly, at which litigated questions were decided and new laws were made or old ones abrogated. They held also four quarterly meetings, on the days of the equinoxes and the solstices.

They permitted none of their doctrines or ceremonies to be committed to common writing, but used a cipher for their concealment. This, Caesar says, consisted of the letters of the Greek alphabet; a statement by no means probable, since it would infer a knowledge by them of the Greek language, of which we have no evidence.

The opinion of Toland is more plausible—that the characters used were those of the Irish *Ogum* alphabet. Sir James Ware, who wrote in Latin, about the middle of the 17th century, a work on the *Antiquities of Ireland*, says that "the ancient Irish, besides the vulgar characters, used also various occult or artificial forms of writing, called *Ogum*, in which they wrote their secrets;" and he adds that he himself was in possession of an ancient book or parchment filled with these characters.¹

Their places of worship were, according to the contemporaneous authority of Cæsar and Tacitus, in sacred groves. Stukely and other antiquaries of his school suppose that the megalithic monuments found in Britain, such as at Stonehenge and Avebury, were Druidical temples, but Ferguson denies this, and asserts that "there is no passage in any classical author which connects the Druids either directly or indirectly with any stone temples or stones of any sort."² The question remains adjudicated, but the position taken by Ferguson seems to be supported by better archaeological evidence.

Their worship, like that of the ancient Mysteries, was accompanied by a secret initiation. Their doctrines were communicated only to the initiated, who were strictly forbidden to expose them to the profane.

What were the precise forms of this initiation it is impossible to

¹ "Antiq. Hibern.," cap. 2.

² "Rude Stone Monuments," p. 20.

say. The Druids themselves, wedded to their oral system of instruction, have left no records. But Dr. Oliver, depending on inferences that he has drawn from the Welsh triads, from the poem of the ancient bard Taleisin, and some other Cambrian authorities, aided by the inventive genius of his own imagination, has afforded us a very minute, if not altogether accurate, detail of these initiatory ceremonies. The account is entirely too long for reproduction, but a condensed view of it will not be uninteresting.¹

Previous to admission to the first degree, or that of the *Vates*, the candidate was submitted to a careful preparation, which in especial cases extended to the long period of twenty years.

The ceremony of initiation began by placing the candidate in the *pastos*, chest or coffin, in which he remained enclosed for three days, to represent death, and was liberated or restored to life on the third day.²

The sanctuary being now prepared for the business of initiation, the Druids are duly arranged, being appropriately clothed and crowned with ivy. The candidate, representing a blind man, is then introduced while a hymn to the Sun is being chanted. He is placed under the care of an officer whose duty it is to receive him in the land of rest, and he is directed to kindle the fire under the cauldron of Ceridwen, the Druidical goddess. A pageant is then formed, and the candidate makes a circumambulation of nine times around the sanctuary, in circles from east to west by the south. The procession is first slow and amid a death-like silence; at length the pace is increased into a rapid and furious motion, accompanied with the tumultuous clang of musical instruments and the screams of harsh and dissonant voices reciting in verse the praises of those heroes who were brave in war, courteous in peace, and patrons of religion.³

This sacred ceremony was followed by the administration of an oath of secrecy, violation of which could be expiated only by death.

Then succeeded a series of ceremonies in which, by means of masks, the candidate was made to assume the character of various animals, such as the dog, the deer, the mare, the cock, etc.⁴

This, according to Oliver, concluded the first part of the cere-

¹ "History of Initiation," lect. viii., p. 199 *et seq.*

² *Ibid.*, p. 201. That this ceremony represented a death and resurrection is altogether conjectural.

³ *Ibid.*, p. 204.

⁴ *Ibid.*, p. 205.

mony of initiation. The second part began with striking the candidate a violent blow on the head with an oar, and a pitchy darkness immediately ensued, which was soon changed into a blaze of light which illuminated the whole area of the shrine.

This sudden transition from darkness to light was intended to shadow forth the same transition which Noah experienced on emerging from the gloom of the ark to the brightness of the renovated world.¹

Thus it is contended that the Druids were Arkite worshippers—a concession by Oliver to the theories of Faber and Bryant.

The light was then withdrawn and the candidate was again involved in chaotic darkness. The most dismal howlings, shrieks, and lamentations salute his astonished ear. Thus the figurative death of Noah, typified by his confinement in the ark, was commemorated with every external mark of sorrow. Alarmed at the discordant noises, the candidate naturally sought to escape, but this was rendered impossible, for wherever he turned he was opposed by dogs who pursued him. At length the gigantic goddess Ceridwen seized him and bore him by main force to the mythological sea which represented the flood of waters over which Noah floated.

Here he is supposed to have remained for a year in the character of Arawn, or Noah.² The same appalling sounds continued, until at length, having emerged from the stream, the darkness was removed and the candidate found himself surrounded by the most brilliant coruscations of light. This change produced in the attendants corresponding emotions, which were expressed by shouts and loud paeans that testified their rejoicings at the resuscitation of their god.³

The aspirant was then presented to the Archdruid, who explained to him the design of the mysteries and imparted some portion of the secret knowledge of Druidism, and recommended to him the practice of fortitude, which was considered as one of the leading traits of perfection.

With the performance of these painful ceremonies, the first degree of initiation into the Druidical Mysteries was concluded.

In the second degree, where the trials appear, from Oliver's

¹ "History of Initiation," p. 208.

² This detention of a year in the waters of the deluge was, I presume, like the fourteen days of interment in the Master Mason's degree, which period passes in the space of a few minutes—only a symbolic idea.

³ "History of Initiation," p. 211.

description, to have been of a less severe character, the candidate underwent lustration, or a typical ablution, which was followed by his enlightenment. He was now instructed in the morality of the order; taught that souls are immortal and must live in a future state; solemnly enjoined to the performance of divine worship and the practice of virtue; and was invested with some of the badges of Druidism. Among these was the crystal, the unequivocal test of his initiation. This crystal, or talisman against danger, was manufactured exclusively by the Druids, and its color varied in the three degrees. In the first it was green, in the second blue, and in the third white. The one presented to the aspirant was a combination of these colors.¹

Beyond the second degree very few advanced. The third was conferred only on persons of rank and consequence, and in it the aspirant passed through still more arduous ceremonies of purification.

The candidate was committed to secluded solitude for a period of nine months, which time was devoted to reflection and to the study of the sciences, so that he might be prepared more fully to understand the sacred truths in which he was about to be instructed. He was again submitted to a symbolic death and regeneration, by ceremonies different from those of the first degree. He was then supposed to represent a new-born infant, and, being placed in a coracle or boat, was committed to the mercy of the waters. The candidate, says Oliver, was actually set adrift in the open sea, and was obliged to depend on his own address and presence of mind to reach the opposite shore in safety.²

This was done at night, and this nocturnal expedition, which sometimes cost the candidate his life, was the closing act of his initiation. Should he refuse to undertake it, he was contemptuously rejected and pronounced unworthy of a participation in the honors to which he aspired and for which he was forever afterward ineligible. But if he courageously entered on the voyage and landed safely, he was triumphantly received by the Archdruid and his companions. He was recognized as a Druid, and became eligible for any ecclesiastical, civil, or military dignity. "The whole circle of human science was open to his investigation; the knowledge of divine things was communicated without reserve; he was now en-

¹ "History of Initiation," p. 212.

² *Ibid.*, p. 216.

abled to perform the mysterious rites of worship, and had his understanding enriched with an elaborate system of morality."¹

But little is known of the religion of the Druids, on which these ceremonies are supposed to be founded, and concerning that little the opinions of the learned greatly differ. "Among those institutions," says Toland, "which are thought to be irrecoverably lost, one is that of the Druids; of which the learned have hitherto known nothing but by some fragments concerning them out of the Greek and Roman authors."² Hence the views relating to their true worship have been almost as various as the writers who have discussed them.

Cæsar, who derived his knowledge of the Druids, imperfect as it was, from the contemporary priests of Gaul, says that they worshipped as their chief god Mercury, whom they considered as the inventor of all the arts, and after him Apollo, Mars, Jupiter, and Minerva.³ But the Romans had a habit of applying to all the gods or idols of foreign nations the names and qualities of the deities of their own mythology. Hence his statement will scarcely amount to more than that the Druids worshipped a variety of gods.

Yet Davies, who, notwithstanding his national prejudices and prepossessions, is, from his learning, an authority not to be contemned, concurs in the view of Cæsar so far as to say that "it is an historical fact, that the mythology and the rites of the Druids were the same, in substance, with those of the Greeks and Romans and of other nations which came under their observation."⁴

Dionysius the Geographer, another writer of the Augustan age, says that the rites of Bacchus were celebrated in Britain,⁵ and Strabo, on the authority of Artemidorus, who wrote a century before Christ, asserts that in an island close to Britain (probably the isle of Mona, where the Druids held their principal seat) Ceres and Proserpine were venerated with rites similar to those of Samothracia.⁶

Bryant, who traced all the ancient religions, principally on the basis of etymology, to traditions of the deluge and the worship of

¹ Oliver, "History of Initiation," p. 217.

² "History of the Druids," in miscellaneous works, vol. i., p. 6.

³ "De Bello Gallico." ⁴ "Mythology and Rites of the British Druids," p. 89

⁵ "Perieget," v., 565. ⁶ Letter IV.

the patriarch Noah, conceived, of course, that Druidism was but a part of this universal cult.¹

Faber, who followed in the footsteps of his learned, predecessor, adopted the same hypothesis, and held the doctrine that the Druids were addicted to what he denominated Arkite worship, or the worship of Noah, and that all their religious rites referred to the deluge, death and immortality being typified by the confinement of the patriarch in the ark and his subsequent emergence from it into a new and renovated world, the symbol of the future life.²

It will be evident from the description already given of the Druidical initiations as portrayed by Dr. Oliver, that he concurred to a great extent in the views of Bryant and Faber.

Stukely, one of the most learned of English antiquarians, believed that the Druids were addicted to tree and serpent worship, and he adduces as evidence of the truth of this theory the megalithic monuments of Stonehenge and Avebury, in the arrangement of whose stones he thought that he had traced a serpentine form.

On the contrary, Mr. Ferguson³ scoffs, in language not always temperate, at the views of Stukely, and not only denies the serpentine form of the stone remains in England, as described by that antiquary, but repudiates the hypothesis that the Druids ever erected or had any connection with stone temples or monuments in any part of the world. But as Ferguson adduces nothing but negative arguments in proof of his assertion, and as he even casts some doubt upon the existence of Druids at all in Britain, his views are by no means satisfactory. He has sought to demolish a palace, but he has not attempted to build even a hovel in its place. Repudiating all other theories, he has offered none of his own.

If the Druids did not erect the stone monuments of Britain, who did? Until the contrary is conclusively proved, we have but little hesitation in attributing them to the Druids. But we need not enter into this discussion, which pertains more properly to the province of archaeology than of Freemasonry.

Some writers have held that the Druids were Sun-worshippers, and that the adoration of the solar orb constituted the national religion of the ancient Britons. Hence these theorists are inclined to

¹ "Analysis of Ancient Mythology." Drummond says of him: "Mr. Bryant was a man possessed of much learning and talent, but his etymologies are generally untenable." — "Origines," vol. iii., p. 191. ² "Pagan Idolatry." ³ "Old Stone Monuments."

believe that Stonehenge and Avebury were really observatories, where the worshippers of the Sun might behold his rising, his diurnal course, and his setting.

Mr. Davies, in his *Celtic Researches* and in his *Mythology and Rites of the British Druids*, maintains that there was among them a mutilated tradition of the Noachic deluge,¹ as there was among all heathen nations. The legend was similar to that of the flood of Deucalion, and was derived from Samothrace and the East, having been brought by a colony from one nation to another and preserved without interruption.²

Hu, the supreme god of the Druids, he therefore supposes to have been identical with Noah, and he bestows upon him the various attributes that were distributed among the different gods of the more prolific mythology of the Greeks and Romans, all of which, with Bryant and Faber, he considers were allusive to Sun-worship and to the catastrophe of the deluge.

He therefore asserts that the Helio-Arkite god of the Britons, the great *Hu*, was a Pantheon (a collection of deities), who under his several titles and attributes comprehended the group of superior gods whom the Greeks and other refined nations separated and arranged in distinct personages.³

In propounding his theory that the Druids were of Eastern origin, and that they had brought from that source their religion and their rites, Mr. Davies has been sustained by the opinions of more recent scholars, though they have traced the birthplace to a more distant region than the island of Samothracia.

It is now very generally believed that the Druids were Buddhists, and that they came into Britain with the great tide of emigration from Asia which brought the Aryan race westward into Europe.

If this be true, the religion of India must have greatly degenerated in the course of its migration. It is admitted that the Druids cultivated the art of magic and in their rites were accustomed to sacrifice human victims, both of which practices were repugnant to the philosophic spirit of Buddhism.

The fact is that, notwithstanding the authority of the Welsh Bards and the scanty passages in Cæsar, Tacitus, and a few other

¹ "British Druids," p. 95.

² *Ibid.*, p. 99.

³ *Ibid.*, p. 126.

Roman writers, we are entirely at sea in reference to everything connected with the religious system of Druidism. Almost all on this mysterious subject is guesswork and conjecture—extravagant theories, the only foundation of which is in the imaginations of their framers and bold assertions for the truth of which no competent authority can be given.

Much of the confusion of ideas in respect to the customs and manners of the ancient Britons has arisen from the ignorance of the old writers in supposing that the inhabitants of Britain, at the time of the Roman invasion and long before, were a homogeneous race. The truth is that the island was inhabited by two very distinct races. Those on the coast, derived from the opposite shores of Gaul, Germany, and Scandinavia, were a people who had made some progress in civilization. The interior of the island was populated by the original natives, who were a very uncivilized and even barbarous race, and it was among these that the Druidical religion prevailed and its mystical and inhuman rites were practiced.

Mr. Ferguson, in his elaborate work on *Tree and Serpent Worship*, sustains this view. He says:

"From whatever point of view the subject is looked at, it seems almost impossible to avoid the conclusion that there were two races in England—an older and less civilized people, who in the time of the Romans had already been driven by the Celts into the fastnesses of the Welsh hills, and who may have been serpent-worshippers and sacrificers of human victims, and that the ecumenical Romans confounded the two."¹

He is, however, in error in supposing that the Romans were ignorant of this fact, for Cæsar distinctly alludes to it. He says in his *Gallic War* that "the interior part of Britain was inhabited by those who were natives of the island," thus clearly distinguishing the inhabitants of the interior from those who dwelt on the coast and who, he states, "had passed over from Belgium."

In another place he speaks of them as a rude and barbarous race, who in one of their embassies to him describe themselves as a savage and unpolished people wholly unacquainted with Roman customs.

In speaking of the ancient Gauls, M. Thierry, in his history of

¹ "Tree and Serpent Worship," p. 29.

that people, makes the following remarks, every one of which may be equally attributed to the ancient Britons. He says:

"When we attentively examine the character of the facts concerning the religious belief of the Gauls, we are enabled to recognize two systems of ideas, two bodies of symbols and superstitions altogether distinct—in a word, two religions. One of these is altogether sensible, derived from the adoration of the phenomena of nature; and by its forms and by its literal development it reminds us of the polytheism of the Greeks. The other is founded upon a material pantheism, mysterious, metaphysical, and sacerdotal, and presents the most astonishing conformity with the religions of the East. This last has received the name of Druidism, from the Druids who were its founders and priests."¹

To the former religion M. Thierry gives the name of Gaulish polytheism. A similar distinction must have existed in Britain, though our own writers do not seem generally to have carefully observed it. In no other way can we attempt, with any prospect of success, to reconcile the contending traditions in relation to the religion of the ancient Britons. The Roman writers have attributed a polytheistic form of religion to the people of the coast, derived apparently from Greece, the gods having only assumed different names. But this religion was very far removed in its character from the bloody and mysterious rites of the Druids, who seem to have brought the forms and objects, but not the spirit of their sanguinary and mysterious worship from the far East.

The Masonic writers who have sought to trace some connection between Druidism and Freemasonry have unfortunately too much yielded their judgment to their imagination. Having adopted a theory, they have, in their investigations, substituted speculation for demonstration and assumptions for facts. By a sort of Procrustean process of reasoning, they have fitted all sorts of legends and traditions to the length required for their preconceived system.

Preston had said that "the Druids retained among them many usages similar to those of the Masons," and hence he conjectured that there might be an affinity between the rites of the two institutions, leaving his readers, however, to determine the question for themselves.

Godfrey Higgins—of all writers not claiming to write fiction,

¹ "Histoire des Gaulois," tom, ii., p. 73.

the most imaginative and the most conjectural—goes a step further and asserts that he has "no doubt that the Masons were Druids," and that they may be "traced downward to Scotland and York." Of this he thinks "the presumption is very strong."¹

Hutchinson thinks it probable that some of the rites and institutions of the Druids might be retained in forming the ceremonies of the Masonic society.²

The theory of Dr. Oliver connected Druidism and Freemasonry in the following way. The reader must be aware, from what has already been said, that the Doctor held that there were two currents of Masonry that came contemporaneously down the stream of time. These were the Pure Freemasonry of the Patriarchs,, that passed through the Jewish people to King Solomon and thence onward to the present day, and a schism from this pure system, fabricated by the Pagan nations and developed in the ancient Mysteries, which impure system he called the Spurious Freemasonry of antiquity. From this latter system he supposes Druidism to have been derived.

Therefore, in support of this opinion, he collates in several of his works, but especially in his *History of Initiation*, the rites and ceremonies of the Druids with those of the Eleusinian, Dionysian, and other mysteries of the Pagan nations, and attempts to show that the design of the initiation was identical in all of them and the forms very similar.

But, true to his theory that the Spurious Freemasonry was an impure secession or offshoot from the Pure or Patriarchal system, he denies that modern Freemasonry has derived anything from Druidism, but admits that similarity in the design and form of initiation in both which would naturally arise from the origin of both from a common system in remote antiquity.

We have therefore to consider two theories in reference to the connection of Druidism and Masonry.

The first is that Freemasonry has derived its system from that of the British Druids. The second is that, while any such descent or succession of the one system from the other is disclaimed, yet that there is a very great similarity in the character of both which points to some common origin.

I shall venture, before concluding this essay, to advance a third

¹ "Anacalypsis," vol. i., p. 769.

² "Spirit of Masonry," lect. iii., p. 41.

theory, which I think is far more reconcilable than either of the others with the true facts of history.

The second of these theories may be dismissed with the remark that it depends for its support on the truth of the theory that there was any kind of historical connection between the Mysteries of the Pagans and Freemasonry. But I think it has been conclusively proved that any similarity of form or design in these institutions is to be attributed not to any dependence or succession, but simply to the influences of that law of human thought which makes men always pursue the same ends by the same methods.

Dr. Oliver has gone so far in the attempt to sustain his theory of two systems of Masonry existing at the same time as to assert that at the time of the Roman invasion, and after the establishment of Christianity in the island, the True and the Spurious Freemasonry—that is, the Masonic system as now practiced and the impure Masonry of Druidism— "flourished at the same period and were considered as distinct institutions in Britain."¹

Of the truth of this statement, there is not a scintilla of historical testimony. Even if we were to accept the doctrine of Anderson, that all great architects in past times were Freemasons, we could hardly dignify the rude carpenters of the early Britons and Anglo-Saxons with the title of Masonry.

The first of the theories to which I have alluded, which derives Freemasonry, or at least its rites and ceremonies, from Druidism, will require a more extended review.

In the first place, we must investigate the methods by which it is supposed that the Greeks and Pythagoras communicated a knowledge of their mysteries to the Druids in their secluded homes in uncivilized Britain.

It is supposed that the principal seats of the British Druids were in Cornwall, in the islands adjacent to its coast, in Wales, and in the island of Mona; that is to say, on the southwestern shores of the island.

It is evident that in these localities they were accessible to any of the navigators from Europe or Asia who should have penetrated to that remote distance for the purpose of commerce. Now, just such

¹ "On Freemasonry, Evidences, Doctrines, and Traditions," No. I, in *Freemasons' Quarterly Review*, 1840, p. 15.

a class of navigators was found in the Phœnicians, an adventurous people who were distinguished for their spirit of maritime enterprise.

The testimony of the Greek and Roman writers is, that in their distant voyages in search of traffic the Phœnicians had penetrated to the southwestern shores of Britain, and that they loaded their vessels with tin, which was found in great abundance in Cornwall and the Scilly islands on its coast.

The theorists who suppose that the religious rites practiced by the Phœnicians at home were introduced by them into Britain are required, in proof of their theory, to show that the Phœnicians were missionaries as well as merchants; that they remained long enough in Britain, at each voyage, to implant their own religious rites in the island; that these merchant-sailors, whose paramount object was evidently the collection of a valuable and profitable cargo, would divert any portion of the time appropriated to this object to the propagation among the barbarians, whom they encountered in the way of business, of the dogmas of their own mystical religion; that if they were so disposed, the Britons were inclined during these necessarily brief visitations to exchange their ancient religion, whatever it was, for the worship attempted to be introduced by the newcomers; and, finally, that the fierce and sanguinary superstition of the Druids, with its human sacrifices, bore any resemblance to or could have possibly been derived from the purer and more benign religion of the Phœnicians.

For not one of these points is there a single testimony of history, and over every one of them there is cast an air of the greatest improbability. History tells us only that the Phœnician merchants visited Britain for the purpose of obtaining tin. On this the Masonic theorists have erected a fanciful edifice of missionary enterprises successfully ending in the implanting of a new religion.

Experience shows us how little in this way was ever accomplished or even attempted by the modern navigators who visited the islands of the Pacific and other unknown countries for the purposes of discovery. Nor can we be ignorant of how little progress in the change of the religion of any people has ever been effected by the efforts of professed missionaries who have lived and labored for years among the people whom they sought to convert. They have made, it is true, especial converts, but in only a very few exceptional instances have they succeeded in eradicating the old faith of a na-

tion or a tribe and in establishing their own in its place. It is not to be presumed that the ancient Phœnician merchants could, with less means and less desires, have been more successful than our modern missionaries.

For these reasons, I hold that the proposition that Druidism was introduced from Greece and Asia into Britain by the Phœnicians is one that is wholly untenable on any principle of historic evidence or of probable conjecture.

It has also been asserted that Pythagoras visited Britain and instructed the inhabitants especially in the doctrine of metempsychosis, or the transmigration of souls.

There is, however, not the slightest historical evidence that the sags of Samos ever penetrated in his travels as far as Britain. Nor is it certain that the dogma of the transmigration as taught by him is of the same character as that which was believed by the Druids. Besides, it is contrary to all that we know of the course pursued by Pythagoras in his visits to foreign countries. He went to learn the customs of the people and to acquire a knowledge of whatever science they might possess. Had he visited Britain, which, however, he never did, it would have been to receive and not to impart instruction.

As to the further explanation offered by these theorists, of a connection between Druidism and Masonry, that the former acquired a knowledge of the Eleusinian and other rites in consequence of their communication with the Greeks, during the celebrated invasion of the Celts, which extended to Delphos, and during the intercourse of the Gauls with the Grecian colony of Marseilles, it is sufficient to say that neither of these events occurred until after the system of Druidism must have been well established among the people of Britain and of Gaul.

But the great argument against any connection of Druidism and Freemasonry is not only the dissimilarity of the two systems, but their total repugnance to each other. The sanguinary superstition of the Druids was developed in their sacrifice of human victims as a mode of appeasing their offended deities, and their doctrine of a future life was entirely irreconcilable with the pure belief in immortality which is taught in Freemasonry and developed in its symbols.

The third theory to which I have referred, and which I advanced in the place of the two others which I have rejected, traces Druid-

ism neither to the Phoenicians, nor to Pythagoras, nor to the Greeks. It is that the ancient inhabitants of Britain were a part of the Celtic division of that great Cimmerian race who, springing from their Aryan origin in the Caucasian mountains, first settled for a time in the region of Asia which lies around the Euxine Sea, and then passed over into the north and west of Europe. One detachment of them entered Gaul, and another, crossing the German Ocean, made their home in Britain.

It is not at all improbable that these nomadic tribes carried with them some memories of the religious faith which they had learned from the original stock whence they sprung. But there is no fact more patent in ethnology than that of the tendency of all nomadic races springing from an agricultural one to degenerate in civilization.

It has been said that the Druids were Buddhists. This might be so, for Brahmanism and its schism, Buddhism, were the religions of the early Aryan stock whence the Druids descended. But it is very evident that in the course of their migrations the faith of their fathers must have become greatly corrupted. Between Buddhism and Druidism the only connecting link is the dogma of the transmigration of souls. Between the rites of the two sects there is no similarity.

I suppose, therefore, that the system of Druidism was the pure invention of the Britons, just as the Mysteries of Osiris were the fabrication of some Egyptian priest or body of priests. What assistance the Britons had in the formation of their mystical system must have been derived from dim recollections of the dogmas of their fatherland, which, however, from the very dimness of those recollections, must have been greatly perverted. I do not find any authentic proof or any reasonable probability that they had obtained any suggestions in the fabrication or the improvement of their system of religious rites from the Phoenicians, from the Greeks, or from Pythagoras.

If, for the sake of argument, we accept for a time the theory that Freemasonry and the Mysteries originated from a common source, whence is derived a connection between the two, we can not fail to see, on an examination of the doctrines and ceremonies of the Druids, that they bore no relation to those of the Mysteries of Egypt or of Greece. Hence the link is withdrawn which would

connect Druidism with Freemasonry through the initiations of the East.

But the fact is that there is not in Druidism the slightest resemblance to Freemasonry, except in the unimportant circumstance that both have mystical ceremonies. The voyages of the candidate in Druidism, after a period of long solitude and confinement, his pursuit by the angry goddess Ceridwen and her accompanying dogs, his dangerous passage in a coracle or small boat over the rough waters, and his final landing and reception by the Archdruid, may have referred, as Dr. Oliver thought, to the transmigration of the soul through different bodies, but just as probably symbolized the sufferings and vicissitudes of human life in the progress to intellectual and moral perfection. But they bear not the slightest analogy to the mystical death in Freemasonry, which is the symbol of a resurrection to a future and immortal life.

Hence the bold assertion of Payne, in his frivolous *Essay on the Origin of Freemasonry*, that "it is derived from and is the remains of the religion of the ancient Druids," simply shows that he was a mere sciolist in the subject of what he presumptuously sought to treat. Equally untenable is the proposition of the more learned Faber, when he says that "the Druids are probably the real founders of English Freemasonry."

The conclusion to which I think we must arrive, from what we learn of the two institutions from historical knowledge of one and personal experience of the other, is that Freemasonry has no more relation or reference or similitude to Druidism than the pure system of Christianity has to the barbarous Fetichism of the tribes of Africa.

CHAPTER XXVIII

FREEMASONRY AND THE CRUSADES

N all the legendary history of Freemasonry there is nothing more interesting or more romantic than the stories which connect its origin with the Crusades; nothing in which the judgment and reasoning powers have been more completely surrendered to the imagination of the inventors of the various theories on this subject or to the credulity of the believers.

Before proceeding to discuss the numerous phases which have been given by different writers to the theory which traces the origin of Freemasonry to the Crusades, to the chivalric orders of the Middle Ages, and especially to the Knights Templars, it will be proper to take a very brief view of those contests between the Christians and the Saracens which, under the name of the Crusades, cost Europe so vast an amount of blood and treasure in the unsuccessful attempt to secure and maintain possession of the Holy Land. This view, or rather synopsis, need not be more than a brief one, for the topic has been frequently and copiously treated by numerous historians, from Joinville to Michaux and Mills, and must therefore be familiar to most readers.

About twenty years after the Moslems had conquered Jerusalem, a recluse of Picardy in France had paid a pious visit to the city. Indignant at the oppressions to which the Christians were subjected in their pious pilgrimages to the sepulcher of their Lord, and moved by the complaints of the aged patriarch, Peter the Hermit—for such is the name that he bears in history—resolved on his return to Europe to attempt to rouse the religious sentiment and the military spirit of the sovereigns, the nobles, and the populace of the West. Having first obtained the sanction of the Roman pontiff, Peter the Hermit traveled through Italy and France, and by fervent addresses in every place that he visited urged his auditors to

the sacred duty of rescuing Palestine from the hands of infidels. The superstitious feelings of a priest-governed people and the military spirit of knights accustomed to adventure were readily awakened by the eloquence of a fanatical preacher. In every city and village, in the churches and on the highways, his voice proclaimed the wrongs and the sufferings of pious pilgrims, and his reproaches awoke the remorse of his hearers for their past supineness and indifference to the cause of their brethren, and stimulated their eagerness to rescue the sacred shrines from the pollution of their Saracen possessors.

The spirit of enthusiasm which pervaded all classes of the people—nobles and priests, princes and peasants—presented a wonderful scene, which the history of the world had never before and has never since recorded. With one voice war was declared by the nations of western Europe against the sacrilegious Moslems. Tradesmen and mechanics abandoned the pursuits by which they were accustomed to gain their livelihood, to take up arms in a holy cause; peasants and husbandmen left their fields, their flocks, and their herds; and barons alienated or mortgaged their estates to find the means of joining the expedition.

The numerous conflicts that followed for the space of two hundred years were called the Crusades, or, in French, *Croisades*, from the blood-red cross worn by the warriors on the breast or shoulder, first bestowed at the council of Clermont, by Pope Urban, on the Bishop of Puy, and ever afterward worn by every Crusader as a badge of his profession.

The first detachment of the great army destined for a holy war issued, in the year 1096, from the western frontiers. It consisted of nearly three hundred thousand men, composed for the most part of the lowest orders of society, and was headed by Peter the Hermit. It was, however, a huge, undisciplined mob rather than an army, whose leader was entirely without military capacity to govern it or to restrain its turbulence.

The march, or rather the progress, of this immense rabble toward Asia Minor was marked at every step by crime. They destroyed the towns and plundered the inhabitants of every province through which they roamed in undisciplined confusion. The outraged inhabitants opposed their passage with arms. In many conflicts in Hungary and in Bulgaria they were slaughtered by thou-

sands. Peter the Hermit escaped to the mountains, and of his deluded and debased followers but few reached Constantinople, and still fewer the shores of Asia Minor. They were speedily destroyed by the forces of the Sultan. The war of the Crusades had not fairly begun before three hundred thousand lives were lost in the advance guard of the army.

The first Crusade was undertaken in the same year, and speedily followed the advanced body whose disastrous fate has just been recorded. This body was composed of many of the most distinguished barons and knights, who were accompanied by their feudal retainers.

At the head of this more disciplined army, consisting of a hundred thousand knights and horsemen and five times that number of foot-soldiers, was the renowned Godfrey of Bouillon, a nobleman distinguished for his piety, his valor, and his military skill.

This army, although unwieldy from its vast numbers and scarcely manageable from the diverse elements of different nations of which it was composed, was, notwithstanding many reverses, more fortunate and more successful than the rabble under Peter the Hermit which had preceded it. It reached Palestine in safety, though not without a large diminution of knights and soldiers. At length Jerusalem, after a siege of five weeks, was conquered by the Christian warriors, in the year 1099, and Godfrey was declared the first Christian King of Jerusalem. In a pardonable excess of humility he refused to accept a crown of gems in the place where his Lord and Master had worn a crown of thorns, and contented himself with the titles of Duke and Defender of the Holy Sepulcher.

In the course of the next twenty-five years Palestine had become the home, or at least the dwelling-place, of much of the chivalry of Europe. The Latin kingdom of Jerusalem had extended eastward from the shores of the Mediterranean Sea to the deserts of Arabia, and southward from the city of Beritus (now Beirut), in Syria, to the frontiers of Egypt, besides the country of Tripoli, which stretched north of Beritus to the borders of the principality of Antioch.

The second Crusade, instigated by the preaching of the monk St. Bernard, and promoted by Louis VII. of France, was undertaken in the year 1147. The number of knights, soldiers, priests, women, and camp-followers who were engaged in this second Crusade has been estimated as approaching a million. At its head were the

Emperor Conrad III. of Germany and King Louis VII. of France. This effort to relieve and to strengthen the decaying Christian power in Palestine was not a successful one. After a futile and inglorious attempt to take the city of Damascus, whose near vicinity to Jerusalem was considered dangerous to the Latin kingdom, Louis returned home with the small remnant of his army, in 1149, and was followed in the succeeding year by the Emperor Conrad. Thus ended abortively the second Crusade, and the Christian cause in Palestine was left to be defended by the feeble forces but invincible courage of the Christian inhabitants.

The next thirty-five or forty years is a sad and continuous record of the reverses of the Christians. They had to contend with a new and powerful adversary in the person of the renowned Saracen, Salah-ud-deen, better known as Saladin, who, after sixteen years of warfare with the Christian knights, in which he was sometimes defeated but oftener a victor, succeeded in taking Jerusalem, on the 2d of October, in the year 1187.

Thus, after a possession by the Christians of eighty-eight years, the city of Jerusalem and the holy shrine which it contained fell again into the power of the Moslems.

When the tidings of its fall reached Europe, the greatest sorrow and consternation prevailed. It was at once determined to make a vigorous effort for its rescue from its infidel conquerors. The enthusiasm of the people for its recovery was scarcely less than that which had preceded the first and second Crusades under the eloquent appeals of Peter the Hermit and St. Bernard. The principal sovereigns of Europe, Spain alone excepted, which was engaged in its own struggles for the extirpation of the Moors, resolved to lead the armies of their respective nations to the reconquest of Jerusalem. Thus was inaugurated the third Crusade.

In the year 1188, innumerable forces from England, France, Italy, and other countries rushed with impetuous ardor to Palestine. In the year 1189 one hundred thousand Crusaders, under Guy de Lusignan, sat down before the city of Acre. The siege lasted for two years, with a vast consumption of lives on both sides. At length the city capitulated and the Mussulmans surrendered to the victorious arms of Richard the Lionhearted, King of England.

This third Crusade is remarkable for the number of European sovereigns who were personally engaged in it. Richard of England,

Philip Augustus of France, Frederick Barbarossa of Germany, and the Dukes of Suabia and of Burgundy, had all left their dominions to be governed by regents in their absence and had joined in the pious struggle to redeem the Holy Land from Mohammedan rule.

But, notwithstanding many victories over Saladin in hard-fought fields, and the conquest of many important places, such as Acre, Ascalon, Jaffa, and Cæsarea, the Crusaders failed in their great design of recovering Jerusalem, which still remained in the possession of Saladin, who, however, having made a truce with King Richard, granted, as one of the terms, free and undisturbed access to all pilgrims who should visit the holy city.

Thus terminated the third Crusade. It can scarcely be called an absolute failure, notwithstanding that Jerusalem still remained in the hands of the infidels, but the total ruin with which, at its commencement, the Latin kingdom had been threatened was averted; the conquering progress of the Mussulmans had been seriously checked; the hitherto victorious Saladin had been compelled to make a truce; the greater part of the seacoast of Palestine, with all its fortresses and the cities of Acre, Jaffa, Antioch, and Tyre, remained in the possession of the Christians.

Saladin had survived the truce which he had made with Richard but a few months, and on his death his dominions were divided between three of his sons and his brother Saphadin. The last of these, to whom most of the veterans who had fought under Saladin adhered, secured for himself a sovereignty in Syria.

The death of their renowned and powerful foe had encouraged the Christians of Palestine to make renewed efforts to recover Jerusalem as soon as the truce had expired. To aid in this design, a new Crusade was invoked in Europe. The appeal, heard with apathy in England and France, met with more favor in Germany. Three large armaments of German chivalry arrived at Acre in 1195. The campaign lasted, however, less than two years, and the troops, having effected no decisive results, were recalled to Germany in consequence of the death of the Emperor Henry VI. This, which has been dignified by some writers with the name of a fourth Crusade, has, however, more generally been considered as a mere episode in the history of the Holy Wars.

The fourth Crusade proper began in the year 1203, when a large armament of knights and men-at-arms of France, Germany, Italy,

and Flanders sailed for Constantinople in transports furnished by the Venetians and commanded by the blind Doge Dandolo. The throne of the Byzantine Empire had been usurped by the elder Alexius, who had imprisoned his brother, the legitimate monarch, after having caused his eyes to be put out. The first object of the Crusaders was to dethrone the usurper and to restore the government to Isaac and his son, the younger Alexius, who had instigated the enterprise and accompanied the expedition.

The siege and the conquest of Constantinople is told in the graphic language of Gibbon; but it is so wholly unconnected with the subject of our present inquiry as not to claim further attention. It is sufficient to say that by it the Crusaders were entirely diverted from the great object for which they had left Europe. None ever reached or sought to reach the land of Palestine, and the fourth Crusade terminated without a blow having been struck for the recovery of Jerusalem and the deliverance of the Holy Sepulcher from the pollution of its Paynim possessors.

The fifth Crusade commenced in the year 1217. In this war the Crusaders attacked Egypt, believing that that country was the key to Palestine. At first they were successful, and besieged and captured the city of Damietta. But, influenced and directed by the cupidity and ignorance of the papal legate, they refused the offer of the Saracens, that if the Christians would evacuate Egypt they would cede Jerusalem to them, they continued the campaign with most disastrous results, and, finally abandoning the contest, the Crusaders returned to Europe in 1229, never having even seen the shores of the Holy Land.

A sixth Crusade was undertaken by the French in 1238. They were subsequently joined by Richard, Earl of Cornwall, the nephew of Richard the Lionhearted. The military capacity and prowess of this able leader led to successful results, and in 1240 to the restoration of Jerusalem to the Christians. The Crusade ended with the return of the Earl of Cornwall to England in 1240.

The fortifications of Jerusalem were rebuilt by the Knights Templars, but the necessary measures for defense had scarcely been completed when the Christian kingdom was attacked by a new enemy. The descendants of those barbaric tribes of Tartars who, under the name of Huns, had centuries before overwhelmed the Roman Empire, now commenced their ravages in Asia Minor,

Twenty thousand Turcoman horsemen, under Barbacan, their chief, assisted by Egyptian priests, were enabled in 1242 to wrest Jerusalem from the Christians, who never again recovered it. The war continued with scarcely varying disasters to the Christians. Palestine was overrun by the barbarous hordes of Turcomans. The Moslems of Damascus, Aleppo, and Ems, forgetful of their ancient hatred and religious conflicts, united with the Knights Templars to oppose a common enemy.

But the effort to stay the progress of the Turcoman invasion was vain. Every city of the Latin kingdom, such as Tiberias, Ascalon, Jaffa, and others, were conquered. Acre alone remained to the Christian chivalry, and the Holy Sepulcher was again in the possession of the infidels.

A seventh Crusade was commenced in 1245, to recover what had been lost. It was undertaken by the chivalry of England and France. Louis IX. commanded the French portion of the forces in person, and William Longsword, who had distinguished himself in the fifth Crusade, with many other English knights and nobles, vowed that they would serve under his banner.

Egypt was again made the objective point of the expedition, and after an unnecessary and imprudent delay of eight months at Cyprus, Louis sailed, in 1248, for Egypt, with a force of fifty thousand men. The history of this Crusade is but a narrative of the defeats of the Christians, by the arms of their enemies, by famine, and by pestilence. At Mansora, in 1250, the Crusaders were totally routed; thirty thousand Christians were slain, among them the flower of the French and English chivalry, and King Louis himself was taken prisoner. He was only ransomed by the surrender of Damietta to the Turks, the conquest of which city had been almost the only successful trophy of the Christian arms. The king proceeded to Acre, almost the only possession of the Christians in Syria, and soon afterward returned to France, thus ending the seventh and penultimate Crusade, in the year 1254.

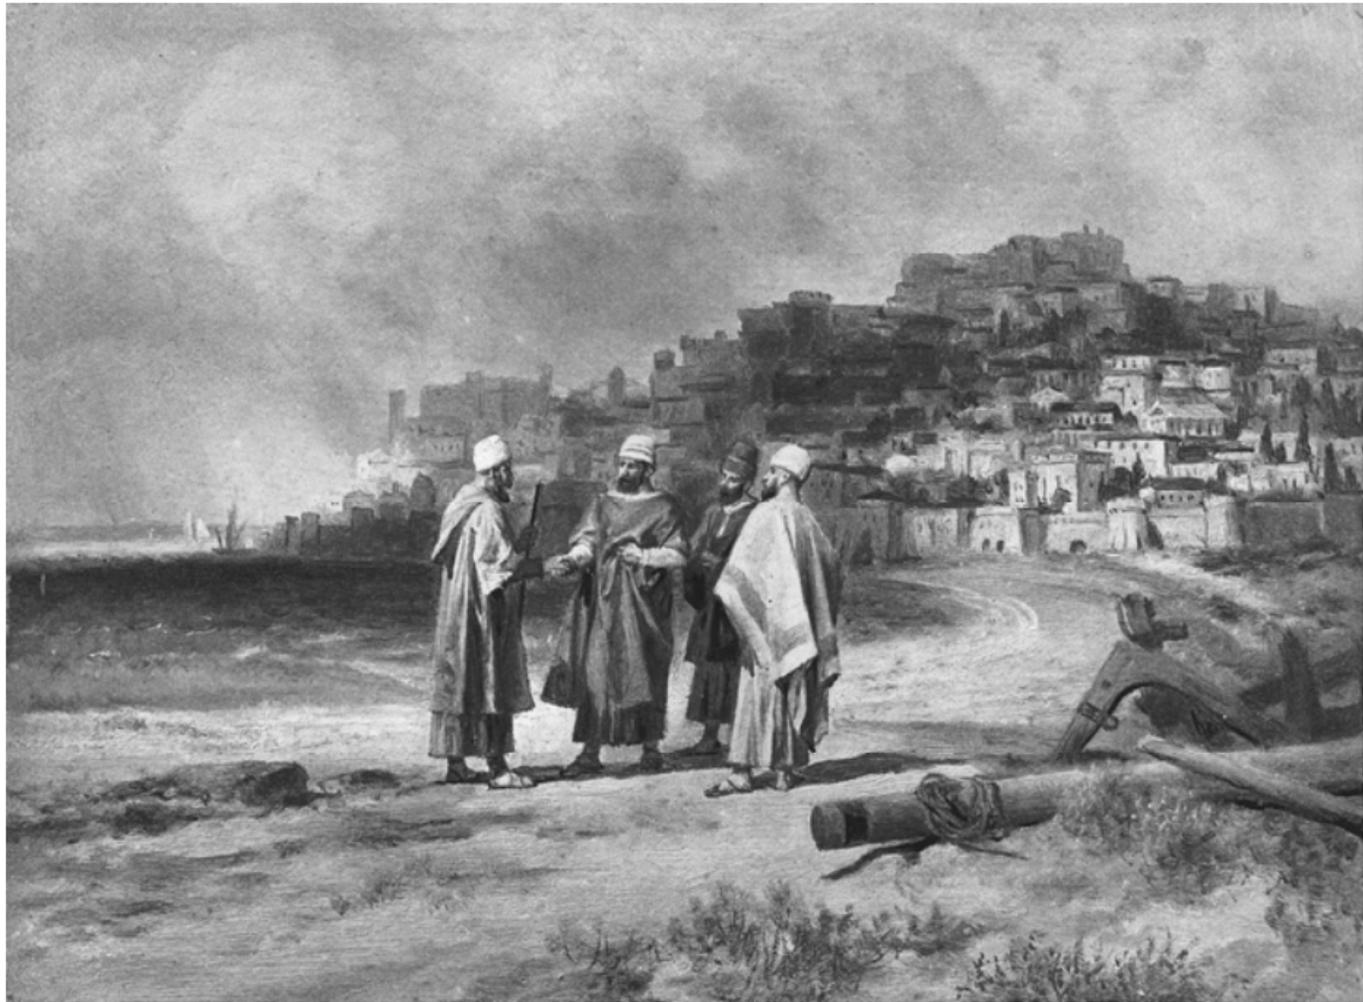

For fourteen years Syria and Palestine were left to the inadequate protection that could be afforded by the Knights Templars and Hospitallers, two Orders who even in the face of their common foe could not restrain their own bitter rivalry and dissensions. These feelings culminated at length in a sanguinary battle between them, in which the Templars were almost completely destroyed.

The Latin kingdom of Palestine being thus enfeebled by the intestine broils of its defenders, city after city was surrendered to the Moslems, until Acre alone remained in the hands of the Christians. In 1268 the heaviest blow was inflicted by the fall of Antioch, the proud capital of Syria. Forty thousand Christians were slain at the time of its surrender and one hundred thousand were sold into slavery.

The fall of the Christian state of Antioch was a catastrophe that once more aroused the military ardor and the pious spirit of Europe, and a new Crusade was inaugurated—the eighth and last—for the recovery of the Holy Land, the restoration of the Latin kingdom, and the extirpation of the infidels from the sacred territory.

This Crusade was conducted entirely by Prince Edward, afterward Edward I. of England. It is true that Louis IX. of France, undeterred by the disasters which had previously befallen him, had with undiminished ardor sought to renew his efforts for the recovery of the Holy Sepulcher, and sailed from France for that purpose in 1270. But he had stopped short at Tunis, the king and people of which he had hoped to convert to Christianity. But, although no decisive battles took place between the Moors and the Christians, the army of the latter was soon destroyed by the heat of the climate, by fatigue, by famine and pestilence, and the king himself died but little more than a month after his arrival on the shore of ancient Carthage. Prince Edward had joined the French army at Tunis with a slender body of knights, but, after the death of the French monarch and the abandonment of the enterprise, he had sailed for Syria with an army of only one thousand knights and men-at-arms, and landed at Acre in 1270. But the knights of the chivalry of Palestine gathered eagerly around his standard and increased his force to seven thousand. With this insignificant body of soldiery, weak in numbers but strong in courage and in the capacity of their leader, Edward attacked the immense horde of Moslems who had been besieging Acre, caused them to retire, and, following them to Nazareth, captured that city, after a battle in which the infidels were defeated with great slaughter.

But the reduction of Nazareth closed the military career of Edward in Palestine. After narrowly escaping death from a poisoned wound inflicted by a Moslem assassin, he returned to England, in 1271, having first effected a truce of ten years with the Sultan of Egypt.

The defense of Palestine, or rather of Acre, the only point occupied by the Christians, as the titular capital of the Latin kingdom, was left to the knights of the three Orders of Chivalry, the Templars, the Hospitallers, and the Teutonic knights. By them the truce was repeatedly violated and peaceable Moslem traders often plundered. Redress for these aggressions having been demanded in vain, the Sultan at length determined to extirpate the "faithless Franks," and marched against Acre with an army of two hundred thousand men.

After a siege of little more than a month, in which prodigies of valor were performed by the knights of the three military orders, Acre was taken, in 1271, by assault, at the cost of sixty thousand Christian lives. The inhabitants who did not submit to the Moslem yoke escaped to Cyprus with the remains of the Templars, the Hospitallers, and the Teutonic knights who had survived the slaughter.

Thus, after a sanguinary contest of two hundred years, the possession of the Holy Land was abandoned forever to the enemies of the Cross.

Thus ends the history of the Crusades. For fifty years afterward the popes endeavored to instigate new efforts for the recovery of the holy places, but their appeals met with no response. The fanatical enthusiasm which had inspired the kings, the nobles, and the knights of Europe for two centuries had been dissolved, and the thirst for glory and the love of arms were thenceforth to be directed in different channels.

It is not my intention to inquire into the influence exerted by the Crusades on the state of religion, of education, of commerce, or of society in Europe. The theme is an interesting one, but it is foreign to the subject of our discussion, which is the possible connection that may have existed between them and the origin of Freemasonry. But, in so far as they may have favored the growth of municipal freedom and the perpetuation of the system of chivalry, it may be necessary in a future part of this discussion that these points should demand some attention.

In the present point of view, the most important subject to attract our attention is the organization during the Crusades of three military Orders of Knighthood, the Knights Hospitallers, the Knights Templars, and the Teutonic Knights. It is through these,

but principally through the second, that the attempt is made to find the origin of the Masonic institution in the time of the Crusaders.

Whatever may have been the origin of the institution of chivalry, whether from the equestrian order of the Romans, from the Scandinavians, the Arabians, the Persians, or, what is far more probable, from the peculiar influences of the feudal system, it is certain that that form of knighthood which was embodied in the organization of religious and military orders took its rise in Palestine during the wars of the Crusades, and that before that era no such organizations of knighthood were known in Europe.

The Knights Hospitallers of St. John, now better known as the Knights of Malta, was the first of the military and religious Orders that was established in Palestine. Its origin must be traced to the Hospitallers of Jerusalem, a purely charitable institution established by certain merchants of Amalfi, in the kingdom of Naples, who, trading in the East, built hospitals in Jerusalem for the entertainment and relief of poor and sick pilgrims, about the middle of the ninth century. After the first Crusade had begun, many knights, laying aside their arms, united with the Hospitallers in the pious task of attending the sick. At length Gerard, the Rector of the Hospital, induced his brethren to assume the vows of poverty, obedience, and chastity, and to adopt a peculiar costume consisting of a black robe bearing a white cross of eight points on the left breast. This was in the year 1099. The knights, however, continued their peaceful vocation of attending the sick until 1118, when Gerard, having died, was succeeded by Raymond de Puy as Rector. The military spirit of Raymond was averse to the monastic seclusion which had been fostered by his predecessor. He therefore proposed a change in the character of the society, by which it should become a military order devoted to the protection of Palestine from the attacks of the infidels. The members gladly acceded to this proposition, and, taking new vows at the hands of the Patriarch of Jerusalem, the military Order of Knights of St. John of Jerusalem was established, in the year 1118. The Order continued to reside in Palestine during its occupation by the Christians of the Latin kingdom, taking an active part in all the wars of the eight Crusades.

When the city of Acre fell beneath the victorious army of the Sultan of Egypt, the Hospitallers, with the knights of the other two

Orders, who had escaped the slaughter which attended the siege and followed on the surrender, fled to Cyprus. Thence they repaired to the island of Rhodes, where they remained for two hundred years under the title of the Knights of Rhodes, and afterward permanently established themselves at Malta, where, with a change of name to that of the Knights of Malta, they remained until the island was taken possession of by Napoleon, in the year 1798. This was virtually the end of the career of these valiant knights, although to this day the Order retains some remnant of its existence in Italy.

The Order of Knights Templars was established in the year 1118 by Hugh de Payens, Godfrey de St. Aldemar, and seven other knights whose names history has not preserved. Uniting the characters of the monk and the soldier, they took the vows of poverty, chastity, and obedience in the presence of the Patriarch of Jerusalem; Baldwin, the King of Jerusalem, assigned them as a residence a part of his palace, which stood near the site of the former Temple, and as a place for an armory the street between the palace and the Temple, from which circumstance they derived their name of Templars. The Templars took a most active part in the defense of Palestine during the two centuries of the Crusades. They had also established houses called Preceptories in every country of Europe, where many of the knights resided. But the head of the Order was always in Palestine. At the close of the contests for the conquest of the Holy Land, when Acre fell and the Latin kingdom was dissolved, the Templars made their escape to Europe and were distributed among their various Preceptories.

But their wealth had excited the cupidity and their power the rivalry of Philip the Fair, King of France, who, with the assistance of a corrupt and weak Pope, Clement V., resolved to extirpate the Order. Charges of religious heresy and of moral licentiousness were preferred against them; proofs were not wanting when proofs were required by a King and a Pontiff; and on the 8th of March, 1314, De Molay, the Grand Master, with the three principal dignitaries of the Order, were publicly burnt at the stake, fifty-four knights having suffered the same fate three years before.

The Order was suppressed in every country of Europe. Its vast possessions were partly appropriated by the different sovereigns to their own use and partly bestowed upon the Knights of Malta, between whom and the Templars there had always existed a rivalry,

and who were not unwilling to share the spoils of their ancient adversaries. In Portugal alone they were permitted to continue their existence, under the name of the Knights of Christ.

The Teutonic Knights, the last of the three Orders, was exclusively German in its organization. Their humble origin is thus related: During the Crusades, a wealthy gentleman of Germany, who resided at Jerusalem, built a hospital for the relief and support of his countrymen who were pilgrims. This charity was extended by other Germans coming from Lubeck and Bremen, and finally, during the third Crusade, a sumptuous hospital was erected at Acre, and an Order was formed under the name of Teutonic Knights, or Brethren of the Hospital of our Lady, of the Germans of Jerusalem. The rule adopted by the knights closely resembled that of the Hospitallers or Templars, with the exception that none but Germans could be admitted into the Order.

Like the knights of the other two Orders, they remained in Palestine until the fall of Acre, when they returned to Europe. For many years they were engaged in a crusade for the conversion of the Pagans of Prussia and Poland, and afterward in territorial struggle with the Kings of Poland, who had invaded their domains. After centuries of contests with various powers, the Order was at length abolished by Emperor Napoleon, in 1809, although it still has a titular existence in Austria.

In an inquiry into any pretended connection of the Crusaders with Freemasonry, we may dismiss the two Orders of the Knights of Malta and the Teutonic Knights with the single remark that in their organization they bore not the slightest resemblance to that of Freemasonry. They had no arcana in their system, no secret form of initiation or admission, and no methods of recognition. And besides this want of similarity, which must at once preclude any idea of a connection between the Masonic and these Chivalric Orders, we fail to find in history any record of such a connection or the faintest allusion to it.

If Freemasonry owed its origin to the Crusades, as has been asserted by some writers, or if any influence was exerted upon it by the Knights who returned to Europe after or during these wars, and found Freemasonry already existing as an organization, we must look for such connection or such influence to the Templars only,

The probabilities of such a connection have been based upon the

following historic grounds. The Knights Templars were a secret society, differing in this respect from the other two Orders. They had a secret doctrine and a secret ceremony of initiation into their ranks. This secret character of their ceremonies was made the subject of one of the charges preferred against them by the pope. The words of this charge are that "when they held their chapters, they shut all the doors of the house or church in which they met so closely that no one could approach near enough to see or hear what they were doing or saying." It is further said, in the next charge, that when they held their secret chapter "they placed a watchman on the roof of the house or church in which they met, to foresee the approach of any one."

Again, it is supposed that the Templars had held frequent and intimate communication with some of the secret societies which, during the Crusades, existed in the East, and that from them they derived certain doctrines which they incorporated into their own Order and introduced into Europe on their return, making them the basis of a system which resulted, if not in the creation of the entire Masonic institution, at least in the invention of the high degrees.

While it may not be possible to sustain this theory of the intercommunion of the Templars and the secret societies of the East by any authentic historical proof, it derives some feature of possibility, and perhaps even of probability, from the admitted character of the Templar Knights during the latter days of their residence in Palestine. They have not been supposed to have observed with strictness their vows of chastity and poverty. That they had lost that humility which made them at first call themselves "poor fellow-soldiers of Christ" and adopt as a seal two knights riding on one horse, is evident from the well-known anecdote of Richard I. of England, who, being advised by a zealous preacher to get rid of his three favorite daughters, pride, avarice, and voluptuousness, replied: "You counsel well. I hereby dispose of the first to the Templars, the second to the Benedictines, and the third to my bishops." In fact, the Templars were accused by their contemporaries of laxity in morals and of infidelity in religion. The Bois du Guibert drawn by the graphic pen of Walter Scott, although a fiction, had many a counterpart in history. There was, in short, nothing in the austerity of manners or intolerance of faith which would have prevented the Templars of the Crusades from holding frequent com-

munications with the infidel secret Societies around them. The Druses, indeed, are said by some modern writers to have Templar blood in them, from the illegal intercourse of their female ancestors with the Knights.

Of these secret Societies three at least demand a brief attention, from the supposed connection of the Templars with them. These are the Essenes, the Druids, and the Assassins.

The Essenes were a Jewish sect which at the time of the Crusades were dwelling principally on the shores of the Dead Sea. Of the three schools of religion which were cultivated by the Jews in the time of our Saviour, the Pharisees and the Sadducees were alone condemned for their vices and their hypocrisy, while neither He nor any of the writers of the New Testament have referred in words either of condemnation or of censure to the Essenes. This complete silence concerning them has been interpreted in their favor, as indicating that they had not by their doctrines or their conduct incurred the displeasure of our Lord or of his disciples. Some have even supposed that St. John the Baptist, as well as some of the Evangelists and Apostles, were members of the sect—an opinion that is at least not absurd; but we reject as altogether untenable the hypothesis of De Quincey, that they were Christians.

Their ceremonies and their tenets are involved in great obscurity, notwithstanding the laborious researches of the learned Ginsburg. From him and from Josephus, who is the first of the ancient writers who has mentioned them, as well as from Philo and some other authorities, we get possession of the following facts.

The forms and ceremonies of the Essenes were, like those of the Freemasons, eminently symbolical. They were all celibates, and hence it became necessary to recruit their ranks, which death and other causes decimated from time to time, by the admission of new converts. Hence they had adopted a system of initiation which was divided into three degrees. The first stage was preceded by a preparatory novitiate which extended to three years. At the end of the first degree, the trials of which continued for twelve months, he was presented with a spade, an apron, and a white robe, the last being a symbol of purity. In the second degree or stage he was called an *approacher*, which lasted for two years, during which time he was permitted to join in some of the ceremonies of the sect, but not admitted to be present at the common. He was then

accepted as an *associate*. If his conduct was approved, he was finally advanced to the third degree and received into full membership as a *companion* or *disciple*.

Brewster, in the work attributed to Lawrie, seeks to find a common origin for the Freemasons and the Essenes, and supports his opinion by the following facts, which, if they do not sustain the truth of his hypothesis, are certainly confirmed by other authorities. He says: "When a candidate was proposed for admission, the strictest scrutiny was made into his character. If his life had hitherto been exemplary, and if he appeared capable of curbing his passions and regulating his conduct according to the virtuous though austere maxims of the Order, he was presented at the expiration of his novitiate with a white garment as an emblem of the regularity of his conduct and the purity of his heart. A solemn oath was then administered to him, that he would never divulge the mysteries of the Order, that he would make no innovations on the doctrines of the society, and that he would continue in that honorable course of piety and virtue which he had begun to pursue. Like Freemasons, they instructed the young members in the knowledge which they derived from their ancestors. They admitted no women into their Order. They had particular signs for recognizing each other, which have a strong resemblance to those of Freemasons. They had colleges or places of retirement, where they resorted to practice their rites and settle the affairs of the society; and after the performance of these duties they assembled in a large hall, where an entertainment was provided for them by the president or master of the college, who allotted a certain quantity of provisions to every individual. They abolished all distinctions of rank, and if preference was ever given, it was given to piety, liberality, and virtue. Treasurers were appointed in every town to supply the wants of indigent strangers."¹

Josephus gives the Essenian oath more *in extenso*. He tells us that before being admitted to the common meal, that is, before advancement to full membership, the candidate takes an oath "that he will exercise piety toward God and observe justice toward men; that he will injure no one either of his own accord or by the com-

¹ Lawrie, "History of Freemasonry," ed. 1804, p. 34.

mand of others; that he will hate the wicked and aid the good; that he will be faithful to all men, especially to those in authority; that if ever placed in authority he will not abuse his power nor seek to surpass those under him in the costliness of his garments or decorations; that he will be a lover of truth and a reprover of falsehood; that he will keep his hands clear from theft and his soul from unlawful gains; that he will conceal nothing from the members of his own sect, nor reveal their doctrines to others, even at the hazard of his life; nor will he communicate those doctrines to any one otherwise than as he has himself received them; and, finally, that he will preserve inviolate the books of the sect and the names of the angels."

This last expression is supposed to refer to the secrets connected with the Tetragrammaton or Four-lettered Name and the other names of God and the angelical hierarchy which are comprised in the mysterious theosophy taught by the Cabalists and accepted, it is said, by the Essenes. The mystery of the name of God was then, as it is now, a prominent feature in all Oriental philosophy and religion.

I am inclined to the opinion of Brunet, who says that the Essenes were less a sect of religion than a kind of religious order or association of zealous and pious men whom the desire of attaining an exalted state of perfection had united together.¹ But whether they were one or the other, any hypothesis which seeks to connect them with Freemasonry through the Knights Templars is absolutely untenable.

At the time of the Crusades, and indeed long before, the Essenes had ceased to hold a place in history. What little remained of them was to be found in settlements about the north-western shore of the Dead Sea. They had decreased almost to a fraction in numbers, and had greatly corrupted their doctrines and their manners, ceasing, for instance, to be celibate and adopting the custom of marriage, while they had accepted much of the philosophy of Plato, of Pythagoras, and of the school of Alexandria.

They still retained, however, their Judaic faith and much of their primitive austerity, and it is therefore improbable that there could have been any congenial intercommunion between them and the

¹ Brunet, "Parallèle des Religions," P. VI., sec. xliv.

Templars. Their poverty and insignificance would have supplied no attraction to the Knights, and their austerity of manners and Judaism would have repelled them.

As to the similarity of Essenism and Freemasonry in the establishment by each of a brotherhood distinguished by love, charity, and a secret initiation, we can draw no conclusion from these coincidences that there was a connection of the two associations, since the same coincidences will be found in all fraternities ancient and modern. They arise from no spirit of imitation or fact of descent, but are the natural outgrowth of the social condition of man, which is ever developing itself in such mystical and fraternal associations.

But this subject will be treated more at length when, in a subsequent chapter of this work, I come to treat of the theory which deduces Freemasonry from Essenism by a direct descent, without the invocation of a Christian chivalric medium. It has, however, become inevitable, in considering the Secret Societies of the East at the period of the Crusades, to anticipate to some extent what will have to be hereafter said.

The Druses were another mystical religion with which the Templars are said to have come in contact and from whom they are said to have derived certain dogmas and usages which were transmitted to Europe and incorporated into the system of Freemasonry.

Of the communication of the Templars with the Druses there is some evidence, both traditional and historic, but what influence that communication had upon either Templarism or Masonry is a problem that admits only of a conjectural solution. The one proposed by King, in his work on the Gnostics, will hereafter be referred to.

The Druses are a mystical sect who have always inhabited the southern side of Mount Lebanon and the western side of Anti-Lebanon, extending from Beirut in the north to Sur in the south, and from the shores of the Mediterranean to the city of Damascus. They trace their origin to Hakim, who was Sultan of Egypt in 926, but derive their name from Mohammed Ben Israel Darasi, under whose leadership they fled from Egypt in the 10th century and settled in Syria, in that part around Lebanon which they still inhabit.

Their religion appears to be a mixture of Judaism, Christianity,

and Mohammedanism, although what it precisely is it is impossible to tell, since they keep their dogmas a secret, which is imparted only to those of their tribe who have passed through a form of initiation.

Of this initiation, Churchill says that there is a probation of twelve months before the candidate can be admitted to full membership. In the second year, the novitiate having been complete, the Druse is permitted to assume the white turban as a badge of his profession, and is permitted to participate in all the mysteries of his religion.

These mysteries refer altogether to dogma, for their religion is without ceremonies of any kind, and even without prayer.

Their doctrines have been summarized as follows: There is one God, unknown and unknowable, without personal form and of whom we can only predicate an existence. Nine times he has appeared on earth in the form of man. These were not incarnations, for God did not assume flesh, but merely put on flesh as a man puts on a garment. There are five invisible intelligences, called Ministers of Religion, and who have been impersonated by five Druse teachers, of whom the first is *Universal Intelligence*, personated by Hamsa, whose creation was the immediate work of God. The second is the *Universal Soul*, personated by Ismael, and is the female principal as to the first, as the Universal Intelligence is the male. From these two proceed the *Word*, which is personated by Mohammed Wahab. The fourth is the *Right Wing*, or the *Proceeding*, produced from the Word and the Universal Soul and personated by Selama. The fifth is the *Left Wing*, or the *Following*, produced in the same way from the Proceeding and personated by Moctana Behædeen. These form the religious hierarchy of Drusism as the ten sephiroth make the mystical tree of the Cabalists, from which it is probable that the Druses borrowed the idea. But they are taken, as Dr. Jessup says, "in some mysterious and incomprehensible sense which no Druse, man or woman, ever understood or can understand."¹ Yet their sacred books assert that none can possess the knowledge of Drusism except he knows all these Ministers of Religion.

They have also seven precepts or commandments, obedience to

¹ "Syrian Home-Life," p. 183.

which is enjoined but very seldom observed by the modern Druses, and never in their intercourse with unbelievers.

1. To speak the truth.
2. To render each other mutual assistance.
3. To renounce all error.
4. To separate from the ignorant and wicked.
5. To always assert the eternal unity of God.
6. To be submissive under trials and sufferings.
7. To be content in any condition, whether of joy or sorrow.

Of their outward forms and ceremonies we have no reliable information, for their worship is a secret one. In their sacred edifices, which are embowered among high trees or placed on the mountain summit, there are no ornaments. They have no prescribed rites and do not offer prayer, but in their worship sing hymns and read the sacred books. Churchill gives evidence of the profound secrecy in which the Druses envelop their religion. "Two objects," he says, "engrossed my attention—the religion of the Druses and the past history of the races which now occupy the mountain range of Lebanon. In vain I tried to make the terms of extreme friendship and intimacy which existed between myself and the Druses available for the purpose of informing myself on the first of these points. Sheiks, akkals, and peasants alike baffled my inquiries, either by jocose evasion or by direct negation."¹

Finally, as if to complete their resemblance to a secret society, we are told that to enable one Druse to recognize another a system of signs and passwords is adopted, without an interchange of which no communication in respect to their mysteries is imparted.

The Rev. Mr. King, in his work on the Gnostics, thinks that "the Druses of Mount Lebanon, though claiming for their founder the Egyptian caliph Hakim, are in all probability the remains of the numerous Gnostic sects noticed by Procopius as flourishing there most extensively in his own times,"² which was in the 6th century. And he adds that "the popular belief among their neighbors is that they, the Druses, adore an idol in the form of a calf, and hold in their secret meetings orgies similar to those laid to the charge of the Ophites in Roman times, of the Templars in mediæval, and of the

¹ "On the Druses and Maronites under Turkish Rule."

² King's "Gnostics," p. 183.

continental Freemasons in modern times."¹ This statement I have found confirmed by other writers. But Mr. King thinks it an interesting and significant point that "the Druses hold the residence of their Supreme head to be in Scotland;" a tradition which, he says, has been "evidently handed down from the times when the Templars were all-powerful in their neighborhood." This would prove, admitting the statement to be true, rather that the Druses borrowed from the Templars than that the Templars borrowed from the Druses; though it would even then be very difficult to understand why the Templars should have traced their head to Scotland, since the legend of Scottish Templarism is of more recent growth.

We may, however, judge of the weight to be attached to Mr. King's arguments from the fact that he deems it to be a "singular coincidence" that our Freemasons are often spoken of by German writers as the "Scottish Brethren." Not being a Mason, he was ignorant of the meaning of the term, which refers to a particular rite of Masonry, and not to any theory of its origin, and is therefore no coincidence at all. The hypothesis of the supposed connection of the sect of Gnostics with Freemasonry will be the subject of future consideration.

But there was another secret society, of greater importance than the Druses, which flourished with vigor in Syria at the time of the Crusaders, and whose connection with the Templars, as historically proved, may have had some influence over that Order in moulding, or at least in suggesting, some of its esoteric dogmas and ceremonies. This was the sect of the Assassins.

The Ishmaeleeh, or, as they are more commonly called, the Assassins, from their supposed use of the herb *hashish* to produce a temporary frenzy, was during the Crusades one of the most powerful tribes of Syria, although their population is now little more than a thousand. The sect was founded about the end of the ninth century, in Persia, by Hassan Sahab. From Persia, where they are supposed to have imbibed many of the doctrines of the philosophical sect of the Sofis, they emigrated to Asia Minor and settled in Syria, to the south of Mount Lebanon. Their chief was called Sheikh-el-Jeber, literally translated "the Old Man of the Mountain," a name familiar to the readers of the *Voyages of Sindbad*. Higgins,

¹ King's "Gnostics," p. 183.

who, when he had a theory to sustain, became insane upon the subject of etymology, translates it as "the sage of the Kabbala or Traditions," but the plain Arabic words admit of no such interpretation.

The credulity and the ignorance of the Middle Ages had assigned to the sect of the Assassins the character of habitual murderers, an historical error that has been perpetuated in our language by the meaning given to the word assassin. This calumny has been exploded by the researches of modern scholars, who now class them as a philosophical sect whose doctrines and instructions were secret. Of the Sofis, from whom the Ishmaeleeh or Assassins derived their doctrine, it will be necessary soon to speak.

Von Hammer, who wrote a history of the Assassins,¹ has sought to trace a close connection between them and the Templars. He has shown himself rather as a prejudiced opponent than as an impartial critic, but the sophistry of his conclusions does not affect the accuracy of his historical statements. Subsequent writers have therefore, in their accounts of this sect, borrowed largely from the pages of Von Hammer.

The Assassins were a secret society having a religion and religious instructions which they imparted only to those of their tribe who had gone through a prescribed form of initiation. According to Von Hammer, that system of initiation was divided into three degrees. They administered oaths of secrecy and of passive obedience and had modes of mutual recognition, thus resembling in many respects other secret societies which have at all times existed. He says that they were governed by a Grand Master and had regulations and a religious code, in all of which he supposes that he has found a close resemblance to the Templars. Their religious views he states to have been as follows:

"Externally they practice the duties of Islamism, although they internally renounce them; they believe in the divinity of Ali, in uncreated light as the principle of all created things, and in the Sheikh Ras-ed-dia, the Grand Prior of the Order in Syria, and contemporary with the Grand Master Hassan II, as the last representative of the Deity on earth."²

The Rev. Mr. Lyde, who traveled among the remains of the

¹ "Die Geschichte der Assassnen aus Morgenländ-ischen Quellen," Tübingen, 1818.

² "Geschichte der Assassnen," Wood's Translation, p. 221.

sect in 1852, says that they professed to believe in all the prophets, but had a chief respect for Mohammed and his son-in-law Ali, and he speaks of their secret prayers and rites as being too disgusting to be mentioned.¹

During the Crusades, the Templars entered at various times into amicable arrangements and treaty stipulations with the Assassins, in whose territory several of the fortresses of the Knights were built, and we may therefore readily believe that at those periods, when war was not raging, there might have been a mutual interchange of courtesies, of visits and of conferences.

Now, the Assassins were by no means incapable of communicating some elements of knowledge to their knightly neighbors. The chivalry of that age were not distinguished for learning and knew little more than their profession of arms, while the Syrian infidels had brought from Persia a large portion of the intellectual culture of the Sofis. Von Hammer, whose testimony is given in the face of his adverse prejudices, admits that they produced many treatises on mathematics and law, and he confesses that Hassan, the founder of the sect, possessed a profound knowledge of philosophy, and of the mathematical and metaphysical sciences. We can not therefore deny the probability that in the frequent communications with this intellectual as well as warlike tribe the Templars may have derived some of those doctrines and secret observances which characterized the Order on its return from Palestine, and which, distorted and misinterpreted by their enemies, formed the basis of those charges which led to the persecution and the eventual extinction of Knight Templarism.

Godfrey Higgins, whose speculations are seldom controlled by a discreet judgment, finds a close connection between the Freemasons and the Assassins, through the Templars. "It is very certain," he says, "that the Ishmalians or Society of Assassins is a Mohammedan sect; that it was at once both a military and religious association, like the Templars and Teutonic Knights; and that, like the Jesuits, it had its members scattered over extensive countries. It was a link that connected ancient and modern Freemasonry."² And he subsequently asserts that "the Templars were nothing but one branch of

¹ "The Ansyreeh and Ishmaeleeh: a visit to the secret societies of Northern Syria," by Rev. Samuel Lyde, B.A., London, 1853, p. 238.

² "Anacalypsis," I., 700.

Masons."¹ And so he goes on speculating, that Templarism and Ishmaelism were identical, and Freemasonry sprung from them both, or rather from the latter through the former. But as Higgins has advanced several other theories of the origin of Masonry, we may let the present one pass.

We may be prepared, however, to admit that the Templars possibly modified their secret doctrines under the influence of their friendly conferences with the Assassins, without recognizing the further fact that the Templars exercised a similar influence over the Freemasons.

I have said that the Assassins are supposed to have derived their doctrines from the sect of the Sofis in Persia. Indeed, the Sofis appear to have been the common origin of all the secret societies of Syria, which will account for their general resemblance to each other. In any inquiry, therefore, into the probable or possible connection of Templarism with these societies, Sofism, or the doctrine of the Sofis, will form an interesting element.

The sect of the Sofis originated in Persia, and was extended over other countries of the East. The name is generally supposed to be derived from the Greek *Sophia*, wisdom, and they bore also the name of *philosauph*, which will easily suggest the word *philosopher*. Dr. Herbelot, however, derived the name from the Persian *sauf* or *sof*, wool, because, as he said, the ancient Sofis dressed in woolen garments. The former derivation is, however, the most plausible.

Sir John Malcolm, who has given a very good account of them in his *History of Persia*, says that among them may be counted some of the wisest men of Persia and the East. The Mohammedan Sofis, he says, have endeavored to connect their mystic faith with the doctrine of the prophet in a manner that will be better shown from Von Hammer. That the Gnostic heresy was greatly infused in the system of Sofism is very evident, and at the same time there appears to have been some connection in ideas with the school of Pythagoras. The object of all investigation is the attainment of truth, and the labors of the initiate are symbolically directed to its discovery.

In Sofism there is a system of initiation, which is divided into

¹ "Anacalypsis," I., 712.

four degrees. In the first or preparatory degree, the novice is required to observe the rites of the popular religion in its ordinary-meaning. In the second degree, called the *Pale of Sofism*, he exchanges these exoteric rites for a spiritual and secret worship. The third degree is called *Wisdom*, and in this the initiate is supposed to be invested with supernatural knowledge and to have become equal with the angels. The fourth and last degree is called *Truth*, which the candidate is now supposed to have attained, and to have become united with the Deity.

Sir William Jones has given a summary of their doctrines, so far as they have been made known, as follows:

Nothing exists absolutely but God; the human soul is but an emanation from His essence, and, though temporarily separated from its divine source, will eventually be united with it. From this union the highest happiness will result, and therefore that the chief good of man in this world consists in as perfect a union with the Eternal Spirit as the incumbrances of flesh will permit.

Von Hammer's history of the rise, the progress, and the character of Sofism is more minute, more accurate, and therefore more interesting than that of any other writer. In accepting it for the reader, I shall not hesitate to use and to condense the language of Sloane, the author of the *New Curiosities of Literature*.

The German historian of the Assassins says that a certain *House of Wisdom* was formed in Cairo at the end of the 10th century by the Sultan, which had thus arisen. Under Maimun, the seventh Abasside Caliph, a certain Abdallah established a secret society, and divided his doctrines into seven degrees, after the system of Pythagoras and the Ionian schools. The last degree inculcated the vanity of all religion and the indifference of actions, which are visited by neither future recompense or punishment. He sent missionaries abroad to enlist disciples and to initiate them in the different degrees, according to their aptitude.

In a short time Karmath, one of his followers, improved this system. He taught that the Koran was to be interpreted allegorically, and, by adopting a system of symbolism, made arbitrary explanations of all the precepts of that book. Prayer, for instance, meant only obedience to a mysterious Imam, whom the Ishmaeleeh said that they were engaged in seeking, and the injunction of alms-

giving was explained as the duty of paying him tithes. Fasting was only silence in respect to the secrets of the sect.

The more violent followers of Karmath sought to subvert the throne and the religion of Persia, and with this intent made war upon the Caliphs, but were conquered and exterminated.

The more prudent portion, under the general name of Ishmaelites, continued to work in secret, and finally succeeded in placing one of their sect upon the throne. In process of time they erected a large building, which they called the House of Wisdom, and furnished it with professors, attendants, and books, and mathematical instruments. Men and women were admitted to the enjoyment of these treasures, and scientific and philosophical disputations were held. It was a public institution, but the secret Order of the Sofis, under whose patronage it was maintained, had their mysteries, which could only be attained by an initiation extending through nine degrees. While Sofism has by most writers been believed to be a religio-philosophical sect, Von Hammer thinks that it was political, and that its principal object was to overthrow the House of Abbas in favor of the Fatimites, which could only be effected by undermining the national religion.

The government at length interfered, and the operations of the society were suspended. But in about a year it resumed its functions and established a new House of Wisdom. Extending its influences abroad, many of the disciples of Sofism passed over into Syria about the close of the 10th century, and there established those secret societies which in the course of the Crusades came into contact, sometimes on the field of battle and sometimes in friendly conferences during temporary truces with the Crusaders, but especially with the Knights Templars.

The principal of these societies were the Ishmaeleeh or Assassins and the Druses, both of whom have been described.

There were other societies in Syria, resembling these in doctrine and ceremonies, who for some especial reasons not now known had seceded from the main body, which appears to have been the Assassins.

Such were the Ansyreeh, who were the followers of that Karmath of whom I have just spoken, who had seceded at an early period from the Sofis in Persia and had established his sect in Syria, on the coast, in the plain of Laodicea, now Ladikeeh,

From them arose another sect, called the Nusairyeh, from the name of their founder, Nusair. They settled to the north of Mount Lebanon, along the low range of mountains extending from Antioch to Tripoli and from the Mediterranean to Hums, where their descendants, numbering about two hundred thousand souls, still remain.

It is from their frequent communications with these various secret societies, but especially with the Assassins, that Von Hammer and Higgins, following Ramsay, have supposed that the Templars derived their secret doctrines and, carrying them to Europe, communicated them to the Freemasons. Rather, I should say, that Von Hammer and Higgins believed these Syrian societies to be Masonic, and that they taught the principles of the institution to the Templars, who were thus the founders of Freemasonry in Europe.

Of such a theory there is not the slightest scintilla of historic evidence. When we come to examine the authentic history of the origin of Freemasonry, it will be seen how such an hypothesis is entirely without support.

But that the Templars did have frequent communication with those secret societies, that they acquired a knowledge of their doctrines, and were considerably influenced in the lives of many of their members, and perhaps in secret modifications of their Order, is an hypothesis that can not be altogether denied or doubted, since there are abundant evidences in history of such communications, and since we must admit the plausibility of the theory that the Knights were to some extent impressed with the profound doctrines of Sofism as practiced by these sects.

Admitting, then, that the Templars derived some philosophical ideas more liberal than their own from these Syrian secret philosophers who were more learned than themselves, the next question will be as to what influences the Templars exerted upon the people of Europe on their return, and in what direction and to what ends this influence was exerted; and to this we must now direct our attention.

But, before entering upon this subject, we may as well notice one significant fact. Of the three Orders of Knighthood who displayed their prowess in Palestine and Syria during the two centuries of the Crusades, the Hospitallers, the Teutonic Knights, and the Templars, it is admitted that the Templars were more intimately

acquainted with the Ishmaeleeh or Assassins than either of the others. It is also known that while the admission to membership in the Hospitaller and Teutonic Orders was open and public, the Templars alone had a secret initiation, and held their meetings in houses guarded from profane intrusion.

Now, at what time the Templars adopted this secret formula of initiation is not known. The rule provided for their government by St. Bernard at the period of their organization makes no allusion to it, and it is probable that there was no such secret initiation practiced for many years after their establishment as an order.

Now, this question naturally suggests itself: Did the Templars borrow the idea and in part the form of their initiation from the Assassins, among whom such a system existed, or, having obtained it from some other source, was it subjected at a later period of their career, but long before they left Palestine, to certain modifications derived from their intercourse with the secret societies of Syria? This is a question that can not be historically solved. We must rest for any answer on mere conjecture. And yet the facts of the Templars being of the three Orders the only secret one, and of their intercourse with the Assassins, who were also a secret order, are very significant. Some light may be thrown upon this subject by a consideration of the charges, mainly false but with certain elements of truth, which were urged against the Order at the time of its suppression.

Let us now proceed to an investigation of the theory that makes the Templars the founders of the Order of Freemasonry, after the return of the Knights to Europe. Rejecting this theory as wholly untenable, it will, however, be necessary to inquire what were the real influences exerted upon Europe by the Knights.

It must be remembered that if any influence at all was exercised upon the people of Europe, the greater portion must be attributed to the Templars. Of the three Orders, the Hospitallers, when they left Palestine, repaired directly to the island of Rhodes, where they remained for two hundred years, and then, removing to Malta, continued in that island until the decadence of their Order at the close of the last century. The Teutonic Knights betook themselves to the uncivilized parts of Germany, and renewed their warlike vocation by crusades against the heathens of that country. The Templars alone distributed themselves in the different kingdoms and

cities of the continent, and became familiar with the people who lived around their preceptories. They alone came in contact with the inhabitants, and they alone could have exercised any influence upon the popular mind or taste.

It has been a generally received opinion of the most able architects that the Templars exerted a healthy influence upon the architecture of the Middle Ages. Thus Sir Christopher Wren says that "the Holy Wars gave the Christians who had been there an idea of the Saracens' works, which were afterward imitated by them in their churches, and they refined upon it every day as they proceeded in building."¹

But the most positive opinion of the influence of the Crusaders upon the architecture of Europe was given in 1836 by Mr. Westmacott, a distinguished artist of England. In the course of a series of lectures before the Royal Academy, he thus spoke of the causes of the revival of the arts.

There were, he said, two principal causes which tended materially to assist the restoration of literature and the arts in England and in other countries of Europe. These were the Crusades and the extension or the establishment of the Freemason's institution in the north and west of Europe. The adventurers who returned from the Holy Land brought back some ideas of various improvements, particularly in architecture, and along with these a strong desire to erect castellated, ecclesiastical, and palatial edifices, to display the taste that they had acquired; and in less than a century from the first Crusade above six hundred buildings of the above description had been erected in southern and western Europe. This taste, he thinks, was spread into almost all countries by the establishment of the Fraternity of Freemasons, who, it appears, had, under some peculiar form of Brotherhood, existed for an immemorial period in Syria and other parts of the East, whence some bands of them migrated to Europe, and after a time a great efflux of these men, Italian, German, French, Spanish, etc., had spread themselves in communities through all civilized Europe; and in all countries where they settled we find the same style of architecture from that period, but differing in some points of treatment as suited the climate.

The latter part of this statement requires confirmation. I do not

¹ Wren's "Parentalia."

think that there is any historical evidence of the ingress into Europe of bands of the Syrian secret fraternities during or after the Crusades, nor is there any probability that such an ingress could have occurred.

But the historical testimonies are very strong that the literature and arts of Europe, and especially its architecture, were materially advanced by the influence of the returning Crusaders, whose own knowledge had been enlarged and their taste cultivated by their contact with the nations of the East.

This topic appertains, however, to the historical rather than to the legendary study of Masonry, and will at a future time in the course of this work command our attention. At present we must restrict ourselves to the consideration of the theory that traditionally connects the Crusaders, and especially the Knights Templars, with the establishment of the Masonic institution, through their intercourse with the secret societies of Syria

The inventor of the theory that Freemasonry was instituted in the Holy Land by the Crusaders, and by them on their return introduced into Europe, was the Chevalier Michael Ramsay, to whom Masonry is indebted (whatever may be the value of the debt) for the system of high degrees and the manufacture of Rites.

In the year 1740 Ramsay was the Grand Orator, and delivered a discourse before the Grand Lodge of France, in which he thus traces the origin of Freemasonry.

Rejecting as fabulous all hypotheses which trace the foundation of the Order to the Patriarchs, to Enoch, Noah, or Solomon, he finds its origin in the time of the Crusades.

"In the time," he says, "of the Holy Wars in Palestine, many princes, nobles, and citizens associated themselves together and entered into vows to re-establish Christian temples in the Holy Land, and engaged themselves by an oath to employ their talents and their fortunes in restoring architecture to its primitive condition. They adopted signs and symbolic words, derived from religion, by which they might distinguish themselves from the infidels and recognize each other in the midst of the Saracens. They communicated these words only to those who had previously sworn a solemn oath, often taken at the altar, that they would not reveal them. Some time after, this Order was united with that of the Knights of St. John of Jerusalem, for which reason in all countries our Lodges are called

Lodges of St. John. This union of the two Orders was made in imitation of the conduct of the Israelites at the building of the second Temple, when they held the trowel in one hand and the sword in the other.

"Our Order must not, therefore, be regarded as a renewal of the Bacchanalian orgies and as a source of senseless dissipation, of unbridled libertinism and of scandalous intemperance, but as a moral Order instituted by our ancestors in the Holy Land to recall the recollection of the most sublime truths in the midst of the innocent pleasures of society.

"The kings, princes, and nobles, when they returned from Palestine into their native dominions, established Lodges. At the time of the last Crusade several Lodges had already been erected in Germany, Italy, Spain, France, and from the last in Scotland, in consequence of the intimate relations which existed between those two countries.

"James Lord Steward of Scotland was the Grand Master of a Lodge established at Kilwinning in the west of Scotland, in the year 1236, a short time after the death of Alexander III., King of Scotland, and a year before John Baliol ascended the throne. This Scottish Lord received the Earls of Gloucester and Ulster, English and Irish noblemen, as Masons into his Lodge.

"By degrees our Lodges, our festivals, and solemnities were neglected in most of the countries in which they had been established. Hence the silence of the historians of all nations, except Great Britain, on the subject of our Order. It was preserved, however, in all its splendor by the Scotch, to whom for several centuries the kings of France had intrusted the guardianship of their person.¹

"After the lamentable reverses of the Crusades, the destruction of the Christian armies, and the triumph of Bendocdar, the Sultan of Egypt, in 1263, during the eighth and ninth Crusades, the great Prince Edward, son of Henry III., King of England, seeing that there would be no security for the brethren in the Holy Land when the Christians should have retired, led them away, and thus a colony of the Fraternity was established in England. As this prince was

¹Ramsay here refers to the company of musketeers, composed entirely of Scotchmen of noble birth, which constituted the body-guard of the kings of France. The reader of the Waverley Novels will remember that the renowned Balafrè, in the story of "Quentin Durward," was a member of this company.

endowed with all the qualities of mind and heart which constitute the hero, he loved the fine arts and declared himself the protector of our Order. He granted it several privileges and franchises, and ever since the members of the confraternity have assumed the name of *Freemasons*. From this time Great Britain became the seat of our sciences, the conservatrix of our laws, and the depository of our secrets. The religious dissensions which so fatally pervaded and rent all Europe during the 16th century caused our Order to degenerate from the grandeur and nobility of its origin. Several of our rites and usages, which were opposed to the prejudices of the times, were changed, disguised, or retrenched. Thus it is that several of our brethren have, like the ancient Jews, forgotten the spirit of our laws and preserved only the letter and the outer covering. But from the British islands the ancient science is now beginning to pass into France."

Such was the theory of Ramsay, the principal points of which he had already incorporated into the Rite of six degrees which bears his name. This Rite might be called the mother of all the Rites which followed it and which in a few years covered the continent with a web of high degrees and of Masonic systems, all based on the hypothesis that Freemasonry was invented during the Crusades, and the great dogma of which, boldly pronounced by the Baron Von Hund, in his Rite of Strict Observance, was that every Freemason was a Templar.

It will be seen that Ramsay repudiates all the legends which ascribe Masonry to the Patriarchs or to the ancient Mysteries, and that he rejects all connection with an Operative association, looking to chivalry alone for the legitimate source of the Fraternity.

Adopting the method of writing Masonic history which had been previously pursued by Anderson, and which was unfortunately followed by other writers of the 18th century, and which has not been altogether abandoned at the present day, Ramsay makes his statements with boldness, draws without stint upon his imagination, presents assumptions in the place of facts, and cites no authority for anything that he advances.

As Mossdorf says, since he cites no authority we are not bound to believe him on his simple word.

Ramsay's influence, however, as a man of ability, had its weight, and the theory of the origin of Freemasonry among the Crusaders

continued to be taught in some one form or another by subsequent writers, and it was infused by the system-makers into most of the Rites that were afterward established. Indeed, it may be said that of all the Rites now existing, the English and American are the only ones in which some feature of this Templar theory may not be found.

The theory of Hutchinson varied somewhat from that of Ramsay, inasmuch as while recognizing the influence of the Crusades upon Masonry he is inclined to suppose that it was carried there by the Crusaders rather than that it was brought thence by them to Europe.

After alluding to the organization of the Crusades by Peter the Hermit, and to the outpouring from Europe into Palestine of tens of thousands of saints, devotees, and enthusiasts to waste their blood and treasure in a barren and unprofitable adventure, he proceeds to say that "it was deemed necessary that those who took up the sign of the Cross in this enterprise should form themselves into such societies as might secure them from spies and treacheries, and that each might know his companion and fellow-laborer by dark as well as by day. As it was with Jephtha's army at the passes of the Jordan, so also was it requisite in these expeditions that certain signs, signals, watchwords, or passwords should be known amongst them; for the armies consisted of various nations and various languages."

"No project or device," he thinks, "could answer the purpose of the Crusaders better than those of Masonry. The maxims and ceremonials attending the Master's Order had been previously established and were materially necessary on that expedition; for as the Mohammedans were also worshippers of the Deity, and as the enterprisers were seeking a country where the Masons were in the time of Solomon called into an association, and where some remains would certainly be found of the mysteries and wisdom of the ancients and of our predecessors, such degrees of Masonry as extended only to their being servants of the God of Nature would not have distinguished them from those they had to encounter, had they not assumed the symbols of the Christian faith."

The hypothesis of Hutchinson is, then, that while there was some Masonry in Palestine before the advent of the Crusaders, it was only that earlier stage which he had already described as appertaining to the Apprentice's degree, and which was what both he and

Oliver have called "Patriarchal Masonry." The higher stage represented by the Master's degree was of course unknown to the Saracens, as it was of Christian origin, and the possession of this degree only could form any distinctive mark between the Crusaders and their Moslem foes. This degree, therefore, he thinks, was introduced into Palestine as a war-measure to supply the Christians with signs and words which would be to them a means of protection. The full force of the language bears only this interpretation, that Freemasonry was used by the Crusaders not for purposes of peace, but for those of war, a sentiment so abhorrent to the true spirit of the institution that nothing but a blind adherence to a preconceived theory could have led so good a Mason as Hutchinson to adopt or to advance such an opinion.

Differing still more from Ramsay, who had attributed the origin of Masonry to the Knights and nobles of the Crusades, Hutchinson assigns the task of introducing it into Palestine to the religious and not the military element of these expeditions.

"All the learning of Europe in those times," he continues, "was possessed by the religious; they had acquired the wisdom of the ancients, and the original knowledge which was in the beginning and now is the *truth*; many of them had been initiated into the mysteries of Masonry, they were the projectors of the Crusades, and, as Solomon in the building of the Temple introduced orders and regulations for the conduct of the work, which his wisdom had been enriched with from the sages of antiquity, so that no confusion should happen during its progress, and so that the rank and office of each fellow-laborer might be distinguished and ascertained beyond the possibility of doubt; in like manner the priests projecting the Crusades, being possessed of the mysteries of Masonry, the knowledge of the ancients, and of the universal language which survived the confusion of Shinar, revived the orders and regulations of Solomon, and initiated the legions therein who followed them to the Holy Land—hence that secrecy which attended the Crusades."

Mr. Hutchinson concludes this collection of assumptions, cumulated one upon another, without the slightest attempt to verify historically a single statement, by asserting that "among other evidences which authorize us in the conjecture that Masons went to the Holy Wars, is the doctrine of that Order of Masons called the *Higher Order*" that is to say, the higher degrees, which he says

that he was induced to believe was of Scottish Origin. He obtained this idea probably from the theory of Ramsay. But be that as it may, he thinks "it conclusively proved that the Masons were Crusaders;" a conclusion that it would be difficult to infer from any known rules of logic. The fact (if it be admitted) that these higher degrees were invented in Scotland by no means proves that the Masons who possessed them went to the Crusades. It is impossible, indeed, to find any natural connection or sequence between the two circumstances.

But the legend which refers to the establishment in Scotland of a system of Masonry at the time of the suppression of the Order and the martyrdom of de Molay, belongs to another portion of the legendary history of Freemasonry and will be treated in a distinct chapter.

Von Hammer shows to what shifts for arguments those are reduced who pretend that the institution of Freemasonry was derived at the Crusades, by the Knights Templars, from the secret societies of the East. He says, as a proof of the truth of this hypothesis, which indeed he makes as a charge against the Templars, that their secret maxims, particularly in so far as relates to the renunciation of positive religion and the extension of their power by the acquisition of castles and strong places, seem to have been the same as those of the Order of Assassins. The similarity also of the white dress and red fillet of the Assassins with the white mantle and red cross of the Templars he thinks is certainly remarkable. Hence he assumes that as the Assassins were a branch of the Ishmaeleeh, whom he calls the "Illuminati of the East," and as the former were a secret society of revolutionary principles, which is a characteristic that he gratuitously bestows upon the Freemasons, he takes it for granted that the Assassins supplied the Templars with those ideas of organization and doctrine out of which they created the system of Freemasonry that they afterward introduced into Europe.

A series of arguments like this is scarcely worthy of a serious refutation. The statement that the Templars ever renounced the precepts of positive religion, either at that early period of their career or at any subsequent time, is a mere assumption, based on the charges made by the malevolence of a wicked King and a still more wicked Pope. The construction of fortresses and castles for their protection, by both the Templars and the Assassins, arose from the

military instinct which teaches all armies to provide the means of defense when in the presence of an enemy. And lastly, the argument drawn from the similarity of the costumes of both Orders is so puerile as to require no other answer than that as the mantle and cross of the Templars were bestowed upon them, the former by Pope Honorius and the latter by Pope Eugenius, therefore they could not have been indebted to the Assassins for either. The best refutation of the slanders of Von Hammer is the fact that to sustain his views he was obliged to depend on such poverty of argument.

Recognizing as historically true the fact that the Templars, or rather, perhaps, the architects and builders, who accompanied them and were engaged in the construction of their fortresses and castles in the Holy Land, the remains of some of which still exist, brought with them to Europe some new views of Saracenic architecture which they communicated to the guilds of Freemasons already established in Europe, we may dismiss the further consideration of that subject as having nothing to do with the question of how much Freemasonry as a secret society was indebted for its origin to Templarism.

On the subject of the direct connection of the Templars with Freemasonry at the time of the Crusades, there are only two propositions that have been maintained. One is that the Templars carried Freemasonry with them to Palestine and there made use of it for their protection from their enemies, the Saracens.

Of this theory there is not the slightest evidence. No contemporary historian of the Crusades makes any mention of such a fact. Before we can begin to even discuss it as something worthy of discussion, we must find the proof, which we can not, that in the 11th and 12th centuries Freemasonry was anything more than an Operative institution, to which it was not likely that any Crusaders of influence, such as the nobles and knights, were attached as members. As a mere conjecture it wants every element of probability. Hutchinson, the most prominent writer who maintains the theory, has evidently confounded the Crusaders of the 11th and 12th centuries, who fought in Palestine, with the Templars, who are said to have fled to Scotland in the 14th century and to have there invented certain high degrees. This manifest confusion of dates gives a feature of absurdity to the argument of Hutchinson.

Another form has been given to this theory by a writer in the

*London Freemasons' Magazine*¹ which has the air of greater plausibility at least. The theory that he has advanced will be best given in his own language: "The traveling bodies of Freemasons (who existed in Europe at the time of the Crusades) consisted of brethren well skilled in every branch of knowledge; among their ranks were many learned ecclesiastics, whose names survive to the present day in the magnificent edifices which they assisted to erect. The Knights of the Temple, themselves a body of military monks partaking both of the character of soldiers and priests, preserved in their Order a rank exclusively clerical, the individuals belonging to which took no part in warfare, who were skilled in letters, and devoted themselves to the civil and religious affairs of the Order; they were the historians of the period, and we know that all the learning of the time was in their keeping in common with the other ecclesiastics of the time. From the best information we are possessed of regarding the Order, we believe there can be little doubt that these learned clerks introduced the whole fabric of Craft Masonry into the body of the Templars, and that not only was the Speculative branch of the science by them incorporated with the laws and organization of the Knights, but to their Operative skill were the Templars indebted for their triumphs in architecture and fortification. And it is worthy of remark that in the records of the Order we find no mention of individual architects or builders; we may therefore not unfairly draw the inference that the whole body were made participators in the knowledge and mysteries of the Craft."

To this theory there is the same objection that has been already made to the other, that it is wholly unsupported by historical authority, and that it is a mere congeries of bold assumptions and fanciful conjectures. Very strange, indeed, is the reasoning which draws the inference that all the Templars were builders because there is no mention of such a class in the records of the Order. Such a silence would rather seem to indicate that there was no such class among the Knights. That they employed architects and builders, who may have belonged to the guilds of Traveling Freemasons before they went to Palestine, is by no means improbable; but there us no evidence, and it is by no means likely, that they would engage in anything more than the duties of their profession, or that there

¹ *Freemasons' Magazine and Masonic Mirror*, vol. iv., p. 962, London, 1858, Part I.

would be any disposition on the part of the Knights devoted to a warlike vocation to take any share in their peaceful association.

The second theory is that the Templars derived their secret doctrines and ceremonies from the sect of the Assassins, or from the Druses of Mount Lebanon, and that on their return to Europe they organized the Fraternity of Freemasons. This theory is the direct opposite of the former, and, like it, has neither history to sustain its truth as a statement nor probability to support it as a conjecture.

It was the doctrine of a German writer, Adler, who advanced it in his treatise, *De Drusis Montis Libani*, published in 1786 at Rome. But its most prominent advocate was Von Hammer, an avowed and prejudiced foe of both Templarism and Freemasonry, and who made it the basis of his charges against both institutions. Notwithstanding this, it has been accepted with his wonted credulity by Higgins in his ponderous work entitled *Anacalypsis*.

Brewster, in the work attributed to Lawrie on the *History of Freemasonry*, has adopted the same hypothesis. "As the Order of the Templars," he says, "was originally formed in Syria, and existed there for a considerable time, it would be no improbable supposition that they received their Masonic knowledge from the Lodges in that quarter."

But as Brewster, or the author of the work called *Lawrie's History*, had previously, with equal powers of sophistry and with a similar boldness of conjecture, attributed the origin of Freemasonry to the ancient Mysteries, to the Dionysiac Fraternity of Artificers, to the Essenes, the Druids, and to Pythagoras, we may safely relegate his hypothesis of its Templar origin to the profound abyss of what ought to be, and probably are, exploded theories. All these various arguments tend only to show how the prejudices of preconceived opinions may warp the judgment of the most learned scholars.

On the whole, I think that we will be safe in concluding that, whatever may have been the valiant deeds of the Crusaders, and especially of the Templars, in their unsuccessful attempt to rescue the Holy Sepulcher from the possession of the infidels, they could scarcely have diverted their attention to the prosecution of an enterprise so uncongenial with the martial spirit of their occupation as that of inventing or organizing a peaceful association of builders. With the Crusades and the Crusaders, Freemasonry had no con-

nection that can be sustained by historical proof or probable conjecture. As to the supposed subsequent connection of Templarism with the Freemasonry of Scotland, that forms another and an entirely different legend, the consideration of which will engage our attention in the following chapter.

CHAPTER XXIX

THE STORY OF THE SCOTTISH TEMPLARS

THE story which connects the Knights Templars with Freemasonry in Scotland, after their return from the Crusades and after the suppression of their Order, forms one of the most interesting and romantic legends connected with the history of Freemasonry. In its incidents the elements of history and tradition are so mingled that it is with difficulty that they can be satisfactorily separated. While there are some writers of reputation who accept everything that has been said concerning the connection in the 14th century of the Freemasons of Scotland with the Templars who were then in that kingdom, or who escaped to it as an asylum from the persecutions of the French monarch, as an authentic narrative of events which had actually occurred, there are others who reject the whole as a myth or fable which has no support in history.

Here, as in most other cases, the middle course appears to be the safest. While there are some portions of the story which are corroborated by historical records, there are others which certainly are without the benefit of such evidence. In the present chapter I shall endeavor, by a careful and impartial analysis, to separate the conflicting elements and to dissever the historical from the legendary or purely traditional portions of the relation.

But it will be necessary, in clearing the way for any faithful investigation of the subject, to glance briefly at the history of those events which were connected with the suppression of the ancient Order of Knights Templars in France in the beginning of the 14th century.

The Templars, on leaving the Holy Land, upon the disastrous termination of the last Crusade and the fall of Acre, had taken temporary refuge in the island of Cyprus. After some vain attempts to regain a footing in Palestine and to renew their contests with the

infidels, who were now in complete possession of that country, the Knights had retired from Cyprus and repaired to their different Commanderies in Europe, among which those in France were the most wealthy and the most numerous.

At this period Philip IV., known in history by the soubriquet of Philip the Fair, reigned on the French throne, and Clement V. was the Pontiff of the Roman Church. Never before had the crown or the tiara been worn by a more avaricious King or a more treacherous Pope.

Clement, when Bishop of Bordeaux, had secured the influence of the French monarch toward his election to the papacy by engaging himself by an oath on the sacrament to perform six conditions imposed upon him by the king, the last of which was reserved as a secret until after his coronation.

This last condition bound him to the extermination of the Templars, an Order of whose power Philip was envious and for whose wealth he was avaricious.

Pope Clement, who had removed his residence from Rome to Poitiers, summoned the heads of the military Orders to appear before him for the purpose, as he deceitfully pretended, of concerting measures for the inauguration of a new Crusade.

James de Molay, the Grand Master of the Templars, accordingly repaired to the papal court. While there the King of France preferred a series of charges against the Order, upon which he demanded its suppression and the punishment of its leaders.

The events that subsequently occurred have been well called a black page in the history of the Order. On the 13th of October, 1307, the Grand Master and one hundred and thirty-nine Knights were arrested in the palace of the Temple, at Paris, and similar arrests were on the same day made in various parts of France. The arrested Templars were thrown into prison and loaded with chains. They were not provided with a sufficiency of food and were refused the consolations of religion. Twenty-six princes and nobles of the court of France appeared as their accusers; and before the judgment of their guilt had been determined by the tribunals, the infamous Pope Clement launched a bull of excommunication against all persons who should give the Templars aid or comfort.

The trials which ensued were worse than a farce, only because of their tragical termination. The rack and the torture were unpar

STRASBOURG CATHEDRAL

ingly applied. Those who continued firm in a denial of guilt were condemned either to perpetual imprisonment or to the stake. Addison says that one hundred and thirteen were burnt in Paris and others in Lorraine, in Normandy, at Carcassonne, and at Senlis.

The last scene of the tragedy was enacted on the 11th of March, 1314. James de Molay, the Grand Master of the Order, after a close and painful imprisonment of six years and a half, was publicly burnt¹ in front of the Cathedral of Notre Dame, in Paris.

The Order was thus totally suppressed in France and its possessions confiscated. The other monarchs of Europe followed the example of the King of France in abolishing the Order in their dominions; but, in a more merciful spirit, they refrained from inflicting capital punishment upon the Knights. Outside of France, in all the other kingdoms of Europe, not a Templar was condemned to death.

The Order was, however, everywhere suppressed, and a spoil made of its vast possessions, notwithstanding that in every country beyond the influence of the Pope and the King of France its general innocence was sustained. In Portugal it changed its name to that of the Knights of Christ—everywhere else the Order ceased to exist.

But there are writers who, like Burnes,¹ maintain that the persecution of the Templars in the 14th century did not close the history of the Order, but that there has been a succession of Knights Templars from the 12th century down to these days. Dr. Burnes alluded to the Order of the Temple and the pretended transmission of the powers of de Molay to Larmenius.

With this question and with the authenticity of the so-called "Charter of Transmission," the topic which we are now about to discuss has no connection, and I shall therefore make no further allusion to it.

It is evident from the influence of natural causes, without the necessity of any historical proof, that after the death of the Grand Master and the sanguinary persecution and suppression of the Order in France, many of the Knights must have sought safety by flight to other countries. It is to their acts in Scotland that we are now to direct our attention.

¹"Sketch of the History of the Knights Templars," by James Burnes, LL.D., F.R.S., etc., London, 1840, p. 39.

There are two Legends in existence which relate to the connection of Templarism with the Freemasonry of Scotland, each of which will require our separate attention. The first may be called the Legend of Bruce, and the other the Legend of d'Aumont.

In Scotland the possessions of the Order were very expensive. Their Preceptories were scattered in various parts of the country. A papal inquisition was held at Holyrood in 1309 to try and, of course, to condemn the Templars. At this inquisition only two knights, Walter de Clifton, Grand Preceptor of Scotland, and William de Middleton appeared. The others absconded, and as Robert Bruce was then marching to meet and repel the invasion of King Edward of England, the Templars are said to have joined the army of the Scottish monarch. Thus far the various versions of the Bruce Legend agree, but in the subsequent details there are irreconcilable differences.

According to one version, the Templars distinguished themselves at the battle of Bannockburn, which was fought on St. John the Baptist's Day, 1314, and after the battle a new Order was formed called the Royal Order of Scotland, into which the Templars were admitted. But Oliver thinks very justly that the two Orders were unconnected with each other.

Thory says that Robert Bruce, King of Scotland under the title of Robert I., created on the 24th of June, 1314, after the battle of Bannockburn, the Order of St. Andrew of the Thistle, to which was afterward added that of Heredom, for the sake of the Scottish Masons, who had made a part of the thirty thousand men who had fought with an hundred thousand English soldiers. He reserved for himself and his successors the title of Grand Master and founded at Kilwinning the Grand Lodge of the Royal Order of Heredom.¹

The Manual of the Order of the Temple says that the Templars, at the instigation of Robert Bruce, ranged themselves under the banners of this new Order, whose initiations were based on those of the Templars. For this apostasy they were excommunicated by John Mark Larmenius, who is claimed to have been the legitimate successor of de Molay.²

None of these statements are susceptible of historical proof.

¹ "Acta Latomorum," tome i., p. 6.

² "Manuel des Chevaliers de l'Ordre du Temple," p. 8.

The Order of Knights of St. Andrew or of the Thistle was not created by Bruce in 1314, but by James II. in 1440.

There is no evidence that the Templars ever made a part of the Royal Order of Heredom. At this day the two are entirely distinct. Nor is it now considered as a fact that the Royal Order was established by Bruce after the Battle of Bannockburn, although such is the esoteric legend.

On the contrary, it is supposed to have been the fabrication of Michael Ramsay in the 18th century. On this subject the remarks of Bro. Lyon, who has made the Masonry of Scotland his especial study, are well worth citation.

"The ritual of the Royal Order of Scotland embraces," he says, "what may be termed a spiritualization of the supposed symbols and ceremonies of the Christian architects and builders of primitive times, and so closely associates the sword with the trowel as to lead to the second degree being denominated an order of Masonic knighthood, which its recipients are asked to believe was first conferred on the field of Bannockburn, as a reward for the valor that had been displayed by a body of Templars who aided Bruce in that memorable victory; and that afterward a Grand Lodge of the Order was established by the King at Kilwinning, with the reservation of the office of Grand Master to him and his successors on the Scottish throne. It is further asserted that the Royal Order and the Masonic Fraternity of Kilwinning were governed by the same head. As regards the claims to antiquity, and a royal origin that are advanced in favor of this rite, it is proper to say that modern inquiries have shown these to be purely fabulous. The credence that is given to that part of the legend which associates the Order with the ancient Lodge of Kilwinning is based on the assumed certainty that that Lodge possessed in former times a knowledge of other degrees of Masonry than those of St. John. But such is not the case. The fraternity of Kilwinning never at any period practiced or acknowledged other than the Craft degrees; neither does there exist any tradition worthy of the name, local or national, nor has any authentic document yet been discovered that can in the remotest degree be held to identify Robert Bruce with the holding of Masonic Courts, or the institution of a secret society at Kilwinning."¹

¹ "History of the Lodge of Edinburgh," by David Murray Lyon, chap. xxxii., p. 307.

After such a statement made by a writer who from his position and opportunities as a Scottish Mason was better enabled to discover proofs, if there were any to be discovered, we may safely conclude that the Bruce and Bannockburn Legend of Scottish Templarism is to be deemed a pure myth, without the slightest historical element to sustain it.

There is another Legend connecting the Templars in Scotland with Freemasonry which demands our attention.

It is said in this Legend that in order to escape from the persecution that followed the suppression of the Order by the King of France, a certain Templar, named d'Aumont, accompanied by seven others, disguised as mechanics or Operative Masons, fled into Scotland and there secretly founded another Order; and to preserve as much as possible the ancient name of Templars as well as to retain the remembrance of and to do honor to the Masons in whose clothing they had disguised themselves when they fled, they adopted the name of Masons in connection with the word *Franc*, and called themselves *Franc Masons*. This they did because the old Templars were for the most part Frenchmen, and as the word *Franc* means both *French* and *Free*, when they established themselves in England they called themselves *Freemasons*. As the ancient Order had been originally established for the purpose of rebuilding the Temple of Jerusalem, the new Order maintained their bond of union and preserved the memory and the design of their predecessors by building symbolically spiritual Temples consecrated to Virtue, Truth, and Light, and to the honor of the Grand Architect of the Universe.

Such is the Legend as given by a writer in the Dutch *Freemasons' Almanac*, from which it is cited in the London *Freemasons' Quarterly Review*.¹

Clavel, in his *Picturesque History of Freemasonry*,² gives it more in detail, almost in the words of Von Hund.

After the execution of de Molay, Peter d'Aumont, the Provincial Grand Master of Auvergne, with two Commanders and five Knights, fled for safety and directed their course toward Scotland, concealing themselves during their journey under the disguise of Operative Masons. Having landed on the Scottish Island of Mull they

¹ See *Freemasons' Quarterly Review*, London, 1843, p. 501, where the Legend is given in full, as above.

² "Histoire Pittoresque de la Franc Maçonnerie," p. 184.

there met the Grand Commander George Harris and several other brethren, with whom they resolved to continue the Order, d'Aumont was elected Grand Master in a Chapter held on St. John's Day, 1313. To protect themselves from all chance of discovery and persecution they adopted symbols taken from architecture and assumed the title of Freemasons. In 1361 the Grand Master of the Temple transferred the seat of the Order to the old city of Aberdeen, and from that time it spread, under the guise of Freemasonry, through Italy, Germany, France, Portugal, Spain, and other places.

It was on this Legend that the Baron Von Hund founded his Rite of Strict Observance, and with spurious documents in his possession, he attempted, but without success, to obtain the sanction of the Congress of Wilhelmsbad to his dogma that every Freemason was a Templar.

This doctrine, though making but slow progress in Germany, was more readily accepted in France, where already it had been promulgated by the Chapter of Clermont, into whose Templar system Von Hund had been initiated.

The Chevalier Ramsay was the real author of the doctrine of the Templar origin of Freemasonry, and to him we are really indebted (if the debt have any value) for the d'Aumont Legend. The source whence it sprang is tolerably satisfactory evidence of its fictitious character. The inventive genius of Ramsay, as exhibited in the fabrications of high degrees and Masonic legends, is well known. Nor, unfortunately for his reputation, can it be doubted that in the composition of his legends he cared but little for the support of history. If his genius, his learning, and his zeal had been consecrated, not to the formation of new Masonic systems, but to a profound investigation of the true origin of the Institution, viewed only from an authentic historical point, it is impossible to say what incalculable benefit would have been derived from his researches. The unproductive desert which for three-fourths of a century spread over the continent, bearing no fruit except fanciful theories, absurd systems, and unnecessary degrees, would have been occupied in all probability by a race of Masonic scholars whose researches would have been directed to the creation of a genuine history, and much of the labors of our modern iconoclasts would have been spared.

The Masonic scholars of that long period, which began with Ramsay and has hardly yet wholly terminated, assumed for the most

part rather the rôle of poets than of historians. They did not remember the wise saying of Cervantes, that the poet may say or sing, not as things have been, but as they ought to have been, while the historian must write of them as they really were, and not as he thinks they ought to have been. And hence we have a mass of traditional rubbish, in which there is a great deal of falsehood with very little truth.

Of this rubbish is the Legend of Peter d'Aumont and his resuscitation of the Order of Knights Templars in Scotland. Without a particle of historical evidence for its support, it has nevertheless exerted a powerful influence on the Masonic organization of even the present day. We find its effects looming out in the most important rites and giving a Templar form to many of the high degrees. And it cannot be doubted that the incorporation of Templarism into the modern Masonic system is mainly to be attributed to ideas suggested by this d'Aumont Legend.

As there appears to be some difficulty in reconciling the supposed heretical opinions of the Templars with the strictly Christian faith of the Scottish Masons, to meet this objection a third Legend was invented, in which it was stated that after the abolition of the Templars, the clerical part of the Order—that is, the chaplains and priests—united in Scotland to revive it and to transplant it into Freemasonry. But as this Legend has not met with many supporters and was never strongly urged, it is scarcely necessary to do more than thus briefly to allude to it.

Much as the Legend of d'Aumont has exerted an influence in mingling together the elements of Templarism and Freemasonry, as we see at the present day in Britain and in America, and in the high degrees formed on the continent of Europe, the dogma of Ramsay, that every Freemason is a Templar, has been utterly repudiated, and the authenticity of the Legend has been rejected by nearly all of the best Masonic scholars.

Dr. Burnes, who was a believer in the legitimacy of the French Order of the Temple, as being directly derived from de Molay through Larmenius, and who, therefore, subscribed unhesitatingly to the authenticity of the "Charter of Transmission," does not hesitate to call Von Hund "an adventurer" and his Legend of d'Aumont "a plausible tale."

Of that part of the Legend which relates to the transfer of the chief

seat of the Templars to Aberdeen in Scotland, he says that "the imposture was soon detected, and it was even discovered that he had himself enticed and initiated the ill-fated Pretender into his fabulous order of chivalry. The delusions on this subject had taken such a hold in Germany, that they were not altogether dispelled until a deputation had actually visited Aberdeen and found amongst the worthy and astonished brethren there no trace either of very ancient Templars or of Freemasonry."¹

In this last assertion, however, Burnes is in error, for it is alleged that the Lodge of Aberdeen was instituted in 1541, though, as its more ancient minutes have been, as it is said, destroyed by fire, its present records go no further back than 1670. Bro. Lyon concurs with Burnes in the statement that the Aberdeenians were much surprised when first told that their Lodge was an ancient center of the High Degrees.²

William Frederick Wilke, a German writer of great ability, has attacked the credibility of this Scottish Legend with a closeness of reasoning and a vigor of arguments that leave but little room for reply. As he gives the Legend in a slightly different form, it may be interesting to quote it, as well as his course of argument.

"The Legend relates," he says, "that after the suppression of the Order the head of the Templar clergy, Peter of Boulogne, fled from prison and took refuge with the Commander Hugh, Wildgrave of Salm, and thence escaped to Scotland with Sylvester von Grumbach. Thither the Grand Commander Harris and Marshal d'Aumont had likewise betaken themselves, and these three preserved the secrets of the Order of Templars and transferred them to the Fraternity of Freemasons."

In commenting on this statement Wilke says it is true that Peter of Boulogne fled from prison, but whither he went never has been known. The Wildgrave of Salm never was in prison. But the legendist has entangled himself in saying that Peter left the Wildgrave Hugh and went to Scotland with Sylvester von Grumbach, for Hugh and Sylvester are one and the same person. His

² "History of the Lodge of Edinburgh," p. 420.

³ In his "Geschichte des Tempelherren's Orders." I have not been able to obtain the work, but I have availed myself of an excellent analysis of it in "Findel's History of Freemasonry," Lyon's Translation.

title was Count Sylvester Wildgrave, and Grumbach was the designation of his Templar Commandery. Hugh of Salm, also Wildgrave and Commander of Grumbach, never took refuge in Scotland, and after the abolition of the Order was made Prebendary of the Cathedral of Mayence.

Wilke thinks that the continuation of the Templar Order was attributed to Scotland because the higher degrees of Freemasonry, having reference in a political sense to the Pretender, Edward Stuart, were called Scotch. Scotland is, therefore, the cradle of the higher degrees of Masonry. But here I am inclined to differ from him and am disposed rather to refer the explanation to the circumstance that Ramsay, who was the inventor of the Legend and the first fabricator of the high degrees, was a native of Scotland and was born in the neighborhood of Kilwinning. To these degrees he gave the name of Scottish Masonry, in a spirit of nationality, and hence Scotland was supposed to be their birthplace. This is not, however, material to the present argument.

Wilke says that Harris and d'Aumont are not mentioned in the real history of the Templars and therefore, if they were Knights, they could not have had any prominence in the Order, and neither would have been likely to have been chosen by the fugitive Knights as their Grand Master.

He concludes by saying that of course some of the fugitive Templars found their way to Scotland, and it may be believed that some of the brethren were admitted into the building fraternities, but that is no reason why either the Lodges of builders or the Knights of St. John should be considered as a continuation of the Templar Order, because they both received Templar fugitives, and the less so as the building guilds were not, like the Templars, composed of chivalrous and free-thinking worldlings, but of pious workmen who cherished the pure doctrines of religion.

The anxiety of certain theorists to connect Templarism with Freemasonry, has led to the invention of other fables, in which the Hiramic Legend of the Master's degree is replaced by others referring to events said to have occurred in the history of the knightly Order. The most ingenious of these is the following:

Some time before the destruction of the Order of Templars, a certain Sub-prior of Montfauçon, named Carolus de Monte Carmel, was murdered by three traitors. From the events that accompanied

and followed this murder, it is said that an important part of the ritual of Freemasonry has been derived. The assassins of the Sub-prior of Montfauçon concealed his body in a grave, and in order to designate the spot, planted a young thorn-tree upon it. The Templars, in searching for the body, had their attention drawn to the spot by the tree, and in that way they discovered his remains. The Legend goes on to recite the disinterring of the body and its removal to another grave, in striking similarity with the same events narrated in the Legend of Hiram.

Another theory connects the martyrdom of James de Molay, the last Grand Master of the Templars, with the Legend of the third degree, and supposes that in that Legend, as now preserved in the Masonic ritual, Hiram has been made to replace de Molay, that the fact of the Templar fusion into Masonry might be concealed.

Thus the events which in the genuine Masonic Legend are referred to Hiram Abif are, in the Templar Legend, made applicable to de Molay; the three assassins are said to be Pope Clement V., Philip the Fair, King of France, and a Templar named Naffodei, who betrayed the Order. They have even attempted to explain the mystical search for the body by the invention of a fable that on the night after de Molay had been burnt at the stake, certain Knights diligently sought for his remains amongst the ashes, but could find only some bones to which the flesh, though scorched, still adhered, but which it left immediately upon their being handled; and in this way they explain the origin of the substitute word, according to the mistranslation too generally accepted.

Nothing could more clearly show the absurdity of the Legend than this adoption of a popular interpretation of the meaning of this word, made by someone utterly ignorant of the Hebrew language. The word, as is now well known to all scholars, has a totally different signification.

But it is scarcely necessary to look to so unessential a part of the narrative for proof that the whole Legend of the connection of Templarism with Freemasonry is irreconcilable with the facts of history.

The Legend of Bruce and Bannockburn has already been disposed of. The story has no historical foundation.

The other Legend, that makes d'Aumont and his companions founders of the Masonic Order in Scotland by amalgamating the

Knights with the fraternity of builders, is equally devoid of an historical basis. But, besides, there is a feature of improbability if not of impossibility about it. The Knights Templars were an aristocratic Order, composed of high-born gentlemen who had embraced the soldier's life as their vocation, and who were governed by the customs of chivalry. In those days there was a much wider line of demarcation drawn between the various casts of society than exists at the present day. The "belted knight" was at the top of the social scale, the mechanic at the bottom.

It is therefore almost impossible to believe that because their Order had been suppressed, these proud soldiers of the Cross, whose military life had unfitted them for any other pursuit except that of arms, would have thrown aside their swords and their spurs and assumed the trowel; with the use of this implement and all the mysteries of the builder's craft they were wholly unacquainted. To have become Operative Masons, they must have at once abandoned all the prejudices of social life in which they had been educated. That a Knight Templar would have gone into some religious house as a retreat from the world whose usage of his Order had disgusted him, or taken refuge in some other chivalric Order, might reasonably happen, as was actually the case. But that these Knights would have willingly transformed themselves into Stonemasons and daily workmen is a supposition too absurd to extort belief even from the most credulous.

We may then say that those legendists who have sought by their own invented traditions to trace the origin of Freemasonry to Templarism, or to establish any close connection between the two Institutions, have failed in their object.

They have attempted to write a history, but they have scarcely succeeded in composing a plausible romance.

CHAPTER XXX

FREEMASONRY AND THE HOUSE OF STUART

THE theory that connects the royal house of the Stuarts with Freemasonry, as an Institution to be cultivated, not on account of its own intrinsic merit, but that it might serve as a political engine to be wielded for the restoration of an exiled family to a throne which the follies and even the crimes of its members had forfeited, is so repugnant to all that has been supposed to be congruous with the true spirit and character of Freemasonry, that one would hardly believe that such a theory was ever seriously entertained, were it not for many too conclusive proofs of the fact.

The history of the family of Stuart, from the accession of James I. to the throne of England to the death of the last of his descendants, the young Pretender, is a narrative of follies and sometimes of crimes. The reign of James was distinguished only by arts which could gain for him no higher title with posterity than that of a royal pedant. His son and successor Charles I. was beheaded by an indignant people whose constitutional rights and liberties he had sought to betray. His son Charles II., after a long exile was finally restored to the throne, only to pass a life of indolence and licentiousness. On his death he was succeeded by his brother James II., a prince distinguished only for his bigotry. Zealously attached to the Roman Catholic religion, he sought to restore its power and influence among his subjects, who were for the most part Protestants. To save the Established Church and the religion of the nation, his estranged subjects called to the throne the Protestant Prince of Orange, and James, abdicating the crown, fled to France, where he was hospitably received with his followers by Louis XIV., who could, however, say nothing better of him than that he had given three crowns for a mass. From 1688, the date of his abdication and flight, until the year 1745 the exiled family

were engaged in repeated but unavailing attempts to recover the throne.

It is not unreasonable to suppose that in these attempts the partisans of the house of Stuart were not unwilling to accept the influence of the Masonic Institution, as one of the most powerful instruments whereby to effect their purpose.

It is true that in this, the Institution would have been diverted from its true design, but the object of the Jacobites, as they were called, or the adherents of King James was not to elevate the character of Freemasonry but only to advance the cause of the Pretender.

It must however be understood that this theory which connects the Stuarts with Masonry does not suppose that the third or Master's degree was invented by them or their adherents, but only that there were certain modifications in the application of its Legend. Thus, the Temple was interpreted as alluding to the monarchy, the death of its Builder to the execution of Charles I., or to the destruction of the succession by the compulsory abdication of James II., and the dogma of the resurrection to the restoration of the Stuart family to the throne of England.

Thus, one of the earliest instances of this political interpretation of the Master's Legend was that made after the expulsion of James II. from the throne and his retirement to France. The mother of James was Henrietta Maria, queen of Charles I. The Jacobites called her "the Widow," and the exiled James became "the Widow's son," receiving thus the title applied in the Masonic Legend to Hiram Abif, whose death they said symbolized the loss of the throne and the expulsion of the Stuarts from England.

They carried this idea to such an extent as to invent a new substitute word for the Master's degree, in the place of the old one, which was known to the English Masons at the time of the Revival in 1717.

This new word was not, as the significant words of Masonry usually are, of Hebrew origin, but was derived from the Gaelic. And this seems to have been done in compliment to the Highlanders, most of whom were loyal adherents of the Stuart cause.

The word *Macbenac* is derived from the Gaelic *mac*, a son, and *benach*, blessed, and literally means the "blessed son;" and this word was applied by the Jacobites to James, who was thus not only

a "widow's son" but a "blessed" one, too. Masonry was here made subservient to loyalty.

They also, to mark their political antipathy to the enemies of the Stuart family, gave to the most prominent leaders of the republican cause, the names in which old Masonry had been appropriated to the assassins of the third degree. In the Stuart Masonry we find these assassins designated by names, generally unintelligible, but, when they can be explained, evidently referring to some well-known opponent of the Stuart dynasty. Thus, *Romvel* is manifestly an imperfect anagram of *Cromwell*, and *Jubelum Guibbs* doubtless was intended as an infamous embalmment of the name of the Rev. Adam Gib, an antiburgher clergyman, who, when the Pretender was in Edinburgh in 1745, hurled anathemas, for five successive Sundays against him.

But it was in the fabrication of the high degrees that the partisans of the Stuarts made the most use of Freemasonry as a political instrument.

The invention of these high degrees is to be attributed in the first place to the Chevalier Ramsay. He was connected in the most intimate relation with the exiled family, having been selected by the titular James III., or, as he was commonly known in England, the Old Pretender, as the tutor of his two sons, Charles Edward and Henry, the former of whom afterward became the Young Pretender, and the latter Cardinal York.

Ardently attached, by this relationship, by his nationality as a Scotchman, and by his religion as a Roman Catholic, to the Stuarts and their cause, he met with ready acquiescence the advances of those who had already begun to give a political aspect to the Masonic system, and who were seeking to enlist it in the Pretender's cause. Ramsay therefore aided in the modification of the old degrees or the fabrication of new ones, so that these views might be incorporated in a peculiar system; and hence in many of the high degrees invented either by Ramsay or by others of the same school, we will find these traces of a political application to the family of Stuart, which were better understood at that time than they are now.

Thus, one of the high degrees received the name of "Grand Scottish Mason of James VI." Of this degree Tessier says that it is the principal degree of the ancient Master's system, and was revived and esteemed by James VI., King of Scotland and of Great

Britain, and that it is still preserved in Scotland more than in any other kingdom.¹

All of this is of course a mere fiction, but it shows that there has been a sort of official acknowledgment of the interference with Masonry by the Stuarts, who did not hesitate to give the name of the first founder of their house on the English throne to one of the degrees.

Another proof is found in the word *Jekson*, which is a significant word in one of the high Scottish or Ramsay degrees. It is thus spelled in the *Cahiers* or manuscript French rituals. There can be no doubt that it is a corruption of *Jacquesson*, a mongrel word compounded of the French *Jacques* and the English *son*, and denotes *The son of James*, that is, of James II. This son was the Old Pretender, or the Chevalier St. George, who after the death of his father assumed the empty title of James III., and whose son, the Young Pretender, was one of the pupils of the Chevalier Ramsay.

These, with many other similar instances, are very palpable proofs that the adherents of the Stuarts sought to infuse a political element into the spirit of Masonry, so as to make it a facile instrument for the elevation of the exiled family and the restoration of their head to the throne of England.

Of the truth of this fact, it is supposed that much support is to be found in the narrative of the various efforts for restoration made by the Stuarts.

When James II. made his flight from England he repaired to France, where he was hospitably received by Louis XIV. He took up his residence while in Paris at the Jesuitical College of Clermont. There, it is said, he first sought, with the assistance of the Jesuits, to establish a system of Masonry which should be employed by his partisans in their schemes for his restoration to the throne. After an unsuccessful invasion of Ireland he returned to France and repaired to St. Germain-en-Laye, a city about ten miles northwest of Paris, where he lived until the time of his death in 1701. It is one of the Stuart myths that at the Château of St. Germain some of the high degrees were fabricated by the adherents of James II., assisted by the Jesuits.

The story is told by Robison, a professed enemy of Freemasonry,

¹ "Manuel Générale de Maçonnerie," p. 148.

but who gives with correctness the general form of the Stuart Legend as it was taught in the last century.

Robison says: "The revolution had taken place, and King James, with many of his most zealous adherents, had taken refuge in France.

"But they took Freemasonry with them to the Continent, where it was immediately received by the French, and cultivated with great zeal in a manner suited to the taste and habits of that highly polished people. The Lodges in France naturally became the rendezvous of the adherents of the exiled king, and the means of carrying on a correspondence with their friends in England."¹

Robison says that at this time the Jesuits took an active part in Freemasonry, and united with the English Lodges, with the view of creating an influence in favor of the re-establishment of the Roman Catholic religion in England. But the supposed connection of the Jesuits with Freemasonry pertains to an independent proposition, to be hereafter considered.

Robison further says that "it was in the Lodge held at St. Germain that the degree of *Chevalier Maçon Ecossais* was added to the three *symbolical* degrees of English Masonry. The Constitution, as imported, appeared too coarse for the refined taste of the French, and they must make Masonry more like the occupation of a gentleman. Therefore the English degrees of Apprentice, Fellowcraft, and Master were called *symbolical*, and the whole contrivance was considered either as typical of something more elegant or as a preparation for it. The degrees afterward superadded to this leave us in doubt which of these views the French entertained of our Masonry. But, at all events, this rank of Scotch Knight was called the *first* degree of the *Maçon Parfait*. There is a device belonging to this Lodge which deserves notice. A lion wounded by an arrow, and escaped from the stake to which he had been bound, with the broken rope still about his neck, is represented lying at the mouth of a cave, and occupied with mathematical instruments, which are lying near him. A broken crown lies at the foot of the stake. There can be little doubt but that this emblem alludes to the dethronement, the captivity, the escape, and the asylum of James II., and his hopes of re-establishment by the help of the

¹ "Proofs of a Conspiracy," p. 27.

loyal Brethren. This emblem is worn as the gorget of the Scotch Knight. It is not very certain, however, when this degree was added, whether immediately after King James's abdication or about the time of the attempt to set his son on the British throne."¹

This extract from Robison presents a very fair specimen of the way in which Masonic history was universally written in the last century and is still written by a few in the present.

Although it cannot be denied that at a subsequent period the primitive degrees were modified and changed in their application of the death of Hiram Abif to that of Charles I., or the dethronement of James II., and that higher degrees were created with still more definite allusion to the destinies of the family of Stuart, yet it is very evident that no such measures could have been taken during the lifetime of James II.

The two periods referred to by Robison, the time of the abdication of James II., which was in 1688, and the attempt of James III., as he was called, to regain the throne, which was in 1715, as being, one or the other, the date of the fabrication of the degree of Scottish Knight or Master, are both irreconcilable with the facts of history. The symbolical degrees of Fellow Craft and Master had not been invented before 1717, or rather a few years later, and it is absurd to speak of higher degrees cumulated upon lower ones which did not at that time exist.

James II. died in 1701. At that day we have no record of any sort of Speculative Masonry except that of the one degree which was common to Masons of all ranks. The titular King James III., his son, succeeded to the claims and pretensions of his father, of course, in that year, but made no attempt to enforce them until 1715, at which time he invaded England with a fleet and army supplied by Louis XIV. But in 1715, Masonry was in the same condition that it had been in 1701. There was no Master's degree to supply a Legend capable of alteration for a political purpose, and the high degrees were altogether unknown. The Grand Lodge of England, the mother of all Continental as well as English Masonry, was not established, or as Anderson improperly calls it, "revived," until 1717. The Institution was not introduced into France until 1725, and there could, therefore, have been no political Masonry practiced in a

¹ Robison, "Proofs of a Conspiracy," p. 28.

country where the pure Masonry of which it must have been a corruption did not exist. Scottish or Stuart Masonry was a superstructure built upon the foundation of the symbolic Masonry of the three degrees. If in 1715 there was, as we know, no such foundation, it follows, of course, that there could have been no superstructure.

The theory, therefore, that Stuart Masonry, or the fabrication of degrees and the change of the primitive rituals to establish a system to be engaged in the support and the advancement of the falling cause of the Stuarts, was commenced during the lifetime of James II., and that the royal château of St. Germain-en-Laye was the manufactory in which, between the years 1689 and 1701, these degrees and rituals were fabricated, is a mere fable not only improbable but absolutely impossible in all its details.

Rebold, however, gives another form to the Legend and traces the rise of Stuart Masonry to a much earlier period. In his *History of the Three Grand Lodges* he says that during the troubles which distracted Great Britain about the middle of the 17th century and after the decapitation of Charles I. in 1649, the Masons of England, and especially those of Scotland, labored secretly for the re-establishment of the monarchy which had been overthrown by Cromwell. For the accomplishment of this purpose they invented two higher degrees and gave to Freemasonry an entirely political character. The dissensions to which the country was a prey had already produced a separation of the Operative and the Accepted Masons—that is to say, of the builders by profession and those honorary members who were not Masons. These latter were men of power and high position, and it was through their influence that Charles II., having been received as a Mason during his exile, was enabled to recover the throne in 1660. This prince gratefully gave to Masonry the title of the "Royal Art," because it was Freemasonry that had principally contributed to the restoration of royalty.¹

Ragon, in his *Masonic Orthodoxy*,² is still more explicit and presents some new details. He says that Ashmole and other Brethren of the Rose Croix, seeing that the Speculative Masons were surpassing in numbers the Operative, had renounced the simple initiation of the latter and established new degrees founded on the

¹ "Histoire de Trois Grandes Loges," p. 32.

² Ragon, "Orthodoxie Maçonnique," p. 29.

Mysteries of Egypt and Greece. The Fellow Craft degree was fabricated in 1648, and that of Master a short time afterward. But the decapitation of King Charles I., and the part taken by Ashmole in favor of the Stuarts produced great modifications in this third and last degree, which had become of a Biblical character. The same epoch gave birth to the degrees of *Secret Master*, *Perfect Master*, and *Irish Master*, of which Charles I. was the hero, under the name of Hiram. These degrees, he says, were, however, not then openly practiced, although they afterward became the ornament of Ecosaism.

But the non-operative or "Accepted" members of the organization secretly gave to the Institution, especially in Scotland, a political tendency. The chiefs or protectors of the Craft in Scotland worked, in the dark, for the re-establishment of the throne. They made use of the seclusion of the Masonic Lodges as places where they might hold their meetings and concert their plans in safety. As the execution of Charles I. was to be avenged, his partisans fabricated a Templar degree, in which the violent death of James de Molay called for vengeance. Ashmole, who partook of that political sentiment, then modified the degree of Master and the Egyptian doctrine of which it was composed, and made it conform to the two preceding degrees framing a Biblical allegory, incomplete and inconsistent, so that the initials of the sacred words of these three degrees should compose those of the name and title of the Grand Master of the Templars.

Northouck,¹ who should have known better, gives countenance to these *supercheries* of history by asserting that Charles II. was made a Mason during his exile, although he carefully omits to tell us when, where, how, or by whom the initiation was effected; but seeks, with a flippancy that ought to provoke a smile, to prove that Charles II. took a great interest in Masonry and architecture, by citing the preamble to the charter of the Royal Society, an association whose object was solely the cultivation of the philosophical and mathematical sciences, especially astronomy and chemistry, and whose members took no interest in the art of building.

Dr. Oliver, whose unfortunate failing was to accept without careful examination all the statements of preceding writers, how-

¹ "Constitutions," p. 141.

ever absurd they might be, repeats substantially these apocryphal tales about early Stuart Masonry.

He says that, about the close of the 17th century, the followers of James II. who accompanied the unfortunate monarch in his exile carried Freemasonry to France and laid the foundation of that system of innovation which subsequently threw the Order into confusion, by the establishment of a new degree, which they called the *Chevalier Maçon Ecossais*, and worked the details in the Lodge at St. Germain. Hence, he adds, other degrees were invented in the Continental Lodges, which became the rendezvous of the partisans of James, and by these means they held communication with their friends in England.¹

But as the high degrees were not fabricated until more than a third of the 18th century had passed, and as James died in 1701, we are struck with the confusion that prevails in this statement as to dates and persons.

It is very painful and embarrassing to the scholar who is really in search of truth to meet with such caricatures of history, in which the boldest and broadest assumptions are offered in the place of facts, the most absurd fables are presented as narratives of actual occurrences, chronology is put at defiance, anachronisms are coolly perpetrated, the events of the 18th century are transferred to the 17th, the third degree is said to have been modified in its ritual during the Commonwealth, when we know that no third degree was in existence until after 1717; and we are told that high degrees were invented at the same time, although history records the fact that the first of them was not fabricated until about the year 1728. Such writers, if they really believed what they had written, must have adopted the axiom of the credulous Tertullian, who said, *Credo quia impossibile est* — "I believe because it is impossible." Better would it be to remember the saying of Polybius, that if we eliminate truth from history nothing will remain but an idle tale.

We must, then, reject as altogether untenable the theory that there was any connection between the Stuart family and Freemasonry during the life of James II., for the simple reason that at that period there was no system of Speculative Masonry existing

¹ "Historical Landmarks," II., p. 28.

which could have been perverted by the partisans of that family into a political instrument for its advancement. If there was any connection at all, it must be looked for as developed at a subsequent period.

The views of Findel on this subject, as given in his *History of Freemasonry*, are worthy of attention, because they are divested of that mystical element so conspicuous and so embarrassing in all the statements which have been heretofore cited. His language is as follows:

"Ever since the banishment of the Stuarts from England in 1688, secret alliances had been kept up between Rome and Scotland; for to the former place the Pretender James Stuart had retired in 1719 and his son Charles Edward was born there in 1720; and these communications became the more intimate the higher the hopes of the Pretender rose. The Jesuits played a very important part in these conferences. Regarding the reinstatement of the Stuarts and the extension of the power of the Roman Church as identical, they sought at that time to make the Society of Freemasons subservient to their ends. But to make use of the Fraternity, to restore the exiled family to the throne, could not have been contemplated, as Freemasonry could hardly be said to exist in Scotland then. Perhaps in 1724, when Ramsay was a year in Rome, or in 1728, when the Pretender in Parma kept up an intercourse with the restless Duke of Wharton, a Past Grand Master, this idea was first entertained, and then when it was apparent how difficult it would be to corrupt the loyalty and fealty of Freemasonry in the Grand Lodge of Scotland, founded in 1736, this scheme was set on foot of assembling the faithful adherents of the banished royal family in the High Degrees! The soil that was best adapted for this innovation was France, where the low ebb to which Masonry had sunk had paved the way for all kinds of new-fangled notions, and where the Lodges were composed of Scotch conspirators and accomplices of the Jesuits. When the path had thus been smoothed by the agency of these secret propagandists, Ramsay, at that time Grand Orator (an office unknown in England), by his speech completed the preliminaries necessary for the introduction of the High Degrees; their further development was left to the instrumentality of others, whose influence produced a result somewhat different from that originally intended."¹

¹ "Geschichte der Freimaurerei."—Translation of Lyon, p. 209.

After the death of James II. his son, commonly called the Chevalier St. George, does not appear to have actively prosecuted his claims to the throne beyond the attempted invasion of England in 1715. He afterward retired to Rome, where the remainder of his life was passed in the quiet observation of religious duties. Nor is there any satisfactory evidence that he was in any way connected with Freemasonry.

In the meantime, his sons, who had been born at Rome, were intrusted to the instructions of the Chevalier Michael Andrew Ramsay, who was appointed their tutor. Ramsay was a man of learning and genius—a Scotchman, a Jacobite, and a Roman Catholic—but he was also an ardent Freemason.

As a Jacobite he was prepared to bend all his powers to accomplish the restoration of the Stuarts to what he believed to be their lawful rights. As a Freemason he saw in that Institution a means, if properly directed, of effecting that purpose. Intimately acquainted with the old Legends of Masonry, he resolved so to modify them as to transfer their Biblical to political allusions. With this design he commenced the fabrication of a series of High Degrees, under whose symbolism he concealed a wholly political object.

These High Degrees had also a Scottish character, which is to be attributed partly to the nationality of Ramsay and partly to a desire to effect a political influence among the Masons of Scotland, in which country the first attempts for the restoration of the Stuarts were to be made. Hence we have to this day in Masonry such terms as "Ecossaim," "Scottish Knights of St. Andrew," "Scottish Master," "Scottish Architect," and the "Scottish Rite," the use of which words is calculated to produce upon readers not thoroughly versed in Masonic history the impression that the High Degrees of Freemasonry originated in Scotland—an impression which it was the object of Ramsay to make.

There is another word for which the language of Masonry has been indebted to Ramsay. This is *Heredom*, indifferently spelled in the old rituals, *Herodem*, *Heroden* and *Heredon*. Now the etymology of this word is very obscure and various attempts have been made to trace it to some sensible signification.

One writer¹ thinks that the word is derived from the Greek

¹ London *Freemasons' Magazine*.

hieros — "holy," and *domos* — "house," and that it means "the *holy house*" that is, the Temple. This explanation is ingenious, and it has been adopted by some recent authorities,

Ragon,¹ however, offers a different etymology. He thinks that it is a corrupted form of the mediæval Latin *hæredum*, which signifies a "heritage," and that it refers to the Château of St. Germain, the residence for a long time of the exiled Stuarts and the only heritage which was left to them. If we accept this etymology, I should rather be inclined to think that the heritage referred to the throne of Great Britain, which they claimed as their lawful possession, and of which, in the opinion of their partisans, they had been unrighteously despoiled.

This derivation is equally as ingenious and just as plausible as the former one, and if adopted will add another link to the chain of evidence which tends to prove that the high degrees were originally fabricated by Ramsay to advance the cause of the Stuart dynasty.

Whatever may be the derivation of the word the rituals leave us in no doubt as to what was its pretended meaning. In one of these rituals, that of the Grand Architect, we meet with the following questions and answers:

"*Q.* Where was your first Lodge held?"

"*A.* Between three mountains, inaccessible to the profane, where cock never crew, lion roared, nor woman chattered; in a profound valley.

"*Q.* What are these three mountains named?"

"*A.* Mount Moriah, in the bosom of the land of Gabaon, Mount Sinai, and the Mountain of Heredon.

"*Q.* What is this Mountain of Heredon?"

"*A.* A mountain situated between the West and the North of Scotland, at the end of the sun's course, where the first Lodge of Masonry was held: in that terrestrial part which has given name to Scottish Masonry.

"*Q.* What do you mean by a profound valley?"

"*A.* I mean the tranquillity of our Lodges."

From this catechism we learn that in inventing the word *Heredon* to designate a fabulous mountain, situated in some unknown part of Scotland, Ramsay meant to select that kingdom as the birth-

¹ "Orthodoxie Maçonnique," p. 91.

place of those Masonic degrees by whose instrumentality he expected to raise a powerful support in the accomplishment of the designs of the Jacobite party. The selection of this country was a tribute to his own national prejudices and to those of his countrymen.

Again: by the "profound valley," which denoted "the tranquility of the Lodges," Ramsay meant to inculcate the doctrine that in the seclusion of these Masonic reunions, where none were to be permitted to enter except "the well-trying, true, and trusty," the plans of the conspirators to overthrow the Hanoverian usurpation and to effect the restoration of the Stuarts could be best conducted. Fortunately for the purity of the non-political character of the Masonic Institution, this doctrine was not generally accepted by the Masons of Scotland.

But there is something else concerning this word *Heredon*, in its connection with Stuart Freemasonry, that is worth attention.

There is an Order of Freemasonry, at this day existing, almost exclusively in Scotland. It is called the Royal Order of Scotland, and consists of two degrees, entitled "Heredon of Kilwinning," and "Rosy Cross." The first is said, in the traditions of the Order, to have originated in the reign of David I., in the 12th century, and the second to have been instituted by Robert Bruce, who revived the former and incorporated the two into one Order, of which the King of Scotland was forever to be the head. This tradition is, however, attacked by Bro. Lyon, in his *History of the Lodge of Edinburgh*. He denies that the Lodge at Kilwinning ever at any period practiced or acknowledged other than the Craft degrees, or that there exists any tradition, local or national, worthy of the name, or any authentic document yet discovered that can in the remotest degree be held to identify Robert Bruce with the holding of Masonic courts or the institution of a secret society at Kilwinning

"The paternity of the Royal Order," he says, "is now pretty generally attributed to a Jacobite Knight named Andrew Ramsay, a devoted follower of the Pretender, and famous as the fabricator of certain rites, inaugurated in France about 1735-40, and through the propagation of which it was hoped the fallen fortunes of the Stuarts would be retrieved."¹

On September 24, 1745, soon after the commencement of his

¹ "History of the Lodge of Edinburgh," p. 307.

invasion of Britain, Charles Edward, the son of the Old Pretender, or Chevalier St. George, styled by his adherents James III., is said to have been admitted into the Order of Knights Templars, and to have been elected its Grand Master, a position which he held until his death. Such is the tradition, but here again we are met by the authentic statements of Bro. Lyon that Templarism was not introduced into Scotland until the year 1798.¹ It was then impossible that Charles Edward could have been made a Templar at Edinburgh in 1745.

It is, however, probable that he was invested with official supremacy over the high degrees which had been fabricated by Ramsay in the interest of his family, and it is not unlikely, as has been affirmed, that, resting his claim on the ritual provision that the Kings of Scotland were the hereditary Grand Masters of the Royal Order, he had assumed that title. Of this we have something like an authentic proof, something which it is refreshing to get hold of as an oasis of history in this arid desert of doubts and conjectures and assumptions.

In the year 1747, more than twelve months after his return from his disastrous invasion of Scotland and England, Charles Edward issued a charter for the formation at the town of Arras in France of what is called in the instrument "a Sovereign Primordial Chapter of Rose Croix under the distinctive title of Scottish Jacobite."

In 1853, the Count de Hamel, Prefect of the Department in which Arras is situated, discovered an authentic copy of the charter in the Departmental archives.

In this document, the Young Pretender gives his Masonic titles in the following words:

"We, Charles Edward, King of England, France, Scotland, and Ireland, and as such Substitute Grand Master of the Chapter of H., known by the title of Knight of the Eagle and Pelican, and since our sorrows and misfortunes by that of Rose Croix," etc.

The initial letter "H." undoubtedly designates the Scottish Chapter of Heredon. Of this body, by its ritual regulation, his father as King of Scotland, would have been the hereditary Grand Master, and he, therefore, only assumes the subordinate one of Substitute.

¹ "History of the Lodge of Edinburgh," p. 287.

This charter, of the authenticity of which, as well as the transaction which it records, there appears to be no doubt, settles the question that it was of the Royal Order of Scotland and not of the Knights Templars that Charles Edward was made Grand Master, or himself assumed the Grand Mastership, during his visit in 1745 to Edinburgh. As that Order and the other High Degrees were fabricated by the Chevalier Ramsay to promote the interests of his cause, his acceptance or assumption of the rank and functions of a presiding officer was a recognition of the plan to use Masonry as a political instrument, and is, in fact, the first and fundamental point in the history of the hypothesis of Stuart Masonry. We here for the first time get tangible evidence that there was an attempt to connect the Institution of Freemasonry with the fortunes and political enterprises of the Stuarts.

The title given to this primordial charter at Arras is further evidence that its design was really political; for the words *Ecosse Jacobite*, or Scottish Jacobite, were at that period universally accepted as a party name to designate a partisan of the Stuart pretensions to the throne of England.

The charter also shows that the organization of this chapter was intended only as the beginning of a plan to enlist other Masons in the same political design, for the members of the chapter were authorized "not only to make knights, but even to create a chapter in whatever town they might think proper," which they actually did in a few instances, among them one at Paris in 1780, which in 1801 was united to the Grand Orient of France.

A year after the establishment of the Chapter at Arras, the Rite of the *Veille Bru*, or the *Faithful Scottish Masons*, was created at Toulouse in grateful remembrance of the reception given by the Masons of that place to Sir Samuel Lockhart, the aide-de-camp of the Pretender. Ragon says that the favorites who accompanied this prince to France were accustomed to sell to certain speculators charters for mother Lodges, patents for Chapters, etc. These titles were their property and they did not fail to use them as a means of livelihood.

It has been long held as a recognized fact in Masonic history that the first Lodge established in France by a warrant from the Grand Lodge of England was held in the year 1725. There is no doubt that a Lodge of Freemasons met in that year at the house of

one Hure, and that it was presided over by the titular Earl of Derwentwater. But the researches of Bro. Hughan have incontestably proved that this was what we would now call a clandestine body, and that the first French Lodge legally established by the Grand Lodge of England was in 1732. Besides the fact that there is no record in that Grand Lodge of England of any Lodge in France at the early date of 1725, it is most improbable that a warrant would have been granted to so conspicuous a Jacobite as Derwentwater. Political reasons of the utmost gravity at that time would have forbidden any such action.

Charles Radcliffe, with his brother the Earl of Derwentwater, had been arrested in England for the part taken by them in the rebellion of 1715 to place James III. on the throne. They were both condemned to death and the earl was executed, but Radcliffe made his escape to France, where he assumed the title which, as he claimed, had devolved upon him by the death of his brother's son. In the subsequent rebellion of 1745, having attempted to join the Young Pretender, the vessel in which he sailed was captured by an English cruiser, and being carried to London, he was decapitated in December, 1746.

The titular Earl of Derwentwater was therefore a zealous Jacobite, an attainted rebel who had been sentenced to death for his treason, a fugitive from the law, and a pensioner of the Old Pretender or Chevalier St. George, who, by the order of Louis XIV., had been proclaimed King of England under the title of James III.

It is absurd, therefore, to suppose that the Grand Lodge of England would have granted to him and to his Jacobite associates a warrant for the establishment of a Lodge. Its statutes had declared in very unmistakable words that a rebel against the State was not to be countenanced in his rebellion. But no greater countenance could have been given than to make him the Master of a new Lodge.

Such, however, has until very recently been universally accepted as a part of the authentic history of Masonry in France. In the words of a modern feuilletonist, "the story was too ridiculous to be believed, and so everybody believed it."

But it is an undeniable fact that in 1725 an English Lodge was really opened and held in the house of an English confectioner named Hure. It was however without regular or legal authority—

was probably organized, although we have no recorded evidence to that effect, through the advice and instructions of Ramsay—and was a Jacobite Lodge consisting solely of the adherents and partisans of the Old Pretender.

This is the most explicit instance that we have of the connection of the Stuarts with Freemasonry. It was an effort made by the adherents of that house to enlist the Order as an instrument to restore its fallen fortunes. The principal members of the Lodge were Derwentwater, Maskelyne, and Heguerty or Heguety. Of Derwentwater I have already spoken; the second was evidently a Scotchman, but the name of the third has been so corrupted in its French orthography that we are unable to trace it to its source. It has been supposed that the real name was Haggerty; if so, he was probably an Irishman. But they were all Jacobites.

The Rite of Strict Observance, which at one time in the last century took so strong a hold upon the Masons of Germany, and whose fundamental doctrine was that of Ramsay—that Freemasonry was only a continuation of the Templar system—is said to have been originally erected in the interests of the Stuarts, and the Brotherhood was expected to contribute liberally to the enterprises in favor of the Pretender.

Upon a review of all that has been written on this very intricate subject—the theories oftentimes altogether hypothetical, assumptions in place of facts, conjectures altogether problematical, and the grain of history in this vast amount of traditional and mythical trash so small—we may, I think, be considered safe in drawing a few conclusions.

In the first place it is not to be doubted that at one time the political efforts of the adherents of the dethroned and exiled family of the Stuarts did exercise a very considerable effect on the outward form and the internal spirit of Masonry, as it prevailed on the continent of Europe.

In the symbolic degrees of ancient Craft Masonry, the influence was but slightly felt. It extended only to a political interpretation of the Legend of the Master's degree, in which sometimes the decapitation of Charles I., and sometimes the forced abdication and exile of James II., was substituted for the fate of Hiram, and to a change in the substitute word so as to give an application of the phrase the "Widow's son" to the child of Henrietta Maria, the con-

sort of Charles I. The effect of these changes, except that of the *word*, which still continues in some Rites, has long since disappeared, but their memory still remains as a relict of the incidents of Stuart Masonry.

But the principal influence of this policy was shown in the fabrication of what are called the "High Degrees," the "Hautes Grades" of the French. Until the year 1728 these accumulations to the body of Masonry were unknown. The Chevalier Ramsay, the tutor of the Pretender in his childhood, and subsequently his most earnest friend and ardent supporter, was the first to fabricate these degrees, although other inventors were not tardy in following in his footsteps.

These degrees, at first created solely to institute a form of Masonry which should be worked for the purpose of restoring the Pretender to the throne of his ancestors, have most of them become obsolete, and their names alone are preserved in the catalogues of collectors; but their effect is to this day seen in such of them as still remain and are practiced in existing Rites, which have been derived indirectly from the system invented in the Chapter of Clermont or the Château of St. Germain. The particular design has passed away but the general features still remain, by which we are enabled to recognize the relicts of Stuart Masonry.

As to the time when this system first began to be developed there can be but little doubt.

We must reject the notion that James II. had any connection with it. However unfitted he may have been by his peculiar temperament from entering into any such bold conspiracy, the question is set at rest by the simple fact that up to the time of his death there was no Masonic organization upon which he or his partisans could have acted.

His son the Chevalier St. George was almost in the same category. He is described in history as a prince—pious, pacific and without talents, incapable of being made the prominent actor in such a drama, and besides, Speculative Masonry had not assumed the proportions necessary to make it available as a part of a conspiracy until long after he had retired from active life to the practice of religious and recluse habits in Rome.

But his son Charles Edward, the Young Pretender as he was called, was of an ardent temperament; an active genius, a fair

amount of talent, and a spirit of enterprise which well fitted him to accept the place assigned him by Ramsay. Freemasonry had then begun to excite public attention, and was already an institution that was rapidly gaining popularity.

Ramsay saw in it what he deemed a fitting lever to be used in the elevation of his patron to the throne, and Prince Charles Edward with eagerness met his propositions and united with him in the futile effort.

To the Chevalier Ramsay we must attribute the invention of Stuart Masonry, the foundations of which he began to lay early in the 18th century, perhaps with the tacit approval of the Old Pretender. About 1725, when the first Lodge was organized in Paris, under some illegitimate authority, he made the first public exposition of his system in the Scottish High Degrees which he at that time brought to light. And finally the workings of the system were fully developed when the Young Pretender began his unsuccessful career in search of a throne, which once lost was never to be recovered.

This conspiracy of Ramsay to connect Freemasonry with the fortunes of the Stuarts was the first attempt to introduce politics into the institution. To the credit of its character as a school of speculative philosophy, the attempt proved a signal failure.

CHAPTER XXXI

THE JESUITS IN FREEMASONRY

THE opinion has been entertained by several writers of eminence that the Company of Jesus, more briefly styled the Jesuits, sought, about the end of the 17th and the beginning of the 18th century, to mingle with the Freemasons and to bend the objects of that Institution to the ambitious designs of their own Order. This view has been denied by other writers of equal eminence, though it is admitted that Roman Catholic, if not Jesuitical, features are to be found in some of the high degrees.

It is contended by one German writer that the object of the Jesuits in seeking a control of the Masonic Institution was that they might be thus assisted in their design of establishing an aristocracy within themselves, and that they sought to accomplish this object by securing not only the direction of the Masonic Lodges, but also by obtaining a monopoly of the schools and churches, and all the pursuits of science, and even of business.

But the more generally accepted reason for this attempted interference with the Lodges is that they thus sought by their influence and secret working to aid the Stuarts to regain the throne, and then, as an expected result, to re-establish the Roman Catholic religion in England.

The first of these explanations is certainly more satisfactory than the second. While there is a great want of historical testimony to prove that the Jesuits ever mingled with Freemasonry—a question to be hereafter decided—there is no doubt of the egotistical and ambitious designs of the disciples of Loyola to secure a control of the public and private affairs of every government where they could obtain a foothold. It was a knowledge of these designs that led to the unpopularity of the Order among even Catholic sovereigns and caused its total suppression, in 1773, by Pope Clement XIV., from

which it was not relieved until 1814, when their privileges were renewed by Pope Pius VII.

But I think that we must concur with Gadeike in the conclusion to which he had arrived, that it is proved by history to be a falsehood that Freemasonry was ever concealed under the mask of Jesuitism, or that it derived its existence from that source.¹ It is, however, but fair that we should collate and compare the arguments on both sides.

Robison, who, where Masonry was concerned, could find a specter in every bush, is, of course, of very little authority as to facts; but he may supply us with a record of the opinions which were prevalent at the time of his writing. He says that when James II. fled from England to France, which was in 1688, his adherents took Freemasonry with them to the continent, where it was received and cultivated by the French in a manner suited to the tastes and habits of that people. But he adds that "at this time, also, the Jesuits took a more active hand in Freemasonry than ever. They insinuated themselves into the English Lodges, where they were caressed by the Catholics, who panted after the re-establishment of their faith, and tolerated by the Protestant royalists, who thought no concession too great a compensation for their services. At this time changes were made in some of the Masonic symbols, particularly in the tracing of the Lodge, which bear evident marks of Jesuitical interference."²

Speaking of the High Degrees, the fabrication of which, however, he greatly antedates, he says that "in all this progressive mummerly we see much of the hand of the Jesuits, and it would seem that it was encouraged by the church."³ But he thinks that the Masons, protected by their secrecy, ventured further than the clergy approved in their philosophical interpretations of the symbols, opposing at last some of "the ridiculous and oppressive superstitions of the church,"⁴ and thus he accounts for the persecution of Freemasonry at a later period by the priests, and their attempts to suppress the Lodges.

The story, as thus narrated by Robison, is substantially that which has been accepted by all writers who trace the origin of Freemasonry

¹ "Freimaurer Lexicon," art. "*Jesuiten*."

² "Proofs of a Conspiracy," p. 27.

³ *Ibid.*, p. 30.

⁴ *Ibid.*

to the Jesuits. They affirm, as we have seen, that it was instituted about the time of the expulsion of James II. from England, or that if it was not then fabricated as a secret society, it was at least modified in all its features from that form which it originally had in England, and was adapted as a political engine to aid in the restoration of the exiled monarch and in the establishment in his recovered kingdom of the Roman Catholic religion.

These theorists have evidently confounded primitive Speculative Masonry, consisting only of three degrees, with the supplementary grades invented subsequently by Ramsay and the ritualists who succeeded him. But even if we relieve the theory of this confusion and view it as affirming that the Jesuits at the College of Clermont modified the third degree and invented others, such as the Scottish Knight of St Andrew, for the purpose of restoring James II. to the throne, we shall find no scintilla of evidence in history to support this view, but, on the contrary, obstacles in the way of anachronisms which it will be impossible to overcome.

James II. abdicated the throne in 1688, and, after an abortive attempt to recover it by an unsuccessful invasion of Ireland, took up his residence at the Château of St. Germain-en-Laye, in France, where he died in 1701.

Between the two periods of 1688, when James abdicated, and 1701, when he died, no one has been enabled to find either in England or elsewhere any trace of a third degree. Indeed, I am very sure that it can be proved that this degree was not invented until 1721 or 1722. It is, therefore, absolutely impossible that any modification could have been made in the latter part of the 17th century of that which did not exist until the beginning of the 18th. And if there was no Speculative Masonry, as distinguished from the Operative Art practiced by the mediæval guilds, during the lifetime of James, it is equally absurd to contend that supplementary grades were invented to illustrate and complete a superstructure whose foundations had not yet been laid.

The theory that the Jesuits in the 17th century had invented Freemasonry for the purpose of effecting one of their ambitious projects, or that they had taken it as it then existed, changed it, and added to it for the same purpose, is absolutely untenable.

Another theory has been advanced which accounts for the establishment of what has been called "Jesuitic Masonry," at about the

middle of the 18th century. This theory is certainly free from the absurd anachronisms which we encounter in the former, although the proofs that there ever was such a Masonry are still very unsatisfactory.

It has been maintained that this notion of the intrusion, as it may well be called, of the Jesuits into the Masonic Order has been attributed to the Illuminati, that secret society which was established by Adam Weishaupt in Bavaria about the year 1776.

The original object of this society was, as its founder declared, to enable its members to attain the greatest possible amount of virtue, and by the association of good men to oppose the progress of moral evil. To give it influence it was connected with Freemasonry, whose symbolic degrees formed the substratum of its esoteric instructions. This has led it incorrectly to be deemed a Masonic Rite; it could really lay no claim to that character, except inasmuch as it required a previous initiation into the symbolic degrees to entitle its disciples to further advancement.

The charges made against it, that it was a political organization, and that one of its designs was to undermine the Christian religion, although strenuously maintained by Barruel, Robison, and a host of other adversaries, have no foundation in truth. The principles of the order were liberal and philosophical, but neither revolutionary nor anti-Christian.

As the defender of free thought, it came of course into conflict with the Roman Catholic Church and the Company of Jesus, whose tendencies were altogether the other way. The priests, therefore, became its most active enemies, and their opposition was so successful that it was suppressed in 1784.

There was also between Illuminism and the many Masonic Rites, which about the period of its popularity were constantly arising in Germany and in France, a species of rivalry. With the natural egotism of reformers, the Illuminati sought to prove the superiority of their own system to that of their rivals.

With this view they proclaimed that all the Lodges of Freemasons were secretly controlled by the Jesuits; that their laws and their mysteries were the inventions of the same Order, of whom every Freemason was unconsciously the slave and the instrument. Hence they concluded that he who desired to possess the genuine

mysteries of Masonry must seek them not among the degrees of Rose Croix or the Scottish Knights, or still less among the English Masons and the disciples of the Rite of Strict Observance in Germany, but only in the Eclectic Lodges that had been instituted by the Illuminati.

Such, says Barruel, was the doctrine of the Illuminati, advanced for the purpose of elevating the character and aims of their own institution. The French abbé is not generally trustworthy on any subject connected with Freemasonry, of which he was the avowed and implacable foe, but we must acknowledge that he was not far from wrong in calling this story of Jesuitic Masonry "a ridiculous and contemptible fable." For once we are disposed to agree with him, when he says in his fervent declamation, "If prejudice did not sometimes destroy the faculty of reasoning, we should be astonished that the Freemasons could permit themselves to be ensnared in so clumsy a trap. What is it, in fact, but to say to the Mother Lodge of Edinburgh, to the Grand Lodges of London and York, to their rulers, and to all their Grand Masters: 'You thought that you held the reins of the Masonic world, and you looked upon yourselves as the great depository of its secrets, the distributors of its diplomas; but you are not so, and, without even knowing it, are merely puppets of which the Jesuits hold the leading-strings, and which they move at their pleasure.'"¹

I think that with a little trouble we may be able to solve this apparently difficult problem of the Jesuitical interference with Freemasonry.

The Jesuits appear to have taken the priests of Egypt for their model. Like them, they sought to be the conservators and the interpreters of religion. The vows which they took attached them to their Order with bonds as indissoluble as those that united the Egyptian priests in the sacred college of Memphis. Those who sought admission into their company were compelled to pass through trials of their fortitude and fidelity. Their ambition was as indomitable as their cunning was astute. They strove to be the confessors and the counsellors of kings, and to control the education of youth, that by these means they might become of importance in the state, and direct the policy of every government where they

¹ "Memoires pour servir à l'Histoire du Jacobanisme," T. N., p. 291.

were admitted. And this policy was on all occasions to be made subservient to the interests of the church.

At one time they had not less than an hundred schools or colleges in France, the most important being that of Clermont, which, though at one time suppressed, had received renewed letters patent from Louis XIV.

It was this College of Clermont, where James II. was a frequent guest, led there by his religious feelings, that is said to have been the seat of that conspiracy of the Stuart faction which was to terminate either in the invention or the adoption of Freemasonry as a means of restoring the monarch to his throne, and of resuscitating the Roman Catholic religion in heretical England.

Now we may readily admit that the Jesuits were exceedingly anxious to accomplish both these objects, and that for that purpose they would enter into any intrigue which would probably lead to success.

With this design there can be but little doubt that they united with the adherents of the Stuarts. But this conspiracy could not have had any reference to a Masonic organization, because Freemasonry was during the life of James II. wholly unknown in France, and known in England only as a guild of Operative Masons, into which a few non-Masons had been admitted through courtesy. It certainly had not yet assumed the form in which we are called upon to recognize it as the political engine used by the Jesuits. The Grand Lodge of England, the mother of all modern Speculative Masonry, had no existence until 1717, or sixteen years after the death of the king.

We are bound, therefore, if on the ground of an anachronism alone, to repudiate any theory that connects the Jesuits with Freemasonry during the life of James II., although we may be ready to admit their political conspiracy in the interests of that dethroned monarch.

During the life of his son and putative successor, the titular James III., Speculative Masonry was established in England and passed over into France.

The Lodge established in Paris in 1725 was, I have no doubt, an organization of the adherents of the Stuart family, as has already been shown. It is probable that most of the members were Catholics and under the influence of the Jesuits. But it is not likely that

those priests took an active part in the internal organization of the Lodge. They could do their work better outside of it than within it.

In the Rose Croix and some other of the High Degrees we find the influences of a Roman Catholic spirit in the original rituals, but this might naturally arise from the religious tendencies of their founders, and did not require the special aid of Jesuitism.

After the year 1738 the bull of excommunication of Pope Clement XII. must have precluded the Jesuits from all connection with Freemasonry except as its denouncers and persecutors, parts which up to the present day they have uninterruptedly played.

In conclusion we must, I think, refuse to accept the theory which makes a friendly connection between Freemasonry and Jesuitism as one of those mythical stories which, born in the imagination of its inventors, has been fostered only by the credulity of its believers.

At this day I doubt if there is a Masonic scholar who would accept it as more than a fable not even "cunningly devised," though there was a time when it was received as a part of the authentic history of Freemasonry.

CHAPTER XXXII

OLIVER CROMWELL AND FREEMASONRY

THREE fables have been invented to establish a connection between Freemasonry and the dynasty of the Stuarts—one which made it the purpose of the adherents of James II. to use the Institution as a means of restoring that monarch to the throne; a second in which the Jesuits were to employ it for the same purpose, as well as for the re-establishment of the Roman Catholic religion in England; the third and most preposterous of these fables is that which attributes the invention of Freemasonry as a secret society to Oliver Cromwell, who is supposed to have employed it as a political engine to aid him in the dethronement of Charles I., in the abolition of the monarchy, and in the foundation of a republic on its ruins, with himself for its head.

The first and second of these fables have already been discussed. The consideration of the third will be the subject of the present chapter.

The theory that Freemasonry was instituted by Oliver Cromwell was not at first received like the other two by any large portion of the fraternity. It was the invention of a single mind and was first made public in the year 1746, by the Abbé Larudan, who presented his views in a work entitled *Les Franc-Maçons écrassés*—a book which Klass, the bibliographer, says is the armory from which all the enemies of Masonry have since derived their weapons of abuse.

The propositions of Larudan are distinguished for their absolute independence of all historical authority and for the bold assumptions which are presented to the reader in the place of facts.

His strongest argument for the truth of his theory is that the purposes of the Masonic Institution and of the political course of Cromwell are identical, namely, to sustain the doctrines of liberty and equality among mankind.

Rejecting all the claims to antiquity that have been urged in behalf of the Institution, he thinks that it was in England where the Order of Freemasonry first saw the light of day, and that it is to Cromwell that it owes its origin. And this theory he claims (with what truth we know not) to have received from a certain Grand Master with whose astuteness and sincerity he was well acquainted. But even this authority, he says, would not have been sufficient to secure his belief, had it not afterward been confirmed by his reading of the history of the English Protector and his mature reflections on the morals and the laws of the Order, where he detected at every step the presence of Cromwell.

The object of Cromwell, as it has been already said, was by the organization of a secret society, whose members would be bound by the most solemn ties of fraternity, to reconcile the various religions and political sects which prevailed in England in the reign of Charles I. to the prosecution of his views, which were equally opposed to the supremacy of the king and to the power of the Parliament, and as a consequence of the destruction of both, to the elevation of himself to the headship of affairs.

In the execution of this plan Cromwell proceeded with his usual caution and address. He first submitted the outline to several of his most intimate friends, such as Algernon Sidney, Harrington, Monk, and Fairfax, and he held with them several private meetings. But it was not until the year 1648 that he began to take the necessary steps for bringing it to maturity.

In that year, at a dinner which he gave to a large number of his friends, he opened his designs to the company. When his guests, among whom were many members of Parliament, both Presbyterians and Independents, the two rival religious sects of the day, had been well feasted, the host dexterously led the conversation to the subject of the unhappy condition of England. He showed in a pathetic manner how the unfortunate nation had suffered distracting conflicts of politics and religion, and he declared that it was a disgrace that men so intelligent as those who then heard him did not make an exertion to put an end to these distracting contests of party.

Scarcely had Cromwell ceased to speak when Ireton, his son-in-law, who had been prepared for the occasion, rose, and, seconding the sentiments of his leader, proceeded to show the absolute necessity for the public good of a conciliation and union of the many discordant

parties which were then dividing the country. He exclaimed with fervor that he would not, himself, hesitate to sacrifice his fortune and his life to remedy such calamities, and to show to the people the road they ought to take, to relieve themselves from the yoke which was oppressing them and to break the iron scepter under which they were groaning. But to do this it was first necessary, he insisted, to destroy every power and influence which had betrayed the nation. Then, turning to Cromwell, he conjured him to explain his views on this important matter, and to suggest the cure for these evils.

Cromwell did not hesitate to accept the task which had, apparently without his previous concurrence, been assigned to him. Addressing his guests in that metaphorical style which he was accustomed to use, and the object of which was to confuse their intellects and make them more ready to receive his boldest propositions, he explained the obligation of a worship of God, the necessity to repel force by force, and to deliver mankind from oppression and tyranny. He then concluded his speech, exciting the curiosity of his auditors by telling them that he knew a method by which they could succeed in this great enterprise, restore peace to England, and rescue it from the depth of misery into which it was plunged. This method, he added, if communicated to the world, would win the gratitude of mankind and secure a glorious memory for its authors to the latest posterity.

The discourse was well managed and well received. All of his guests earnestly besought him to make this admirable expedient known to them. But Cromwell would not yield at once to their importunities, but modestly replying that so important an enterprise was beyond the strength of any one man to accomplish, and that he would rather continue to endure the evils of a bad government than, in seeking to remove them by the efforts of his friends, to subject them to dangers which they might be unwilling to encounter.

Cromwell well understood the character of every man who sat at the table with him, and he knew that by this artful address he should still further excite their curiosity and awaken their enthusiasm.

And so it was that, after a repetition of importunities, he finally consented to develop his scheme, on the condition that all the guests should take a solemn oath to reveal the plan to no one and to consider it after it had been proposed with absolutely unprejudiced

mind. This was unanimously assented to, and, the oath of secrecy having been taken, Cromwell threw himself on his knees and, extending his hands toward heaven, called on God and all the celestial powers to witness the innocence of his heart and the purity of his intentions. All this the Abbé Larudan relates with a minuteness of detail which we could expect only from an eye-witness of the scene.

Having thus made a deep impression on his guests, Cromwell said that the precise moment for disclosing the plan had not arrived, and that an inspiration from heaven, which he had just received, instructed him not to divulge it until four days had elapsed.

The company, though impatient to receive a knowledge of the important secret, were compelled to restrain their desires and to agree to meet again at the appointed time and at a place which was designated.

On the fourth day all the guests repaired to a house in King Street, where the meeting took place, and Cromwell proceeded to develop his plan. (And here the Abbé Larudan becomes fervid and diffuse in the minuteness with which he describes what must have been a wholly imaginary scene.)

He commenced by conducting the guests into a dark room, where he prepared their minds for what was going to occur by a long prayer, in the course of which he gave them to understand that he was in communion with the spirits of the blessed. After this he told them that his design was to found a society whose only objects would be to render due worship to God and to restore to England the peace for which it so ardently longed. But this project, he added, required consummate prudence and infinite address to secure its success. Then taking a censer in his hands, he filled the apartment with the most subtle fumes, so as to produce a favorable disposition in the company to hear what he had further to say.

He informed them that at the reception of a new adherent it was necessary that he should undergo a certain ceremony, to which all of them, without exception, would have to submit. He asked them whether they were willing to pass through this ceremony, to which proposition unanimous consent was given. He then chose from the company five assistants to occupy appropriate places and to perform prescribed functions. These assistants were a Master, two Wardens, a Secretary, and an Orator.

Having made these preparations, the visitors were removed to another apartment, which had been prepared for the purpose, and in which was a picture representing the ruins of King Solomon's Temple. From this apartment they were transferred to another, and, being blindfolded, were finally invested with the secrets of initiation. Cromwell delivered a discourse on religion and politics, the purport of which was to show to the contending sects of Presbyterians and Independents, representatives of both being present, the necessity, for the public good, of abandoning all their frivolous disputes, of becoming reconciled, and of changing the bitter hatred which then inspired them for a tender love and charity toward each other.

The eloquence of their artful leader had the desired effect, and both sects united with the army in the establishment of a secret association founded on the professed principles of love of God and the maintenance of liberty and equality among men, but whose real design was to advance the projects of Cromwell, by the abolition of the monarchy and the establishment of a commonwealth of which he should be the head.

It is unfortunate for the completed symmetry of this rather interesting fable that the Abbé has refrained from indulging his imagination by giving us the full details of the form of initiation. He has, however, in various parts of his book alluded to so much of it as to enable us to learn that the instructions were of a symbolic character, and that the Temple of Solomon constituted the most prominent symbol.

This Temple had been built by divine command to be the sanctuary of religion and as a place peculiarly consecrated to the performance of its august ceremonies. After several years of glory and magnificence it had been destroyed by a formidable army, and the people who had been there accustomed to worship were loaded with chains and carried in captivity to Babylon. After years of servitude, an idolatrous prince, chosen as the instrument of Divine clemency, had permitted the captives to return to Jerusalem and to rebuild the Temple in its primitive splendor.

It was in this allegory, says the Abbé, that the Freemasons of Cromwell found the exact analogy of their society. The Temple in its first splendor is figurative of the primitive state of man. The religion and the ceremonies which were there practiced are nothing else than that universal law engraved on every heart whose principles

are found in the ideas of equity and charity to which all men are obliged. The destruction of this Temple, and the captivity and slavery of its worshippers, symbolized the pride and ambition which have produced political subjection among men. The un pitying hosts of Assyrians who destroyed the Temple and led the people into captivity are the kings, princes, and magistrates whose power has overwhelmed oppressed nations with innumerable evils. And finally, the chosen people charged with the duty of rebuilding the Temple are the Freemasons, who are to restore men to their original dignity.

Cromwell had divided the Order which he founded into three classes or degrees. The third or Master's degree was of course not without its Hiram legend, but the interpretation of its symbolism was very different from that which is given at the present day.

The Abbé thus explains it. The disorder of the workmen and the confusion at the Temple were intended to make a profound impression upon the mind of the candidate and to show him that the loss of liberty and equality, represented by the death of Hiram, is the cause of all the evils which affect mankind. While men lived in tranquillity in the asylum of the Temple of Liberty they enjoyed perpetual happiness. But they have been surprised and attacked by tyrants who have reduced them to a state of slavery. This is symbolized by the destruction of the Temple, which it is the duty of the Master Masons to rebuild; that is to say, to restore that liberty and equality which had been lost.

Cromwell appointed missionaries or emissaries, says Larudan, who propagated the Order, not only over all England, but even into Scotland and Ireland, where many Lodges were established.

The members of the Order or Society were first called Freemasons; afterward the name was repeatedly changed to suit the political circumstances of the times, and they were called Levelers, then Independents, afterward Fifth Monarchy Men, and finally resumed their original title, which they have retained to the present day.

Such is the fable of the Cromwellian origin of Freemasonry which we owe entirely to the inventive genius of the Abbé Larudan. And yet it is not wholly a story of the imagination, but is really founded on an extraordinary distortion of the facts of history.

Edmund Ludlow was an honest and honorable man who took at first a prominent part in the civil war which ended in the decapitation of Charles I., the dissolution of the monarchy, and the establish-

ment of the Commonwealth. He was throughout his whole life a consistent and unswerving republican, and was as much opposed to the political schemes of Cromwell for his own advancement to power as he was to the usurpation of unconstitutional power by the King. In the language of the editor of his memoirs, "He was an enemy to all arbitrary government, though gilded over with the most specious pretences; and not only disapproved the usurpation of Cromwell, but would have opposed him with as much vigor as he had done the King, if all occasions of that nature had not been cut off by the extraordinary jealousy or vigilance of the usurpers."¹

Having unsuccessfully labored to counteract the influence of Cromwell with the army, he abandoned public affairs and retired to his home in Essex, where he remained in seclusion until the restoration of Charles II., when he fled to Switzerland, where he resided until his death.

During his exile, Ludlow occupied his leisure hours in the composition of his *Memoirs*, a work of great value as a faithful record of the troublous period in which he lived and of which he was himself a great part. In these memoirs he has given a copious narrative of the intrigues by which Cromwell secured the alliance of the army and destroyed the influence of the Parliament.

The work was published at Vevay, in Switzerland, under the title of *Memoirs of Edmund Ludlow, Esq.; Lieutenant-General of the Tories in Ireland, One of the Council of State, and a Member of the Parliament which began on November 3, 1640*. It is in two volumes, with a supplementary one containing copies of important papers. The edition from which I cite bears the date of 1698. There may have been an earlier one. With these memoirs the Abbé Larudan appears to have been well acquainted. He had undoubtedly read them carefully, for he has made many quotations and has repeatedly referred to Ludlow as his authority.

But unfortunately for the Abbé's intelligence, or far more probably for his honesty, he has always applied what Ludlow said of the intrigues of Cromwell for the organization of a new party as if it were meant to describe the formation of a new and secret society.

Neither Ludlow nor any other writer refers to the existence of Freemasonry as we now have it and as it is described by the Abbé

¹ Ludlow's "Memoirs," Preface, p. iv.

Larudan in the time of the civil wars. Even the Operative Masons were not at that period greatly encouraged, for, says Northouck, "no regard to science and elegance was to be expected from the sour minds of the puritanical masters of the nation between the fall of Charles I. and the restoration of his son."¹

The Guild of Freemasons, the only form in which the Order was known until the 18th century, was during the Commonwealth discouraged and architecture was neglected. In the tumult of war the arts of peace are silent. Cromwell was, it is true, engaged in many political intrigues, but he had other and more effective means to accomplish his ends than those of Freemasonry, of whose existence at that time, except as a guild of workmen, we have no historical evidence, but a great many historical facts to contradict its probability.

The theory, therefore, that Freemasonry owes its origin to Oliver Cromwell, who invented it as a means of forwarding his designs toward obtaining the supreme power of the state, is simply a fable, the invention of a clerical adversary of the Institution, and devised by him plainly to give to it a political character, by which, like his successors Barruel and Robison, he sought to injure it.

¹Northouck's "Constitutions," p. 141.

CHAPTER XXXIII

THE ROYAL SOCIETY AND FREEMASONRY

THE hypothesis that Freemasonry was instituted in the 17th century and in the reign of Charles II., by a set of philosophers and scientists who organized it under the title of the "Royal Society," is the last of those theories which attempts to connect the Masonic Order with the House of Stuart that we will have to investigate.

The theory was first advanced by an anonymous writer in the *German Mercury*, a Masonic journal published about the close of the last century at Weimar, and edited by the celebrated Christopher Martin Wieland.

In this article the writer says that Dr. John Wilkins, one of the most learned men of his time, and the brother-in-law of Oliver Cromwell, becoming discontented with the administration of Richard Cromwell, his son and successor, began to devise the means of re-establishing the royal authority. With this view he suggested the idea of organizing a society or club, in which, under the pretence of cultivating the sciences, the partisans of the king might meet together with entire freedom. General Monk and several other military men, who had scarcely more learning than would enable them to write their names, were members of this academy. Their meetings were always begun with a learned lecture, for the sake of form, but the conversation afterward turned upon politics and the interests of the king. And this politico-philosophical club, which subsequently assumed, after the Restoration, the title of the "Royal Society of Sciences," he asserts to have been the origin of the fraternity of Freemasons.

We have already had abundant reason to see, in the formation of Masonic theories, what little respect has been paid by their framers to the contradictory facts of history nor does the present hy-

pothesis afford any exception to the general rule of dogmatic assumption and unfounded assertion.

Christopher Frederick Nicolai, a learned bookseller of Berlin, wrote and published, in 1783, an *Essay on the Accusations made against the Order of Knights Templars and their Mystery; with an Appendix on the Origin of the Fraternity of Freemasons*.¹

In this work he vigorously attacks the theory of the anonymous writer in Wieland's *Mercury*, and the reasons on which he grounds his dissent are well chosen, but they do not cover the whole ground. Unfortunately, Nicolai had a theory of his own to foster, which also in a certain way connects Freemasonry with the real founders of the Royal Society, and the impugment of the hypothesis of Wieland's contribution in its whole extent impugns also his own. Two negatives in most languages are equivalent to an affirmative, but nowhere are two fictions resolvable into a truth.

The arguments of Nicolai against the Wieland theory are, however, worth citation, before we examine his own.

He says that Wilkins could scarcely have been discontented with the government of Richard Cromwell, since it was equally as advantageous to him as that of his father. He was (and he quotes Wood in the *Athenæ Oxonienses* as his authority) much opposed to the court, and was a zealous Puritan before the rebellion.

In 1648 he was made the Master of Wadham College, in the place of a royalist who had been removed. In 1649, after the decapitation of Charles I., he joined the republican party and took the oath of allegiance to the Commonwealth. In 1656 he married the sister of Cromwell, and under Richard received the valuable appointment of Master of Trinity College, which, however, he lost upon the restoration of the monarchy in the following year.

"Is it credible," says Nicolai, "that this man could have instituted a society for the purpose of advancing the restoration of the king; a society all of whose members were of the opposite party? The celebrated Dr. Goddard, who was one of the most distinguished members, was the physician and favorite of Cromwell, whom, after the death of the King, he attended in his campaigns in Ireland and Scotland. It is an extraordinary assertion that a dis-

¹"Versuch über die Besschuldigungen, welche dem Tempelhern orden gemacht worden und über dessen Geheimniss; nebst einem Anhange über das Entstehen der Freimaurergesellschaft," Berlin and Stettin, 1783.

content with the administration of Richard Cromwell should have given rise in 1658 to a society which was instituted in 1646. It is not less extraordinary that this society should have held its meetings in a tavern. It is very certain that in those days of somber Puritanism the few taverns to be found in London could not have been used as places of meeting for associations consisting of men of all conditions, as is now the custom. There would have been much imprudence in thus exposing secret deliberations on an affair equally dangerous and important to the inspection of all the spies who might be congregated in a tavern."

He asserts that the first meetings of the society were held at the house of Dr. Goddard and of another member, and afterward at Cheapside and at Gresham College. And these facts are proved by the records of the society, as published by its annalists.

As to the statement that Monk was one of the members of the society—a fact that would be important in strengthening the theory that it was organized by the friends of the monarchy and with a design of advancing its restoration—he shows the impossibility that it could be correct, because Monk was a prisoner in the Tower from 1643 until 1647, and after his release in that year spent only a month in London, not again visiting that city till 1659, when he returned at the head of an army and was engaged in the arrangement of such delicate affairs and was so narrowly watched that it is not possible to be believed that with his well-known caution he would have taken part in any sort of political society whatever, while the society would have acted very inconsiderately in admitting into its ranks military men who could scarcely write, and that too at a time when distrust had risen to its height.

But a better proof than any advanced by Nicolai, that Monk had nothing to do with the establishment of the Royal Society, whatever may have been its object, is that his name does not appear upon the list of original or early members, taken from the official records and published by Dr. Thompson in his history of the society.

Finally Nicolai asserts very truthfully that its subsequent history has shown that this society was really engaged in scientific pursuits, and that politics were altogether banished from its conferences. But he also contends, but with less accuracy, that the political principles of its members were opposed to the restoration of the monarchy, for which statement there is no positive authority.

Hence Nicolai concludes that "there is no truth in the statements of the anonymous writer in Wieland's *Mercury*, except that the restoration was opposed in secret by a certain society."

And now he advances his own theory, no less untenable than the one he is opposing, that this society "was the Freemasons, who had nothing in common with the other, except the date of foundation, and whose views in literature as well as in politics were of an entirely opposite character."

This was the theory of Nicolai—not that Freemasonry originated in the Royal Society, but that it was established by certain learned men who sought to advance the experimental philosophy which had just been introduced by Bacon. But the same idea was sought by the originators of the Royal Society, and as many of the founders of this school were also among the founders of the Royal Society, it seems difficult to separate the two theories so as to make of each a distinct and independent existence. But it will be better to let the Berlin bookseller explain his doctrine in his own language, before an attempt is made to apply to it the canons of criticism.

He commences by asserting that one of the effects of the labors of Andrea and the other Rosicrucians was the application of a wholesome criticism to the examination of philosophical and scientific subjects. He thinks even that the *Fama Fraternitatis*, the great work of Andrea, had first suggested to Bacon the notion of his immortal work on *The Advancement of Learning*. At the same time in which Bacon flourished and taught his inductive philosophy, the Rosicrucians had introduced a system of philosophy which was established on the phenomena of nature.

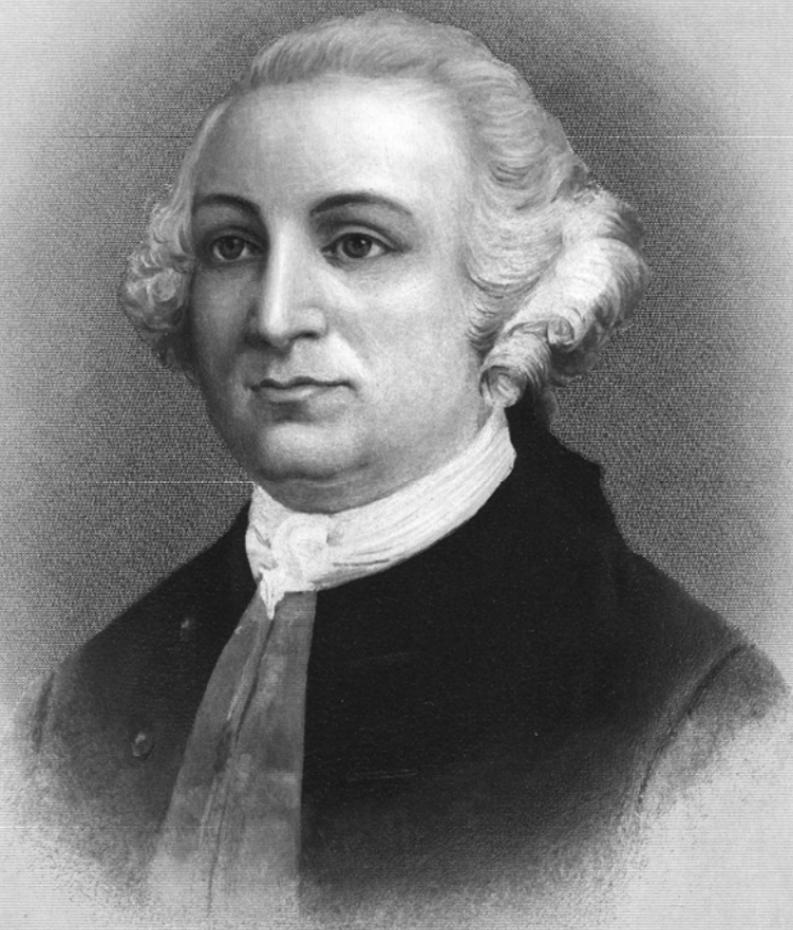

Lord Bacon had cultivated these views in his book *De Augmentis Scientiarum*, except that he rejected the Rosicrucian method of esoteric instruction. Everything that he taught was to be open and exoteric. Therefore, as he had written his great work in the Latin language, for the use of the learned, he now composed his *New Atlantis* in English, that all classes might be able to read it.

In this work is contained his celebrated romance of the House of Solomon, which Nicolai thinks may have had its influence in originating the society of Freemasons.

In this fictitious tale Bacon supposes that a vessel lands on an unknown island, called Bensalem, over which in days of yore a certain King Solomon reigned. This King had a large establish-

HENRY PRICE

First Active Grand Master *of* North American Colonies, 1733

ment, which was called the House of Solomon or the College of the Six Days' Work, in allusion to the six days of the Mosaic account of the creation. He afterward describes the immense apparatus which was there employed in physical researches. There were deep grottoes and tall bowers for the observation of the phenomena of nature; artificial mineral-waters; large buildings in which meteors, the wind, rain and thunder and lightning were imitated; extensive botanic gardens, and large fields in which all kinds of animals were collected for the study of their instinct and habits, and houses filled with all the wonders of nature and art. There were also a great number of learned men, to whom the direction of these things was intrusted. They made journeys into foreign countries, and observations on what they saw. They wrote, they collected, they determined results, and deliberated together as to what was proper to be published.

This romance, says Nicolai, which was in accord with the prevailing taste of the age, contributed far more to spread the views of Bacon on the observation of nature than his more learned and profound work had been able to do. The House of Solomon attracted the attention of everybody. King Charles I. was anxious to establish something like it, but was prevented by the civil wars. Nevertheless this great idea, associated with that of the Rosicrucians, continued to powerfully agitate the minds of the learned men of that period, who now began to be persuaded of the necessity of experimental knowledge.

Accordingly, in 1646, a society of learned men was established, all of whom were of Bacon's opinion, that philosophy and the physical sciences should be placed within the reach of all thinking minds. They held meetings at which—believing that instruction in physics was to be sought by a mutual communication of ideas—they made many scientific experiments in common. Among these men were John Wallis, John Wilkins, Jonathan Goddard, Samuel Foster, Francis Glisson, and many others, all of whom were, fourteen years afterward, the founders of the Royal Society.

But proceedings like these were not congenial with the intellectual condition of England at that period. A melancholy and somber spirit had overshadowed religion, and a mystical theology, almost Gnostic in its character, had infected the best minds. Devotion had passed into enthusiasm and that into fanaticism, and sanguinary wars and revolutions were the result.

It was then that such skillful hypocrites as Cromwell and Ireton took advantage of this weakness for the purpose of concealing and advancing their own designs.

The taint of this dark and sad character is met with in all the science, the philosophy, and even in the oratory and poetry of the period. Astrology and Theurgy were then in all their glory. Chemistry, which took the place of experimental science, was as obscure as every other species of learning, and its facts were enveloped in the allegories of the Alchemists and the Rosicrucians. A few learned men, disheartened by this obscuration of intellectual light, had organized a society in 1646; but as they were still imbued with a remnant of the popular prejudice, they were the partisans of the esoteric method of instruction, and did not believe that human knowledge should be exoterically taught so as to become accessible to all. Hence their society became a secret one. The first members of this society were, says Nicolai, Elias Ashmole, the celebrated antiquary; William Lilly, a famous astrologer; Thomas Wharton, a physician; George Wharton; William Oughtred, a mathematician; Dr. John Hewitt, and Dr. John Pearson, both clergymen, and several others. The annual festival of the Astrologers gave rise to this association. It had previously held one meeting at Warrington, in Lancashire, but it was first firmly established at London.

Its object was to build the House of Solomon in a literal sense; but the establishment was to remain as secret as the island of Bensalem in Bacon's *New Atlantis*; that is, they were to be engaged in the study of nature, but the instructions were to remain within the society in an esoteric form; in other words, it was to be a secret society. Allegories were used by these philosophers to express their ideas. First were the ancient columns of Hermes, by which Jamblichus pretended that he had enlightened all the doubts of Porphyry. You then mounted, by several steps, to a chequered floor divided into four regions, to denote the four superior sciences, after which came the types of the six days, which expressed the object of the society. All of which was intended to teach the doctrines that God created the world and preserves it by fixed principles, and that he who seeks to know these principles, by an investigation of the interior of nature, approximates to God and obtains from His grace the power of commanding nature. This, says Nicolai, was the essence of the mystical and alchemical doctrine of the age, so that we may

conclude that the society which he has been describing was in reality an association of alchemists, or rather of astrologers.

In these allegories, for which Nicolai may have been indebted to the alchemical writings of that period, to which he refers, or for which he may have drawn on his own imagination—we are uncertain which, as he cites no authorities—we may plainly detect Masonic symbols, such as the pillars of the porch of the Temple, the mystical ladder of steps, and the mosaic pavement, and thus it is that he seems to find an analogy between Freemasonry and the secret society that he has been describing.

He still further pursues the hypothesis of their identity in the following remarks:

"It is known," he says, "that all who have the right of citizenship in London, whatever may be their rank or condition, must be recognized as members of some company or corporation. But it is always easy for a man of quality or of letters to gain admission into one of these companies. Now, several members of the society that has just been described were also members of the Company of Masons. This was the reason of their holding their meetings at Masons' Hall, in Masons' Alley, Basinghall Street. They all entered the company and assumed the name of *Free and Accepted Masons*, adopting, besides, all its external marks of distinction. *Free* is the title which every member of this body assumes in England; the right or franchise is called *Freedom*; the brethren call themselves *Freemen*; *Accepted* means, in this place, that this private society had been accepted or incorporated into that of the Masons, and thus it was that chance gave birth to that denomination of *Freemasons* which afterward became so famous, although it is possible that some allusion may also have been intended to the building of the House of Solomon, an allegory with which they were also familiar."

Hence, according to the theory of Nicolai, two famous associations, each of a character peculiar to itself, were at the same period indebted to the same cause for their existence. These were the Royal Society and the Freemasons. "Both," he says, "had the same object and the difference in their proceedings arose only from a difference in some of the opinions of their members. The one society had adopted as its maxim that the knowledge of nature and of natural science should be indiscriminately communicated to all classes of men, while the other contended that the secrets

of nature should be restricted to a small number of chosen recipients. The former body, which was the Royal Society, therefore held open meetings; the latter, which was the Society of Freemasons, enveloped its transactions in mystery."

"In those days," says Nicolai, "the Freemasons were altogether devoted to the King and opposed to the Parliament, and they soon occupied themselves at their meetings in devising the means of sustaining the royal cause. After the death of Charles I., in 1649, the Royalists becoming still more closely united, and, fearing to be known as such, they joined the assemblies of the Freemasons for the purpose of concealing their own identity, and the good intentions of that society being well known many persons of rank were admitted into it. But as the objects which occupied their attention were no other than to diminish the number of the partisans of Parliament, and to prepare the way for the restoration of Charles II. to the throne, it would have been very imprudent to communicate to all Freemasons, without exception, the measures which they deemed it expedient to take, and which required an inviolable secrecy. Accordingly they adopted the method of selecting a certain number of their members, who met in secret, and this committee, which had nothing at all to do with the House of Solomon, selected allegories, which had no relation to the former ones, but which were very appropriate to their design. These new Masons took Death for their symbol. They lamented the death of their master, Charles I.; they nursed the hope of vengeance on his murderers; they sought to re-establish the *Word*, or his son, Charles II., for they applied to him the word *Logos*, which, in its theological sense, means both the *Word* and the *Son*; and the Queen, Henrietta Maria, the relict of Charles I., being thenceforth the head of the party, they designated themselves the *Widow's Sons*.

"They agreed also upon private signs and modes of recognition, by which the friends of the royal cause might be able to distinguish each other from their enemies. This precaution was of great utility to those who traveled, and especially to those of them who retired with the court to Holland, where, being surrounded by the spies of the Commonwealth, it was necessary to be exceedingly diligent in guarding their secret."

Nicolai then proceeds to show how, after the death of Oliver Cromwell and the abdication of his son Richard, the administration

of affairs fell into the hands of the chiefs of various parties, whence resulted confusion and dissensions, which tended to render the cause of the monarchy still more popular. The generals of the army were, however, still opposed to any notion of a restoration, and the hopes of the royalists centered upon General Monk, who commanded the army in Scotland, and who, it was known, had begun to look favorably on propositions which he had received in 1659 from the exiled King.

It then became necessary to bind their secret committee still more closely, that they might treat of Scottish affairs in reference to the interests of the King. They selected new allegories, which symbolized the critical state to which they were reduced, and the virtues, such as prudence, pliancy, and courage, which were necessary to success. They selected a new device and a new sign, "and in their meetings spoke allegorically of taking care, in that wavering and uncertain condition of falling, lest the arms should be broken." It is probable that, in this last and otherwise incomprehensible sentence, Nicolai refers to some of the changes made in the High Degrees, fabricated about the middle of the 18th century, but whose invention he incorrectly, but like most Masonic historians of his day, attributes to an earlier date.

As some elucidation of what he says respecting the fact of *falling and the broken arm*, we find Nicolai afterward quoting a small dictionary which he says appeared about the beginning of the 18th century, and in which we meet with the following definition:

"*Mason's Wound*, An imaginary wound above the elbow, to represent a fracture of the arm occasioned by a fall from an elevated place."

"This," says Nicolai, "is the authentic history of the origin of the Society of Freemasons, and of the first changes that it underwent, changes which transformed it from an esoteric society of natural philosophers into an association of good patriots and loyal subjects; and hence it was that it subsequently took the name of the Royal Art as applied to Masonry."

He concludes by affirming that the Society of Freemasons continued to assemble after the Restoration, in 1660, and even made, in 1663, several regulations for its preservation, but the zeal of its members was diminished by the changes which science and manners underwent during the reign of Charles II. Its political character

ceased by the advent of the king, and its esoteric method of teaching the natural sciences must have been greatly interrupted.

The Royal Society, whose method had been exoteric and open, and from whose conferences politics were excluded, although its members were, in principle, opposed to the Restoration, had a more successful progress, and was joined by many of the Freemasons, the most prominent of whom was Elias Ashmole, who, Nicolai says, changed his opinions and became a member of the Royal Society.

But, to prevent its dissolution, the Society of Freemasons made several changes in its constitution, so as to give it a specific design. This was undertaken and the symbols of the Society were altered so as to substitute the Temple of Solomon in the place of Bacon's House of Solomon, as a more appropriate allegory to express the character of the new institution. Nicolai thinks that the building of St. Paul's Church and the persecutions endured by Sir Christopher Wren may have contributed to the selection of these new symbols. But on this point he does not insist.

Such is the theory of Nicolai. Rejecting the idea that the origin of the Order of Freemasonry is to be traced to the founders of the Royal Society, he claims to have found it in a society of contemporaneous philosophers who met at Masons' Hall, in Basinghall Street, and assumed the name of Free and Accepted Masons, and who, claiming, in opposition to the views of the members of the Royal Society, that all sciences should be communicated esoterically, therefore held their meetings in secret, their real object therefor being to nourish a political conspiracy for the advancement of the cause of the monarchy and the restoration of the exiled King.

Nicolai does not expressly mention the Astrologers, but it is very evident that he alludes to them as the so-called philosophers who originated this secret society, and to them, therefore, he attributes the invention of the Masonic system, as it now exists, after the necessary changes which policy and the vicissitudes of the times had induced.

Nicholas de Bonneville, the author of the essay entitled *The Jesuits chased out of Freemasonry*, entertained a similar opinion. He says that in 1646 a society of Rosicrucians was formed at London, modeled on the ideas of the *New Atlantis* of Bacon. It assembled in Masons' Hall, where Ashmole and other Rosicrucians modified the formula of reception of the Operative Masons,

which had consisted only of a few ceremonies used by craftsmen, and substituted a mode of initiation founded in part on the mysteries of Ancient Egypt and Greece. They then fabricated the first degree of Masonry as we now have it, and, to distinguish themselves from common Masons, called themselves Freemasons. Thory cites this without comment in his *Acta Latomorum*, and gives it as a part of the authentic annals of the Order.

But ingenious and plausible as are these views, both of Nicolai and Bonneville, they unfortunately can not withstand the touchstone of all truth, the proofs of authentic history.

It will be seen that we have two hypotheses to investigate—first that advanced by the contributor to Wieland's *Mercury*, that the Society of Freemasons was originated by the founders of the Royal Society, and that maintained by Nicolai and Bonneville, that it owes its invention to the Astrologers who were contemporary with these founders. Both hypotheses place the date of the invention in the same year, 1646, and give London as the place of the invention.

We must first direct our attention to the theory which maintains that the Royal Society was the origin of Freemasonry, and that the founders of that academy were the establishers of the Society of Freemasons.

This theory, first advanced, apparently, by the anonymous contributor to Wieland's *Mercury*, was exploded by Nicolai, in the arguments heretofore quoted, but something may be added to increase the strength of what he has said.

We have the explicit testimony of all the historians of that institution that it was not at all connected with the political contests of the day, and that it was founded only as a means of pursuing philosophical and scientific inquiries.

Dr. Thompson, who derives his information from the early records of the society, says that "it was established for the express purpose of advancing experimental philosophy, and that its foundation was laid during the time of the civil wars and was owing to the accidental association of several learned men who took no part in the disturbances which agitated Great Britain."¹

He adds that "about the year 1645 several ingenious men who

¹ "History of the Royal Society," by Thomas Thompson, M.D., F.R.S., LL.D. London, 1812, p. 1.

resided in London and were interested in the progress of mathematics and natural philosophy agreed to meet once a week to discourse upon subjects connected with these sciences. These meetings were suspended after the resignation of Richard Cromwell, but revived in 1660, upon the Restoration."¹

They met at first in private rooms, but afterward in Gresham College and then in Arundel House. Their earliest code of laws shows that their conferences were not in secret, but open to properly introduced visitors, as they still continue to be.

Weld, the librarian of the society, says that to it "attaches the renown of having from its foundation applied itself with untiring zeal and energy to the great objects of its institution."² He states that, although the society was not chartered until 1660, "there is no doubt that a society of learned men were in the habit of assembling together to discuss scientific subjects for many years previous to that time."³

Spratt, in his history of the society, says that in the gloomy season of the civil wars they had selected natural philosophy as their private diversion, and that at their meetings "they chiefly attended to some particular trials in Chymistry or Mechanics."

The testimony of Robert Boyle, Wallis, and Evelyn, contemporaries of the founders, is to the same effect, that the society was simply philosophical in its character and without any political design.

Dr. Wallis, who was one of the original founders, makes this statement concerning the origin and objects of the society in his *Account of some Passages in my own Life*:⁴

"About the year 1645, while I lived in London (at a time when, by our civil wars, academical studies were much interrupted in both our Universities), besides the conversation of divers eminent divines, as to matters theological, I had the opportunity of being acquainted with divers worthy persons inquisitive into natural philosophy and other parts of human learning, and particularly what has

³ Ibid.

⁴ In Hearne's edition of Langsteffs chronicle.

been called the *New Philosophy* or *Experimental Philosophy*. We did, by agreements, divers of us meet weekly in London on a certain day to treat and discourse of such affairs."

Wallis says that the subjects pursued by them related to physics, astronomy, and natural philosophy, such as the circulation of the blood, the Copernican system, the Torricellian experiment, etc.

In all these authentic accounts of the object of the society there is not the slightest allusion to it as a secret organization, nor any mention of a form of initiation, but only a reception by the unanimous vote of the members, which reception, as laid down in the by-laws consisted merely in the president taking the newly elected candidate by the hand and saluting him as a member or fellow of the society.

The fact is that at that period many similar societies had been instituted in different countries of Europe, such as the *Accademia del Corrento* at Florence and the *Academy of Sciences* at Paris, whose members, like those of the Royal Society of London, devoted themselves to the development of science.

This encouragement of scientific pursuits may be principally attributed to many circumstances that followed the revival of learning; the advent of Greeks into Western Europe, imbued with Grecian literature; Bacon's new system of philosophy, which alone was enough to awaken the intellects of all thinking men; and the labors of Galileo and his disciples. All these had prepared many minds for the pursuit of philosophy by experimental and inductive methods, which took the place of the superstitious dogmas of preceding ages.

It was through such influences as these, wholly unconnected with any religious or political aspirations, that the founders of the Royal Society were induced to hold their meetings and to cultivate without the restraints of secrecy their philosophical labors, which culminated in 1660 in the incorporation of an institution of learned men which at this day holds the most honored and prominent place among the learned societies of the world.

But it is in vain to look in this society, either in the mode of its organization, in the character of its members, or in the nature of their pursuits, for any connection with Freemasonry, an institution entirely different in its construction and its objects. The theory, therefore, that Freemasonry is indebted for its origin to the Royal

Society of London must be rejected as wholly without authenticity or even plausibility.

But the theory of Nicolai, which attributes its origin to another contemporaneous society, whose members were evidently Astrologers, is somewhat more plausible, although equally incorrect. Its consideration must, however, be reserved as the subject of another chapter.

CHAPTER XXXIV

THE ASTROLOGERS AND THE FREEMASONS

WE have seen, in the preceding chapter, that Nicolai had sought to trace the origin of Freemasonry to a society organized in 1646 by a sect of philosophers who were contemporary with, but entirely distinct from, those who founded the Royal Society. Though he does not explicitly state the fact, yet, from the names of the persons to whom he refers, there can be no doubt that he alluded to the Astrologers, who at that time were very popular in England.

Judicial astrology, or the divination of the future by the stars, was, of all the delusions to which the superstition of the Middle Ages gave birth, the most popular. It prevailed over all Europe, so that it was practiced by the most learned, and the predictions of its professors were sought with avidity and believed with confidence by the most wealthy and most powerful. Astrologers often formed a part of the household of princes, who followed their counsels in the most important matters relating to the future, while men and women of every rank sought these charlatans that they might have their nativities cast and secure the aid of their occult art in the recovery of stolen goods or the prognostications of happy marriages or of successful journeys.

Astrology was called the Daughter of Astronomy, and the scholars who devoted themselves to the study of the heavenly bodies for the purposes of pure science were often called upon to use their knowledge of the stars for the degrading purpose of astrological predictions. Kepler, the greatest astronomer of that age, was compelled against his will to pander to the popular superstition, that he might thus gain a livelihood and be enabled to pursue his nobler studies. In one of his works he complains that the scanty reward of an astronomer would not provide him with bread, if men did not entertain hopes of reading the future in the heavens.

And so he tampered with the science that he loved and adorned, and made predictions for inquisitive consulters, although, at the same time, he declared to his friends that "they were nothing but worthless conjecture."

Cornelius Agrippa, though he cultivated alchemy, a delusion but little more respectable than that of astrology, when commanded by his patroness, the Queen mother of France, to practice the latter, expressed his annoyance at the task. Of the Astrologers he said, in his great work on the *Vanity of the Arts and Sciences*, "these fortune tellers do find entertainment among princes and magistrates, from whom they receive large salaries; but, indeed, there is no class of men who are more pernicious to a commonwealth. For, as their skill lies in the adaptation of ambiguous predictions to events after they have happened, so it happens that a man who lives by falsehood shall by one accidental truth obtain more credit than he will lose by a hundred manifest errors."

The 16th and 17th centuries were the golden age of astrology in England. We know all that is needed of this charlatanism and of the character of its professors from the autobiography of William Lilly, himself an English astrologer of no mean note; perhaps, indeed, the best-educated and the most honest of those who practiced this delusion in England in the 17th century, and who is one of those to whom Nicolai ascribes the formation of that secret society, in 1646, which invented Freemasonry.

It will be remembered that Nicolai says that of the society of learned men who established Freemasonry, the first members were Elias Ashmole, the skillful antiquary, who was also a student of astrology, William Lilly, a famous astrologer, George Wharton, likewise an astrologer, William Oughtred, a mathematician, and some others. He also says that the annual festival of the Astrologers gave rise to this association. "It had previously held," says Nicolai, "one meeting at Warrington, in Lancashire, but it was first firmly established at London."

Their meetings, the same writer asserts, were held at Masons' Hall, in Masons' Alley, Basinghall Street. Many of them were members of the Masons' Company, and they all entered it and assumed the title of Free and Accepted Masons, adopting, besides, all its external marks of distinction.

Such is the theory which makes the Astrologers, incorporating

themselves with the Operative Masons, who met at their Hall in Basinghall Street, the founders of the Speculative Order of Free and Accepted Masons as they exist at the present day.

It is surprising that in a question of history a man of letters of the reputation of Nicolai should have indulged in such bold assumptions and in statements so wholly bare of authority. But unfortunately it is thus that Masonic history has always been written.

I shall strive to eliminate the truth from the fiction in this narrative. The task will be a laborious one, for, as Goethe has well said in one of his maxims, "It is much easier to perceive error than to find truth. The former lies on the surface, so that it is easily reached; the latter lies in the depth, which it is not every man's business to search for."

The Astrologers, to whose meeting in the Masons' Hall is ascribed the origin of the Freemasons, were not a class of persons who would have been likely to have united in such an attempt, which showed at least a desire for some intellectual progress. Lilly, perhaps the best-educated and the most honest of these charlatans, has in the narrative of his life, written by himself, given us some notion of the character of many of them who lived in London when he practiced the art in that city.¹

Of Evans, who was his first teacher, he tells us that he was a clergyman of Staffordshire, whence he "had been in a manner enforced to fly for some offences very scandalous committed by him"; of another astrologer, Alexander Hart, he says "he was but a cheat." Jeffry Neve he calls a smatterer; William Poole was a frequenter of taverns with "lewd people," and fled on one occasion from London under the suspicion of complicity in theft; John Booker, though honest, was ignorant of his profession; William Hodges dealt with angels, but "his life answered not in holiness and sanctity to what it should," for he was addicted to profanity; and John à Windsor was given to debauchery.

Men of such habits of life were not likely to interest themselves in the advancement of science or in the establishment of a society of speculative philosophers. It is true that these charlatans lived at an earlier period than that ascribed by Nicolai to the organization

¹ "The Life of William Lilly, Student in Astrology, wrote by himself in the 66th year of his Age, at Hershams, in the Parish of Walton upon Thames, in the County of Surrey. *Propria Manu.*"

of the society in Masons' Hall, but in the few years that elapsed it is not probable that the disciples of astrology had much improved in their moral or intellectual condition.

Of certain of the men named by Nicolai as having organized the Society of Freemasons in 1646, we have some knowledge. Elias Ashmole, the celebrated antiquary, and founder of the Ashmolean Museum in the University of Oxford, is an historical character. He wrote his own life, in the form of a most minute diary, extending from July 2, 1633, to October 9, 1687. In this diary, in which he registers the most trivial as well as the most important events of his life—recording even the cutting of his wisdom teeth, or the taking of a sudorific—he does not make the slightest allusion to the transaction referred to by Nicolai. The silence of so babbling a chronicler as to such an important event is itself sufficient proof that it did not occur. What Ashmole has said about Freemasonry will be presently seen.

Lilly, another supposed actor in this scene, also wrote his life with great minuteness. His complete silence on the subject is equally suggestive. Nicolai says that the persons he cites were either already members of the Company of Masons or at once became so. Now, Lilly was a member of the Salter's Company, one of the twelve great livery companies, and would not have left it to join a minor company, which the Masons' was.

Oughtred could not have been united with Ashmole in organizing a society in 1646, for the latter, in a note to Lilly's life, traces his acquaintance with him to the residence of both as neighbors in Surrey. Now, Ashmole did not remove to Surrey until the year 1675, twenty-nine years after his supposed meeting with Oughtred at the Masons' Hall.

Between Wharton and Lilly, who were rival almanac-makers, there was, in 1646, a bitter feud, which was not reconciled until years afterward. In an almanac which Wharton published in 1645 he had called Lilly "an impudent, senseless fellow, and by name William Lilly." It is not likely that they would have been engaged in the fraternal task of organizing a great society at that very time.

Dr. Pearson, another one of the supposed founders, is celebrated in literary and theological history as the author of an *Exposition of the Creed*. Of a man so prominent as to have been the Master of

Jesus College, Cambridge, and afterward Bishop of Chester, Ashmole makes no mention in his diary. If he had ever met him or been engaged with him in so important an affair, this silence in so minute a journal of the transactions of his every-day life would be inexplicable.

But enough has been said to show the improbability of any such meeting as Nicolai records. Even Ashmole and Lilly, the two leaders, were unknown to each other until the close of the year 1646. Ashmole says in his diary of that year: "Mr. Jonas Moore brought and acquainted me with Mr. William Lilly: it was on a Friday night, and I think on the 20th Nov. (1646)."

That there was an association, or a club or society, of Astrologers about that time in London is very probable. Pepys, in his *Memoirs*, says that in October, 1660, he went to Mr. Lilly's, "there being a club that night among his friends." There he met Esquire Ashmole and went home accompanied by Mr. Booker, who, he says, "did tell me a great many fooleries, which may be done by nativities, and blaming Mr. Lilly for writing to please his friends, and not according to the rules of art, by which he could not well erre as he had done." The club, we may well suppose, was that of the Astrologers, held at the house of the chief member of the profession. That it was not a secret society we conclude from the fact that Pepys, who was no astrologer, was permitted to be present. We know also from Ashmole's diary that the Astrologers held an annual feast, generally in August, sometimes in March, July, or November, but never on a Masonic festival. Ashmole regularly attended it from 1649 to 1658, when it was suspended, but afterward revived, in 1682. In 1650 he was elected a steward for the following year. He mentions the place of meeting only three times, twice at Painters' Hall, which was probably the usual place, and once at the Three Cranes, in Chancery Lane. Had the Astrologers and the Masons been connected, Masons' Hall, in Basinghall Street, would certainly have been the place for holding their feast.

Again, it is said by Nicolai that the object of this secret society which organized the Freemasons was to advance the restoration of the King. But Lilly had made, in 1645, the year before the meeting, this declaration: "Before that time, I was more Cavalier than Round-head, but after that I engaged body and soul in the cause of Parliament." He still expressed, it is true, his attachment to mon-

archy; but his life during the Commonwealth showed his devotion to Cromwell, of whom he was a particular favorite. After the Restoration he had to sue out a pardon, which was obtained by the influence of his friends, but which would hardly have been necessary if he had been engaged in a secret society the object of which was to restore Charles II. to the throne.

But Charles I. was not beheaded until 1649, so that a society could not have been organized in 1646 for the restoration of his son. But it may be said that the Restoration alluded to was of the monarchy, which at that time was virtually at an end. So this objection may pass without further comment.

But the fact is that the whole of this fiction of the organization, in 1646, of a secret society by a set of philosophers or astrologers, or both, which resulted in the establishment of Freemasonry, arose out of a misconception or a misrepresentation—whether willful or not, I will not say—of two passages in the diary of Elias Ashmole. Of these two passages, and they are the only ones in his minute diary of fifty-four years in which there is any mention of Freemasonry, the first is as follows:

"1646, Octob. 16. 4 *Hor.* 30 minutes *post merid.* I was made a Free-Mason at Warrington in Lancashire, with Colonel Henry Mainwarring of Karticham in Cheshire; the names of those that were then at the lodge, Mr. Richard Penket Warden, Mr. James Collier, Mr. Richard Sankey, Henry Littler, John Ellam, and Hugh Brewer."

And then, after an interval of thirty-five years, during which there is no further allusion to Masonry, we find the following memorandum: "1682, Mar. 10. About 5 *Hor. post merid.* I received a summons to appear at a lodge to be held the next day at Masons Hall, London.

"II. Accordingly I went, and about noon was admitted into the fellowship of Free-Masons, by Sir William Wilson Knight, Captain Richard Borthwick, Mr. William Wodman, Mr. William Grey, Mr. Samuel Taylour, and Mr. William Wise.

"I was the senior fellow among them (it being thirty-five years since I was admitted) there was present besides myself, the fellows after mentioned. Mr. Thomas Wise, Master of the Masons Company, this present year; Mr. Thomas Shorthose, Mr. Thomas Shadbolt, — Wardsfford, Esq; Mr. Nicholas Young, Mr. John Short-

hose, Mr. William Hamon, Mr. John Thompson, and Mr. William Stanton. We all dined at the Half-Moon-Tavern, in Cheapside, at a noble dinner prepared at the charge of the new accepted Masons."

Without the slightest show of reason or semblance of authority, Nicolai transmutes the Lodge at Warrington, in which Ashmole was made a Freemason, into an annual feast of the Astrologers. The Society of Astrologers, he says, "had previously held one meeting at Warrington, in Lancashire, but it was first firmly established at London." And he cites as his authority for this statement the very passage from Ashmole's diary in which that antiquary records his reception in a Masonic Lodge.

These events in the life of Ashmole, which connect him with the Masonic fraternity, have given considerable embarrassment to Masonic scholars who have been unable to comprehend the two apparently conflicting statements that he was made a Freemason at Warrington in 1646 and afterward received into the fellowship of the Freemasons, in 1682, at London. The embarrassment and misapprehension arose from the fact that we have unfortunately no records of the meetings of the Operative Lodges of England in the 17th century, and nothing but traditional and generally mythical accounts of their usages during that period.

The sister kingdom of Scotland has been more fortunate in this respect, and the valuable work of Brother Lyon, on the *History of the Lodge of Edinburgh*, has supplied us with authentic records of the Scottish Lodges at a much earlier date. These records will furnish us with some information in respect to the contemporaneous English Lodges, which we have every reason to suppose were governed by usages not very different from those of the Lodges in the adjacent kingdom.

Mr. Lyon has on this subject the following remarks, which may be opportunely quoted on the present occasion.

"The earliest date at which non-professionals are known to have been received into an English Lodge is 1646. The evidence of this is derived from the diary of one of the persons so admitted; but the preceding minutes¹ afford authentic instances of Speculative Masons having been admitted to the fellowship of the Lodge of

¹ Minutes of the Lodge of Cannongate, Kilwinning, for 1635, quoted by him in a preceding page.

Edinburgh twelve years prior to the reception of Colonel Mainwarring and Elias Ashmole in the Lodge of Warrington and thirty-eight years before the date at which the presence of Gentleman Masons is first discernible in the Lodge of Kilwinning by the election of Lord Cassillis to the deaconship. It is worthy of remark that, with singularly few exceptions, the non-operatives who were admitted to Masonic fellowship in the Lodges of Edinburgh and Kilwinning, during the 17th century, were persons of quality, the most distinguished of whom, as the natural result of its metropolitan position, being made in the former Lodge. Their admission to fellowship in an institution composed of Operative Masons associated together for purposes of their Craft would in all probability originate in a desire to elevate its position and increase its influence, and once adopted, the system would further recommend itself to the Fraternity by the opportunities which it presented for cultivating the friendship and enjoying the society of gentlemen to whom in ordinary circumstances there was little chance of their ever being personally known. On the other hand, non-professionals connecting themselves with the Lodge by the ties of membership would, we believe, be actuated partly by a disposition to reciprocate the feelings that had prompted the bestowal of the fellowship partly by curiosity to penetrate the arcana of the Craft, and partly by the novelty of the situation as members of a secret society and participants in its ceremonies and festivities. But whatever may have been the motives which animated the parties on either side, the tie which united them was a purely honorary one."¹

What is here said by Lyon of the Scottish Lodges may, I think, be with equal propriety applied to those of England at the same period. There was in 1646 a Lodge of Operative Masons at Warrington, just as there was a similar one at Edinburgh. Into this Lodge Colonel Mainwarring and Elias Ashmole, both non-professional gentlemen, were admitted as honorary members, or, to use the language of the latter, were "made Freemasons," a technical term that has been preserved to the present day.

But thirty-five years afterward, being then a resident of London, he was summoned to attend a meeting of the Company of Masons, to be held at their hall in Masons' Alley, Basinghall Street, and

¹ Lyon, "History of the Lodge of Edinburgh," p. 81.

there, according to his own account, he was "admitted into the fellowship of Freemasons." How are we to explain this apparent double or renewed admission? But mark the difference of language. In 1646 he was "made a Freemason." In 1682 he was "admitted into the fellowship of Freemasons." The distinction is an important one.

The Masons' Company in 1682 constituted in London one of those many city companies which embraced the various trades and handicrafts of the metropolis. Stowe, in his *Survey of London*, says that "the Masons, otherwise termed Freemasons, were a society of ancient standing and good reckoning, by means of affable and kind meetings divers times, and as a loving brotherhood should use to do, did frequent their mutual assemblies in the time of King Henry IV., in the 12th year of whose most gracious reign they were incorporated."

In Cheswell's *New View of London*, printed in 1708, it is said that the Masons' Company "were incorporated about the year 1410, having been called the Free Masons, a Fraternity of great account, who have been honored by several Kings, and very many of the Nobility and Gentry being of their Society. They are governed by a Master, 2 Wardens, 25 Assistants, and there are 65 on the Livery."

Maitland, in his *London and its Environs*, says, speaking of the Masons: "This company had their arms granted by Clarendieux, King-at-Arms, in the year 1477, though the members were not incorporated by letters patent till they obtained them from King Charles II. in 1677. They have a small convenient hall in Masons' Alley, Basinghall Street."

There were then, in the time of Ashmole, two distinct bodies of men practicing the Craft of Operative Masonry, namely, the Lodges which were to be found in various parts of the country, and the Company of Masons, whose seat was at London.

Into one of the Lodges, which was situated at Warrington, in Lancashire, Ashmole had in 1646 received honorary membership, which, in compliance with the technical language of that and of the present day, he called being "made a Freemason." But this did not constitute him a member of the Masons' Company of London, for this was a distinct incorporated society, with its exclusive rules and regulations, and admission into which could only be obtained by

the consent of the members. There were many Masons who were not members of the Company.

Ashmole, who had for thirty-five years been a Freemason, by virtue of his making at Warrington, was in 1682 elected a member of this Masons' Company, and this he styles being "admitted into the fellowship of Free-Masons"—that is, he was admitted to the fellowship or membership of the Company and made "free" of it.

From all of which we may draw the following conclusions: First, that in 1646, at the very date assigned by Nicolai for the organization of the Freemasons as a secret political society, under the leadership of Ashmole and Lilly, the former, being as yet unacquainted with the latter, was at Warrington, in Lancashire, where he found a Lodge of Masons already organized and with its proper officers and its members, by whom he was admitted as an honorary non-professional member of the Craft. And secondly, that while in London he was admitted, being already a Freemason, to the fellowship of the Masons' Company. And thirdly, that he was also a member of the fraternity of Astrologers, having been admitted probably in 1649, and regularly attended their annual feast from that year to 1658, when the festival, and perhaps the fraternity, was suspended until 1682, when it was again revived. But during all this time it is evident from the memoranda of Ashmole that the Freemasons and the Astrologers were two entirely distinct bodies. Lilly, who was the head of the Astrologers, was, we may say almost with certainty, not a Freemason, else the spirit of minuteness with which he has written his autobiography would not have permitted him to omit what to his peculiar frame of mind would have been so important a circumstance as connecting him still more closely with his admired friend, Elias Ashmole, nor would the latter have neglected to record it in his diary, written with even still greater minuteness than Lilly's memoirs.

Notwithstanding the clear historical testimony which shows that Lodges of Freemasons had been organized long before the time of Ashmole, and that he had actually been made a Freemason in one of them, many writers, both Masonic and profane, have maintained the erroneous doctrine that Ashmole was the founder of the Masonic Society.

Thus Chambers, in their *Encyclopædia*, say that "Masonry was founded by Ashmole and some of his literary friends," and De Quincey expressed the same opinion.

Mr. John Yarker, in his very readable *Notes on the Scientific and Religious Mysteries of Antiquity*, offers a modified view and a compromise of the subject. He refers to the meeting of the chemical adepts at Masons' Hall (a fact of which we have no evidence), and then to the "Feast of the Astrologers" which Ashmole attended. He follows Nicolai in asserting that their allegories were founded on Bacon's House of Solomon, and says that they used as emblems the sun, moon, square, triangle, etc. And he concludes, "it is possible that Ashmole may have consolidated the customs of the two associations, but there is *no evidence* that any Lodge of this, his speculative rite, came under the Masonic Constitution."¹

We may also say that it is possible that Ashmole may have invented a speculative rite of some kind, but there is *no evidence* that he did so. Many things are possible that are not probable, and many probable that are not actual. History is made up of facts, and not of possibilities or probabilities.

Ashmole himself entertained a very different and much more correct notion of the origin of Masonry than any of those who have striven to claim him as its founder.

Dr. Knipe, of Christ Church, Oxford, in a letter to the publisher of Ashmole's Life, says: "What from Mr. E. Ashmole's collections I could gather was, that the report of our society's taking rise from a bull granted by the Pope in the reign of Henry III., to some Italian architects to travel over all Europe, to erect chapels, was ill-founded. Such a bull there was, and these architects were Masons; but this bull, in the opinion of the learned Mr. Ashmole, was confirmative only, and did not, by any means, create our Fraternity, or even establish them in this kingdom."

This settles the question. Ashmole could not have been the founder of Freemasonry in London in 1646, since he himself expressed the belief that the Institution had existed in England before the 13th century.

There is no doubt, as I have already said, that he was very intimately connected with the Astrologers. Dr. Krause, in his *Three Oldest Documents of the Masonic Brotherhood*,² quotes the following passage from Lilly's *History of my Life and Times*. (I can not

¹ "Notes on the Scientific and Religious Mysteries of Antiquity," p. 106.

² "Die drei ältesten Kunsturkunden der Freimaurerbrüderschaft," IV., 286.

find it in my own copy of that work, but the statements are corroborated by Ashmole's diary.)

"The King's affairs being now grown desperate, Mr. Ashmole withdrew himself, after the surrender of the Garrison of Worcester, into Cheshire, where he continued till the end of October, and then came up to London, where he became acquainted with Master, afterwards Sir Jonas Moore, Mr. William Lilly, and Mr. John Booker, esteemed the greatest astrologers in the world, by whom he was caressed, instructed and received into their fraternity, which then made a very considerable figure, as appeared by the great resort of persons of distinction to their annual feast, of which Mr. Ashmole was afterwards elected Steward."

Ashmole left Worcester for Cheshire July 24, 1646, and removed from Cheshire to London October 25, of the same year. In that interval of three months he was made a Freemason, at Warrington. At that time he was not acquainted with Lilly, Moore, or Booker, and knew nothing of astrology or of the great astrologers.

This destroys the accuracy of Nicolai's assertion that the meeting held at Masons' Hall, in 1682, by Ashmole, Lilly, and other astrologers, when they founded the Society of Freemasons, was preceded by a similar and initiatory one, in 1646, at Warrington.

A few words must now be said upon the subject of Bacon's House of Solomon, which Nicolai and others supposed to have first given rise to the Masonic allegory which was afterward changed to that of the Temple of Solomon.

Bacon, in his fragmentary and unfinished romance of the *New Atlantis*, had devised the fable of an island of Bensalem, in which was an institution or college called the House of Solomon, the fellows of which were to be students of philosophy and investigators of science. He thus described their occupations:

"We have twelve that sail into foreign countries, who bring in the books and patterns of experiments of all other parts; these we call merchants of light. We have three that collect the experiments that are in all books; these are called depredators. We have three that collect experiments of all mechanical arts, and also of liberal sciences, and also of practices which are not brought into the arts; these we call mystery men. We have three that try new experiments such as themselves think good; these we call pioneers or miners. We have three that draw the experiments of the former four into titles and

tablets to give the better light for the drawing of observations and axioms out of them; these we call compilers. We have three that bind themselves looking into the experiments of their fellows and cast about how to draw out of them things of use and practice for man's life and knowledge as well for works as for plain demonstrations and the easy and clear discovering of the virtues and parts of bodies; these we call doing men and benefactors. Then after divers meetings and consults of our whole number to consider of the former labors and collections, we have three to take care out of them to direct new experiments of higher light, more penetrating into nature than the former; these we call lamps. We have three others that do execute the experiments so directed and report them; these we call inoculators. Lastly we have three that raise the former discoveries by experiments into greater observations, axioms and aphorisms; these we call interpreters of nature."¹

It is evident from this schedule of the occupations of the inmates of the House of Solomon that it could not in the remotest degree have been made the foundation of a Masonic allegory. In fact, the suggestion of a Masonic connection could have been derived only from a confused idea of the relation of the House to the Temple of Solomon, a misapprehension which a reading of the *New Atlantis* would readily remove.

As Plato had written his *Republic* and Sir Thomas More his *Utopia* to give their ideas of a model commonwealth, so Lord Bacon commenced his *New Atlantis* to furnish his idea of a model college to be instituted for the study and interpretation of nature by experimental methods. These views were first introduced in his *Advancement of Human Learning*, and would have been perfected in his *New Atlantis* had he ever completed it.

The new philosophy of Bacon had produced a great revolution in the minds of thinking men, and that group of philosophers who in the 17th century, as Dr. Whewell says, "began to knock at the door where truth was to be found" would very wisely seek the key in the inductive and experimental method taught by Bacon.

To the learned men, therefore, who first met at the house of Dr. Goddard and the other members, and whose meetings finally ended in the formation of the Royal Society, the allegory of the House of

¹ "New Atlantis," Works, vol. ii., p. 376.

Solomon very probably furnished valuable hints for the pursuit of their experimental studies.

To Freemasons in any age the allegory would have been useless and unprofitable, and could by no ingenious method have been twisted into a foundation for their symbolic science. The hypothesis that it was adopted in 1646 by the founders of Freemasonry as a fitting allegory for their esoteric system of instruction is evidently too absurd to need further refutation.

In conclusion, we may unhesitatingly concur with Bro. W. J. Hughan in his opinion that the theory which assigns the foundation of Freemasonry to Elias Ashmole and his friends the Astrologers "is opposed to existing documents dating before and since his initiation." It is equally opposed to the whole current of authentic history, and is unsupported by the character of the Institution and the nature of its symbolism.

CHAPTER XXXV

THE ROSICRUCIANS AND THE FREEMASONS

F all the theories which have been advanced in relation to the origin of Freemasonry from some one of the secret sects, either of antiquity or of the Middle Ages, there is none more interesting than that which seeks to connect it with the Hermetic philosophy, because there is none which presents more plausible claims to our consideration.

There can be no doubt that in some of what are called the High Degrees there is a very palpable infusion of a Hermetic element. This can not be denied, because the evidence will be most apparent to any one who examines their rituals, and some by their very titles, in which the Hermetic language and a reference to Hermetic principles are adopted, plainly admit the connection and the influence.

There is, therefore, no necessity to investigate the question whether or not some of those High or Philosophic Degrees which were fabricated about the middle of the last century are or are not of a Hermetic character, because the time of their invention, when Craft Masonry was already in a fixed condition, removes them entirely out of the problem which relates to the origin of the Masonic Institution. No matter when Freemasonry was established, the High Degrees were an afterthought, and might very well be tinged with the principles of any philosophy which prevailed at the period of their invention.

But it is a question of some interest to the Masonic scholar whether at the time of the so-called Revival of Freemasonry, in the early part of the 18th century, certain Hermetic degrees did not exist which sought to connect themselves with the system of Masonry. And it is a question of still greater interest whether this attempt was successful so far, at least, as to impress upon the features of

that early Freemasonry a portion of the characteristic tints of the Hermetic philosophy, some of the marks of which may still remain in our modern system.

But as the Hermetic philosophy was that which was invented and taught by the Rosicrucians, before we can attempt to resolve these important and interesting questions, it will be necessary to take a brief glance at the history and the character of Rosicrucianism. On the 17th of August, 1586, Johann Valentin Andreä was born at Herrenberg, a small market-town of what was afterward the kingdom of Würtemberg. After a studious youth, during which he became possessed of a more than moderate share of learning, he departed in 1610 on a pilgrimage through Germany, Austria, Italy, and France, supplied with but little money, but with an indomitable desire for the acquisition of knowledge. Returning home, in 1614, he embraced the clerical profession and was appointed a deacon in the town of Vaihingen, and by subsequent promotions reached, in 1634, the positions of Protestant prelate of the Abbey of Bebenhausen and spiritual counsellor of the Duchy of Brunswick. He died on the 27th of June, 1654, at the ripe age of sixty-eight years.

On the moral character of Andreä his biographers have lavished their encomiums. A philanthropist from his earliest life, he carried, or sought to carry, his plans of benevolence into active operation. Wherever, says Vaughan, the church, the school, the institute of charity have fallen into ruin or distress, there the indefatigable Andreä sought to restore them. He was, says another writer, the guardian genius and the comforter of the suffering; he was a practical helper as well as a theoretical adviser; in the times of dearth and famine, many thousand poor were fed and clothed by his exertions, and the town of Kalw, of which, in 1720, he was appointed the superintendent, long enjoyed the benefit of many charitable institutions which owed their origin to his solicitations and zeal.¹

It is not surprising that a man indued with such benevolent feelings and actuated by such a spirit of philanthropy should have viewed with deep regret the corruptions of the times in which he lived, and should have sought to devise some plan by which the condition of his fellow-men might be ameliorated and the dry, effete

¹ Biographical Sketch by Wm. Bell, in *Freemasons' Quarterly Magazine*, London, vol. ii., N. S., 1854, p. 27.

theology of the church be converted into some more living, active, humanizing system.

For the accomplishment of this purpose he could see no better method than the establishment of a practical philanthropical fraternity, one that did not at that time exist, but the formation of which he resolved to suggest to such noble minds as might be stimulated to the enterprise.

With this view he invoked the assistance of fiction, and hence there appeared, in 1615, a work which he entitled the *Report of the Rosicrucian Brotherhood*, or, in its original Latin, *Fama Fraternitatis Rosæ Crucis*. An edition had been published the year before with the title of *Universal Reformation of the Whole World, with a Report of the Worshipful Order of the Rosicrucian Brotherhood, addressed to all the Learned Men and Nobility of Europe*,¹ There was another work, published in 1616, with the title of *Chemische Hochzeit, or Chemical Nuptials, by Christian Rosencreutz*.

All of these books were published anonymously, but they were universally attributed to the pen of Andreä, and were all intended for one purpose, that of discovering by the character of their reception who were the true lovers of wisdom and philanthropy, and of inducing them to come forward to the perfection of the enterprise, by transforming this fabulous society into a real and active organization.

The romantic story of Christian Rosencreutz, the supposed founder of the Order, is thus told by Andreä. I have borrowed for the most part the language of Mr. Sloane,² who, although his views and deductions on the subject are for the most part erroneous, has yet given us the best English epitome of the myth of Andreä.

According to Andreä's tale, a certain Christian Rosencreutz, though of good birth, found himself compelled from poverty to enter the cloister at a very early period of life. He was only sixteen years old when one of the monks purposed a pilgrimage to the Holy Sepulcher, and Rosencreutz, as a special favor, was permitted to accompany him. At Cyprus the monk is taken ill, but Rosencreutz proceeds onward to Damascus with the intention of going on to

¹ "Allgemeine und General Reformation der ganzen, weiten Welt. Beneben der Fama Fratemitatis des Löblichen Ordens des Rosencreutzes, an alle Gelehrte und Häupter Europas geschreiben," Cassel, 1614.

² "New Curiosities of Literature," vol. ii., p. 44.

Jerusalem. While detained in the former city by the fatigues of his journey, he hears of the wonders performed by the sages of Damascus, and, his curiosity being excited, he places himself under their direction.

Three years having been spent in the acquisition of their most hidden mysteries, he sets sail from the Gulf of Arabia for Egypt. There he studies the nature of plants and animals and then repairs, in obedience to the instructions of his Arabian masters, to Fez, in Africa. In this city it was the custom of the Arab and African sages to meet annually for the purpose of communicating to each other the results of their experience and inquiries, and here he passed two years in study. He then crossed over to Spain, but not meeting there with a favorable reception, he returned to his native country.

But as Germany was then filled with mystics of all kinds, his proposals for a reformation in morals and science meets with so little sympathy from the public that he resolves to establish a society of his own.

With this view he selects three of his favorite companions from his old convent. To them, under a solemn vow of secrecy, he communicates the knowledge which he had acquired during his travels. He imposes on them the duty of committing it to writing and of forming a magical vocabulary for the benefit of future students.

But in addition to this task they also undertook to prescribe gratuitously for all the sick who should ask their assistance, and as in a short time the concourse of patients became so great as materially to interfere with their other duties, and as a building which Rosencreutz had been erecting, called the Temple of the Holy Ghost, was now completed, he determines to increase the number of the brotherhood, and accordingly initiates four new members.

When all is completed, and the eight brethren are instructed in the mysteries of the Order, they separate, according to agreement, two only staying with Father Christian. The other six, after traveling for a year, are to return and communicate the results of their experience. The two who had stayed at home are then to be relieved by two of the travelers, so that the founder may never be alone, and the six again divide and* travel for a year.

The laws of the Order as they had been prescribed by Rosencreutz were as follows:

1. That they should devote themselves to no other occupation than that of the gratuitous practice of physic.

2. That they were not to wear a particular habit, but were to conform in this respect to the customs of the country in which they might happen to be.

3. That each one was to present himself on a certain day in the year at the Temple of the Holy Ghost, or send an excuse for his absence.

4. That each one was to look out for a brother to succeed him in the event of his death.

5. That the letters R. C. were to be their seal, watchword, and title.

6. That the brotherhood was to be kept a secret for one hundred years.

When one hundred years old, Christian Rosencreutz died, but the place of his burial was unknown to any one but the two brothers who were with him at the time of his death, and they carried the secret with them to the grave.

The society, however, continued to exist unknown to the world, always consisting of eight members only, until another hundred and twenty years had elapsed, when, according to a tradition of the Order, the grave of Father Rosencreutz was to be discovered, and the brotherhood to be no longer a mystery to the world.

It was about this time that the brethren began to make some alterations in their building, and thought of removing to another and more fitting situation the memorial tablet, on which were inscribed the names of their associates. The plate, which was of brass, was affixed to the wall by means of a nail in its center, and so firmly was it fastened that in tearing it away a portion of the plaster of the wall became detached and exposed a concealed door. Upon this door being still further cleansed from the incrustation, there appeared above it in large letters the following words: POST CXX ANNOS PATEBO—*After one hundred and twenty years I will be opened.*

Although the brethren were greatly delighted at the discovery, they so far restrained their curiosity as not to open the door until the next morning, when they found themselves in a vault of seven sides, each side five feet wide and eight feet high. It was lighted by an artificial sun in the centre of the arched roof, while in the

middle of the floor, instead of a tomb, stood a round altar covered with a small brass plate, on which was this inscription:

A. C. R. C. *Hoc, universi compendium, vivus mihi sepulchrum feci—i.e.*, while living, I made this epitome of the universe my sepulcher.

About the outer edge was:

Jesus mihi omnia—i.e., Jesus is all things to me.

In the center were four figures, each enclosed in a circle, with these words inscribed around them:

1. *Nequaquam vacuus.*
2. *Legis Jugum.*
3. *Libertas Evangelii.*
4. *Dei gloria intacta.*

That is—1. By no means void. 2. The yoke of the Law. 3. The liberty of the Gospel. 4. The unsullied Glory of God.

On seeing all this, the brethren knelt down and returned thanks to God for having made them so much wiser than the rest of the world. Then they divided the vault into three parts, the roof, the wall, and the pavement. The first and the last were divided into seven triangles, corresponding to the seven sides of the wall, each of which formed the base of a triangle, while the apices met in the center of the roof and of the pavement. Each side was divided into ten squares, containing figures and sentences which were to be explained to the new initiates. In each side there was also a door opening upon a closet, wherein were stored up many rare articles, such as the secret books of the Order, the vocabulary of Paracelsus, and other things of a similar nature. In one of the closets they discovered the life of their founder; in others they found curious mirrors, burning lamps, and a variety of objects intended to aid in rebuilding the Order, which, after the lapse of many centuries, was to fall into decay.

Pushing aside the altar, they came upon a strong brass plate, which being removed, they beheld the corpse of Rosencreutz as freshly preserved as on the day when it had been deposited, and under his arm a volume of vellum with letters of gold, containing, among other things, the names of the eight brethren who had founded the Order.

Such is an outline of the story of Christian Rosencreutz and his Rosicrucian Order as it is told in the *Fama Fraternitatis*. It is very

evident that Andreä composed this romance—for it is nothing else—not to record the existence of any actual society, but only that it might serve as a suggestion to the learned and the philanthropic to engage in the establishment of some such benevolent association. "He hoped," says Vaughan, "that the few nobler minds whom he desired to organize would see through the veil of fiction in which he had invested his proposal; that he might communicate personally with some such, if they should appear, or that his book might lead them to form among themselves a practical philanthropic confederacy answering to the serious purpose he had embodied in his fiction."¹

But his design was misunderstood then, as it has been since, and everywhere his fable was accepted as a fact. Diligent search was made by the credulous for the discovery of the Temple of the Holy Ghost. Printed letters appeared continually, addressed to the unknown brotherhood, seeking admission into the fraternity—a fraternity that existed only in the pages of the *Fama*. But the irresponsible silence to so many applications awoke the suspicions of some, while the continued mystery strengthened the credulity of others. The brotherhood, whose actual house "lay beneath the Doctor's hat of Valentin Andreä," was violently attacked and as vigorously defended in numerous books and pamphlets which during that period flooded the German press.

The learned men among the Germans did not give a favoring ear to the philanthropic suggestions of Andreä, but the mystical notions contained in his fabulous history were seized with avidity by the charlatans, who added to them the dreams of the alchemists and the reveries of the astrologers, so that the post-Andrean Rosicrucianism became a very different thing from that which had been devised by its original author. It does not, however, appear that the Rosicrucians, as an organized society, made any stand in Germany. Descartes says that after strict search he could not find a single lodge in that country. But it extended, as we will presently see, into England, and there became identified as a mystical association.

It is strange what misapprehension, either willful or mistaken, has existed in respect to the relations of Andreä to Rosicrucianism. We have no more right or reason to attribute the detection of such

¹ "Hours with the Mystics," vol. ii., p. 103.

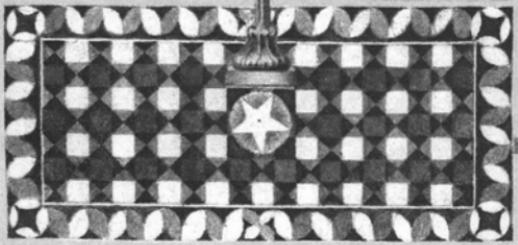

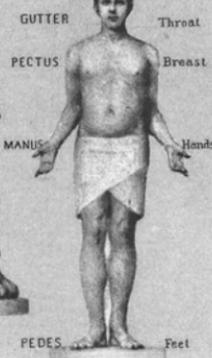

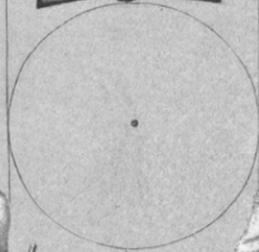

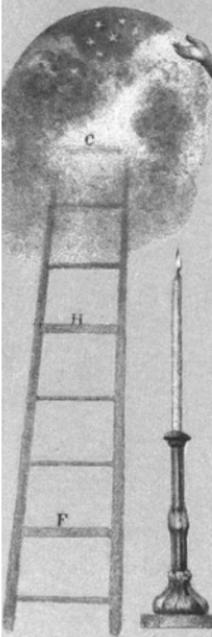

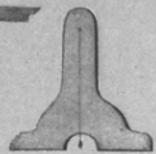

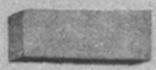

a sect to the German theologian than we have to ascribe the discovery of the republic of Utopia to Sir Thomas More, or of the island of Bensalem to Lord Bacon. In each of these instances a fiction was invented on which the author might impose his philosophical or political thoughts, with no dream that readers would take that for fact which was merely intended for fiction.

And yet Rhigellini, in his *Masonry Considered as the Result of the Egyptian, Jewish, and Christian Religions*, while declining to express an opinion on the allegorical question, as if there might be a doubt on the subject, respects the legend as it had been given in the *Fama*, and asserting that on the return of Rosencreutz to Germany "he instituted secret societies with an initiation that resembled that of the early Christians."¹ He antedates the *Chemical Nuptials* of Andrea a century and a half, ascribes the authorship of that work to Christian Rosencreutz, as if he were a real personage, and thinks that he established, in 1459, the Rite of the Theosophists, the earliest branch of the Rose Croix, or the Rosicrucians; for the French make no distinction in the two words, though in history they are entirely different. History written in this way is worse than fable—it is an *ignis fatuus* which can only lead astray. And yet this is the method in which Masonic history has too often been treated.

Nicolai, although the deductions by which he connects Freemasonry with Rosicrucianism are wholly untenable, is yet, in his treatment of the latter, more honest or less ignorant. He adopts the correct view when he says that the *Fama Fraternitatis* only announced a general reformation and exhorted all wise men to unite in a proposed society for the purpose of removing corruption and restoring wisdom. He commends it as a charming vision, full of poesy and imagination, but of a singular extravagance very common in the writings of that age. And he notes the fact that while the Alchemists have sought in that work for the secrets of their mysteries, it really contains the gravest satire on their absurd pretensions.

The *Fama Fraternitatis* had undoubtedly excited the curiosity of the Mystics, who abounded in Germany at the time of its appearance, of whom not the least prominent were the Alchemists. These, having sought in vain for the invisible society of the Rosicrucians, as it had been described in the romance of Andrea, resolved to form

¹"La Maçonnerie considérée comme le resultat des Religions Egyptienne, Juive et Chrétienne," L. iii., p. 108.

such a society for themselves. But, to the disappointment and the displeasure of the author of the *Fama*, they neglected or postponed the moral reformation which he had sought, and substituted the visionary schemes of the Alchemists, a body of quasi-philosophers who assigned their origin as students of nature and seekers of the philosopher's stone and the elixir of immortality to a very remote period.

Thus it is that I trace the origin of the Rosicrucians, not to Valentin Andréä, nor to Christian Rosencreutz, who was only the coinage of his brain, but to the influence exerted by him upon certain Mystics and Alchemists who, whether they accepted the legend of Rosencreutz as a fiction or as a verity, at least made diligent use of it in the establishment of their new society.

I am not, therefore, disposed to doubt the statement of L. C. Orvius, as cited by Nicolai, that in 1622 there was a society of Alchemists at The Hague, who called themselves Rosicrucians and claimed Rosencreutz as their founder.

Michael Maier, the physician of the Emperor Rudolf II, devoted himself in the early part of the 17th century to the pursuits of alchemy, and, having adopted the mystical views of the Rosicrucians, is said to have introduced that society into England. Maier was the author of many works in Latin in defense and in explanation of the Rosicrucian system. Among them was an epistle addressed "To all lovers of true chemistry throughout Germany, and especially to that Order which has hitherto lain concealed, but is now probably made known by the Report of the Fraternity (*Fama Fraternalitatis*) and their admirable Confession."¹ In this work he uses the following language:

"What is contained in the 'Fama' and 'confessio' is true. It is a very childish objection that the brotherhood have promised so much and performed so little. The Masters of the Order hold out the Rose as a remote reward, but they impose the Cross on all who are entering. Like the Pythagoreans and the Egyptians, the Rosicrucians extract vows of silence and secrecy. Ignorant men have treated the whole as a fiction; but this has arisen from the probation of five years to which they subject even well qualified novices,

¹"Omnibus veræ chymię Amantibus per Germaniam, et precipere illi Ordini adhuc delitescenti, at Fama Fraternalitatis et confessione suâ admiranda et probabile manifestato."

before they are admitted to the higher mysteries, and within that period they are taught how to govern their own tongues!"

Although Maier died in 1622, it appears that he had lived long enough to take part in the organization of the Rosicrucian sect, which had been formed out of the suggestions of Andreaë. His views on this subject were, however, peculiar and different from those of most of the new disciples. He denied that the Order had derived either its origin or its name from the person called Rosencreutz. He says that the founder of the society, having given his disciples the letters R. C. as a sign of their fraternity, they improperly made out of them the words *Rose* and *Cross*. But these heterodox opinions were not accepted by the Rosicrucians in general, who still adhered to Andreaë's legend as the source and the signification of their Order.

At one time Maier went to England, where he became intimately acquainted with Dr. Robert Fludd, the most famous as well as the earliest of the English Rosicrucians.

Robert Fludd was a physician of London, who was born in 1574 and died in 1637. He was a zealous student of alchemy, theosophy, and every other branch of mysticism, and wrote in defense of Rosicrucianism, of which sect he was an active member. Among his earliest works is one published in 1616 under the title of *A Compendious Apology clearing the Fraternity of the Rosy Cross from the stains of suspicion and infamy cast upon them*.¹

There is much doubt whether Maier communicated the system of Rosicrucianism to Fludd or whether Fludd had already received it from Germany before the visit of Maier. The only authority for the former statement is De Quincey (a most unreliable one), and the date of Fludd's *Apology* militates against it.

Fludd's explanation of the name of the sect differs from that of both Andreaë and Maier. It is, he says, to be taken in a figurative sense, and alludes to the cross dyed with the blood of Christ. In this explanation he approaches very nearly to the idea entertained by the members of the modern Rose Croix degree.

No matter who was the missionary that brought it over, it is very certain that Rosicrucianism was introduced from Germany, its birth-

¹"Apologia Compendiaria, Fraternitatem de Rosea Cruce suspicionis et infamie maculis aspersum abluens."

place, into England at a very early period of the 17th century, and it is equally certain that after its introduction it flourished, though an exotic, with more vigor than it ever had in its native soil.

That there were in that century, and even in the beginning of the succeeding one, mystical initiations wholly unconnected with Freemasonry, but openly professing a Hermetic or Rosicrucian character and origin, may very readily be supposed from existing documents. It is a misfortune that such authors as Buhle, Nicolai, and Rhigellini, with many others, to say nothing of such non-masonic writers as Sloane and De Quincey, who were necessarily mere sciolists in all Masonic studies, should have confounded the two institutions, and, because both were mystical, and one appeared to follow (although it really did not) the other in point of time, should have proclaimed the theory (wholly untenable) that Freemasonry is indebted for its origin to Rosicrucianism.

The writings of Lilly and Ashmole, both learned men for the age in which they lived, prove the existence of a mystical philosophy in England in the 17th century, in which each of them was a participant. The Astrologers, who were deeply imbued with the Hermetic philosophy, held their social meetings for mutual instruction and their annual feasts, and Ashmole gives hints of his initiation into what I suppose to have been alchemical or Rosicrucian wisdom by one whom he reverently calls "Father Backhouse."

But we have the clearest documentary testimony of the existence of a Hermetic degree or system at the beginning of the 18th century, and about the time of what is called the Revival of Masonry in England, by the establishment of the Grand Lodge at London, and which, from other undoubted testimony, we know were not Masonic. This testimony is found in a rare work, some portions of whose contents, in reference to this subject, are well worthy of a careful review.

In the year 1722 there was published in London a work in small octavo bearing the following title:¹

"Long Livers: A curious History of such Persons of both Sexes who have liv'd several Ages and grown Young again: With the rare Secret of Rejuvenescency of Arnoldus de Villa Nova. And

¹A copy of this work, and, most probably, the only one in this country, is in the valuable library of Bro. Carson, of Cincinnati, and to it I am indebted for the extracts that I have made.

a great many approv'd and invaluable Rules to prolong Life: Also how to prepare the Universal Medicine. Most humbly dedicated to the Grand Master, Masters, Wardens, and Brethren of the Most Ancient and Honorable Fraternity of the FREE MASONS of Great Britain and Ireland. By Eugenius Philalethes, F.R.S., Author of the Treatise of the Plague. *Viri Fratres audite me*. Act. xv. 13. *Diligite Fraternitatem timete Deum honor aie Regem*. I. Pet. ii. 17. LONDON. Printed for J. Holland, at the Bible and Ball, in St. Paul's Church Yard, and L. Stokoe, at Charing Cross, 1722." pp. 64-199.

Eugenius Philalethes was the pseudonym of Thomas Vaughn, a celebrated Rosicrucian of the 17th century, who published, in 1652, a translation of the *Fama Fraternitatis* into English. But, as he was born in 1612, it is not to be supposed that he wrote the present work. It is, however, not very important to identify this second Philalethes. It is sufficient for our purpose to know that it is a Hermetic treatise written by a Rosicrucian, of which the title alone—the references to the renewal of youth, one of the Rosicrucian secrets, to the recipe of the great Rosicrucian Villa Nova, or Arnold de Villaneuve, and to the Universal Medicine, the Rosicrucian Elixir Vitse—would be sufficient evidence. But the only matter of interest in connection with the present subject is that this Hermetic work, written, or at least printed, in 1722, one year before the publication of the first edition of Anderson's *Constitutions*, refers explicitly to the existence of a higher initiation than that of the Craft degrees, which the author seeks to interweave in the Masonic system.

This is evidently shown in portions of the dedication, which is inscribed to "the Grand Master, Masters, Wardens, and Brethren of the Most Ancient and Most Honorable Fraternity of the Free Masons of Great Britain and Ireland"; and it is dedicated to them by their "Brother Eugenius Philalethes." This fraternal subscription shows that he was a Freemason as well as a Rosicrucian, and therefore must have been acquainted with both systems.

The important fact, in this dedication, is that the writer alludes, in language that can not be mistaken, to a certain higher degree, or to a more exalted initiation, to the attainment of which the primitive degrees of Ancient Craft Masonry were preparatory. Thus he says, addressing the Freemasons:

"I present you with the following sheets, as belonging more

properly to you than any else. But what I here say, those of you who are not far illuminated, who stand in the outward place and are not worthy to look behind the veil, may find no disagreeable or unprofitable entertainment; and those who are so happy as to have greater light, will discover under these shadows, somewhat truly great and noble and worthy the serious attention of a genius the most elevated and sublime—the spiritual, celestial cube, the only true, solid, and immovable basis and foundation of all knowledge, peace, and happiness." (Page iv.)

Another passage will show that the writer was not only thoroughly acquainted with the religious, philosophical, and symbolic character of the institution, but that he wrote evidently under the impression (rather I should say the knowledge) that at that day others besides himself had sought to connect Freemasonry with Rosicrucianism. He says:

"Remember that you are the salt of the earth, the light of the world, and the fire of the universe. Ye are living stones, built up a spiritual house, who believe and rely on the chief *Lapis Angularis*, which the refractory and disobedient builders disallowed; you are called from darkness to light; you are a chosen generation, a royal priesthood."

Here the symbolism is Masonic, but it is also Rosicrucian. The Masons had derived their symbol of the STONE from the metaphor of the Apostle, and like him had given it a spiritual signification. The Rosicrucians had also the *Stone* as their most important symbol. "Now," says one of them, "in this discourse will I manifest to thee the natural condition of the Stone of the Philosophers, apparelled with a triple garment, even this Stone of Riches and Charity, the Stone of Relief from Languishment—in which is contained every secret; being a Divine Mystery and Gift of God, than which there is nothing more sublime."¹

It was natural that a Rosicrucian, in addressing Freemasons, should refer to a symbol common to both, though each derived its interpretation through a different channel.

In another passage he refers to the seven liberal arts, of which he calls Astronomy "the grandest and most sublime." This was the

¹ Dialogue of Arislaus in the Alchemist's Enchiridion, 1672. Quoted by Hitchcock in his "Alchemy and the Alchemists," p. 39.

Rosicrucian doctrine. In that of the Freemasons the precedence is given to Geometry. Here we find a difference between the two institutions which proves their separate and independent existence. Still more important differences will be found in the following passages, which, while they intimate a higher degree, show that it was a Hermetic one, which, however, the Rosicrucian writer was willing to ingraft on Freemasonry. He says:

"And now, my Brethren, *you of the higher class* (note that he does not call it a degree), permit me a few words, since you are but few; and these few words I shall speak to you in riddles, because to you it is given to know those mysteries which are hidden from the unworthy.

"Have you not seen then, my dearest Brethren, that stupendous bath, filled with the most limpid water, than which no pure can be purer, of such admirable mechanism, that makes even the greatest philosopher gaze with wonder and astonishment, and is the subject of the contemplation of the wisest men. Its form is a quadrate sublimely placed on six others, blazing all with celestial jewels, each angularly supported with four lions. Here repose our mighty King and Queen, (I speak foolishly, I am not worthy to be of you), the King shining in his glorious apparel of transparent, incorruptible gold, beset with living sapphires; he is fair and ruddy, and feeds among the lilies; his eyes, two carbuncles, the most brilliant, darting prolific never-dying fires; and his large, flowing hair, blacker than the deepest black or plumage of the long-lived crow; his royal consort vested in tissue of immortal silver, watered with emeralds, pearl and coral. O mystical union! O admirable commerce!

"Cast now your eyes to the basis of this celestial structure, and you will discover just before it a large basin of porphyrian marble, receiving from the mouth of a large lion's head, to which two bodies displayed on each side of it are conjoined, a greenish fountain of liquid jasper. Ponder this well and consider. Haunt no more the woods and forests; (I speak as a fool) haunt no more the fleet; let the flying eagle fly unobserved; busy yourselves no longer with the dancing idiot, swollen toads, and his own tail-devouring dragon; leave these as elements to your *Tyrones*.

"The object of your wishes and desires (some of you may, perhaps, have attained it, I speak as a fool), is that admirable thing which has a substance, neither too fiery nor altogether earthy, nor

simply watery; neither a quality the most acute or most obtuse, but of a middle nature, and light to the touch, and in some manner soft, at least not hard, not having asperity, but even in some sort sweet to the taste, odorous to the smell, grateful to the sight, agreeable and delectable to the hearing, and pleasant to the thought; in short, that one only thing besides which there is no other, and yet everywhere possible to be found, the blessed and most sacred subject of the square of wise men, that is ... I had almost blabbed it out and been sacrilegiously perjured. I shall therefore speak of it with a circumlocution yet more dark and obscure, that none but the Sons of Science and those who are illuminated with the sublimest mysteries and profoundest secrets of MASONRY may understand. . . . It is then what brings you, my dearest Brethren, to that pellucid, diaphanous palace of the true disinterested lovers of wisdom, that triumphant pyramid of purple salt, more sparkling and radiant than the finest Orient ruby, in the center of which reposes inaccessible light epitomized, that incorruptible celestial fire, blazing like burning crystal, and brighter than the sun in his full meridian glories, which is that immortal, eternal, never-dying PYROPUS; the King of genius, whence proceeds everything that is great and wise and happy.

"These things are deeply hidden from common view, and covered with pavilions of thickest darkness, that what is sacred may not be given to dogs or your pearls cast before swine, lest they trample them under foot, and turn again and rend you."

All this is Rosicrucian thought and phraseology. Its counterpart may be found in the writings of any of the Hermetic philosophers. But it is not Freemasonry and could be understood by no Freemason relying for his comprehension only on the teaching he had received in his own Order. It is the language of a Rosicrucian adept addressed to other adepts, who like himself had united with the Fraternity of Freemasons, that they might out of its select coterie choose the most mystical and therefore the most suitable candidates to elevate them to the higher mysteries of their own brotherhood.

That Philalethes and his brother Rosicrucians entertained an opinion of the true character of Speculative Masonry very different from that taught by its founders is evident from other passages of this Dedication. Unlike Anderson, Desaguliers, and the writers purely

Masonic who succeeded them, the author of the Dedication establishes no connection between Architecture and Freemasonry. Indeed it is somewhat singular that although he names both David and Solomon in the course of his narrative, it is with little respect, especially for the latter, and he does not refer, even by a single word, to the Temple of Jerusalem. The Freemasonry of this writer is not architectural, but altogether theosophic. It is evident that as a Hermetic philosopher he sought to identify the Freemasons with the disciples of the Rosicrucian sect rather than with the Operative Masons of the Middle Ages. This is a point of much interest in the discussion of the question of a connection between the two associations, considering that this work was published only five years after the revival. It tends to show, not that Freemasonry was established by the Rosicrucians, but, on the contrary, that at that early period the latter were seeking to ingraft themselves upon the former, and that while they were willing to use the simple degrees of Craft Masonry as a nucleus for the growth of their own fraternity, they looked upon them only as the medium of securing a higher initiation, altogether unmasonic in its character and to which but few Masons ever attained.

Neither Anderson nor Desaguliers, our best because contemporary authority for the state of Masonry in the beginning of the 18th century, give the slightest indication that there was in their day a higher Masonry than that described in the *Book of Constitutions* of 1723. The Hermetic element was evidently not introduced into Speculative Masonry until the middle of the 18th century, when it was infused in a fragmentary form into some of the High Degrees which were at that time fabricated by certain of the Continental manufacturers of Rites.

But if, as Eugenius Philalethes plainly indicates, there were in the year 1721 higher degrees, or at least a higher degree, attached to the Masonic system and claimed to be a part of it, which possessed mystical knowledge that was concealed from the great body of the Craft, "who were not far illuminated, who stood in the outward place and were not worthy to look behind the veil"—by which it is clearly implied that there was another class of initiates *who were far illuminated, who stood within the inner place and looked behind the veil*—then the question forces itself upon us, why is it that neither Anderson nor Desaguliers nor any of the writers of that

period, nor any of the rituals, make any allusion to this higher and more illuminated system?

The answer is readily at hand. It is because no such system of initiation, so far as Freemasonry was concerned, existed. The Master's degree was at that day the consummation and perfection of Speculative Masonry. There was nothing above or beyond it. The Rosicrucians, who, especially in their astrological branch, were then in full force in England, had, as we see from this book, their own initiation into their Hermetic and theosophic system. Freemasonry then beginning to become popular and being also a mystical society, these mystical brethren of the Rosy Cross were ready to enter within its portals and to take advantage of its organization. But they soon sought to discriminate between their own perfect wisdom and the imperfect knowledge of their brother Masons, and, Rosicrucian-like, spoke of an arcana which they only possessed. There were some Rosicrucians who, like Philalethes, became Freemasons, and some Freemasons, like Elias Ashmole, who became Rosicrucians.

But there was no legitimate derivation of one from the other. There is no similarity between the two systems—their origin is different; their symbols, though sometimes identical, have always a different interpretation; and it would be an impossible task to deduce the one historically from the other.

Yet there are not wanting scholars whose judgment on other matters has not been deficient, who have not hesitated to trace Freemasonry to a Rosicrucian source. Some of these, as Buhle, De Quincey, and Sloane, were not Freemasons, and we can easily ascribe their historical errors to their want of knowledge, but such writers as Nicolai and Reghellini have no such excuse for the fallacy of which they have been guilty.

Johann Gottlieb Buhle was among the first to advance the hypothesis that Freemasonry was an offshoot of Rosicrucianism. This he did in a work entitled *On the Origin and the Principal Events of the Orders of Rosicrucianism and Freemasonry?* published in 1804. His theory was that Freemasonry was invented in the year 1629, by John Valentin Andreä, and hence that it sprang out of the

¹ "Über den Ursprung und die vornehmsten Schicksale des Ordens der Rosenkreute- und Freimaurer."

Rosicrucian system or fiction which was the fabrication of that writer. His fallacious views and numerous inaccuracies met with many refutations at the time, besides those of Nicolai, produced in the work which has been heretofore cited. Even De Quincey himself, a bitter but flippant adversary of Freemasonry, and who translated, or rather paraphrased, the views of Buhle, does not hesitate to brand him as illogical in his reasoning and confused in his arrangement.

Yet both Nicolai and De Quincey have advanced almost the same hypothesis, though that of the former is considerably modified in its conclusions.

The flippancy and egotism of De Quincey, with his complete ignorance as a profane, of the true elements of the Masonic institution, hardly entitle his arguments to a serious criticism. His theory and his self-styled facts may be epitomized as follows:

He thinks that the Rosicrucians were attracted to the Operative Masons by the incidents, attributes, and legends of the latter, and that thus the two Orders were brought into some connection with each other. The same building that was used by the guild of Masons offered a desirable means for the secret assemblies of the early Freemasons, who, of course, were Rosicrucians. An apparatus of implements and utensils, such as was presented in the fabulous sepulcher of Father Rosencreutz, was introduced, and the first formal and solemn Lodge of Freemasons, on which occasion the name of Freemasons was publicly made known, was held in Masons' Hall, Masons' Alley, Basinghall Street, London, in the year 1646. Into this Lodge he tells us that Elias Ashmole was admitted. Private meetings, he says, may have been held, and one at Warrington in Lancashire, which is mentioned in Ashmole's Life, but the name of a Freemasons' Lodge, with the insignia, attributes, and circumstances of a Lodge, first, he assures us, came forward at the date above mentioned.

All of this, he tells us, is upon record, and thus refers to historical testimony, though he does not tell us where it is to be found. Now, all these statements we know, from authentic records, to be false. Ashmole is our authority, and he is the very best authority, because he was an eye-witness and a personal actor in the occurrences which he records.

It has already been seen, by the extracts heretofore given from Ashmole's diary, that there is no record of a Lodge held in 1646 at

Masons' Hall; that the Lodge was held, with all "the attributes and circumstances of a Lodge," at Warrington; that Ashmole was then and there initiated as a Freemason, and not at London; and finally, that the record of the Lodge held at Masons' Hall, London, which is made by the same Ashmole, was in 1683 and not in 1646, or thirty-five years afterward.

An historian who thus falsifies records to sustain a theory is not entitled to the respectful attention of a serious argument. And so De Quincey may be dismissed for what he is worth. I do not concede to him the excuse of ignorance, for he evidently must have had Ashmole's diary under his eyes, and his misquotations could only have been made in bad faith.

Nicolai is more honorable in his mode of treating the question. He does not attribute the use of Freemasonry directly and immediately from the Rosicrucian brotherhood. But he thinks that its mystical theosophy was the cause of the outspring of many other mystical associations, such as the Theosophists, and that, passing over into England, it met with the experimental philosophy of Bacon, as developed especially in his *New Atlantis*, and that the combined influence of the two, the esoteric principles of the one and the experimental doctrines of the other, together with the existence of certain political motives, led to a meeting of philosophers who established the system of Freemasonry at Masons' Hall in 1646. He does not explicitly say so, but it is evident from the names that he gives that these philosophers were Astrologers, who were only a sect of the Rosicrucians devoted to a specialty.

The theory and the arguments of Nicolai have already been considered in the preceding chapter of this work, and need no further discussion here.

The views of Rhigellini are based on the book of Nicolai, and differ from them only in being, from his Gallic ignorance of English history, a little more inaccurate. The views of Rhigellini have already been referred to on a preceding page.

And now we meet with another theorist, who is scarcely more respectful or less flippant than De Quincey, and who, not being a Freemason, labors under the disadvantage of an incorrect knowledge of the principles of the Order. Besides we can expect but little accuracy from one who quotes as authentic history the spurious Leland Manuscript.

Mr. George Sloane, in a very readable book published in London in 1849, under the title of *New Curiosities of Literature*, has a very long article in his second volume on *The Rosicrucians and Freemasons*. Adopting the theory that the latter are derived from the former, he contends, from what he calls proofs, but which are no proofs at all, that "the Freemasons are not anterior to the Rosicrucians; and their principles, so far as they were avowed about the middle of the 17th century, being identical, *it is fair to presume* that the Freemasons were, in reality, the first incorporated body of Rosicrucians or Sapientes."

As he admits that this is but a presumption, and as presumptions are not facts, it is hardly necessary to occupy any time in its discussion.

But he proceeds to confirm his presumption, in the following way.

"In the *Fama* of Andrea," he says, "we have the first sketch of a constitution which bound by oath the members to mutual secrecy, which proposed higher and lower grades, yet leveled all worldly distinctions in the common bonds of brotherhood, and which opened its privileges to all classes, making only purity of mind and purpose the condition of reception."

This is not correct. Long before the publication of the *Fama Fraternitatis* there were many secret associations in the Middle Ages, to say nothing of the Mysteries of antiquity, in which such constitutions prevailed, enjoining secrecy under the severest penalties, dividing their system of esoteric instruction into different grades, establishing a bond of brotherhood, and always making purity of life and rectitude of conduct the indispensable qualifications for admission. Freemasonry needed not to seek the model of such a constitution from the Rosicrucians.

Another argument advanced by Mr. Sloane is this:

"The emblems of the two brotherhoods are the same in every respect—the plummet, the level, the compasses, the cross, the rose, and all the symbolic trumpery which the Rosicrucians named in their writings as the insignia of their imaginary associations, and which they also would have persuaded a credulous world concealed truths ineffable by mere language; both, too, derived their wisdom from Adam, adopted the same myth of building, connected themselves in the same unintelligible way with Solomon's Temple, af-

fectured to be seeking *light from the East*—in other words, the Cabala—and accepted the heathen Pythagoras among their adepts."

In this long passage there are almost as many errors and mis-statements as there are lines. The emblems of the two Orders were not the same in any respect. The square and compasses were not ordinary nor usual Rosicrucian emblems. In one instance, in a plate in the *Azoth Philosophorum* of Basil Valentine, published in the 17th century, we will, it is true, find these implements forming part of a Rosicrucian figure, but they are there evidently used as phallic symbols, a meaning never attached to them in Freemasonry, whose interpretation of them is derived from their operative use. Besides, we know, from a relic discovered near Limerick, in Ireland, that the square and the level were used by the Operative Masons as emblems in the 16th or, perhaps, the 15th century, with the same signification that is given to them by the Freemasons of the present day. The Speculative Masons derived nearly all of their symbols from the implements and the language of the Operative art; the Rosicrucians took theirs from astronomical and geometrical problems, and were connected in their interpretations with a system of theosophy and not with the art of building. The cross and the rose, referred to by Mr. Sloane, never were at any time, not even at the present day, emblems recognized in Craft Masonry, and were introduced into such of the High Degrees fabricated about the middle of the 18th century as had in them a Rosicrucian element. Again, the Rosicrucians had nothing to do with the Temple of Solomon. Their "invisible house," or their Temple, or "House of the Holy Ghost," was a religious and philosophic idea, much more intimately connected with Lord Bacon's House of Solomon in the Island of Bensalem than it was with the Temple of Jerusalem. And, finally, the early Freemasons, like their successors of the present day, in "seeking light from the East," intended no reference to the Cabala, which is never mentioned in any of their primitive rituals, but alluded to the East as the source of physical light—the place of sunrising, which they adopted as a symbol of intellectual and moral light. It would, indeed, be easier to prove from their symbols that the first Speculative Masons were sun-worshippers than that they were Rosicrucians, though neither hypothesis would be correct.

If any one will take the trouble of toiling through the three books of Cornelius Agrippa's *Occult Philosophy*, which may be

considered as the text-book of the old Rosicrucian philosophy, he will see how little there is in common between Rosicrucianism and Freemasonry. The one is a mystical system founded on the Cabala; the other the outgrowth of a very natural interpretation of symbols derived from the usages and the implements of an operative art. The Rosicrucians were theosophists, whose doctrines were of angels and demons, of the elements, of the heavenly bodies and their influence on the affairs of men, and of the magical powers of numbers, of suffumigations, and other sorceries.

The Alchemists, who have been called "physical Rosicrucians," adopted the metals and their transmutation, the elixir of life, and their universal solvent, as symbols, if we may believe Hitchcock,¹ by which they concealed the purest dogmas of a religious life.

But Freemasonry has not and never had anything of this kind in its system. Its founders were, as we will see when we come to the historical part of this work, builders, whose symbols, applied in their architecture, were of a religious and Christian character; and when their successors made this building fraternity a speculative association, they borrowed the symbols by which they sought to teach their philosophy, not from Rosicrucianism, not from magic, nor from the Cabala, but from the art to which they owed their origin. Every part of Speculative Masonry proves that it could not have been derived from Rosicrucianism. The two Orders had in common but one thing—they both had secrets which they scrupulously preserved from the unhallowed gaze of the profane.

Andreä sought, it is true, in his *Fama Fraternitatis*, to elevate Rosicrucianism to a more practical and useful character, and to make it a vehicle for moral and intellectual reform. But even his system, which was the only one that could have exerted any influence on the English philosophers, is so thoroughly at variance in its principles from that of the Freemasonry of the 17th century, that a union of the two, or the derivation of one from the other, must have been utterly impracticable.

It has been said that when Henry Cornelius Agrippa was in London, in the year 1510, he founded a secret society of Rosicrucians. This is possible, although, during his brief visit to London, Agrippa was the guest of the learned Dean Colet, and spent his time with his

¹ "Remarks upon Alchemy and the Alchemists," *passim*.

host in the study of the works of the Apostle to the Gentiles. "I labored hard," he says himself, "at the Epistles of St. Paul." Still he may have found time to organize a society of Rosicrucians. In the beginning of the 16th century secret societies "chiefly composed," says Mr. Morley, "of curious and learned youths had become numerous, especially among the Germans, and towards the close of that century these secret societies were developed into the form of brotherhoods of Rosicrucians, each member of which gloried in styling himself Physician, Theosophist, Chemist, and now, by the mercy of God, Rosicrucian."¹

But to say of this society, established by Agrippa in England in 1510 (if one was actually established), as has been said by a writer of the last century, that "this practice of initiation, or secret incorporation, thus and then first introduced has been handed down to our own times, and hence, apparently, the mysterious Eleusinian confederacies now known as the Lodges of Freemasonry,"² is to make an assertion that is neither sustained by historical testimony nor supported by any chain of reasoning or probability.

I have said that while the hypothesis that Freemasonry was originally derived from Rosicrucianism, and that its founders were the English Rosicrucians in the 17th century, is wholly untenable, there is no doubt that at a later period, a century after this, its supposed origin, a Rosicrucian element, was very largely diffused in the *Hautes Grades* or High Degrees which were invented on the continent of Europe about the middle of the 18th century.

This subject belongs more appropriately to the domain of history than to that of legend, but its consideration will bring us so closely into connection with the Rosicrucian or Hermetic philosophy that I have thought that it would be more convenient not to dissever the two topics, but to make it the subject of the next chapter.

² *Monthly Review*, London, 1798, vol. xxv., p. 30.

CHAPTER XXXVI

THE ROSICRUCIANISM OF THE HIGH DEGREES

HE history of the High Degrees of Masonry begins with the inventions of the Chevalier Michael Ramsay, who about the year 1728 fabricated three which he called Ecosais, Novice, and Knight Templar. But the inventions of Ramsay had nothing in them of a Rosicrucian character. They were intended by him to support his hypothesis that Freemasonry originated in the Crusades, and that the first Freemasons were Templars. His degrees were therefore not philosophic but chivalric. The rite-manufacturers who succeeded him, followed for the most part in his footsteps, and the degrees that were subsequently invented partook of the chivalric and military character, so that the title of "Chevalier" or "Knight," unknown to the early Freemasons, became in time so common as to form the designation in connection with another noun of most of the new degrees. Thus we find in old and disused Rites, as well as in those still existing, such titles as "Knight of the Sword," "Knight of the Eagle," "Knight of the Brazen Serpent," and so many more that Ragon, in his *Nomenclature*, furnishes us with no less than two hundred and ninety-two degrees of Masonic Knighthood, without having exhausted the catalogue.

But it was not until long after the Masonic labors of Ramsay had ceased that the element of Hermetic philosophy began to intrude itself into still newer degrees.

Among the first to whom we are to ascribe the responsibility of this novel infusion is a Frenchman named Antoine Joseph Pernelty, who was born in 1716 and died in 1800, having passed, therefore, the most active and vigorous portion of his life in the midst of that flood of Masonic novelties which about the middle quarters of the 18th century inundated the continent of Europe and more especially the kingdom of France.

Pernelty was at first a Benedictine monk, but, having at the age of forty-nine obtained a dispensation from his vows, he removed from Paris to Berlin, where for a short time he served Frederick the Great as his librarian. Returning to Paris, he studied and became infected with the mystical doctrines of Swedenborg, and published a translation of one of the most important of his works. He then repaired to Avignon, where he established a new Rite, which, on its transference to Montpellier, received the name of the "Academy of True Masons." Into this Rite it may well be supposed that he introduced much of the theosophic mysticism of the Swedish sage, in parts of which there is a very strong analogy to Rosicrucianism, or at least to the Hermetic Doctrines of the Rosicrucians. It will be remembered that the late General Hitchcock, who was learned on mystical topics, wrote a book to prove that Swedenborg was a Hermetic philosopher; and the arguments that he advances are not easily to be confuted.

But Pernelty was not a Swedenborgian only. He was a man of multifarious reading and had devoted his studies, among other branches of learning, to theology, philosophy, and the mathematical sciences. The appetite for a mystical theology, which had led him to the study and the adoption of the views of Swedenborg, would scarcely permit him to escape the still more appetizing study of the Hermetic philosophers.

Accordingly we find him inventing other degrees, and among them one, the "Knight of the Sun," which is in its original ritual a mere condensation of Rosicrucian doctrines, especially as developed in the alchemical branch of Rosicrucianism.

There is not in the wide compass of Masonic degrees, one more emphatically Rosicrucian than this. The reference in its ritual to Sylphs, one of the four elementary spirits of the Rosicrucians; to the seven angels which formed a part of the Rosicrucian hierarchy; the dialogue between Father Adam and Truth in which the doctrines of Alchemy and the Cabala are discussed in the search of man for theosophic truth, and the adoption as its principal word of recognition of that which in the Rosicrucian system was deemed the primal matter of all things, are all sufficient to prove the Hermetic spirit which governed the founder of the degree in its fabrication.

There have been many other degrees, most of which are now obsolete, whose very names openly indicate their Hermetic origin.

Such are the "Hermetic Knight," the "Adept of the Eagle" (the word *adept* being technically used to designate an expert Rosicrucian), the "Grand Hermetic Chancellor," and the "Philosophic Cabalist." The list might be increased by fifty more, at least, were time and space convenient. There have been whole rites fabricated on the basis of the Rosicrucian or Hermetic philosophy, such as the "Rite of Philalethes," the "Hermetic Rite," and the "Rite of Illuminated Theosophists," invented in 1767 by Benedict Chartanier, who united in it the notions of the Hermetic philosophy and the reveries of Swedenborg. Gadicke tells us also, in his *Freimaurer-Lexicon*, of a so-called Masonic system which was introduced by the Marquis of Lerna into Berlin in 1758, the objects of which were the Hermetic arcana and the philosopher's stone.

But the Hermetic degree which to the present day has exercised the greatest influence upon the higher grades of Masonry is that of the Rose Croix. This name was given to it by the French, and it must be noticed that in the French language no distinction has ever been made between the *Rosenkreutzer* and *Rose Croix*; or, rather, the French writers have always translated the *Rosenkreutzer* of the German and the *Rosicrucian* of the English by their own words *Rose Croix*, and to this philological inaccuracy is to be traced an historical error of some importance, to be soon adverted to.

The first that we hear in history of a Rosicrucian Masonry, under that distinctive name, is about the middle of the 18th century.

The society to which I allude was known as the "Gold-und-Rosenkreutzer," or the "Golden Rosicrucians." We first find this title in a book published at Berlin, in 1714, by one Samuel Richter, under the assumed name of Sincerus Renatus, and with the title of *A True and Complete Preparation of the Philosopher's Stone by the Order of the Golden Rosicrucians*. In it is contained the laws of the brotherhood, which Findel thinks bear unmistakable evidence of Jesuitical intervention.

The book of Richter describes a society which, if founded on the old Rosicrucians, differed essentially from them in its principles. Findel speaks of these "Golden Rosicrucians" as if originally formed on this work of Richter, and in the spirit of the Jesuits, to repress liberty of thought and the healthy development of the intellect. If formed at that early period, in the beginning of the 18th

century, it could not possibly have had a connection with Freemasonry.

But the Order, as an appendant to Masonry, was not really perfected until about the middle of the 18th century. Findel says after 1756. The Order consisted of nine degrees, all having Latin names, viz.: 1, Junior; 2, Theoreticus; 3, Practicus; 4, Philosophus; 5, Minor; 6, Major; 7, Adeptus; 8, Magister; 9, Magus. It based itself on the three primitive degrees of Freemasonry only as giving a right to entrance; it boasted of being descended from the ancient Rosicrucians, and of possessing all their secrets, and of being the only body that could give a true interpretation of the Masonic symbols, and it claimed, therefore, to be the head of the Order. There is no doubt that this brotherhood was a perfect instance of the influence sought to be cast, about the middle of the 18th century, upon Freemasonry by the doctrines of Rosicrucianism. The effort, however, to make it a Hermetic system failed. The Order of the Golden Rosicrucians, although for nearly half a century popular in Germany, and calling into its ranks many persons of high standing, at length began to decay, and finally died out, about the end of the last century.

Since that period we hear no more of Rosicrucian Masonry, except what is preserved in degrees like that of the Knight of the Sun and a few others, which are still retained in the catalogue of the Ancient and Accepted Scottish Rite.

I have said that the translation of the word *Rosicrucian* by *Rose Croix* has been the source of an important historical error. This is the confounding of the French degree of "Rose Croix," or "Knight of the Eagle and Pelican," with Rosicrucianism, to which it has not the slightest affinity. Thus Dr. Oliver, when speaking of this degree, says that the earliest notice that he finds of it is in the *Fama Fraternitatis*, evidently showing that he deemed it to be of Rosicrucian origin.

The modern Rose Croix, which constitutes the summit of the French Rite, and is the eighteenth of the Ancient and Accepted Scottish Rite, besides being incorporated into several other Masonic systems, has not in its construction the slightest tinge of Rosicrucianism, nor is there in any part of its ritual, rightly interpreted, the faintest allusion to the Hermetic philosophy.

I speak of it, of course, as it appears in its original form. This

has been somewhat changed in later days. The French Masons, objecting to its sectarian character, substituted for it a modification which they have called the "Philosophic Rose Croix." In this they have given a Hermetic interpretation to the letters on the cross, an example that has elsewhere been more recently followed.

But the original Rose Croix, most probably first introduced to notice by Prince Charles Edward, the "Young Pretender," in the Primordial chapter which he established in 1747, at Arras, in France, was a purely Christian, if not a Catholic degree. Its most prominent symbols, the rose, the cross, the eagle, and the pelican, its ceremonies, and even its words and signs of recognition, bore allusion to Jesus Christ, the expounder of the new law, which was to take the place of the old law that had ceased to operate when "the veil of the temple was rent."

The Rose Croix, as we find it in its pure and uncorrupted ritual, was an attempt to apply the rites, symbols, and legends of the primitive degrees of Ancient Craft Masonry to the last and greatest dispensation; to add to the first temple of Solomon, and the second of Zerubbabel, a third, which is the one to which Christ alluded when he said, "Destroy this temple, and in three days will I raise it up"—an expression wholly incomprehensible by the ignorant populace who stood around him at the time, but the meaning of which is perfectly intelligible to the Rose Croix Mason who consults the original ritual of his degree.

In all this there is nothing alchemical, Hermetic, or Rosicrucian and it is a great error to suppose that there is anything but Christian philosophy in the degree as originally invented.

The name of the degree has undoubtedly led to the confusion in its history. But, in fact, the words "Rosa Crucis," common both to the ancient Rosicrucian philosophers and to the modern Rose Croix Masons, had in each a different meaning, and some have supposed a different derivation. In the latter the title has by many writers been thought to allude to the *ros*, or dew, which was deemed by the alchemists to be a powerful solvent of gold, and to *crux*, the cross, which was the chemical hieroglyphic of light. Mosheim says:

"The title of *Rosicrucians* evidently denotes the chemical philosophers and those who blended the doctrines of religion with the secrets of chemistry. The denomination itself is drawn from the

science of chemistry; and they only who are acquainted with the peculiar language of the chemists can understand its true signification and energy. It is not compounded, as many imagine, of the two words *rosa* and *crux*, which signify *rose* and *cross*, but of the latter of these words and the Latin word *ros*, which signifies *dew*. Of all natural bodies *dew* is the most powerful solvent of gold. The *cross*, in the chemical style, is equivalent to *light*, because the figure of the cross exhibits at the same time the three letters of which the word *lux*, i.e., *light*, is compounded. Now, *lux* is called by this sect the *seed* or *menstruum of the red dragon*; or, in other words, that gross and corporeal, when properly digested and modified, produces gold."¹

Notwithstanding that this learned historian has declared that "all other explications of this term are false and chimerical," others more learned perhaps than he, in this especial subject, have differed from him in opinion, and trace the title to *rosa*, not to *ros*.

There is certainly a controversy about the derivation of *Rosicrucian* as applied to the Hermetic philosophers, but there is none whatever in reference to that of the Masonic *Rose Croix*. Everyone admits, because the admission is forced upon him by the ritual and the spirit of the degree, that the title comes from *rose* and *cross*, and that *rose* signifies Christ, and *cross* the instrument of his passion. In the Masonic degree, *Rose Croix* signifies *Christ on the cross*, a meaning that is carried out by the jewel, but one which is never attached to the rose and cross of the Rosicrucians, where *rose* most probably was the symbol of silence and secrecy, and the cross may have had either a Christian or a chemical application; most probably the latter.

Again, we see in the four most important symbols of the *Rose Croix* degree, as interpreted in the early rituals (at least in their spirit), the same Christian interpretation, entirely free from all taint of Rosicrucianism.

These symbols are the *eagle*, the *pelican*, the *rose*, and the *cross*, all of which are combined to form the beautiful and expressive jewel of the degree.

Thus the writer of the book of Exodus, in allusion to the be-

¹ Mosheim, "Ecclesiastical History," Maclane's Translation, cent. xvii., sec. i., vol. iii., p. 436, note.

lief that the eagle assists its feeble younglings in their first flights by bearing them on its pinions, represents Jehovah as saying, "Ye have seen what I did to the Egyptians, and how I bore you on eagle's wings and brought you unto myself." Hence, appropriating this idea, the Rose Croix Masons selected the eagle as a symbol of Christ in his divine character, bearing the children of his adoption in their upward course, and teaching them with unequalled love and tenderness to poise their unfledged wings, and soar from the dull corruptions of earth to a higher and holier sphere. And hence the eagle in the jewel is represented with expanded wings, as if ready for flight.

The pelican, "vulning herself and in her piety," as the heralds call it, is, says Mr. Sloane Evans, "a sacred emblem of great beauty and striking import, and the representation of it occurs not unfrequently among the ornaments of churches."¹ The allusion to Christ as a Saviour, shedding his blood for the sins of the world, is too evident to need explanation.

Of the rose and the cross I have already spoken. The rose is applied as a figurative appellation of Christ in only one passage of Scripture, where he is prophetically called the "rose of Sharon," but the flower was always accepted in the iconography of the church as one of his symbols. But the fact that in the jewel of the Rose Croix the blood-red rose appears attached to the center of the cross, as though crucified upon it, requires no profound knowledge of the science of symbolism to discover its meaning.

The cross was, it is true, a very ancient symbol of eternal life, especially among the Egyptians, but since the crucifixion it has been adopted by Christians as an emblem of him who suffered upon it. "The cross," says Didron, "is more than a mere figure of Christ; it is, in iconography, either Christ himself or his symbol." As such it is used in the Masonry of the Rose Croix.

It is evident, from these explanations, that the Rose Croix was, in its original conception, a purely Christian degree. There was no intention of its founders to borrow for its construction anything from occult philosophy, but simply to express in its symbolization a purely Christian sentiment.

I have, in what I have said, endeavored to show that while Rosi-

¹ "The Art of Blazon," p. 130.

crucianism had no concern, as has been alleged, with the origination of Freemasonry in the 17th century, yet that in the succeeding century, under various influences, especially, perhaps, the diffusion of the mystical doctrines of Swedenborg, a Hermetic or Rosicrucian element was infused into some of the High Degrees then newly fabricated. But the diffusion of that element went no farther; it never affected the pure Masonic system; and, with the few exceptions which I have mentioned, even these degrees have ceased to exist. Especially was it not connected with one of the most important and most popular of those degrees.

From the beginning of the 19th century Rosicrucianism has been dead to Masonry, as its exponent, the Hermetic philosophy, has been to literature. It has no life now, and we preserve its relics only as memorials of a past obscuration which the sunbeams of modern learning have dispersed.

CHAPTER XXXVII

THE PYTHAGOREANS AND FREEMASONRY

THE theory which ascribes, if not the actual origin of Freemasonry to Pythagoras, at least its introduction into Europe by him, through the school which he established at Crotona, in Italy, which was a favorite one among our early writers, may very properly be placed among the legends of the Order, since it wants all the requisites of his-

torical authority for its support.

The notion was most probably derived from what has been called the Leland Manuscript, because it is said to have been found in the Bodleian Library, in the handwriting of that celebrated antiquary. The author of the *Life of Leland* gives this account of the manuscript:

"The original is said to be the handwriting of King Henry VI. and copied by Leland by order of his highness, King Henry VIII. If the authenticity of this ancient monument of literature remains unquestioned, it demands particular notice in the present publication, on account of the singularity of the subject, and no less from a due regard to the royal writer and our author, his transcriber, indefatigable in every part of literature. It will also be admitted, acknowledgment is due to the learned Mr. Locke, who, amidst the closest studies and the most strict attention to human understanding, could unbend his mind in search of this ancient treatise, which he first brought from obscurity in the year 1796."¹

This production was first brought to the attention of scholars by being published in the *Gentleman's Magazine* for September, 1753, where it is stated to have been previously printed at Frankfort, in Germany, in 1748, from a copy found in "the writing-desk of a deceased brother."

¹ "Life of John Leland," p. 67.

The title of it, as given in the magazine, is in the following words:

"Certeayne Questyons wyth Answeres to the same, concernynge the Mystery of Maconrye; wrytenne by the hande of Kynge Henrye the Sixthe of the Name, and faythefullye copyed by me Johan Leylande, Antiquarius, by the commaunde of His Highnesse."

The opinion of Masonic critics of the present day is that the document is a forgery. It was most probably written about the time and in the spirit in which Chatterton composed his imitations of the Monk Rowley, and of Ireland with his impositions of Shakespeare, and was fabricated as an unsuccessful attempt to imitate the archaic language of the 15th century, and as a pious fraud intended to elevate the character and sustain the pretensions of the Masonic Fraternity by furnishing the evidence of its very ancient origin.

Such were not, however, the views of the Masonic writers of the last and beginning of the present century.

They accepted the manuscript, or rather the printed copy of it—for the original codex has never been seen—with unhesitating faith as an authentic document. Hutchinson gave it as an appendix to his *Spirit of Masonry*, Preston published it in the second and enlarged edition of his *Illustrations*, Calcott in his *Candid Disquisition*, Dermott in his *Ahiman Rezon*, and Krause in his *Drei Alt-esten Kunslurkunden*. In none of these is there the faintest hint of its being anything but an authentic document. Oliver said: "I entertain no doubt of the genuineness and authenticity of this valuable Manuscript." The same view has been entertained by Reghellini among the French, and by Krause, Fessier, and Lenning among the Germans.

Mr. Halliwell was perhaps the first of English scholars to express a doubt of its genuineness. After a long and unsuccessful search in the Bodleian Library for the original, he came, very naturally, to the conclusion that it is a forgery. Hughan and Woodford, both excellent judges, have arrived at the same conclusion, and it is now a settled question that the Leland or Locke Manuscript (for it is known by both titles) is a document of no historic character.

It is not, however, without its value. To its appearance about the middle of the last century, and the unhesitating acceptance of its truth by the Craft at the time, we can, in all probability, assign the establishment of the doctrine that Freemasonry was of a Py-

thagorean origin, though it had been long before adverted to by Dr. Anderson.

Before proceeding to an examination of the rise and progress of this opinion, it will be proper to cite so much of the manuscript as connects Pythagoras with Masonry. I do not quote the whole document, though it is short, because it has so repeatedly been printed, in even elementary Masonic works, as to be readily accessible to the reader. In making my quotations I shall so far defer to the artifice of the fabricator as to preserve unchanged his poor attempt to imitate the orthography and style of the 15th century, and interpolate in brackets, when necessary, an explanation of the most unintelligible words.

The document purports to be answers by some Mason to questions proposed by King Henry VI., who, it would seem, must have taken some interest in the "Mystery of Masonry," and had sought to obtain from competent authority a knowledge of its true character. The following are among the questions and answers:

"Q. Where dyd ytt [*Masonry*] begynne?

"A. Ytt dyd begynne with the fyrst menne, yn the Este, which were before the fyrste Manne of the Weste, and comynge westlye, ytt hathe broughte herwyth alle confortes to the wylde and comfortlesse.

"Q. Who dyd brynge ytt Westlye?

"A. The Venetians [*Phœnicians*] who beyngre grate Merchaundes, corned ffyrst ffrome the Este yn Venetia [*Phœnicia*] ffor the commodyte of Merchaundysinge beithe [*both*] Este and Weste bey the redde and Myddlelonde [*Mediterranean*] Sees.

"Q. Howe comede ytt yn Englonde?

"A. Peter Gower [*Pythagoras*] a Grecian journeyedde ffor kunnyng yn Egypt and in Syria and in everyche Londe whereat the Venetians [*Phœnicians*] hadde plauntedde Maconrye and wynnyng Entraunce yn al Lodges of Maconnes, he lerned muche, and retournedde and woned [*dwelt*] yn Grecia Magna wachsyngre [*growing*] and becommynge a myghtye wyseacre [*philosopher*] and gratelyche renoued and here he framed a grate Lodge at Groton [*Crotona*] and maked many Maconnes, some whereoffe dyd journeye yn Fraunce, and maked manye Maconnes wherefromme, yn processe of Tyme, the Arte passed yn Englonde."

I am convinced that there was a French original of this docu-

ment, from which language the fabricator translated it into archaic English. The internal proofs of this are to be found in the numerous preservations of French idioms. Thus we meet with *Peter Gower*, evidently derived from *Pythagore*, pronounced *Petagore*, the French for Pythagoras; *Maconrye* and *Maconnes*, for *Masonry* and *Masons*, the French *c* in the word being used instead of the English *s*; the phrase *wynnynge the Facultye of Abrac*, which is a pure Gallic idiom, instead of *acquiring the faculty*, the word *gayner* being indifferently used in French as signifying to *win* or to *acquire*; the word *Freres* for *Brethren*; and the statement, in the spirit of French nationality, that Masonry was brought into England out of France.

None of these idiomatic phrases or national peculiarities would have been likely to occur if the manuscript had been originally written by an Englishman and in the English language.

But be this as it may, the document had no sooner appeared than it seemed to inspire contemporary Masonic writers with the idea that Masonry and the school of Pythagoras, which he established at Crotona, in Italy, about five centuries before Christ, were closely connected—an idea which was very generally adopted by their successors, so that it came at last to be a point of the orthodox Masonic creed.

Thus Preston, in his *Illustrations of Masonry*, when commenting on the dialogue contained in this document, says that "the records of the fraternity inform us that Pythagoras was regularly initiated into Masonry; and being properly instructed in the mysteries of the Art, he was much improved, and propagated the principles of the Order in other countries into which he afterwards travelled."

Calcott, in his *Candid Disquisition*, speaks of the Leland Manuscript as "an antique relation, from whence maybe gathered many of the original principles of the ancient society, on which the institution of Freemasonry was ingrafted"—by the "ancient society" meaning the school of Pythagoras.

Hutchinson, in his *Spirit of Masonry*, quotes this "ancient Masonic record," as he calls it, and says that "it brings us positive evidence of the Pythagorean doctrine and Basilidian principles making the foundation of our religious and moral duties." Two of the lectures in his work are appropriated to a discussion of the doctrines of Pythagoras in connection with the Masonic system.

But this theory of the Pythagorean origin of Freemasonry does not owe its existence to the writers of the middle of the 18th century. It had been advanced at an early period, and soon after the Revival in 1717 by Dr. Anderson. In the first edition of the *Constitutions*, published in 1723, he alludes to Pythagoras as having borrowed great knowledge from the Chaldean Magi and the Babylonish Jews, but he is more explicit in his *Defense of Masonry*, published in 1730, wherein he says: "I am fully convinced that Freemasonry is very nearly allied to the old Pythagorean Discipline, from whence, I am persuaded, it may in some circumstances very justly claim a descent."

Now, how are we to explain the way in which this tradition of the connection of the Philosopher of Samos first acquired a place among the legends of the Craft? The solution of the problem does not appear to be very difficult.

In none of the old manuscript constitutions which contain what has been called the *Legend of the Guild*, or the *Legend of the Craft*, is there, with a single exception, any allusion to the name of Pythagoras. That exception is found in the Cooke MS., where the legendist, after relating the story of the two pillars inscribed with all the sciences, which had been erected by Jabal before the flood, adds, in lines 318-326, this statement:

"And after this flode many yeres as the cronycle telleth these ii were founde and as the polycronicon seyeth that a grete clerke that called putogaras [*Pythagoras*] fonde that one and hermes the philisopre fonde that other, and thei tought forthe the sciens that thei fonde therein y written."

Now, although the Cooke MS. is the earliest of the old records, after the Halliwell poem, none of the subsequent constitutions have followed it in this allusion to Pythagoras. This was because the writer of the Cooke MS., being in possession of the *Polychronicon* of the monk Ranulph Higden, an edition of which had been printed during his time by William Caxton, he had liberally borrowed from that historical work and incorporated parts of it into his Legend.

Of these interpolations, the story of the finding of one of the pillars by Pythagoras is one. The writer acknowledges his indebtedness for the statement to Higden's *Polychronicon*. But it formed no part of the *Legend of the Craft*, and hence no notice is taken of

it in the subsequent manuscript copies of the Legend. In none of them is Pythagoras even named.

It is evident, then, that in the 14th and following centuries, to the beginning of the 18th, the theory of the Pythagorean origin of Freemasonry, or of the connection of the Grecian philosopher with it, was not recognized by the Craft as any part of the traditional history of the Fraternity. There is no safer rule than that of the old schoolmen, which teaches us that we must reason alike concerning that which does not appear and that which does not exist — "*de non apparentibus et de non existentibus, eadem est ratio.*" The old craftsmen who fabricated the Legend were workmen and not scholars; they were neither acquainted with the scholastic nor the ancient philosophy; they said nothing about Pythagoras because they knew nothing about him.

But about the beginning of the 18th century a change took place, not only in the organization of the Masonic institution, but also in the character and qualifications of the men who were engaged in producing the modification, or we might more properly call it the revolution.

Although in the 17th, and perhaps in the 16th century, many persons were admitted into the Lodges of Operative Masons who were not professional builders, it is, I think, evident that the society did not assume a purely speculative form until the year 1717. The Revival in that year, by the election of Anthony Sayer, "Gentleman," as Grand Master; Jacob Lamball, a "Carpenter," and Joseph Elliott, a "Captain," as Grand Wardens, proves that the control of the society was to be taken out of the hands of the Operative Masons.

Among those who were at about that time engaged in the reconstruction of the Institution were James Anderson and Theophilus Desaguliers. Anderson was a Master of Arts, and afterward a Doctor of Divinity, the minister of a church in London, and an author; Desaguliers was a Doctor of Laws, a fellow of the Royal Society, and a teacher of Experimental Philosophy of no little reputation.

Both of these men, as scholars, were thoroughly conversant with the system of Pythagoras, and they were not unwilling to take advantage of his symbolic method of inculcating his doctrine, and to introduce some of his symbols into the symbolism of the Order which they were renovating.

Jamblichus, the biographer of Pythagoras, tells us that while the sage was on his travels he caused himself to be initiated into all the mysteries of Byblos and Tyre and those which were practiced in many parts of Syria. But as these mysteries were originally received by the Phoenicians from Egypt, he passed over into that country, where he remained twenty-two years, occupying himself in the study of geometry, astronomy, and all the initiations of the gods, until he was carried a captive into Babylon by the soldiers of Cambyzes. There he freely associated with the Magi in their religion and their studies, and, having obtained a thorough knowledge of music, the science of numbers, and other arts, he finally returned to Greece.¹

The school of philosophy which Pythagoras afterward established at the city of Crotona, in Italy, differed from those of all the other philosophers of Greece, in the austerities of initiation to which his disciples were subjected, in the degrees of probation into which they were divided, and in the method which he adopted of veiling his instructions under symbolic forms. In his various travels he had imbibed the mystical notions prevalent among the Egyptians and the Chaldeans, and had borrowed some of their modes of initiation into their religious mysteries, which he adopted in the method by which he communicated his own principles.

Grote, in his *History of Greece*, has very justly said that "Pythagoras represents in part the scientific tendencies of his age, in part also the spirit of mysticism and of special fraternities for religious and ascetic observance which became diffused throughout Greece in the 6th century before the Christian era."

Of the character of the philosophy of Pythagoras and of his method of instruction, which certainly bore a very close resemblance to that adopted by the founders of the speculative system, such cultivated scholars as Anderson and Desaguliers certainly were not ignorant. And if, among those who were engaged with them in the construction of this new and improved school of speculative Masonry, there were any whose limited scholastic attainments would not enable them to consult the Greek biographies of Pythagoras by Jamblichus and by Porphyry, they had at hand and readily accessible an English translation of M. Dacier's life of the philosopher, con-

¹ "Jamblichus de Pythagorica Vita," c. iii., iv.

taining also an elaborate explication of his symbols, together with a translation of the *Commentaries of Hierodes on the Golden Verses of Pythagoras*, all embraced in one volume and published in London in the year 1707, by the celebrated bibliopole Jacob Tonson.

There was abundant material and ready opportunity for the partially unlearned as well as for the more erudite to obtain a familiarity with the philosophy of Pythagoras, his method of initiation, and his system of symbols.

It is not, therefore, surprising that these "Revivalists," as they have been called, should have delighted, as Anderson has done in his *Defense of Masonry*, to compare the two schools of the Pythagoreans and the Freemasons; that they should have dwelt on their great similarity; and in the development of their speculative system should have adopted many symbols from the former which do not appear to have been known to or used by the old Operative Masons whom they succeeded.

Among the first Pythagorean symbols which were adopted by the Speculative Masons was the symbolism of the science of numbers, which appears in the earliest rituals extant, and of which Dr. Oliver has justly said, in his posthumous work entitled *The Pythagorean Triangle*, that "the Pythagoreans had so high an opinion of it that they considered it to be the origin of all things, and thought a knowledge of it to be equivalent to a knowledge of God."

This symbolism of numbers, which was adopted into Speculative Masonry at a very early period after the Revival, has been developed and enlarged in successive revisions of the lectures, until at the present day it constitutes one of the most important and curious parts of the system of Freemasonry. But we have no evidence that the same system of numerical symbolism, having the Pythagorean and modern Masonic interpretation, prevailed among the Craft anterior to the beginning of the 18th century. It was the work of the Revivalists, who, as scholars familiar with the mystical philosophy of Pythagoras, deemed it expedient to introduce it into the equally mystical philosophy of Speculative Masonry.

In fact, the Traveling Freemasons, Builders, or Operative Masons of the Middle Ages, who were the real predecessors of the Speculative Masons of the 18th century, did not, so far as we can learn from their remains, practice any of the symbolism of Pythagoras. Their symbols, such as the *vesica piscis*, the cross, the

rose, or certain mathematical figures, were derived either from the legends of the church or from the principles of geometry applied to the art of building. These skillful architects who, in the dark ages, when few men could read or write, erected edifices surpassing the works of ancient Greece or Rome, and which have never been equalled by modern builders, were wonderful in their peculiar skill, but were wholly ignorant of metaphysics or philosophy, and borrowed nothing from Pythagoras.

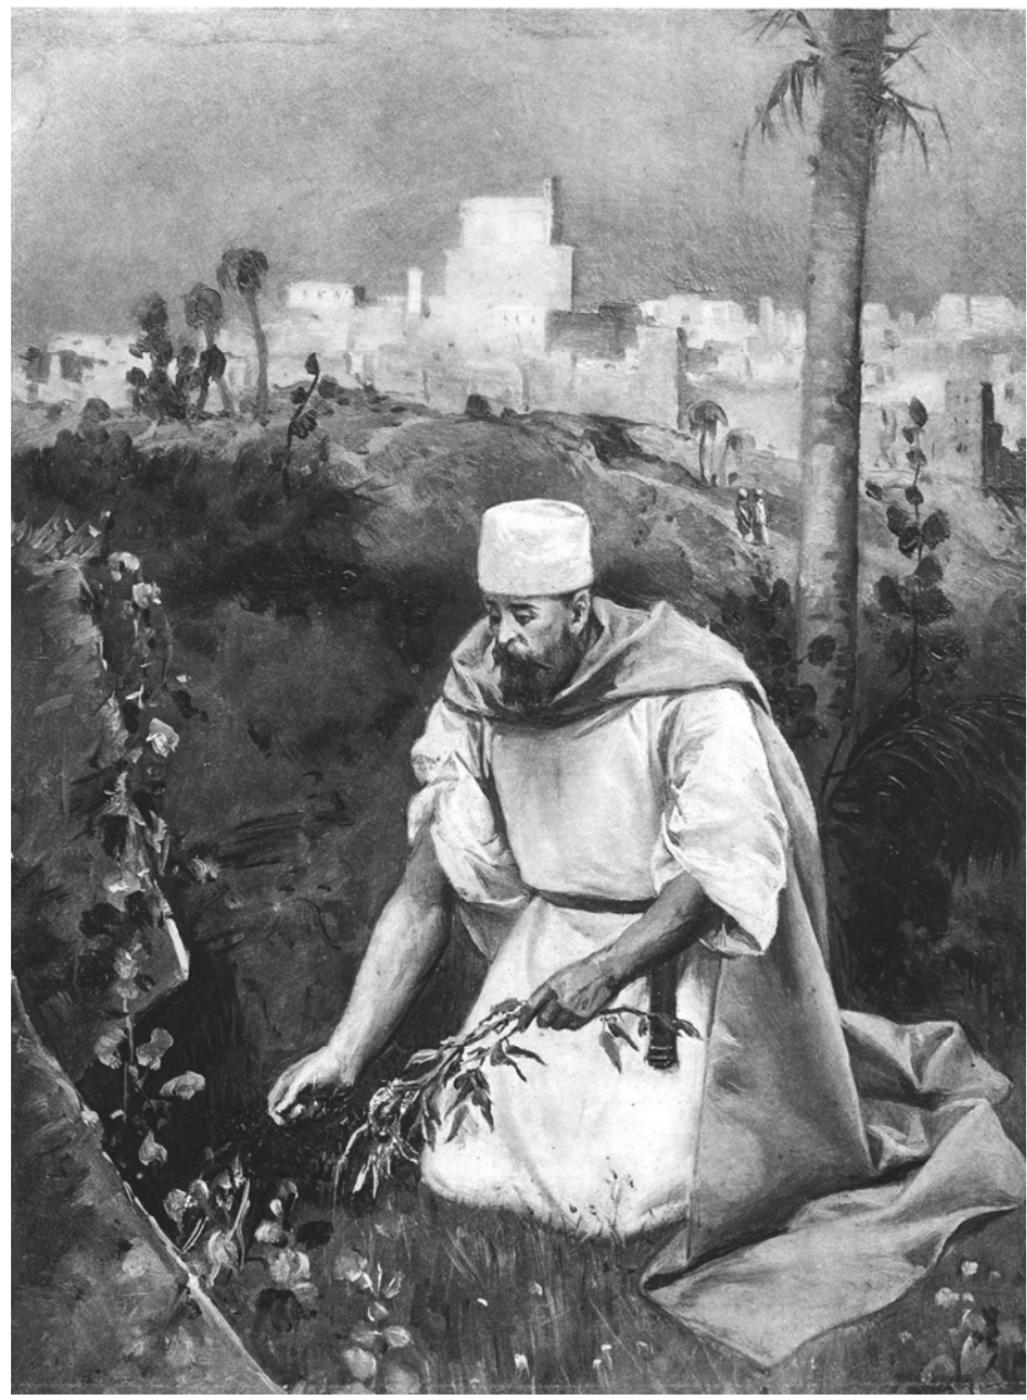

Between the period of the Revival and the adoption of the Prestonian system, in 1772, the lectures of Freemasonry underwent at least seven revisions. In each of these, the fabricators of which were such cultivated scholars as Dr. Desaguliers, Martin Clare, a President of the Royal Society, Thomas Dunckerley, a man of considerable literary attainments, and others of like character, there was a gradual increment of Pythagorean symbols. Among these, one of the most noted is the forty-seventh proposition of Euclid, which is said to have been discovered by Pythagoras, and which the introducer of it into the Masonic system, in his explanation of the symbol, claims the sage to have been "an ancient brother."

For some time after the Revival, the symbols of Pythagoras, growing into gradual use among the Craft, were referred to simply as an evidence of the great similarity which existed between the two systems—a theory which, so far as it respects modern Speculative Masonry, may be accepted with but little hesitation.

The most liberal belief on this subject was that the two systems were nearly allied, but, except in the modified statement of Anderson, already quoted from his *Defense of Masonry*, there was no claim in the years immediately succeeding the Revival that the one was in direct descent from the other.

In none of the speeches, lectures, or essays of the early part of the last century, which have been preserved, is there any allusion to this as a received theory of the Craft.

Drake, in his speech before the Grand Lodge of York, delivered in 1726, does, indeed, speak of Pythagoras, not as the founder of Masonry, but only in connection with Euclid and Archimedes as great proficient in Geometry, whose works have been the basis "on which the learned have built at different times so many noble superstructures." And of Geometry, he calls it "that noble and useful science which must have begun and goes hand-in-hand with

Masonry," an assertion which, to use the old chorus of the Masons, "nobody will deny."

But to say that Geometry is closely connected with Operative Masonry, and that Pythagoras was a great geometrician, is very different from saying that he was a Mason and propagated Masonry in Europe.

Martin Clare, in his lecture on the *Advantages Enjoyed by the Fraternity*, whose date is 1735, does not even mention the name of Pythagoras, although, in one passage at least, when referring to "those great and worthy spirits with whom we are intimately related," he had a fair opportunity to refer to that illustrious sage.

In a *Discourse Upon Masonry*, delivered before a Lodge of England in 1742, now lying before me, in which the origin of the Order is fully discussed, there is not one word of reference to Pythagoras.

The same silence is preserved in a *Lecture on the Connection Between Freemasonry and Religion*, by the Rev. C. Brockwell, published in 1747.

But after the middle of the century the frequent references in the lectures to the Pythagorean symbols, and especially to that important one, in its Masonic as well as its geometrical value, the forty-seventh proposition, began to lead the members of the society to give to Pythagoras the credit of a relationship to the order to which historically he had no claim.

Thus, in *A Search After Truth*, delivered in the Lodge in 1752, the author says that "Solon, Plato, and Pythagoras, and from them the Grecian literati in general, in a great measure, were obliged for their learning to Masonry and the labors of some of our ancient brethren."

And then, when this notion of the Pythagorean origin of Freemasonry began to take root in the minds of the Craft, it was more firmly established by the appearance in 1753, in the *Gentleman's Magazine*, of that spurious document already quoted, in which, by a "pious fraud," the fabricator of it sought to give the form of an historical record to the statement that Pythagoras, learning his Masonry of the Eastern Magi, had brought it to Italy, and established a Lodge at Crotona, whence the institution was propagated throughout Europe, and from France into England.

As to this statement in the Leland MS., it may be sufficient to say that the sect of Pythagoras did not subsist longer than to the

end of the reign of Alexander the Great. So far from disseminating its Lodges or schools after the Christian era, we may cite the authority of the learned Dacier, who says that "in after ages there were here and there some disciples of Pythagoras, but these were only private persons who never established any society, nor had the Pythagoreans any longer a public school."

And so the result of this investigation into the theory of the Pythagorean origin of Freemasonry may be briefly epitomized thus:

The mediæval Freemasons never entertained any such theory, nor in their architectural labors did they adopt any of his symbols.

The writer of the Cooke MS., in 1490, having at hand Higden's *Polychronicon*, in Trevisa's translation, a new edition of which had just been printed by Caxton, incorporated into the *Legend of the Craft* some of the historical statements (such as they were) of the Monk of Chester, but they were extraneous to and formed no part of the original Legend. Therefore, in all the subsequent *Old Records* these interpolations were rejected and the *Legend of the Craft*, as accepted by the writers of the manuscripts which succeeded that of the Cooke codex, from 1550 to 1701, contained no mention of Pythagoras.

Upon the Revival, in 1717, which was really the beginning of genuine Speculative Masonry, the scholars who fabricated the scheme, finding the symbolic teaching of Pythagoras very apposite, adopted some of its symbols, especially those relating to numbers in the new Speculative system which they were forming.

By the continued additions of subsequent ritualists these symbols were greatly increased, so that the name and the philosophy of Pythagoras became familiar to the Craft, and finally, in 1753, a forged document was published which claimed him as the founder and propagator of Masonry.

In later days this theory has continued to be maintained by a few writers, and the received rituals of the Order require it as a part of the orthodox Masonic creed, that Pythagoras was a Mason and an ancient brother and patron of the Order.

Neither early Masonic tradition nor any historical records exist which support such a belief.

CHAPTER XXXVIII

FREEMASONRY AND THE GNOSTICS

THE hypothesis which seeks to trace a connection between Gnosticism and Freemasonry, and perhaps even an origin of the latter from the former, has been repeatedly advanced, and is therefore worthy of consideration.

The latest instance is in a work of Mr. C. W. King, published in 1864, under the title of *The Gnostics and their Remains, Ancient and Mediæval*.

Mr. King is not a Freemason, and, like all the writers non-Masonic, such as Barnell, Robison, De Quincey, and a host of others, who have attempted to discuss the history and character of Freemasonry, he has shown a vast amount of ignorance. In fact, these self-constituted critics, when treating of subjects with which they are not and can not be familiar, remind one of the busybodies of Plautus, of whom he has said that, while pretending to know everything, they in fact know nothing — "*Qui omnia se simulant scise nec quicquam sciunt.*"

Very justly has Mr. Hughan called this work of King's, so far as its Masonic theories are concerned, one of an "unmasonic and un-historic character."

But King, it must be admitted, was not the first writer who sought to trace Freemasonry to a Gnostic origin.

In a pamphlet published in 1725, a copy of which has been preserved in the Bodleian Library, among the manuscripts of Dr. Rawlinson, and which bears the title of *Two Letters to a Friend. The First concerning the Society of Free-Masons. The Second, giving an Account of the Most Ancient Order of Gormogons*, etc., we find, in the first letter, on the Freemasons, the following passage:

"But now, Sir, to draw towards a conclusion; and to give my opinion seriously, concerning these prodigious Virtuosi;—My belief is, that if they fall under any denomination at all, or belong to any

sect of men, which has hitherto appeared in the world, they may be ranked among the GNOSTICS, who took their original from Simon Magus; these were a set of men, which ridiculed not only Christianity, but even rational morality; teaching that they should be saved by their capacious knowledge and understanding of no mortal man could tell what. They babbled of an amazing intelligence they had, from nobody knows whence. They amused and puzzled the hair-brained, unwary crowd with superstitious interpretations of extravagant talismanic characters and abstruse significations of uncommon Cabalistic words; which exactly agrees with the proceedings of our modern Freemasons."

Although the intrinsic value of this pamphlet was not such as to have preserved it from the literary tomb which would have consigned it to oblivion, had not the zeal of an antiquary preserved a single copy as a relic, yet the notion of some relation of Freemasonry to Gnosticism was not in later years altogether abandoned.

Hutchinson says that "under our present profession of Masonry, we allege our morality was originally deduced from the school of Pythagoras, and that the Basilidian system of religion furnished us with some tenets, principles, and hieroglyphics."¹ Basilides, the founder of the sect which bears his name, was the most eminent of the Egyptian Gnostics.

About the time of the fabrication of the High Degrees on the continent of Europe, a variety of opinions of the origin of Masonry—many of them absurd—sprang up among Masonic scholars. Among these theorists, there were not a few who traced the Order to the early Christians, because they found it, as they supposed, among the Gnostics, and especially its most important sect, the Basilidians.

Some German and French writers have also maintained the hypothesis of a connection, more or less intimate, between the Gnostics and the Masons.

I do not know that any German writer has positively asserted the existence of this connection. But the doctrine has, at times, been alluded to without any absolute disclaimer of a belief in its truth.

Thus Carl Michaeler, the author of a *Treatise on the Phœnician*

¹ "Spirit of Masonry," lect. x., p. 106.

Mysteries, has written some observations on the subject in an article published by him in 1784, in the Vienna *Journale für Freimaurer*, on the analogy between the Christianity of the early times and Freemasonry. In this essay he adverts to the theory of the Gnostic origin of Freemasonry. He is, however, very guarded in his deductions, and says conditionally that, if there is any connection between the two, it must be traced to the Gnosticism of Clement of Alexandria, and on which simply as a school of philosophy and history it may have been founded, while the differences between the two now existing must be attributed to changes of human conception in the intervening centuries.

But, in fact, the Gnosticism of Clement was something entirely different from that of Basilides, to whom Hutchinson and King attribute the origin of our symbols, and whom Clement vigorously opposed in his works. It was what he himself calls it, "a true gnosis or Christian philosophy on the basis of faith." It was that higher knowledge, or more perfect state of Christian faith, to which St. Paul is supposed to allude when he says, in his First Epistle to the Corinthians, that he made known to those who were perfect a higher wisdom.

Reghellini speaks more positively, and says that the symbols and doctrines of the Ophites, who were a Gnostic sect, passed over into Europe, having been adapted by the Crusaders, the Rosicrucians, and the Templars, and finally reached the Masons.¹

Finally, I may refer to the Leland MS., the author of which distinctly brought this doctrine to the public view, by asserting that the Masons were acquainted with the "facultye of Abrac," by which expression he alludes to the most prominent and distinctive of the Gnostic symbols. That the fabricator of this spurious document should thus have intimated the existence of a connection between Gnosticism and Freemasonry would lead us to infer that the idea of such a connection was not wholly unfamiliar to the Masonic mind at that period—an inference which will be strengthened by the passage already quoted from the pamphlet in the Rawlinson collection, which was published about a quarter of a century before.

But before we cart enter into a proper discussion of this îm-

¹ "Maçonnerie consideries comme re Resultat des Relig. Egypt. Juive et Chre-
tienne," tom, i., p. 291.

portant question, it will be expedient for the sake of the general reader that something should be said of the Gnostics and of the philosophical and religious system which they professed.

I propose, therefore, very briefly to reply to the questions, What is Gnosticism, and Who were the Gnostics?

Scarcely had the light of Christianity dawned upon the world before a multitude of heresies sprang up to disturb the new religion. Among these Gnosticism holds the most important position. The title of the sect is derived from the Greek word *γνῶσις*, (*gnosis*), "wisdom or knowledge," and was adopted in a spirit of ostentation, to intimate that the disciples of the sect were in possession of a higher degree of spiritual wisdom than was attainable by those who had not been initiated into their mysteries.

At so early a period did the heresy of Gnosticism arise in the Christian Church, that we find the Apostle Paul warning the converts to the new faith of the innovations on the pure doctrine of Christ, and telling his disciple Timothy to avoid "profane and vain babblings, and oppositions of science, falsely so called." The translators of the authorized version have so rendered the passage. But in view of the greater light that has since their day been thrown upon the religious history and spirit of the apostolical age, and the real nature of the Gnostic element which disturbed it, we may better preserve the true sense of the original Greek by rendering it "oppositions of the false *gnosis*."

There were then two kinds of *Gnosis*, or Gnosticism—the true and the false, a distinction which St. Paul himself makes in a passage in his Epistle to the Corinthians, in which he speaks of the wisdom which he communicated to the perfect, in contradistinction to the wisdom of the world.

Of this true Gnosticism, Clement declared himself to be a follower. With it and Freemasonry there can be no connection, except that modified one admitted by Michaeler, which relates only to the investigation of philosophical and historical truth.

The false *Gnosis* to which the Apostle refers is the Gnosticism which is the subject of our present inquiry.

When John the Baptist was preaching in the Wilderness, and for some time before, there were many old philosophical and religious systems which, emanating from the East, all partook of the mystical character peculiar to the Oriental mind. These various systems were

then, in consequence of the increased communication of different nations which followed the conquests of Alexander of Macedon, beginning to approximate each other. The disciples of Plato were acquiring some of the doctrines of the Eastern Magi, and these in turn were becoming more or less imbued with the philosophy of Greece. The traditions of India, Persia, Egypt, Chaldea, Judea, Greece, and Rome were commingling in one mass, and forming out of the conglomeration a mystical philosophy and religion which partook of the elements of all the ingredients out of which it was composed, and yet contained within its bosom a mysticism which was peculiar to itself.

This new system was Gnosticism, which derived its leading doctrines from Plato, from the Zend-Avesta, the Cabala, the Vedas, and the hieroglyphs of Egypt. It taught as articles of faith the existence of a Supreme Being, invisible, inaccessible, and incomprehensible, who was the creator of a spiritual world consisting of divine intelligences called *æons*, emanating from him, and of matter which was eternal, the source of evil and the antagonist of the Supreme Being.

One of these *æons*, the lowest of all, called the Demiurge, created the world out of matter, which, though eternal, was inert and formless.

The Supreme Father, or First Principle of all things, had dwelt from all eternity in a *pleroma*, or fullness of inaccessible light, and hence he was called *Bythos*, or the Abyss, to denote the unfathomable nature of his perfections. "This Being," says Dr. Burton, in his able exposition of the Gnostic system, in the *Bampton Lectures*, "by an operation purely mental, or by acting upon himself, produced two other beings of different sexes, from whom by a series of descents, more or less numerous according to different schemes, several pairs of beings were formed, who were called *æons*, from the periods of their existence before time was, or *emanations* from the mode of their production. These successive *æons* or *emanations* appear to have been inferior each to the preceding; and their existence was indispensable to the Gnostic scheme, that they might account for the creation of the world, without making God the author of evil. These *æons* lived through countless ages with their first Father. But the system of *emanations* seems to have resembled that of concentric circles, and they gradually deteriorated as they

approached nearer and nearer to the extremity of the *pleroma*. Beyond this *pleroma* was matter, inert and powerless, though co-eternal with the Supreme God, and like him without beginning. At length one of the *æons* (the Demiurge) passed the limits of the *pleroma*, and, meeting with matter, created the world after the form and model of an ideal world, which existed in the *pleroma* or the mind of the Supreme God."

It is not necessary to enter into a minute recapitulation of the other points of doctrine which were evolved out of these three. It is sufficient to say that the old Gnosticism was not an original system, but was really a cosmogony, a religion and a philosophy which was made up of portions of the older Grecian and Oriental systems, including the Platonism of the Greeks, the Parsism of the Persians, and the Cabala of the Jews.

The advent of Christianity found this old Gnosticism prevailing in Asia and in Egypt. Some of its disciples became converts to the new religion, but brought with them into its fold many of the mystical views of their Gnostic philosophy and sought to apply them to the pure and simple doctrines of the Gospel.

Thus it happened that the name of Gnosticism was applied to a great variety of schools, differing from each other in their interpretations of the Christian faith, and yet having one common principle of unity—that they placed themselves in opposition to the conceptions of Christianity as it was generally received by its disciples. And this was because they deemed it insufficient to afford any germs of absolute truth, and therefore they claimed for themselves the possession of an amount of knowledge higher than that of ordinary believers.

"They seldom pretended," says the Rev. Dr. Wing, "to demonstrate the principles on which their systems were founded by historical evidence or logical reasonings, since they rather boasted that these were discovered by the intuitional powers of more highly endowed minds, and that the materials thus obtained, whether through faith or divine revelation, were then worked up into a scientific form, according to each one's natural power and culture. Their aim was to construct, not merely a theory of redemption, but of the universe—a cosmogony. No subject was beyond their investigations. Whatever God could reveal to the finite intellect they looked upon as within their range. What to others seemed only specula-

tive ideas, were by them hypostatized or personified into real beings or historical facts. It was in this way that they constructed systems of speculation on subjects entirely beyond the range of human knowledge, which startle us by their boldness and their apparent consciousness of reality."¹

Such was the Gnosticism whose various sects intruded with their mystical notions and their allegorical interpretations into the Church, before Christianity had been well established. Although denounced by St. Paul as "vain babblers," they increased in strength and gave rise to many heresies which lasted until the 4th century.

The most important of these sects, and the one from which the moderns have derived most of their views of what Christian Gnosticism is, was established in the 2d century by Basilides, the chief of the Egyptian Gnostics.

The doctrine of Basilides and the Basilidians was a further development of the original Gnostic system. It was more particularly distinguished by its adoption from Pythagoras of the doctrine of numbers and its use and interpretation of the word *Abrahas*—that word the meaning of which, according to the Leland MS., so greatly puzzled the learned Mr. Locke.

In the system of Basilides the Supreme God was incomprehensible, non-existent, and ineffable. Unfolded from his perfection were seven attributes or personified powers, namely, *Mind, Reason, Thought, Wisdom, Power, Holiness, and Peace*. Seven was a sacred number, and these seven powers referred to the seven days of the week. Basilides also supposed that there were seven similar beings in every stage or region of the spiritual world, and that these regions were three hundred and sixty-five in number, thus corresponding to the days in the solar year. These three hundred and sixty-five regions were so many heavenly mansions between the earth and the empyrean, and he supposed the existence of an equal number of angels. The number three hundred and sixty-five was in the Basilidian system one of sacred import. Hence he fabricated the word *ABRAXAS*, because the Greek letters of which it is composed have the numerical value, when added together, of exactly three hundred and sixty-five. The learned German theologian, Bellerman,

¹ Strong and McClintock's "Cyclopædia of Biblical, Theological, and Ecclesiastical Literature."

thinks that he has found the derivation in the Captu, or old Egyptian language, where the words *abrah*, signifying "word," and *sadsch*, signifying "blessed," "holy," or "adorable," and therefore *abrahadsch*, Hellenized into *Abraxas*, would denote "the holy, blessed, or adorable Word," thus approximating to the spirit of the Jewish Cabalists in their similar use of a Holy Name.

Whether the word was thus derived or was invented by Basilides on account of the numerical value of its letters, is uncertain. He, however, applied it in his system as the name of the Supreme God.

This word *Abraxas*, like the *Tetragrammaton* of the Jews, became one of great importance to the sect of Basilidians. Their reverence for it gave origin to what are called "abraxas gems."

These are gems, plates, or tablets of metal, which have been discovered principally in Egypt, but have also been found in France and Spain. They are inscribed with the word *Abraxas* and an image supposed to designate the Basilidian god. Some of them have on them Jewish words, such as *Jehovah* or *Adonai*, and others contain Persian, Egyptian, or Grecian symbols.

Montfaucon, who has treated the subject of "abraxas gems" elaborately, divides them into seven classes. 1. Those inscribed with the head of a cock as a symbol of the sun. 2. Those having the head of a lion, to denote the heat of the sun, and the word *Mithras*. 3. Those having the image of the Egyptian god *Serapis*. 4. Those having the images of sphinxes, apes, and other animals. 5. Those having human figures with the words *Iao*, *Sabaoth*, *Adonai*, etc. 6. Those having inscriptions without figures. 7. Those having monstrous forms.

From these gems we have derived our knowledge of the Gnostic or Basilidian symbols, which are said to have furnished ideas to the builders of the Middle Ages in their decorative art, and which Mr. King and some other writers have supposed to have been transmitted to the Freemasons.

The principal of these Gnostic symbols is that of the Supreme God, *Abraxas*. This is represented as a human figure with the head of a cock, the legs being two serpents. He brandishes a sword in one hand (sometimes a whip) and a shield in the other.

The serpent is also a very common symbol, having sometimes the head of a cock and sometimes that of a lion or of a hawk.

Other symbols, known to be of a purely Gnostic or rather Basi-

lian origin, from the accompanying inscription, *Abraxas*, or *Iao*, or both, are *Horus*, or the Sun, seated on a lotus flower, which is supported by a double lamp, composed of two phallic images conjoined at their bases; the dog; the raven; the tancross surmounted by a human head; the Egyptian god, *Anubis*; and Father *Nilus*, in a bending posture and holding in his hand the double, phallic lamp of *Horus*. This last symbol is curious because the word *Heilos*, like *Mithras*, which is also a Gnostic symbol, and *Abraxas*, expresses, in the value of the Greek letters of which it is composed, the number three hundred and sixty-five.

All these symbols, it will be seen, make some reference to the sun, either as the representative of the Supreme God or as the source of light, and it might lead to the supposition that in the later Gnosticism, as in the Mithraic Mysteries, there was an allusion to sun-worship, which was one of the earliest and most extensively diffused of the primitive religions. Evidently in both the Gnostic and the Mithraic symbolism the sun plays a very important part.

While the architects or builders of the Middle Ages may have borrowed, and probably did borrow, some suggestions from the Gnostics in carrying out the symbolism of their art, it is not probable, from their ecclesiastical organization and their religious character, that they would be more than mere suggestions. Certainly they would not have been accepted by these orthodox Christians with anything of their real Gnostic interpretation.

We may apply to the use of Gnostic symbols by the mediaeval architects the remarks made by Mr. Paley on the subject of the adoption of certain Pagan symbols by the same builders. Their Gnostic origin was a mere accident. They were employed not as the symbolism of any Gnostic doctrine, but in the spirit of Christianity, and "the Church, in perfecting their development, stamped them with a purer and sublimer character."¹

On a comparison of these Gnostic symbols with those of Ancient Craft or Speculative Masonry, I fail to find any reason to subscribe to the opinion of Hutchinson, that "the Basilidian system of religion furnished Freemasonry with some tenets, principles, and hieroglyphics." As Freemasons we will have to repudiate the "tenets and principles" of the sect which was condemned by

¹ "Manual of Gothic Architecture," p. 4.

Clement and by Ireneus; and as to its "hieroglyphics," by which is meant its symbols, we will look in vain for their counterpart or any approximation to them in the system of Speculative Masonry.

That the Masons at a very early period exhibited a tendency to the doctrine of sacred numbers, which has since been largely developed in the Masonry of the modern High Degrees, is true, but this symbolism was derived directly from the teachings of Pythagoras, with which the founders of the primitive rituals were familiar.

That the sun and the moon are briefly referred to in our rituals and may be deemed in some sort Masonic symbols, is also true, but the use made of this symbolism, and the interpretation of it, very clearly prove that it has not been derived from a Gnostic source.

The doctrine of the metempsychosis, which was taught by the Basilidians, is another marked point which would widely separate Freemasonry from Gnosticism, the dogma of the resurrection being almost the foundation-stone on which the whole religious philosophy of the former is erected.

Mr. King, in his work on the Gnostics, to which allusion has already been made, seeks to trace the connection between Freemasonry and Gnosticism through a line of argument which only goes to prove his absolute and perhaps his pardonable ignorance of Masonic history. It requires a careful research, which must be stimulated by a connection with the Order, to enable a scholar to avoid the errors into which he has fallen.

"The foregoing considerations," he says, "seem to afford a rational explanation of the manner in which the genuine Gnostic symbols (whether still retaining any mystic meaning or kept as mere lifeless forms, let the Order declare) have come down to these times, still paraded as things holy and of deep significance. Treasured up amongst the dark sectaries of the Lebanon and the Sofis of Persia, communicated to the Templars, and transmitted to their heirs, the Brethren of the Rosy Cross, they have kept up an unbroken existence."¹

In the line of history which Mr. King has here pursued, he has presented a mere jumble of non-consecutive events which it would be impossible to disentangle. He has evidently confounded the old Rosicrucians with the more modern Rose Croix, while the only

¹ "The Gnostics and their Remains," p. 191.

connection between the two is to be found in the apparent similarity of name. If he meant the former, he has failed to show a relation between them and the Freemasons; if the latter, he was wholly ignorant that there is not a Gnostic symbol in their system, which is wholly constructed out of an ecclesiastical symbolism. Such inconsequential assertions need no refutation.

Finally he says that "Thus those symbols, in their origin, embodying the highest mysteries of Indian theosophy, afterward eagerly embraced by the subtle genius of the Alexandrian Greeks, and combined by them with the hidden wisdom of Egypt, in whose captivating and profound doctrines the few bright spirits of the Middle Ages sought a refuge from the childish fables then constituting orthodoxy, engendered by monkery upon the primal Buddhistic stock; these sacred symbols exist even now, but serve merely for the insignia of what at best is but a charitable, probably nothing more in its present form than a convivial institution."

These last lines indicate the precise amount of knowledge that he possesses of the character and the design of Freemasonry. It is to be regretted that he had not sought to explain the singular anomaly that "what at best is but a charitable, and probably nothing more than a convivial institution" has been made the depository of the symbols of an abstruse theosophy. Benevolent societies and convivial clubs do not, as a rule, meddle with matters of such high import.

But to this uncritical essay there need be no reply. When anyone shall distinctly point out and enumerate the Gnostic symbols that made a part of the pure and simple symbolism of the primitive Speculative Masons, it will be time enough to seek the way in which they came there.

For the present we need not undergo the needless labor of searching for that which we are sure can not be found.

CHAPTER XXXIX

THE SOCINIANS AND FREEMASONRY

WHILE some of the adversaries of Freemasonry have pretended that its origin is to be found in the efforts of the Jesuits, who sought to effect certain religious and political objects through the influence of such a society, one, at least, has endeavored to trace its first rise to the Socinians, who sprang up as a religious sect in Italy about the middle of the 16th century.

This hypothesis is of so unhistorical a character that it merits a passing notice in the legendary history of the Institution.

It was first promulgated (and I do not know that it has ever since been repeated) by the Abbé Le Franc, the Superior of the House of the Eudists, at Caën, in a book published by him in the year 1791, under the title of *Le Voile levé pour les curieux, ou le secret des Révolutions, révélé à l'aide de la Franc-Maçonnerie*; i.e., "The Veil lifted for the Inquisitive, or the Secret of Revolutions revealed by the assistance of Freemasonry." This work was deemed of so much importance that it was translated in the following year into Italian.

In this essay Le Franc, as a loyal Catholic ecclesiastic, hating both the Freemasons and the Socinians, readily seized the idea, or at all events advanced it, that the former was derived from the latter, whose origin he assigns to the year 1546.

He recapitulates, only to deny, all the other theories that have been advanced on the subject, such as that the origin of the Institution is to be sought in the fraternities of Operative Masons of the Middle Ages, or in the assembly held at York under the auspices of King Athelstane, or in the builders of King Solomon's Temple, or in the Ancient Mysteries of Egypt. Each of these hypotheses he refuses to admit as true.

On the contrary, he says the Order can not be traced beyond the

famous meeting of Socinians, which was held at the City of Vicenza, in Italy, in the year 1546, by Lælius Socinus, Ochirius, Gentilis, and others, who there and then established the sect which repudiated the doctrine of the Trinity, and whose successors, with some modification of tenets, still exist under the name of Unitarians, or Liberal Christians.

But it is to Faustus Socinus, the nephew of Lælius, he asserts, that the real foundation of Freemasonry as a secret and symbolical society is to be ascribed. This "artful and indefatigable sectary," as he calls him, having beheld the burning of Servetus at Geneva by Calvin, for maintaining only a part of the system that he advocated, and finding that both Catholics and Protestants were equally hostile to his views, is said to have concealed it under symbols and mysterious ceremonies, accompanied by oaths of secrecy, in order that, while it was publicly taught to the people in countries where it was tolerated, it might be gradually and safely insinuated into other states, where an open confession of it would probably lead its preachers to the stake.

The propagation of this system, he further says, was veiled under the enigmatical allegory of building a temple whose extent, in the very words of Freemasonry, was to be "in length from the east to the west, and in breadth from north to south." The professors of it were therefore furnished, so as to carry out the allegory, with the various implements used in building, such as the square, the compasses, the level, and the plumb. And here it is that the Abbé Le Franc has found the first form and beginning of the Masonic Institution as it existed at the time of his writing.

I have said that, so far as I have been able to learn, Le Franc is the sole author or inventor of this hypothesis. Reghellini attributes it to three distinct writers, the author of the *Voile levé*, Le Franc, and the Abbé Barruel. But in fact the first and second of these are identical, and Barruel has not made any allusion to it in his *History of Jacobinism*. He attributes the origin of Freemasonry to the Manicheans, and makes a very elaborate and learned collation of the usages and ceremonies of the two, to show how much the one has taken from the other.

Reghellini, in commenting on this theory of the Abbé Le Franc, says that all that is true in it is that there was at the same period, about the middle of the 16th century, a learned society of philoso-

phers and literary men at Vicenza, who held conferences on the theological questions which at that time divided Europe, and particularly Germany.

The members of this celebrated academy, he says, looked upon all these questions and difficulties concerning the mysteries of the Christian religion as points of doctrine which pertained simply to the philosophy of the ancient Egyptians, Greeks, and Christians, and had no relation whatever to the dogmas of faith.¹

Considering that out of these meetings of the philosophers at Vicenza issued a religious sect, whose views present a very important modification of the orthodox creeds, we may well suppose that Reghellini is as much in error in his commentary as Le Franc has been in his text.

The society which met at Vicenza and at Venice, though it sought to conceal its new and heterodox doctrines under a veil of secrecy, soon became exposed to the observation of the Papal court, through whose influence the members were expelled from the Venetian republic, some of them seeking safety in Germany, but most of them in Poland, where their doctrines were not only tolerated, but in time became popular. In consequence, flourishing congregations were established at Cracow, Lublin, and various other places in Poland and in Lithuania.

Lælius Socinus had, soon after the immigration of his followers into Poland, retired to Zurich, in Switzerland, where he died. He was succeeded by his nephew, Faustus Socinus, who greatly modified the doctrines of his uncle, and may be considered as the real founder of the Socinian sect of Christians.

Now, authentic history furnishes us with these few simple facts.

In the 16th century secret societies were by no means uncommon in various countries of Europe. In Italy especially many were to be found. Some of these coteries were established for the cultivation of philosophical studies, some for the pursuit of alchemy, some for theological discussions, and many were of a mere social character. In all of them, however, there was an exclusiveness which shut out the vulgar, the illiterate, or the profane.

Thus there was founded at Florence a club which called itself the "*Società della Cucchiara*," or the *Society of the Trowel*. The

¹ Reghellini, "La Maçonnerie," tom. iii., p. 60.

name and the symbols it used, which were the trowel, the hammer, the square, and the level, have led both Lenning and Reghellini to suppose that it was a Masonic association. But the account given of it by Vasari, in his *Lives of the Painters and Sculptors*, shows that it was merely a social club of Florentine artists, and that it derived its existence and its name from the accidental circumstance that certain painters and sculptors dining together once upon a time, in a certain garden, discovered, not far from their table, a heap of mortar in which a trowel was sticking. In an exuberance of spirits they began to throw the mortar on each other, and to call for the trowel to scrape it off. In the same sportive humor they then and there resolved to form an association which should annually thereafter dine together, and to commemorate the ludicrous event which had given rise to their association, they called it the Society of the Trowel, and adopted as emblems certain tools connected with the mystery of bricklaying.

Every city in Italy in which science was cultivated had its academy, many of which, like the Platonic Academy, established at Florence in 1540, held their sessions in secret, and admitted none but members to participate in their mystical studies. In Germany the secret societies of the Alchemists were abundant. These spread also into France and England. To borrow the language of a modern writer, mystical interpretation ran riot, everything was symbolized, and metaphors were elaborated into allegories.¹

It is a matter of historical record that in 1546 there was a society of this kind, consisting of about forty persons, eminent for their learning, who, in the words of Mosheim,² "held secret assemblies, at different times, in the territory of Venice, and particularly at Vicenza, in which they deliberated concerning a general reformation of the received systems of religion, and, in a more especial manner, undertook to refute the peculiar doctrines that were afterwards publicly rejected by the Socinians."

Mosheim, who was rigorous in the application of the canons of criticism to all historical questions that came under his review, says, in a note appended to this passage: "Many circumstances and relations sufficiently prove that immediately after the reformation had

¹ Vaughan, "Hours with the Mystics," I., p. 119.

² "Ecclesiast. Hist. XVI. Cent.," Part III., chap. iv.

taken place in Germany, secret assemblies were held and measures proposed in several provinces that were still under the jurisdiction of Rome, with a view to combat the errors and superstitions of the times."

Such was the character of the secret society at Vicenza to which Le Franc attributes the origin of Freemasonry. It was an assembly of men of advanced thought, who were compelled to hold their meetings in secret, because the intolerance of the church and the jealous caution of the state forbade the free and open discussion of opinions which militated against the common sentiments of the period.

The further attempt to connect the doctrines of Socinus with those of Freemasonry, because, when speaking of the new religion which he was laboring to establish, he compared it to the building of a new temple, in which his disciples were to be diligent workers, is futile. The use of such expressions is to be attributed merely to a metaphorical and allegorical spirit by no means uncommon in writers of every age. The same metaphor is repeatedly employed by St. Paul in his various Epistles, and it is not improbable that from him Socinus borrowed the idea.

There is, therefore, as I conceive, no historical evidence whatever to support the theory that Faustus Socinus and the Socinians were the founders of Freemasonry. At the very time when he was establishing the sect whose distinctive feature was its denial of the dogma of the Trinity, the manuscript constitutions of the Masons were beginning their *Legend of the Craft*, with an invocation to "the Might of the Father, the Wisdom of the Glorious Son, and the Goodness of the Holy Ghost, three Persons and one God."

The idea of any such connection between two institutions whose doctrines were so antagonistic was the dream—or rather the malicious invention—of Le Franc, and has in subsequent times received the amount of credit to which it is entitled.

CHAPTER XL

FREEMASONRY AND THE ESSENES

LAWRIE—or I should rather say Brewster—was the first to discover a connection between the Freemasons and the Jewish sect of the Essenes, a doctrine which is announced in his *History of Freemasonry*. He does not indeed trace the origin of the Masonic Institution to the Essenes, but only makes them the successors of the Masons of the Temple, whose forms and tenets they transmitted to Pythagoras and his school at Crotona, by whom the art was disseminated throughout Europe.

Believing as he did in the theory that Freemasonry was first organized at the Temple of Solomon by a union of the Jewish workmen with the association of Dionysian Artificers—a theory which has already been discussed in a preceding chapter—the editor of Lawrie's *History* meets with a hiatus in the regular and uninterrupted progress of the Order which requires to be filled up. The ingenious mode in which he accomplishes this task may be best explained in his own words:

"To these opinions it may be objected, that if the Fraternity of Freemasons flourished during the reign of Solomon, it would have existed in Judea in after ages, and attracted the notice of sacred or profane historians. Whether or not this objection is well founded, we shall not pretend to determine; but if it can be shown that there did exist, after the building of the temple, an association of men resembling Freemasons, in the nature, ceremonies, and object of their institution, the force of the objection will not only be taken away, but additional strength will be communicated to the opinion which we have been supporting. The association here alluded to is that of the Essenes, whose origin and sentiments have occasioned much discussion among ecclesiastical historians. They are all, however, of

one mind concerning the constitution and observances of this religious order."¹

The peace-making quality of "if" is here very apparent. "If it can be shown" that there is a chronological sequence from the builders of the Temple to the Essenes, and that there is a resemblance of both to the Freemasons in "the nature, ceremonies, and object of their institution," the conclusion to which Brewster has arrived will be better sustained than it would be if these premises are denied or not proved.

The course of argument must therefore be directed to these points.

In the first place we must inquire, who were the Essenes and what was their history? This subject has already been treated to some extent in a previous portion of this work. But the integrity of the present argument will require, and I trust excuse, the necessity of a repetition.

The three sects into which the Jews were divided in the time of Christ were the Pharisees, the Sadducees, and the Essenes. Of these, while the Saviour makes repeated mention of the first two, he never alludes in the remotest manner to the third. This singular silence of Jesus has been explained by some imaginative Masonic writers, such, for instance, as Clavel, by asserting that he was probably an initiate of the sect. But scholars have been divided on this subject, some supposing that it is to be attributed to the fact (which, however, has not been established) that the Essenes originated in Egypt at a later period; others that they were not an independent sect, but only an order or subdivision of Pharisaism. However, in connection with the present argument, the settlement of this question is of no material importance.

The Essenes were an association of ascetic celibates whose numbers were therefore recruited from the children of the Jewish community in which they lived. These were carefully trained by proper instructions for admission into the society. The admission into the interior body of the society and to the possession of its mystical doctrine was only attained after a long probation through three stages or degrees, the last of which made the aspirant a participant in the full fellowship of the community.

¹ Lawrie's "History of Freemasonry," p. 33.

The history of the Essenes has been so often written by ancient and modern authors, from Philo and Josephus to Ginsburg, that an inquirer can be at no loss for a knowledge of the sect. The Masonic student will find the subject discussed in the author's *Encyclopædia of Freemasonry*, and the ordinary reader may be referred to the able article in McClintock and Strong's *Cyclopædia of Biblical, Theological, and Ecclesiastical Literature*. I shall content myself, in fairness to the theory, with quoting the brief but compendious description given by the editor of Lawrie's *History*. It is in the main correct and sustained by other authorities, except a few deductions which must be attributed to the natural inclination of every theorist to adapt facts to his hypothesis. A few interpolations will be necessary to correct manifest errors.

"When a candidate was proposed for admission, the strictest scrutiny was made into his character. If his life had been hitherto exemplary, and if he appeared capable of curbing his passions and regulating his conduct according to the virtuous though austere maxims of their order, he was presented, at the expiration of his novitiate, with a white garment, as an emblem of the regularity of his conduct and the purity of his heart."

It was not at the termination, but at the beginning of the novitiate, that the white garment or robe was presented, and it was accompanied by the presentation of an apron and a spade.

"A solemn oath was then administered to him that he would never divulge the mysteries of the Order; that he would make no innovations on the doctrines of the society; and that he would continue in that honorable course of piety and virtue which he had begun to pursue."

This is a mere abstract of the oath, which is given at length by Josephus. It was not, however, administered until the candidate had passed through all the degrees or stages, and was ready to be admitted into full fellowship.

"Like Freemasons, they instructed the young member in the knowledge which they derived from their ancestors."

He might have said, like all other sects, in which the instruction of the young member is an imperative duty.

"They admitted no women into their Order."

Though this is intended by the editor to show a point of identity with Freemasonry, it does no such thing. It is the common rule of

all masculine associations. It distinguishes the Essenes from other religious sects, but it by no means essentially likens them to the Freemasons.

"They had particular signs for recognizing each other, which have a strong resemblance to those of Freemasons."

This is a mere assumption. That they had signs for mutual recognition is probable, because such has been in all ages the custom of secret societies. We have classical authority that they were employed in the ancient Pagan Mysteries. But there is no authority for saying that these signs of the Essenes bore any resemblance to those of the Freemasons. The only allusion to this subject is in the treatise of Philo Judæus, *De Vita Contemplativa*, where that author says that "the Essenes meet together in an assembly and the right hand is laid upon the part between the chin and the breast, while the left hand hangs straight by the side." But Philo does not say that it was used as a sign of recognition, but rather speaks of it as an attitude or posture assumed in their assemblies. Of the resemblance every Mason can judge for himself.

"They had colleges, or places of retirement, where they resorted to practice their rites, and settle the affairs of the society; and after the performance of these duties, they assembled in a large hall, where an entertainment was provided for them by the president, or master, of the college, who allotted a certain quantity of provisions to every individual."

This was the common meal, not partaken on set occasions and in a particular place, as the writer intimates, but every day, in their usual habitation and at the close of daily labor.

"They abolished all distinctions of rank; and if preference was ever given, it was given to piety, liberality, and virtue. Treasurers were appointed in every town to supply the wants of indigent strangers. The Essenes pretended to higher degrees of piety and knowledge than the uneducated vulgar, and though their pretensions were high, they were never questioned by their enemies. Austerity of manners was one of the chief characteristics of the Essenian Fraternity. They frequently assembled, however, in convivial parties, and relieved for awhile the severity of those duties which they were accustomed to perform."

In concluding this description of an ascetic religious sect, the writer of Lawrie's *History* says that "this remarkable coinci-

dence between the chief features of the Masonic and Essenian Fraternities can be accounted for only by referring them to the same origin." Another, and, perhaps, a better reason to account for these coincidences will be hereafter presented.

While admitting that there is a resemblance in some points of the two institutions to each other, such as their secrecy, their classification into different degrees, although there is no evidence that the Essenian initiation had any form except that of a mere passage from a lower to a higher grade, and their cultivation of fraternal love, which resemblances may be found in many other secret associations, I fail to see the identity "in the nature, the object, and the external forms of the two institutions" which Brewster claims.

On the contrary, there is a total dissimilarity in each of these points.

The nature of the Essenian institution was that of an ascetic and a bigoted religious sect, and in so far has certainly no resemblance to Freemasonry.

The object of the Essenes was to preserve in its most rigid requirements the observance of the Mosaic law; that of Freemasonry is to diffuse the tolerant principles of a universal religion, which men of every sect and creed may approve.

As to the external form of the two institutions, what little we know of those of the Essenes certainly does not exhibit any other resemblance than that which is common to all secret associations, whatever may be their nature and objects.

But the most fatal objection to the theory of a connection between them, which is maintained by the author of Lawrie's *History*, has been admitted with some candor by himself.

"There is one point, however," he says, "which may, at first sight, seem to militate against this supposition. The Essenes appear in no respects connected with architecture; nor addicted to those sciences and pursuits which are subsidiary to the art of building."

This objection, I say, is fatal to the theory which makes the Essenes the successors of the builders of Solomon's Temple and the forerunners of the Operative Masons of the Middle Ages, out of whom sprang the Speculative Masons of the 18th century. Admitting for a moment the reality of the organization of Masonry at the building of the Temple in Jerusalem, any chain which unites that

body of builders with the Freemasonry of the present day must show, in every link, the presence and the continuance of pursuits and ideas connected with the operative art of building. Even the Speculative Masons of the present day have not disturbed that chain, because, though the fraternity is not now composed, necessarily, of architects and builders, yet the ideas and pursuits of those professions are retained in the Speculative science, all of whose symbolism is founded on the operative art.

The Essenes were not even Speculative Masons. Their symbolism, if they had any, was not founded on nor had any reference to the art of building. The apron which they presented to their novice was intended to be used, according to their practice, in baptism and in bathing; and the spade had no symbolic meaning, but was simply intended for practical purposes.

The defense made by the author of the *History*, that in modern times there are "many associations of Freemasons where no architects are members, and which have no connection with the art of building," hardly needs a reply. There never has been an association of Freemasons, either Operative or Speculative, which did not have a connection with the art of building, in the former case practically, in the latter symbolically.

It is absurd to suppose the interpolation between these two classes of an institution which neither practically nor symbolically cultivated the art on which the very existence of Freemasonry in either condition is based.

But another objection, equally as fatal to the theory which makes the Essenes the uninterrupted successors of the Temple builders, is to be found in the chronological sequence of the facts of history. If this succession is interrupted by any interval, the chain which connects the two institutions is broken, and the theory falls to the ground.

The Temple of Solomon was finished about a thousand years before the Christian era, and, according to the Masonic legendary account, the builders who were engaged in its construction immediately dispersed and traveled into foreign countries to propagate the art which they had there acquired. This, though merely a legend, is not at all improbable. It is very likely that the Tyrian workmen, at least (and they constituted the larger number of those employed in the building), returned to their homes after the tasks for which

they had been sent to Solomon, by the King of Tyre, had been accomplished. If there were any Jewish Masons at ail, who were not mere laborers, it is not unreasonable to suppose that they would seek employment elsewhere, in the art of building which they had acquired from their Tyrian masters. This is a proper deduction from the tradition, considered as such.

Who, then, were left to continue the due succession of the fraternity? Brewster, in Lawrie's *History*, and Oliver, in his *Antiquities*, affirm that it was the Essenes.

But we do not hear of this sect as an organized body until eight centuries afterward. The apocryphal statement of Pliny, that they had been in being for thousands of years — "*per seculorum millia*" — has met with no reception from scholars. It is something which, as he himself admits, is incredible; and Pliny is no authority in Jewish affairs.

Josephus speaks of them, as existing in the days of Jonathan the Maccabæan; but this was only 143 years before Christ. They are never mentioned in any of the books of the Old Testament, written subsequently to the building of the Temple, and the silence of the Saviour and the Apostles concerning them has been attributed to the fact that they were not even at that time an organized body, but merely an order of the Pharisees. The Rabbi Nathan distinctly says that "those Pharisees who live in a state of celibacy are Essenes;" and McClintock collates from various authorities fourteen points of resemblance, which are enumerated to show the identity in the most important usages of the two institutions. At all events, we have no historic evidence of the existence of the Essenes as a distinct organization before the war of the Maccabees, and this would separate them by eight centuries from the builders of Solomon's Temple, of whom the theory under review erroneously supposes them to be the direct descendants.

But Brewster¹ seeks to connect the Essenes and the builders of Solomon through the Assideans, whom he also calls "an order of the KNIGHTS OF THE TEMPLE OF JERUSALEM, who bound themselves to adorn the porches of that magnificent structure and to pre-

¹The unfairness of the author of Lawrie's "History" is apparent when he quotes the "Histoire des Juifs," by Basnage, as authority for the existence of the Essenes three hundred years before the Christian era. Basnage actually says that they existed in the reign of Antigonus, but this was only 105 B.C.

serve it from injury and decay." He adds that "this association was composed of the greatest men of Israel, who were distinguished for their charitable and peaceful dispositions; and always signalized themselves by their ardent zeal for the purity and preservation of the temple." Hence he argues that "the Essenes were not only an ancient fraternity, but that they originated from an association of architects who were connected with the building of Solomon's temple."

All this is very ingenious, but it is very untrue. It is, however, the style, now nearly obsolete, it is to be hoped, in which Masonic history has been written.

The fact is that the Assideans were not of older date than the Essenes. They are not mentioned by the canonical writers of the Scriptures, nor by Josephus, but the word first occurs in the book of Maccabees, where it is applied, not, as Brewster calls them, to men of "peaceful dispositions," but to a body of devoted and warlike heroes and patriots who, as Kitto says, rose at the signal for armed resistance given by Mattathias, the father of the Maccabees, and who, under him and his successors, upheld with the sword the great doctrine of the unity of God, and stemmed the advancing tide of Grecian manners and idolatries.

Hence the era of the Assideans, like that of the Essenes, is removed eight centuries from the time of the building of the Solomonic Temple.

Scaliger, who is cited in Lawrie's *History* as authority, only says that the Assideans were a confraternity of Jews whose principal devotion consisted in keeping up the edifices belonging to the Temple; and who, not content with paying the common tribute of half a shekel a head, appointed for Temple repairs, voluntarily imposed upon themselves an additional tax.

But as they are not known to have come into existence until the wars of the Maccabees, it is evident that the Temple to which they devoted their care must have been the second one, which had been built after the return of the Jews from their Babylonian captivity. With the Temple of Solomon and with its builders the Assideans could not have had any connection.

Prideaux says that the Jews were divided, after the captivity, into two classes—the Zadikim or righteous, who observed only the written law of Moses, and the Chasidim or pious, who superadded

the traditions of the elders. These latter, he says, were the Assideans, the change of name resulting from a common alteration of the sounds of the original Hebrew letters.

But if this division took place after the captivity, a period of nearly five centuries had then elapsed since the building of Solomon's Temple, and an uninterrupted chain of sequences between that monarch's builders and the Essenes is not preserved.

After the establishment of the Christian religion we lose sight of the Essenes. Some of them are said to have gone to Egypt, and there to have founded the ascetic sect of Therapeutists. Others are believed to have been among the first converts to Christianity, but in a short time they faded out of all notice. I think, from what has been said, that there can be no hesitation in pronouncing the theory of the descent of Freemasonry to modern times through the Assideans and the Essenes to be wholly untenable and unsupported by historical testimony.

In relation to what has been called the "remarkable coincidences" to be met with in the doctrines and usages of this Jewish sect and the Freemasons, giving to them all the weight demanded, the rational explanation appears to be such as I have elsewhere given, and which I may repeat here.

The truth is that the Essenes and the Freemasons derive whatever similarity or resemblance they may have from that spirit of brotherhood which has prevailed in all ages of the civilized world, the inherent principles of which, as the natural results of any fraternization, where all the members are engaged in the same pursuit and governed by one common bond of unity, are brotherly love, charity, and generally that secrecy and exclusiveness which secures to them an isolation, in the practice of their rites, from the rest of the world. And hence, between all fraternities, ancient and modern, these "remarkable coincidences" will be apt to be found.

CHAPTER XLI

THE LEGEND OF ENOCH

BEFORE concluding this series of essays, as they might be called, on the legendary history of Freemasonry, it will be necessary, so that a completion may be given to the subject, to refer to a few Legends of a peculiar character, which have not yet been noticed. These Legends form no part of the original *Legend of the Craft*. There are, however, brief allusions in that document to them; so brief as almost to attract no especial observation, but which might possibly indicate that some form, perhaps a very mutilated one, of these Legends was familiar to the Mediæval Masons, or, perhaps, which is more probable, that they have suggested a foundation for the fabrication of these legendary narratives at a later period by the Speculative Freemasons of the 18th century.

Or it may be supposed that both those views are correct, and that while the imperfect and fragmentary Legend was known to the Freemasons of the Middle Ages, its completed form was thereby suggested to the Fraternity at a later period, and after the era of the Revival.

Whichever of these views we may accept, it is at least certain that at the present day, and in the present condition of the Order, these Legends form an important part of the ritualism of the Order. They can not be rejected in their symbolic interpretation, unless we are willing with them to reject the whole fabric of Freemasonry, into which they have been closely interwoven.

Of these Legends and of some minor ones of the same class, Dr. Oliver has spoken with great fairness in his *Historical Landmarks*, in the following words:

"It is admitted that we are in possession of numerous legends which are not found in holy writ, but being of very ancient date, are entitled to consideration, although their authenticity may be

questioned and their aid rejected. I shall not, however, in any case, use their evidence as a *prima facie* means of proving any doubtful proposition, but merely in corroboration of an argument which might probably be complete without their aid. Our system of typical or legendary tradition adds to the dignity of the institution by its general reference to sublime truths, which were considered necessary to its existence or its consistency, although some of the facts, how pure soever at their first promulgation, may have been distorted and perverted by passing through a multitude of hands in their transmission down the stream of time, amidst the fluctuation of the earth and the downfall of mighty states and empires."

Without discussing the question of their great antiquity, or of their original purity and subsequent distortion and perversion, I propose to present these Legends to the Masonic reader, because they are really not so much traditional narratives of events that are supposed to have at some time occurred, but because they are to be considered really as allegorical attempts to symbolize certain ethical or religious ideas, the expression of which lies at the very foundation of the Masonic system.

So considered, they must be deemed of great value. Their interest will also be much enhanced by a comparison of the facts of history that are interwoven with them, and to certain traditions of the ancient Oriental nations which show the existence of the same Legends among them. These may, indeed, have been the foundation on which the Masonic ones have been built, the "distortion or perversion" being simply those variations which were necessary to connect the legendary statements more intimately and consistently with the Masonic symbolic ideas.

The first of these to which our attention will be directed is the *Legend of Enoch*, the seventh of the Patriarchs, of whom Milton has said:

. . . "him the Most High,
(Rapt in a balmy cloud with winged steeds)
Did, as thou seest, receive to walk with God
High in salvation and the claims of bliss,
Exempt from death."

I shall first present the reader with the Masonic Legend, and then endeavor to trace out the idea which it was intended to convey, by a comparison of it with historical occurrences, with Oriental

traditions of a similar nature, and with the Masonic symbolism which it seems to embody. The Legend as accepted by the Craft, from a time hereafter to be referred to, runs to the following effect.

Enoch, being inspired by the Most High, and in obedience to a vision, constructed underground, in the bosom of Mount Moriah, an edifice consisting of nine brick vaults situated perpendicularly beneath each other and communicating by apertures left in the arch of each vault.

He then caused a triangular plate of gold to be made, each side of which was a cubit long; he enriched it with the most precious stones, and engraved upon it the ineffable name of God. He then encrusted the plate upon a stone of agate of the same form, which he placed upon a cubical stone of marble, and deposited the whole within the ninth or innermost vault.

When this subterranean building was completed, Enoch made a slab or door of stone, and, attaching to it a ring of iron, by which it might, if necessary, be raised, he placed it over the aperture of the uppermost arch, and so covered it over with soil that the opening could not easily be discovered. Enoch himself was not permitted to enter it more than once a year, and on his death or translation all knowledge of this building and of the sacred treasure which it contained was lost until in succeeding ages it was accidentally discovered while Solomon was engaged in building a temple above the spot, on the same mountain.

The Legend proceeds to inform us that after Enoch had finished the construction of the nine vaults, fearing that the principles of the arts and sciences which he had assiduously cultivated would be lost in that universal deluge of which he had received a prophetic vision, he erected above-ground two pillars, one of marble, to withstand the destructive influences of fire, and one of brass, to resist the action of water. On the pillar of brass he engraved the history of the creation, the principles of the arts and sciences, and the doctrines of Speculative Masonry as they were then practiced; and on the pillar of marble he inscribed in hieroglyphic characters the information that near the spot where they stood a precious treasure was deposited in a subterranean vault.

Such is the *Legend of Enoch*, which forms a very important part of the legendary history of the High Degrees. As a traditional narrative it has not the slightest support of authentic history, and

the events that it relates do not recommend themselves by an air of probability. But, accepted as the expression of a symbolic idea, it undoubtedly possesses some value.

That part of the Legend which refers to the two pillars is undoubtedly a perversion of the old Craft Legend of Lamech's sons, which has already been treated in this work. It will need no further consideration.

The germ of the Legend is the preservation through the efforts of the Patriarch of the Ineffable Name. This is in fact the true symbolism of the Legend, and it is thus connected with the whole system of Freemasonry in its Speculative form.

There is no allusion to this story in the *Legend of the Craft*. None of the old manuscript Constitutions contain the name of Enoch, nor does he appear to have been deemed by the Mediaeval Masons to be one of the worthies of the Craft. The Enoch spoken of in the Cooke MS. is the son of Cain, and not the seventh Patriarch. We must conclude, therefore, that the Legend was a fabrication of a later day, and in no way suggested by anything contained in the original Craft Legend.

But that there were traditions outside of Masonry, which prevailed in the Middle Ages, in reference to subterranean caves in Mount Moriah is evident from the writings of the old historians. Thus there was a tradition of the Talmudists that when King Solomon was building the Temple, foreseeing that at some future time the edifice would be destroyed, he caused a dark and intricate vault to be constructed underground, in which the ark might be concealed whenever such a time of danger should arrive; and that Josiah, being warned by Huldah, the prophetess, of the approaching peril, caused the ark to be hidden in the crypt which had been built by Solomon. There was also in this vault, as in that of Enoch, a cubical stone, on which the ark was placed.¹

There is a tradition also, among the Arabians, of a sacred stone found by Abraham beneath the earth, and made by him the stone of foundation of the temple which Jehovah ordered him to erect—a temple the tradition of which is confined to the Mohammedans.

But the most curious story is one told by Nicephorus Callistus, a Greek historian of the 14th century, in his *Ecclesiastical Histories*.

¹ Lightfoot, "Prospect of the Temple," ch. xv.

When detailing the events that occurred while Julian the Apostate was making his attempt to rebuild the Temple of Jerusalem, he narrates the following fable, but of whose fabulous character the too credulous monk has not the slightest notion.

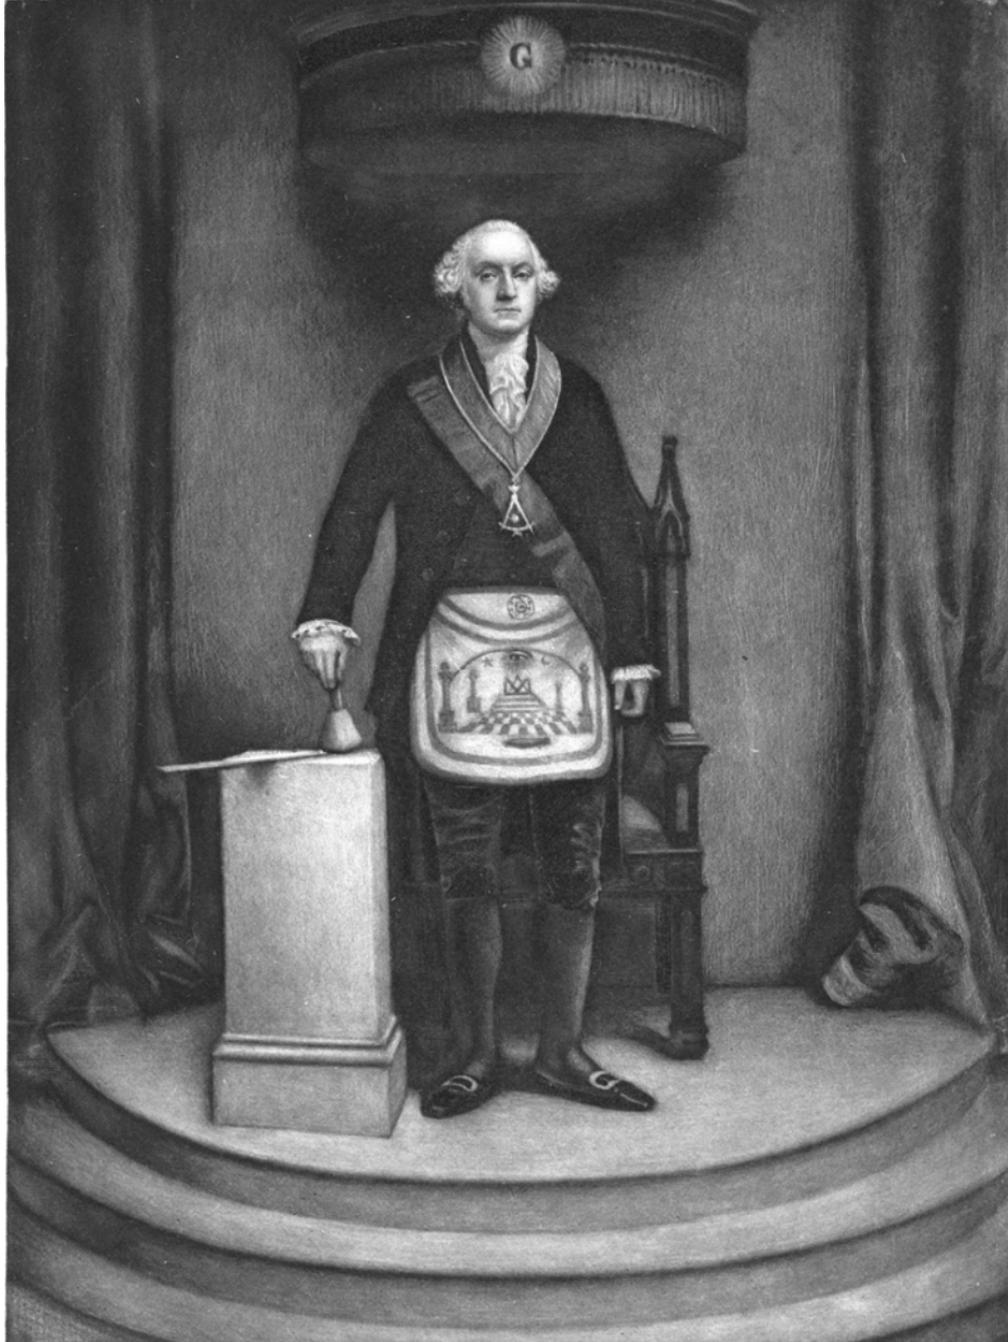

"When the foundations were being laid, as has been said, one of the stones attached to the lowest part of the foundation was removed from its place and showed the mouth of a cavern which had been cut out of the rock. But as the cave could not be distinctly seen, those who had charge of the work, wishing to explore it, that they might be better acquainted with the place, sent one of the workmen down tied to a long rope. When he got to the bottom he found water up to his legs. Searching the cavern on every side, he found by touching with his hands that it was of a quadrangular form. When he was returning to the mouth, he discovered a certain pillar standing up scarcely above the water. Feeling with his hand, he found a little book placed upon it, and wrapped up in very fine and clean linen. Taking possession of it, he gave the signal with the rope that those who had sent him down, should draw him up. Being received above, as soon as the book was shown all were struck with astonishment, especially as it appeared untouched and fresh notwithstanding that it had been found in so dismal and dark a place. But when the book was unfolded, not only the Jews but the Greeks were astounded. For even at the beginning it declared in large letters: IN THE BEGINNING WAS THE WORD WITH GOD, AND THE WORD WAS GOD. To speak plainly, the writing embraced the whole Gospel which was announced in the Divine tongue of the Virgin disciple."¹

It is true that Enoch has been supposed to have been identical with Hermes, and Kerihier says, in the *Ædipus Egyptiacus*, "Idris, among the Hebrews, has been called Enoch, among the Egyptians Osiris and Hermes, and he was the first who before the Flood had any knowledge of astronomy and geometry." But the authors of the *Legend of the Craft* were hardly likely to be acquainted with this piece of archaeology, and the Hermes to whom, with a very corrupt spelling, they refer as the son of Cush, was the Hermes Trismegistus, popularly known as the "Father of Wisdom."

Enoch is first introduced to the Craft as one of the founders of

¹ Nicephori Callisti "Ecclesiasticæ Historiæ," tom. ii., lib. x., cap. xxxiii.

GEORGE WASHINGTON

Geometry and Masonry, by Anderson, in the year 1723, who, in the *Constitutions* printed in that year, has the following passage:

"By some vestiges of antiquity we find one of them (the offspring of Seth) prophesying of the final conflagration at the day of Judgment, as St. Jude tells, and likewise of the general deluge for the punishment of the world. Upon which he erected his two large pillars (though some ascribe them to Seth), the one of stone and the other of brick, whereon were engraven the liberal sciences, etc. And that the stone pillar remained in Syria until the days of Vespasian, the Emperor."¹

Fifteen years afterward, when he published the second edition of the *Constitutions*, he repeated the Legend, with the additional statement that Enoch was "expert and bright both in the science and the art" of Geometry and Masonry, an abridgment of which he placed on the pillars which he had erected. He adds that "the old Masons firmly believed this tradition," but as there is no appearance of any such tradition in the old records, of which since his date a large number have been recovered (for in them the building of the pillars is ascribed to the sons of Lamech), we shall have to accept this assertion with many grains of allowance, and attribute it to the general inaccuracy of Anderson when citing legendary authority.

But as the first mention of Enoch as a Freemason is made by Anderson, and as we not long afterward find him incorporated into the legendary history of the Order, we may, I think, attribute to him the suggestion of the Legend, which was, however, afterward greatly developed.

It was not, however, adopted into the English system, since neither Entick nor Northouck, who subsequently edited the *Book of Constitutions*, say anything more of Enoch than had already been said by Anderson. They, indeed, correct to some extent his statement, by ascribing the pillars either to Seth or to Enoch, leaning therefore, to the authority of Josephus, but, equally with Anderson, abandoning the real tradition of the old Legend, which gave them to the children of Lamech.

It is, I think, very evident that the *Legend of Enoch* was of Continental origin, and I am inclined conjecturally to assign its invention to the fertile genius of the Chevalier Ramsay, the first fab-

¹ "Constitutions," 1723, p. 3, notes.

ricator of High Degrees, or to some of his immediate successors in the manufactory of Masonic Rites.

Ramsay was too learned a man to be ignorant of the numerous Oriental traditions, Arabic, Egyptian, and Rabinal, concerning Enoch, that had been long in existence. Of this we have evidence in a very learned work on *The Philosophical Principles of Natural and Revealed Religion*, published by him in 1749.

In this work¹ he refers to the tradition extant in all nations, of a great man or legislator who was the first author of sacred symbols and hieroglyphics, and who taught the people their sacred mysteries and religious rites. This man, he says, was, among the Phœnicians, Thaut; the Greeks, Hermes; the Arabians, Edris. But he must have known that Thaut, Hermes, and Edris were all synonymous of Enoch, for he admits that "all these lived some time before the universal deluge, and they were all the same man, and consequently some antediluvian patriarch."

And, finally, he adds that "some think that this antediluvian patriarch was Enoch himself." And then he presents, in the following language, those views which most probably supplied the suggestions that were afterward developed by himself, or some of his followers, in the full form of the Masonic Legend of Enoch.

"Whatever be in these conjectures," says Ramsay, "it is certain, from the principles laid down, that the antediluvian or Noevian patriarchs ought to have taken some surer measures for transmitting the knowledge of divine truths to their posterity, than by oral tradition, and, consequently, that they either invented or made use of hieroglyphics or symbols to preserve the memory of these sacred truths." And these he calls the Enochian symbols.

He does not, indeed, make any allusion to a secret depository of these symbols of Enoch, and supposes that they must have been communicated to the sons of Noah and their descendants, though in time they lost their true meaning. But the change made in the Masonic Legend was necessary to adapt it to a peculiar system of ritualism.

It is singular how Enoch ever became among the ancients a type of the mysteries of religion. The book of Genesis devotes only

¹ Vol. ii., p. 12 *et seq.*

three short verses to an account of him, and nothing is there said of him, his deeds, or his character, except an allusion to his piety.

The Oriental writers, however, abound in traditionary tales of the learning of the Patriarch. One tradition states that God bestowed upon him the gift of knowledge, and that he received thirty volumes from Heaven, filled with all the secrets of the most mysterious sciences. The Babylonians supposed him to have been intimately acquainted with the nature of the stars, and they attribute to him the invention of astrology.

The Jewish Rabbins maintained that he was taught by Adam how to sacrifice and to worship the Deity aright. The Cabalistic book of Raziel says that he received the divine mysteries through the direct line of the preceding Patriarchs.

Bar Hebræus, a Jewish writer, asserts that Enoch was the first who invented books and writing; that he taught men the art of building cities—thus evidently confounding him with another Enoch, the son of Cain; that he discovered the knowledge of the Zodiac and the course of the stars; and that he inculcated the worship of God by religious rites.

There is a coincidence in the sacred character thus bestowed upon Enoch with his name and the age at which he died, and this may have had something to do with the mystical attributes bestowed upon him by the Orientalists.

The word *Enoch* signifies, in the Hebrew, *initiated* or *consecrated*, and would seem, as all Hebrew names are significant, to have authorized, or, perhaps, rather suggested the idea of his connection with a system of initiation into sacred rites.

He lived, the Scriptures say, three hundred and sixty-five years. This, too, would readily be received as having a mystical meaning, for 365 is the number of the days in a solar year and was, therefore, deemed a sacred number. Thus we have seen that the letters of the mystical word *Abraxas*, which was the Gnostic name of the Supreme Deity, amounted, according to their numerical value in the Greek alphabet, to 365, which was also the case with *Mithras*, the god to whom the Mithraic mysteries were dedicated. And this may account for the statement of Bar Hebræus that Enoch appointed festivals and sacrifices to the sun at the periods when that luminary entered each of the zodiacal signs.

Goldziher, one of the latest of the German ethnologists, has ad-

vanced a similar idea in his work on *Mythology Among the Hebrews*. He says:

"The solar character of Enoch admits of no doubt. He is brought into connection with the building of towns—a solar feature. He lives exactly three hundred and sixty-five years, the number of days of the solar year; which can not be accidental. And even then he did not die, but 'Enoch walked with Elohim, and was no more (to be seen), for Elohim *took him away*.' In the old times when the figure of Enoch was imagined, this was doubtless called Enoch's Ascension to heaven, as in the late traditional legends Ascensions to heaven are generally acknowledged to be solar features."¹

These statements and speculations have been objected to, because they would tend to make Enoch an idolater and a sun-worshipper. This is a consequence by no means absolutely necessary, but, as the whole is merely traditionary, we need waste no time in defending the orthodox character of the Patriarch's religious views.

After all, it would appear that the *Legend of Enoch*, being wholly unknown to the Fraternity in the Middle Ages, unrecognized in the *Legend of the Craft*, and the name even, not mentioned in any of the old records, was first introduced into the rituals of some of the higher degrees which began to be fabricated toward the middle of the 18th century; that it was invented by the Chevalier Ramsay, or by some of those ritual-mongers who immediately succeeded him, and that in its fabrication very copious suggestions were borrowed from the Rabbinical and Oriental traditions on the same subject.

It is impossible then to assign to this Legend the slightest historical character. It is made up altogether out of traditions which were the inventions of Eastern imagination.

We must view it, therefore, as an allegory; but as one which has a profound symbolic character. It was intended to teach the doctrine of Divine Truth by the symbol of the Holy Name—the Tetragrammaton—the Name most reverently consecrated in the Jewish system as well as in others, and which has always constituted one of the most important and prominent symbols of Speculative Masonry.

In the Continental system of the High Degrees, this symbol is

¹ Chap. v., sect. viii., p. 127, Martineau's Translation.

presented in the form of the *Legend of Enoch*. From the English system of Ancient Craft Masonry, that Legend is rejected, or rather it never has been admitted into it. In its place, there is another esoteric Legend, which, differing altogether in details, is identical in result and effects the same symbolism. But this will be more appropriately discussed when the symbolism of Freemasonry is treated, in a future part of this work.

CHAPTER XLII

NOAH AND THE NOACHITES

IN reality, there is no Legend of Noah to be found in any of the Masonic Rituals. There is no myth, like that of Enoch or Euclid, which intimately connects him with the legendary history of the institution. And yet the story of his life has exercised a very important influence in the origin and the development of the principles of Speculative Masonry.

Dr. Oliver has related a few traditions of Noah which, he says, are Masonic, but they never had any general acceptance among the Craft, as they are referred to by no other writer, and, if they ever existed, are now happily obsolete.

The influence of Noah upon Masonic doctrine is to be traced to the almost universal belief of men in the events of the deluge, and the consequent establishment in many nations of a system of religion known to ethnologists as the "Arkite worship." Of this a brief notice must be taken before we can proceed to investigate the connection of the name of Noah with Speculative Masonry.

The character and the actions of Noah are to be looked upon from a twofold stand-point, the historic and the legendary.

The historic account of Noah is contained in portions of the sixth and seventh chapters of the Book of Genesis, and are readily accessible to every reader, with which, however, they must already be very familiar.

The legendary account is to be found in the almost inexhaustible store of traditions which are scattered among almost all the nations of the world where some more or less dim memory of a cataclysm has been preserved.

If we examine the ancient writers, we shall find ample evidence that among all the pagan peoples there was a tradition of a deluge which, at some remote period, had overwhelmed the earth. This

tradition was greatly distorted from the biblical source, and the very name of the Patriarch who was saved was forgotten and replaced by some other, which varied in different countries. Thus, in different places, he had received the names of Xisuthrus, Prometheus, Deucalion, Ogyges, and many others, where the name has been rendered very unlike itself by terminations and other idiomatic changes. But everywhere the name was accompanied by a tradition, which also varied in its details, of a deluge by which mankind had been destroyed, and the race had, through the instrumentality of this personage, been renewed.

It is to be supposed that so important an event as the deluge would have been transmitted by the Patriarch to his posterity, and that in after times, when, by reason of the oral transmission of the history, the particular details of the event would be greatly distorted from the truth, a veneration for this new founder of the race of men would be retained. At length, when various systems of idolatry began to be established, Noah, under whatever name he may have been known, would have been among the first to whom divine honors would be paid. Hence arose that system known to modern scholars as the "Arkite worship," in whose rites and mysteries, which were eventually communicated to the other ancient religions, there were always some allusions to the events of the Noachic flood—to the ark, as the womb of Nature, to the eight persons saved in it, as the ogdoad or sacred number—and to the renovation of the world, as symbolizing the passage from death to immortal life.

It is not, therefore, surprising that Noah should have become a mystical personage, and that the modern Speculative Masons should have sought to incorporate some reference to him in their symbolic system, though no such idea appears to have been entertained by the Operative Masons who preceded them.

On examining the old records of the Operative Masons it will be found that no place is assigned to Noah, either as a Mason or as one of the founders of the "science." He receives only the briefest mention.

In the Halliwell Poem his name and the flood are merely referred to as denoting an era of time in the world's history. It is only a statement that the tower of Babel was begun many years after "Noees flod."

In the Cooke MS. the record is a little more extended, but still

is but an historical narrative of the flood, in accordance with the biblical details.

In the Dowland MS. and in all the other manuscripts of the *Legend of the Craft* that succeeded it, the reference to Noah is exceedingly meager, his name only being mentioned, and that of his sons, from whom descended Hermes, who found one of the pillars and taught the science thereon described to other men. So far, Noah has had no part in Masonry.

Anderson, who, in the *Book of Constitutions* modified and enlarged the old Craft Legends at his pleasure, calls Noah and his three sons "all Masons true," and says that they brought over from the flood the traditions and arts of the antediluvians and communicated them to their growing offspring. And this was perhaps the first time that the Patriarch was presented to the attention of the Fraternity in a Masonic character.

Anderson seems to have cherished this idea, for in the second edition of the *Constitutions* he still further develops it by saying that the offspring of Noah, "as they journeyed from the East (the plains of Mount Ararat, where the ark rested) towards the West, they found a plain in the land of Shinar, and dwelt there together as NOACHIDÆ:, or sons of Noah." And, he adds, without the slightest historical authority, that this word "Noachidæ" was "the first name of Masons, according to some old traditions." It would have puzzled him to specify any such tradition.

Having thus invented and adopted the name as the distinctive designation of a Mason, he repeats it in his second edition or revision of the "Old Charges" appended to the *Book of Constitutions*. The first of these charges, in the *Constitutions* of 1723, contained this passage: "A Mason is obliged by his tenure to obey the moral law." In the edition of 1738, Dr. Anderson has, without authority, completed the sentence by adding the words "as a true Noachida." This interpolation was rejected by Entick, who edited the third and fourth editions in 1756 and 1767, and by Northouck, who published the fifth in 1784, both of whom restored the old reading, which has ever since been preserved in all the Constitutions of the Grand Lodge of England.

Dermott, however, who closely followed the second edition of Anderson, in the composition of his *Ahiman Rezon* of course adopted the new term.

About that time, or a little later, a degree was fabricated on the continent of Europe, bearing the name of "Patriarch Noachite," one peculiar feature of which was that it represented the existence of two classes or lines of Masons, the one descending from the Temple of Solomon, and who were called Hiramites, and the other tracing their origin to Noah, who were styled Noachites.

Neither Preston nor Hutchinson, nor any other writer of the 18th century, appear to have accepted the term. But it was a favorite with Dr. Oliver, and under his example it has become of so common use that *Noachida* and *Freemason* have come to be considered as synonymous terms.

What does this word really signify, and how came Anderson to adopt it as a Masonic term? The answers to these questions are by no means difficult.

Noachida, or Noachides, from which we get the English Noachite, is a gentilitial name, or a name designating the member of a family or race, and is legitimately formed according to Greek usage, where Atrides means a descendant of Atreus, or Heraclides a descendant of Heracles. And so Noachides, or its synonyms Noachida or Noachites, means a descendant of Noah.

But why, it may be asked, are the Freemasons called the descendants of Noah? Why has he been selected alone to represent the headship of the Fraternity? I have no doubt that Dr. Anderson was led to the adoption of the word by the following reason.

After Noah's emergence from the ark, he is said to have promulgated seven precepts for the government of the new race of men of whom he was to be the progenitor.

These seven precepts are: 1, to do justice; 2, worship God; 3, abstain from idolatry; 4, preserve chastity; 5, do not commit murder; 6, do not steal; 7, do not eat the blood.

These seven obligations, says the Rev. Dr. Raphall,¹ are held binding on all men, inasmuch as all are descendants of Noah, and the Rabbins maintain that he who observes them, though he be not an Israelite, has a share in the future life, and it is the duty of every Jew to enforce their due observance whenever he has the power to do so.

In consequence of this, the Jewish religion was not confined

¹ "Genesis, with Translation and Notes," by Rev. Morris J. Raphall, p. 52.

during its existence in Palestine to the Jewish nation only, but proselytes of three kinds were freely admitted. One of these classes was the "proselytes of the gate." These were persons who, without undergoing the rite of circumcision or observing the ritual prescribed by the law of Moses, engaged to worship the true God and to observe the seven precepts of Noah, and these things they were to do whether they resided in Judea or in foreign lands. They were not, however, admitted to all the privileges of the Jewish religion; marriage with Israelites was forbidden, and they were not permitted to enter within the sacred inclosure of the temple. So that, although they were Noachidæ, they were not considered equal to the true children of Abraham.

Anderson, who was a theologian, was, of course, acquainted with these facts, but, with a more tolerant spirit than the Jewish law, which gave the converted Gentiles only a qualified reception, he was disposed to admit into the full fellowship of Freemasonry all the descendants of Noah who would observe the precepts of the Patriarch, these being the only moral laws inculcated by Masonry.

In giving the history of the introduction of the word into Masonry, I have not cited among the authorities the document known as the Stonehouse MS., because it was verified by a person of that name, but more usually the Krause MS., because it was first published in a German translation by Dr. Krause in his *Three Oldest Documents*. It is alleged to be a copy of the *York Constitutions*, enacted in 926, but is generally admitted by scholars to be spurious. Yet, as it is probable that it was originally written by a contemporary of Anderson, and about the time of the publishing of the *Constitutions* of 1738, it may be accepted, so far as it supplies us with a suggestion of the motive that induced Anderson to interpolate the word "Noachida" into the "Old Charges."

In the Krause MS., under the head of "The Laws or Obligations laid before his Brother Masons by Prince Edwin," we find the following article. (I translate from the German of Krause, because the original English document is nowhere to be found.)

"The first obligation is that you shall sincerely honor God and obey the laws of the Noachites, because they are divine laws, which should be obeyed by all the world. Therefore, you must avoid all heresies and not thereby sin against God."

The language of this document is more precise than that of An-

derson, though both have the same purpose. The meaning is that the only religious laws which a Freemason is required to obey are those which are contained in the code that has been attributed to Noah. This sentiment is still further expressed toward the close of the "Old Charges," where it is said that the Mason is obliged only "to that religion in which all men agree," excluding, therefore, atheism, and requiring the observance of such simple laws of morality as are enjoined in the precepts of Noah.

Anderson had, however, a particular object in the use of the word "Noachida." The Krause MS. says that the Mason "must obey the laws of the Noachites; "that is, that he is to observe the seven precepts of Noah, without being required to observe any other religious dogmas outside of these—a matter which is left to himself.

But Anderson says he "must obey the moral law as a true Noachida," by which he intimates that that title is the proper designation of a Mason. And he has shown that this was his meaning by telling us, in a preceding part of his book, that "Noachida; was the first name of Masons, according to some old traditions."

Now the object of Anderson in introducing this word into the second edition of the *Constitutions* was to sustain his theory that Noah was the founder of the science of Freemasonry after the flood. This was the theory taught by Dr. Oliver a century afterward, who followed Anderson in the use of the word, with the same meaning and the same object, and his example has been imitated by many recent writers. But when Anderson speaks of a Noachida or a Noachite as a word synonymous with Freemason, he is in error; for although all Freemasons are necessarily the descendants of Noah, all the descendants of Noah are not Freemasons.

And if by the use of the word he means to indicate that Noah was the founder of post-diluvian Freemasonry, he is equally in error; for that theory, it has heretofore been shown, can not be sustained, and his statement that Noah and his three sons were "all Masons true " is one for which there is no historical support, and which greatly lacks an element of probability.

It is better, therefore, when we speak or write historically of Freemasonry, that this word Noachida, or Noachite, should be avoided, since its use leads to a confusion of ideas, and possibly to the promulgation of error.

CHAPTER XLIII

THE LEGEND OF HIRAM ABIF

HIS is the most important of all the legends of Freemasonry. It will therefore be considered in respect to its origin, its history, and its meaning.

Before, however, proceeding to the discussion of these important subjects, and the investigation of the truly mythical character of Hiram Abif, it will be proper to inquire into the meaning of his name, or rather the meaning of the epithet that accompanies it.

In the places in Scripture in which he is mentioned he is called at one time (in 2 Chronicles ii., 13), by the King of Tyre, in the letter written by him to King Solomon, CHURAM ABI; in another place (in 2 Chronicles iv., 16), where the writer of the narrative is recording the work done by him for Solomon, CHURAM ABIV, or, as it might be pronounced according to the sound of the Hebrew letters, ABIU. But Luther, in his German translation of the Bible, adopted the pronunciation ABIF, exchanging the flat *v* for the sharp *f*. In this he was followed by Anderson, who was the first to present the full name of *Hiram Abif* to the Craft. This he did in the first edition of the English book of *Constitutions*.

And since his time at least the appellation of Hiram Abif has been adopted by and become familiar to the Craft as the name of the cunning or skillful artist who was sent by Hiram, King of Tyre, to assist King Solomon in the construction of the Temple. In *Chronicles* and *Kings* we find Churam or Hiram, as we may use the initial letter as a guttural or an aspirate, and Chiram or Hiram, the vowel *u* or *i* being indifferently used. But the Masonic usage has universally adopted the word *Hiram*.

Now, the *Abi* and *Abiv*, used by the King of Tyre, in the book of *Chronicles* form no part of the name, but are simply inflections of the possessive pronouns *my* and *his* suffixed to the appellative *Ab*.

Ab in Hebrew means *father*, *i* is *my*, and *in*, *iv*, or *if is his*. *Abi* is therefore *my father*, and so he is called by the King of Tyre when he is describing him to Solomon, "Hiram my father;" *Abif* is *his father*, and he is so spoken of by the historian when he recounts the various kinds of work which were done for King Solomon by "Hiram his father."

But the word *Ab* in Hebrew, though primarily signifying a male parent, has other derivative significations. It is evident that in none of the passages in which he is mentioned is it intended to intimate that he held such relationship to either the King of Tyre or the King of Israel.

The word "father" was applied by the Hebrews as a term of honor, or to signify a station of pre-eminence. Buxtorf¹ says it sometimes signified *Master*, and he cites the fourth chapter of Genesis, where Jabal is called the father of cattle and Jubal the father" of musicians.

Hiram Abif was most probably selected by the King of Tyre to be sent to Solomon as a skillful artificer of pre-eminent skill that he might execute the principal works in the interior of the Temple and fabricate the various utensils intended for the sacred services. He was a master in his art or calling, and properly dignified with a title which announced his distinguished character. The title of Father, which was given to him, denotes, says Smith,² the respect and esteem in which he was held, according to the similar custom of the people of the East at the present day.

I am well pleased with the suggestion of Dr. McClintock that "*Hiram my father* seems to mean *Hiram my counsellor*; that is to say, *foreman* or *master-workman*."³

Applying this meaning to the passages in Chronicles which refer to this artist, we shall see how easily every difficulty is removed and the Craftsman Hiram placed in his true light.

When King Hiram, wishing to aid the King of Israel in his contemplated building, writes him a letter in which he promises to comply with the request of Solomon to send him timber from Lebanon and wood-cutters to hew it, as an additional mark of his friendship and his desire to contribute his aid in building "a house for Je-

¹ "Lexicon Talmudicum."

² "Cyclopædia of Biblical Literature."

³ "Cyclopædia of Biblical, Theological, and Classical Literature."

hovah," he gives him the services of one of his most skillful artisans and announces the gift in these words: "And now I have sent a skillful man, endued with understanding, my master-workman Hiram."

And when the historian who wrote the *Chronicles* of the kingdom had recapitulated all the work that Hiram had accomplished, such as the pillars of the porch, the lavers and the candlesticks, and the sacred vessels, he concludes by saying that all these things were made for King Solomon by *his master-workman* Hiram, in the Hebrew *gnasah Huram Abif Lammelech Schelomoh*.

Hiram or Hiram was his proper name. *Ab*, father of his trade or *master-workman*, his title, and *i* or *if*, *my* or *his*, the possessive pronominal suffix, used according to circumstances. The King of Tyre calls him *Hiram Abi*, "*my* master-workman." When the chronicler speaks of him in his relation to King Solomon, he calls him *Hiram Abif* "*his* master-workman." And as all his Masonic relations are with Solomon, this latter designation has been adopted, from Anderson, by the Craft.

Having thus disposed of the name and title of the personage who constitutes the main point in this Masonic Legend, I proceed to an examination of the origin and progressive growth of the myth.

"The Legend of the Temple-Builder," as he is commonly but improperly called, is so intimately connected in the ritual with the symbolic history of the Temple, that we would very naturally be led to suppose that the one has always been contemporary and coexistent with the other. The evidence on this point is, however, by no means conclusive or satisfactory, though a critical examination of the old manuscripts would seem to show that the writers of those documents, while compiling from traditional sources the *Legend of the Craft*, were not altogether ignorant of the rank and services that have been subsequently attributed by the Speculative Masons of the present day to Hiram Abif. They certainly had some notion that in the building of the Temple at Jerusalem King Solomon had the assistance of a skillful artist who had been supplied to him by the King of Tyre.

The origin of the Legend must be looked for in the Scriptural account of the building of the Temple of Jerusalem, The story, as told in the books of Kings and Chronicles, is to this effect.

On the death of King David, his son and successor, Solomon, resolved to carry into execution his father's long-contemplated design of erecting a Temple on Mount Moriah for the worship of Jehovah. But the Jews were not a nation of artisans, but rather of agriculturists, and had, even in the time of David, depended on the aid of the Phœnicians in the construction of the house built for that monarch at the beginning of his reign. Solomon, therefore, applied to his ally, Hiram, King of Tyre, to furnish him with trees from Lebanon and with hewers to prepare them, for, as he said in his letter to the Tyrian King, "thou knowest that there is not any among us that can skill to hew timber like unto the Sidonians."

Hiram complied with his request, and exchanged the skilled workmen of sterile Phœnicia for the oil and corn and wine of more fertile Judea.

Among the artists who were sent by the King of Tyre to the King of Israel, was one whose appearance at Jerusalem seems to have been in response to the following application of Solomon, recorded in the second book of Chronicles, the second chapter, seventh verse:

"Send me now therefore a man cunning to work in gold, and in silver, and in brass, and in iron, and in purple and in crimson, and blue, and that can skill to grave with the cunning men that are with me in Judah, and in Jerusalem, whom David my father did provide."

In the epistle of King Hiram, responsive to this request, contained in the same book and chapter, in the thirteenth and fourteenth verses, are the following words:

"And now I have sent a cunning man, endued with understanding, of Hiram my father's. The son of a woman of the daughters of Dan, and his father was a man of Tyre, skillful to work in gold and in silver, in brass, in iron, in stone, and in timber, in purple, in blue, and in fine linen, and in crimson; also to grave any manner of graving, and to find out every device which shall be put to him, with thy cunning men, and with the cunning men of my lord David, thy father."

A further description of him is given in the seventh chapter of the first book of Kings, in the thirteenth and fourteenth verses, and in these words:

"And King Solomon sent and fetched Hiram out of Tyre. He was a widow's son of the tribe of Naphtali—and his father was a

man of Tyre, a worker in brass; and he was filled with wisdom and understanding, and cunning to work all works in brass, and he came to King Solomon and wrought all his work."

It is very evident that this was the origin of the Legend which was incorporated into the Masonic system, and which, on the institution of Speculative Freemasonry, was adopted as the most prominent portion of the Third Degree.

The mediæval Masons were acquainted with the fact that King Solomon had an assistant in the works of the Temple, and that that assistant had been sent to him by King Hiram. But there was considerable confusion in their minds upon the subject, and an ignorance of the scriptural name and attributes of the person.

In the Halliwell MS., the earliest known to us, the Legend is not related. Either the writers of the two poems of which that manuscript is composed were ignorant of it, or in the combination of the two poems there has been a mutilation and the Hiramic Legend has been omitted.

In the Cooke MS., which is a hundred years later, we meet with the first allusion to it and the first error, which is repeated in various forms in all the subsequent manuscript constitutions.

That manuscript says: "And at the makynge of the temple in Salamonis tyme as hit is seyde in the bibull in the iii boke of Regum in tertio Regum capitulo quinto, that Salomon had iiii score thousand masons at his werke. And the kyngis sone of Tyry was his master mason."

The reference here made to the third book of Kings is according to the old distribution of the Hebrew canon, where the two books of Samuel are called the first and second books of Kings. According to our present canon, the reference would be to the fifth chapter of the first book of Kings. In that chapter nothing is said of Hiram Abif, but it is recorded there that "Adoniram was over the levy." Now the literal meaning of Adoniram is *the lord Hiram*. As the King of Tyre had promised to send his workmen to Lebanon, and as it is stated that Adoniram superintended the men who were there hewing the trees, the old legendist, not taking into account that the levy of thirty thousand, over whom Adoniram presided, were Israelites and not Phoenicians, but supposing that they had been sent to Lebanon by Hiram, King of Tyre, and that he had sent Adoniram with them, and viewing the word as meaning *the lord Hiram*,

hastily came to the conclusion that this Lord or Prince Hiram was the son of the King. And hence he made the mistake of saying that the son of the King of Tyre was the person sent to Solomon to be his master-mason or master-builder.

This error was repeated in nearly all the succeeding manuscripts, for they are really only copies of each other, and the word *Adon*, as meaning *lord* or prince, seems to have been always assumed in some one or other corrupted form as the name of the workman sent by King Hiram to King Solomon, and whom the Freemasons of the present day know as Hiram Abif.

Thus in the Dowland MS., conjecturally dated at A.D. 1550, it is said:

"And furthermore there was a Kinge of another region that men called IRAM, and he loved well Kinge Solomon and he gave him tymber to his worke. And he had a sonn that height (was called) AYNON, and he was a Master of Geometrie and was chief Master of all his Masons, and was Master of all his gravings and carvinge and of all manner of Masonrye that longed to the Temple."

There can be no doubt that *Aynon* is here a corruption of *Adon*.

In the Landsdowne MS., whose date is A.D. 1560, the language is precisely the same, except that it says King Iram "had a sonne that was called *a man*."

It seems almost certain that the initial letter *a* in this name has been, by careless writing, dislocated from the remaining letters, man, and that the true reading is *Aman*, which is itself an error, instead of *Anton*, and this a manifest corruption of *Adon*. This is confirmed by the York MS., Number 1, which is about forty years later (A.D. 1600), where the name is spelled *Amon*. This is also the name in the Lodge of Hope MS., dated A.D. 1680.

In the Grand Lodge MS., date of A.D. 1632, he is again called the son of the King of Tyre, but his name is given as *Aynone*, another corrupted form of *Adon*. In the Sloane MS., Number 3,848, A.D. 1646, it is *Aynon*, the final *e* being omitted. In the Harleian MS., Number 1,942, dated A.D. 1670, both the final *e* and the medial *y* are omitted, and the name becoming *Anon*, approximates still nearer to the true *Adon*.

In the Alnwick MS., of A.D. 1701, the name is still further corrupted into *Ajuon*. In all of these manuscripts the Legend continues to call this artist the son of the King of Tyre, whose name is

said to be *Hiram*, or more usually *Iram*; and hence the corrupted orthography of *Amon*, *Aynon*, or *Anon*, being restored to the true form of *Adon*, with which word the old Masons were acquainted, as signifying *Lord* or *Prince*, we get, by prefixing it to his father's name, *Adon-Iram* or *Adoniram*, the Lord or Prince Hiram. And hence arose the mistake of confounding Hiram Abif with Adoniram, the chief of the workmen on Mount Lebanon, who was a very different person.

The Papworth MS., whose date is A.D. 1714, is too near the time of the Revival and the real establishment of Speculative Masonry to be of much value in this inquiry. It, however, retains the statement from the Old Legend, that the artist was the son of King Hiram. But it changes his name to that of *Benaim*. This is probably an incorrect inflection of the Hebrew word *Boneh* a builder, and shows that the writer, in an attempt to correct the error of the preceding legendists who had corrupted *Adon* into *Anon* or *Amon*, or *Ajuon*, had in his smattering of Hebrew committed a greater one.

The Krause MS. is utterly worthless as authority. It is a forgery, written most probably, I think I may say certainly, after the publication of the first edition of Anderson's *Constitutions*, and, of course, takes the name from that work.

The name of Hiram Abif is first introduced to public notice by Anderson in 1723, in the book of *Constitutions* printed in that year.

In this work he changes the statement made in the *Legend of the Craft*, and says that the King of Tyre sent to King Solomon "his namesake Hiram Abif, the prince of architects."

Then quoting in the original Hebrew a passage from the second book of Chronicles, where the name of Hiram Abif is to be found, he explains it "by allowing the word *Abif* to be the surname of Hiram the Mason;" furthermore he adds that in the passage where the King of Tyre calls him "Hiram of my father's," the meaning is that Hiram was "the chief Master Mason of my father, King Abibalus," a most uncritical attempt, because he intermixes, as its foundation, the Hebrew original and the English version. He had not discovered the true explication, namely, that *Hiram* is the name, and *Ab* the title, denoting, as I have before said, *Master Workman*, and that *in*, or *iv*, or *if*, is a pronominal suf-

fix, meaning *his*, so that when speaking of him in his relation to King Solomon, he is called *Hiram Abif*, that is *Hiram, his* or *Solomon's Master Workman*.

But Anderson introduced an entirely new element in the Legend when he said, in the same book, that "the wise King Solomon was Grand Master of the Lodge at Jerusalem, King Hiram was Grand Master of the Lodge at Tyre, and the inspired Hiram Abif was Master of Work."

In the second or 1738 edition of the *Constitutions*, Anderson considerably enlarged the Legend, for reasons that will be adverted to when I come, in the next part of this work, to treat of the origin of the Third Degree, but on which it is here unnecessary to dwell.

In that second edition, he asserts that the tradition is that King Hiram had been Grand Master of all Masons, but that when the Temple was finished he surrendered the pre-eminence to King Solomon. No such tradition, nor any allusion to it, is to be found in any of the Old Records now extant, and it is, moreover, entirely opposed by the current of opinion of all subsequent Masonic writers.

From these suggestions of Anderson, and from some others of a more esoteric character, made, it is supposed, by him and by Dr. Desaguliers about the time of the Revival, we derive that form of the *Legend of Hiram Abif* which has been preserved to the present day with singular uniformity by the Freemasons of all countries.

The substance of this Legend, so far as it is concerned in the present investigation, is that at the building of the Temple there were three Grand Masters—Solomon, King of Israel; Hiram, King of Tyre, and Hiram Abif, and that the last was the architect or chief builder of the edifice.

As what relates to the fate of Hiram Abif is to be explained in an altogether allegorical or symbolical sense, it will more appropriately come under consideration when we are treating, in a subsequent part of this work, of the Symbolism of Freemasonry.

Our present study will be the legendary character of Hiram Abif as the chief Master Mason of the Temple, and our investigations will be directed to the origin and meaning of the myth which has now, by universal consent of the Craft, been adopted, whether correctly or not we shall see hereafter.

The question before us, let it be understood, is not as to the his'

toric truth of the Hiramic legend, as set forth in the Third Degree of the Masonic ritual—not as to whether this be the narrative of an actual occurrence or merely an allegory accompanied by a moral signification—not as to the truth or fallacy of the theory which finds the origin of Freemasonry in the Temple of Jerusalem—but how it has been that the Masons of the Middle Ages should have incorporated into their *Legend of the Craft* the idea that a worker in metal—in plain words, a smith—was the chief builder at the Temple. This thought, and this thought alone, must govern us in the whole course of our inquiry.

Of all the myths that have prevailed among the peoples of the earth, hardly any has had a greater antiquity or a more extensive existence than that of the *Smith* who worked in metals, and fabricated shields and swords for warriors, or jewelry for queens and noble ladies. Such a myth is to be found among the traditions of the earliest religions,¹ and being handed down through ages of popular transmission, it is preserved, with various natural modifications, in the legends of the Middle Ages, from Scandinavia to the most southern limit of the Latin race. Long before this period it was to be found in the mythology and the folk-lore of Assyria, of India, of Greece, and of Rome.

Freemasonry, in its most recent form as well as in its older Legend, while adopting the story of Hiram Abif, once called Adon Hiram, has strangely distorted its true features, as exhibited in the books of Kings and Chronicles; and it has, without any historical authority, transformed the Scriptural idea of a skillful smith into that of an architect and builder. Hence, in the Old Legend he is styled a "Master of Geometry and of all Masonry," and in the modern ritual of Speculative Masonry he is called "the Builder," and to him, in both, is supposed to have been intrusted the superintendence of the Temple of Solomon, during its construction, and the government and control of those workmen—the stone squarers and masons—who were engaged in the labor of its erection.

To divest this Legend of its corrupt form, and to give to Hiram

¹"Vala, one of the names of Indra, in the Aryan mythology, is traced," says Mr. Cox, "through the Teutonic lands until we reach the cave of Wayland Smith, in Warwickshire." "Mythology of the Aryan Nations," vol. ii, p. 326.

Abif, who was actually an historic personage, his true position among the workmen at the Temple, can not affect, in the slightest degree, the symbolism of which he forms so integral a part, while it will rationally account for the importance that has been attributed to him in the old as well as in the new Masonic system.

Whether we make Hiram Abif the chief Builder and the Operative Grand Master of Solomon's Temple, or whether we assign that position to Anon, Amon, or Ajuon, as it is in the Old Legend, or to Adoniram, as it is done in some Masonic Rites, the symbolism will remain unaffected, because the symbolic idea rests on the fact of a Chief Builder having existed, and it is immaterial to the development of the symbolism what was his true name. The instruction intended to be conveyed in the legend of the Third Degree must remain unchanged, no matter whom we may identify as its hero; for he truly represents neither Hiram nor Anon nor Adoniram nor any other individual person, but rather the idea of man in an abstract sense.

It is, however, important to the truth of history that the real facts should be eliminated out of the mythical statements which envelop them. We must throw off the husk, that we may get at the germ. And besides, it will add a new attraction to the system of Masonic ritualism if we shall be able to trace in it any remnant of that oldest and most interesting of the myths, the *Legend of the Smith*, which, as I have said, has universally prevailed in the most ancient forms of religious faith.

Before investigating this *Legend of the Smith* in its reference to Freemasonry and to this particular *Legend of Hiram Abif* which we are now considering, it will be proper to inquire into the character of the Legend as it existed in the old religions and in the mediaeval myths. We may then inquire how this Legend, adopted in Freemasonry in its stricter ancient form of the Legend of Tubal Cain, became afterward confounded with another legend of a Temple-Builder.

If we go back to the oldest of all mythologies, that which is taught in the Vedic hymns, we shall find the fire-god Agni, whose flames are described as being "luminous, powerful, fearful, and not to be trusted."

The element of fire thus worshipped by the primeval Aryans, as an instrument of good or of evil, was subsequently personified by

the Greeks; the Vedic hymns, referring to the continual renovation of the flame, as it was fed by fuel, called it the fire-god Agni; also Gavishtha, that is, the ever young. From this the Greeks got their Hephaestus, the mighty workman, the immortal smith who forged the weapons of the gods, and, at the prayer of Thetis, fabricated the irresistible armor of Achilles. The Romans were indebted to their Aryan ancestors for the same idea of the potency of fire, and personified it in their Vulcan, a name which is evidently derived from the Sanscrit *Ulka*, a firebrand, although a similarity of sound has led many etymologists to deduce the Roman Vulcan from the Semitic Tubal Cain. Indeed, until the modern discoveries in comparative philology, this was the universal opinion of the learned.

Among the Babylonians an important god was Bil-can. He was the fire-god, and the name seems to be derived from Baal, or Bel, and Cain, the god of smiths, or the master smith. George Smith, in his *Chaldean Account of Genesis*, thinks that there is possibly some connection here with the Biblical Tubal Cain and the classical Vulcan.

From the fragments of Sanchoniathon we learn that the Phoenicians had a hero whom he calls Chrysor. He was worshipped after his death, in consequence of the many inventions that he bestowed on man, under the name of Diamichius; that is, the great inventor. To him was ascribed the invention of all those arts which the Greeks attributed to Hephaestus, and the Romans to Vulcan. Bishop Cumberland derives the name of Chrysor from the Hebrew *Charatz*, or the *Sharpener*, an appropriate designation of one who taught the use of iron tools. The authorized version of Genesis, which calls Tubal Cain "an instructor of every artificer in brass and iron," is better rendered in the Septuagint and the Vulgate as "a sharpener of every instrument in brass and iron."

Tubal Cain has been derived, in the English lectures of Dr. Hemming, and, of course, by Dr. Oliver, from a generally received etymology that *Cain* meant *worldly possessions*, and the true symbolism of the name has been thus perverted. The true derivation is from *kin*, which, says Gesenius, has the especial meaning to *forge iron*, whence comes *Kain*, a spear or lance, an instrument of iron that has been forged. In the cognate Arabic it is *Kayin*. "This word," says Dr. Goldziher in his work on *Mythology Among the He-*

brews, "which with other synonymous names of trades occurs several times on the so-called Nabatean Sinaitic inscriptions, signifies *Smith*, maker of agricultural implements,¹ and has preserved this meaning in the Arabic *Kayin* and the Aramaic *kinaya*, whilst in the later Hebrew it was lost altogether, being probably suppressed through the Biblical attempt to derive the proper name Cain etymologically from *kana*, "to gain." Here it is that Hemming and Oliver got their false symbolism of "worldly possessions."

Goldziher attempts to identify mythologically Cain the fratricide with the son of Lamech. Whether he be correct or not in his theory, it is at least a curious coincidence that Cain, which I have shown to mean a smith, should have been the first builder of a city, and that the same name should have been assigned to the first forger of metals, while the old Masonic Legend makes the master smith, Hiram of Tyre, also the chief builder of Solomon.

It will, I think, be interesting to trace the progress of the myth which has given in every age and every country this prominent position among artisans to the smith.

Hephaestus, or Vulcan, kindling his forges in the isle of Lemnos, and with his Cyclops journeymen beating out and shaping and welding the red-hot iron into the forms of spears and javelins and helmets and coats of mail, was the southern development of the Aryan fire-god Agni. "Hephaestus, or Vulcan," says Diodorus Siculus, "was the first founder in iron, brass, gold, silver, and all fusible metals, and he taught the uses to which fire might be applied by artificers." Hence he was called by the ancients the god of black-smiths.

The Scandinavians, or northern descendants of the Aryan race, brought with them, in their emigration from Caucasus, the same reverence for fire and for the working of metals by its potent use. They did not, however, bring with them such recollections of Agni as would invent a god of fire like the Hephaestus and Vulcan of the Greeks and Romans. They had, indeed, Loki, who derived his name, it is said by some, from the Icelandic *logi*, or flame. But he was an

¹ He confines the expression to "agricultural" to enforce a particular theory then under consideration. He might correctly have been more general and included all other kinds of implements, warlike and mechanical as well as agricultural.

evil principle, and represented rather the destructive than the creative powers of fire.

But the Scandinavians, interpolating, like all the northern nations, their folk-lore into their mythology, invented their legends of a skillful smith, beneath whose mighty blows upon the yielding iron swords of marvelous keenness and strength were forged, or by whose wonderful artistic skill diadems and bracelets and jewels of surpassing beauty were constructed. Hence the myth of a wonderfully cunning artist was found everywhere, and the *Legend of the Smith* became the common property of all the Scandinavian and Teutonic nations, and was of so impressive a character that it continued to exist down to mediæval times, and traces of it have extended to the superstitions of the present day. May we not justly look to its influence for the prominence given by the old Masonic legendists to the Master Smith of King Hiram among the workmen of Solomon?

Among the Scandinavians we have the Legend of Völund, whose story is recited in the Völunddarkvitha, or Lay of Völund, contained in the *Edda* of Sæmund. Völund (pronounced as if spelled *Wayland*) was one of three brothers, sons of an Elf-king; that is to say, of a supernatural race. The three brothers emigrated to Ulfdal, where they married three Valkyries, or choosers of the slain, maidens of celestial origin, the attendants of Odin, and whose attributes were similar to those of the Greek Parcæ, or Fates. After seven years the three wives fled away to pursue their allotted duty of visiting battle-fields. Two of the brothers went in search of their errant wives; but Völund remained in Ulfdal. He was a skillful workman at the forge, and occupied his time in fabricating works in gold and steel, while patiently awaiting the promised return of his beloved spouse.

Niduth, the king of the country, having heard of the wonderful skill of Völund as a forger of metals, visited his home during his absence and surreptitiously got possession of some of the jewels which he had made, and of the beautiful sword which the smith had fabricated for himself.

Völund, on his return, was seized by the warriors of Niduth and conducted to the castle. There the queen, terrified at his fierce looks, ordered him to be hamstrung. Thus, maimed and deprived of the power of escape or resistance, he was confined to a small

island in the vicinity of the royal residence and compelled to fabricate jewels for the queen and her daughter, and weapons of war for the king.¹

It were tedious to recount all the adventures of the smith while confined in his island prison. It is sufficient to say that, having constructed a pair of wings by which he was enabled to fly (by which we are reminded of the Greek fable of Dædalus), he made his escape, having by stratagem first dishonored the princess and slain her two brothers.

This legend of "a curious and cunning workman" at the forge was so popular in Scandinavia that it extended into other countries, where the *Legend of the Smith* presents itself under various modifications.

In the Icelandic legend Völund is described as a great artist in the fabrication of iron, gold, and silver. It does not, however, connect him with supernatural beings, but attributes to him great skill in his art, in which he is assisted by the power of magic.

The Germans had the same legend at a very early period. In the German Legend the artificer is called Wieland, and he is represented as the son of a giant named Wade. He acquires the art of a smith from Minner, a skillful workman, and is perfected by the Dwarfs in all his operations at the forge as an armorer and goldsmith. He goes of his own accord to the king, who is here called Nidung, where he finds another skillful smith, named Amilias, with whom he contends in battle, and kills him with his sword, Mimung. For this offense he is maimed by the king, and then the rest of the story proceeds very much like that of the Scandinavian legend.

Among the Anglo-Saxons the legend is found not varying much from the original type. The story where the hero receives the name of Weland is contained in an ancient poem, of which fragments, unfortunately, only remain. The legend had become so familiar to the people that in the metrical romance of Beowulf the coat of mail of the hero is described as the work of Weland; and King Alfred, in his translation of the *Consolation of Philosophy*, by Boethius, where the author alludes to the bones of the Consul Fabricius, in the passage "*ubi sunt ossa Fabricie?*" (where now are the bones of Fabricius?), thus paraphrases the question: "Where now

¹ All these smiths of mythology and folk-lore are represented as being lame, like Hephæstus, who broke his leg in falling from heaven.

are the bones of the wise Weland, the goldsmith that was formerly so famed?" Geoffrey of Monmouth afterward, in a Latin poem, speaks of the gold, and jewels, and cups that had been sculptured by Weland, which name he Latinizes as Gueilandus.

In the old French chronicles we repeatedly encounter the legend of the skillful smith, though, as might be expected, the name undergoes many changes. Thus, in a poem of the 6th century, entitled *Gautier à la main forte, or Walter of the strong hand*, it is said that in a combat of Walter de Varkastein he was protected from the lance of Randolf by a cuirass made by Wieland.

Another chronicle, of the 12th century, tells us that a Count of Angoulême, in a battle with the Normans, cut the cuirass and the body of the Norman King in twain at a single stroke, with his sword Durissima, which had been made by the smith Walander. A chronicle of the same period, written by the monk John of Marmontier, describes the magnificent habiliments of Geoffrey Plantagenet, Duke of Normandy, among which, says the author, was "a sword taken from the royal treasury and long since renowned. Galannus, the most skillful of armorers, had employed much labor and care in making it." Galans, for Walans (the *G* being substituted for the *W*, as a letter unknown in the French alphabet), is the name bestowed in general on this skillful smith, and the romances of the Trouvères and Troubadours of northern and southern France, in the 12th and 13th centuries, abound in references to swords of wondrous keenness and strength that were forged by him for the knights and paladins.

Whether the name was given as *Völund*, or *Wieland*, or *Weland*, or *Galans*, it found its common origin in the Icelandic *Völundr*, which signifies a *smith*. It is a generic term, from which the mythical name has been derived. So the Greeks called the skillful workman, the smith of their folk-lore, *Dædalus*, because there is a verb in their language *daidallo*, which means *to do skillful or ornamental work*.

Here it may not be irrelevant to notice the curious fact that concurrently with these legends of a skillful smith there ran in the Middle Ages others, of which King Solomon was the subject. In many of these old romances and metrical tales, a skill is attributed to him which makes him the rival of the subordinate artisan. Indeed, the artistic reputation of Solomon was so proverbial at the

very time when these legends of the smith were prevalent, that in the poems of those days we meet with repeated uses of the expression "l'oeuvre Salemon," or "the work of Solomon," to indicate any production of great artistic beauty.

So fully had the Scandinavian sagas, the German chronicles, and the French romances spoken of this mythical smith that the idea became familiar to the common people, and was handed down in the popular superstitions and the folk-lore, to a comparatively modern period. Two of these, one from Germany and one from England, will suffice as examples, and show the general identity of the legends and the probability of their common origin.¹

Herman Harrys, in his *Tales and Legends of Lower Saxony*, tells the story of a smith who dwelt in the village of Hagen, on the side of a mountain, about two miles from Osnabrück. He was celebrated for his skill in forging metals; but, being discontented with his lot, and murmuring against God, he was supernaturally carried into a cavernous cleft of the mountain, where he was condemned to be a metal-king, and, resting by day, to labor at night at the forge for the benefit of men, until the mine in the mountain should cease to be productive.

In the coolness of the mine, says the legend, his good disposition returned, and he labored with great assiduity, extracting ore from its veins, and at first forging household and agricultural implements. Afterward he confined himself to the shoeing of horses for the neighboring farmers. In front of the cavern was a stake fixed in the ground, to which the countryman fastened the horse which he wished to have shod, and on a stone near by he laid the necessary fee. He then retired. On returning in due time he would find the task completed; but the smith, or, as he was called, the *Hiller*, i.e., Hider, would never permit himself to be seen.

Similar to this is the English legend, which tells us that in a vale of Berkshire, at the foot of White Horse Hill, evidently, from the stones which lay scattered around, the site of a Druidic monument, formerly dwelt a person named Wayland Smith. It is easily

¹ For many of the details of these two legends, as well as for much that has already been said of the mythological smith of the Middle Ages, I have been indebted to the learned Dissertation of MM. Depping and Michel. It has been ably translated from the French, with additions by Mr. S. W. Singer, London, 1847.

understood that here the handicraft title has been incorporated with the anglicized name, and that it is the same as the mediaeval Weland the Smith. No one ever saw him, for the huge stones afforded him a hiding-place. He, too, was a *Hiller*; for the word in the preceding legend does not mean "the man of the hill," but is from the German *hüllen*, to cover or conceal, and denotes the man who conceals himself. In this studious concealment of their persons by both of these smiths we detect the common origin of the two legends. When his services were required to shoe a horse, the animal was left among the stones and a piece of money placed on one of them. The owner then retired, and after some time had elapsed he returned, when he found that the horse was shod and the money had disappeared. The English reader ought to be familiar with this story from the use made of it by Sir Walter Scott in his novel of *Kenilworth*.

It is very evident, from all that has been here said, that the smith, as the fabricator of weapons for the battle-field and jewels for the *boudoir*, as well as implements of agriculture and household use, was a most important personage in the earliest times, deified by the ancients, and invested by the moderns with supernatural gifts. It is equally evident that this respect for the smith as an artificer was prevalent in the Middle Ages. But in the very latest legends, by a customary process of degeneration in all traditions, when the stream becomes muddled as it proceeds onward, he descended in character from a forger of swords, his earliest occupation, to be a shoer of horses, which was his last.

It must be borne in mind, also, that in the Middle Ages the respect for the smith as a "curious and cunning" workman began by the introduction of a new element, brought by the Crusaders and pilgrims from the East to be shared with King Solomon, who was supposed to be invested with equal skill.

It is not, therefore, strange that the idea should have been incorporated into the rituals of the various secret societies of the Middle Ages, and adopted by the Freemasons, at first by the Operative branch and afterward, in a more enlarged form, by the Speculative Masons.

In all of the old manuscript constitutions of the Operative Masons we find the *Legend of the Craft*, and with it, except in one instance, and that the earliest, a reference to Tubal Cain as the one

who "found [that is, invented] the Smith Craft of gold and silver, iron and copper and steel."

Nothing but the universal prevalence of the mediaeval legend of the smith, Völund or Weland, can, I think, account for this reference to the Father of Smith Craft in a legend which should have been exclusively appropriated to Stone Craft. There is no connection between the forge and the trowel which authorized on any other ground the honor paid by stone-masons to a forger of metals—an honor so marked that in time the very name of Tubal Cain came to be adopted as a significant and important word in the Masonic ritual, and the highest place in the traditional labors of the Temple was assigned to a worker in gold and brass and iron.

Afterward, when the Operative Art was superseded by the Speculative Science, the latter supplemented to the simple *Legend of the Craft* the more recondite *Legend of the Temple*. In this latter Legend, the name of that Hiram whom the King of Tyre had sent with all honor to the King of Israel, to give him aid in the construction of the Temple, is first introduced under his biblical appellation. But this is not the first time that this personage is made known to the fraternity. In the older Legends he is mentioned, always with a different name but always, also, as "King Solomon's Master Mason."

In the beginning of the 18th century, when what has been called the Revival took place, there was a continuation of the general idea that he was the chief Mason at the Temple; but the true name of Hiram Abif is, as we have already said, then first found in a written or printed record. Anderson speaks of his architectural abilities in exaggerated terms. He calls him in one place "the most accomplished Mason on earth," and in another "the prince of architects." This character has adhered to him in all subsequent times, and the unwritten Legend of the present day represents him as the "Chief Builder of the Temple," the "Operative Grand Master," and the "Skillful Architect" by whose elaborate designs on his trestle-board the Craft were guided in their labors and the edifice was constructed.

Now, it will be profitable in the investigation of historic truth to compare these attributes assigned to Hiram Abif by the older and more recent legendists with the biblical accounts of the same person which have already been cited.

In the original Hebrew text of the passage in the book of

Chronicles, the words which designate the profession of Hiram Abif are *khoresh nekhoshet*; literally, a worker in brass. The Vulgate, which was the popular version in those days and from which the old legendists must have derived their knowledge of biblical history, thus translates the letter of King Hiram to King Solomon: "Therefore I have sent to thee a wise and most skillful man, Hiram the workman or smith, my father"—*Hiram fabrem patrem meum*.

Indeed, in the close of the verse in the Authorized Version he is described as being "cunning to work all works in brass." And hence Dr. Adam Clarke, in his *Commentaries*, calls him "a very intelligent coppersmith."

The error into which the old legendists and the modern Masonic writers have fallen, in supposing him to have been a stone-mason or an architect, has arisen from the mistranslation in the Authorized Version of the passage in Chronicles where he is said to have been "skillful to work in gold and in silver, in brass, in iron, in stone, and in timber." The words in the original are *Baabanim vebagnetsim*, in *stones* and in *woods*; that is, in *precious stones* and in *woods of various kinds*. That is to say, besides being a coppersmith he was a lapidary and a carver and gilder. The words in the original Hebrew are in the plural, and therefore the translation "in wood and in timber" is not correct. Gesenius says—and there is no better authority for a Hebraism—that the word *eben* is used by way of excellence, to denote a precious stone, and its plural, *abanim*, means, therefore, precious stones. In the same way *gnetz*, which in the singular signifies a tree, in the plural denotes *materials of wood*, for any purpose.

The work that was done by Hiram Abif in the Temple is fully recounted in the first book of Kings, the seventh chapter, from the fifteenth to the fortieth verse, and is briefly recapitulated in verses forty-one to fifty. It is also enumerated in the third and fourth chapters of second Chronicles, and in both books care is taken to say that when this work was done the task of Hiram Abif was completed. In the first book of Kings (vii. 40) it is said: "So Hiram made an end of doing all the work that he made King Solomon for the house of the Lord. In the second book of Chronicles (iv. 2) the statement is repeated thus: "And Hiram finished the work that he was to make for King Solomon for the house of God."

The same authority leaves us in no doubt as to what that work was to which the skill of Hiram Abif had been devoted. "It was," says

the book of Chronicles, "the two pillars, and the pommels and the chapiters which were on the top of the pillars; and four hundred pomegranates on the two wreaths; two rows of pomegranates on each wreath, to cover the two pommels of the chapiters which were upon the pillars. He made also bases, and lavers made he upon the bases; one sea and twelve oxen under it. The pots also, and the shovels and the flesh hooks and all their instruments, did Hiram his father (Hiram Abif) make to King Solomon, for the house of the Lord, of bright brass."

Enough has been said to show that the labors of Hiram Abif in the Temple were those of a worker in brass and in precious stones, in carving and in gilding, and not those of a stonemason. He was the decorator and not the builder of the Temple. He owes the position which he holds in the legends and in the ritual of Freemasonry, not to any connection which he had with the art of architecture, of which there is not the slightest mention by the biblical authorities, but, like Tubal Cain, to his skill in bringing the potency of fire under his control and applying it to the forging of metals.

The high honor paid to him is the result of the influence of that *Legend of the Smith*, so universally spread in the Middle Ages, which recounted the wondrous deeds of Völund, or Wieland, or Wayland. The smith was, in the mediaeval traditions, in the sagas of the north and in the romances of the south of Europe, the maker of swords and coats of mail; in the Legends of Freemasonry he was transmuted into the fabricator of holy vessels and sacred implements.

But the idea that of all handicrafts smith-craft was the greatest was unwittingly retained by the Masons when they elevated the skillful smith of Tyre, the "cunning" worker in brass, to the highest place as a builder in their Temple legend.

The spirit of critical iconoclasm, which strips the exterior husk from the historic germ of all myths and legends, has been doing much to divest the history of Freemasonry of all fabulous assumptions. This attempt to give to Hiram Abif his true position, and to define his real profession, is in the spirit of that iconoclasm.

But the doctrine here advanced is not intended to affect in the slightest degree the part assigned to Hiram Abif in the symbolism of the Third Degree. Whatever may have been his profession, he must have stood high in the confidence of the two kings, of him who sent him and him who received him, as "a master workman;"

and he might well be supposed to be entitled in an allegory to the exalted rank bestowed upon him in the *Legend of the Craft* and in the modern ritual.

Allegories are permitted to diverge at will from the facts of history and the teachings of science. Trees may be made to speak, as they do in the most ancient fable extant, and it is no infringement of their character that a worker in brass may be transmuted into a builder in stone to suit a symbolic purpose.

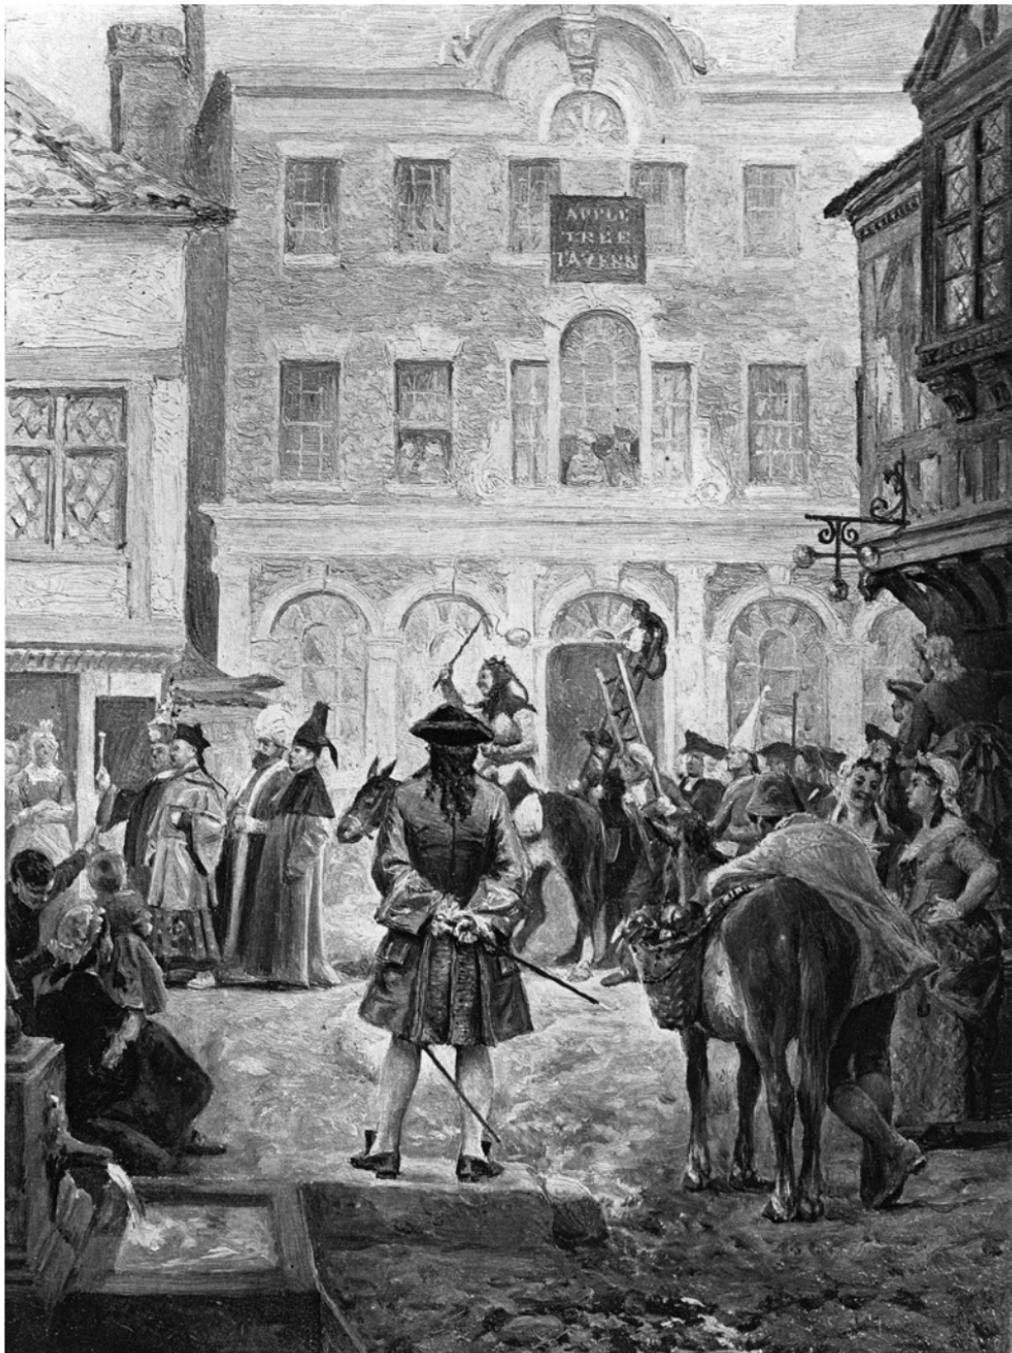

Hence this "celebrated artist," as he is fairly called, whether smith or mason, is still the representative, in the symbolism of Freemasonry, of the abstract idea of man laboring in the temple of life, and the symbolic lesson of his tried integrity and his unhappy fate is still the same.

As Freemasons, when we view the whole Legend as a myth intended to give expression to a symbolic idea, we may be content to call him an architect, the first of Masons, and the chief builder of the Temple; but as students of history we can know nothing of him and admit nothing concerning him that is not supported by authentic and undisputed authority.

We must, therefore, look upon him as the ingenious artist, who worked in metals and in precious stones, who carved in cedar and in olive-wood, and thus made the ornaments of the Temple.

He is only the Völund or Wieland of the olden legend, changed, by a mistaken but a natural process of transmuting traditions, from a worker in brass to a worker in stone.

PROCESSION OF THE SCALD MISERABLES, IN 1741

CHAPTER XLIV

THE LELAND MANUSCRIPT

THE Leland Manuscript, so called because it is said to have been discovered by the celebrated antiquary John Leland, and sometimes called the Locke Manuscript in consequence of the supposititious annotations appended to it by that metaphysician, has for more than a century attracted the attention and more recently excited the controversies of Masonic scholars. After having been cited with approbation by such writers as Preston, Hutchinson, Oliver, and Krause, it has suffered a reverse under the crucial examination of later critics. It has by nearly all of these been decided to be a forgery—a decision from which very few at this day would dissent.

It is in fact one of those "pious frauds" intended to strengthen the claim of the Order to a great antiquity and to connect it with the mystical schools of the ancients. But as it proposes a theory concerning the origin of the Institution, which was long accepted as a legend of the Order, it is entitled to a place in the legendary history of Freemasonry.

The story of this manuscript and the way in which it was introduced to the notice of the Craft is a singular one.

In the *Gentleman's Magazine* for September, 1753, the so-called manuscript was printed for the first time under the title of "Certayne Questyons with Awnserers to the same, Concernynge the Mystery of Maconrye, wrytenne by the Hande of Kyng Henrye the Sixthe of the Name, and faythfullye copied by me Johan Leylande Antiquaries, by the Commaunde of His Highnesse." That is, King Henry the Eighth, by whom Leland was employed to search for antiquities in the libraries of cathedrals, abbeys, priories, colleges, and all places where any ancient records were to be found.

The article in the *Gentleman's Magazine* is prefaced with these words:

"The following Treatise is said to be printed at Franckfort, Germany, 1748, under the following Title. Ein Brief Vondem Beruchmten Herr Johann Locke, betreffend die Frey-Maureren. So auf einem Schrieb-Tisch enines verstorbnen Bruders ist gefunden worden. *That is*, A Letter of the famous Mr. John Locke relating to Freemasonry; found in the Desk or Scritoir of a deceased Brother."

The claim, therefore, is that this document was first published at Frankfort in 1748, five years before it appeared in England. But this German original has never been produced, nor is there any evidence before us that there ever was such a production. The laborious learning of Krause would certainly have enabled him to discover it had it ever been in existence. But, although he accepts the so-called manuscript as authentic, he does not refer to the Frankfort copy, but admits that, so far as he knows, it first made its appearance in Germany in 1780, in J. G. L. Meyer's translation of Preston's *Illustrations*.¹

Kloss, it is true, in his *Bibliography*, gives the title in German, with the imprint of "Frankfort, 12 pages." But he himself says that the actuality of such a document is to be wholly doubted.²

Besides, it is not unusual with Kloss to give the titles of books that he has never seen, and for whose existence he had no other authority than the casual remark of some other writer. Thus he gives the titles of the *Short Analysis of the Unchanged Rites and Ceremonies of Freemasons*, said to have been printed in 1676, and the *Short Charge*, ascribed to 1698, two books which have never been found. But he applies to them the epithet of "doubtful" as he does to the Frankfort edition of the *Leland Manuscript*.

But before proceeding to an examination of the external and internal evidence of the true character of this document, it will be expedient to give a sketch of its contents. It has been published in so many popular works of easy access that it is unnecessary to present it here in full.

It is introduced by a letter from Mr. Locke (the celebrated

¹ "Kunstskunden der Freimaurerei," I., 14.

² "Bibliographie der Freimaurerei," No. 329.

author of the *Essay on the Human Understanding*), said to be addressed to the Earl of Pembroke, under date of May 6, 1696, in which he states that by the help of Mr. C——ns he had obtained a copy of the MS. in the Bodleian Library, which he therewith had sent to the Earl. It is accompanied by numerous notes which were made the day before by Mr. Locke for the reading of Lady Masham, who had become very fond of Masonry.

Mr. Locke says: "The *manuscript* of which this is a copy, appears to be about 160 years old. Yet (as your Lordship will observe by the title) it is itself a copy of one yet more ancient by about 100 years. For the original is said to have been the handwriting of K. H. VI. Where the Prince had it is at present an uncertainty, but it seems to me to be an examination (taken perhaps before the king) of some one of the Brotherhood of Masons; among whom he entered himself, as 'tis said, when he came out of his minority, and thenceforth put a stop to the persecution that had been raised against them."

The "examination," for such it purports to be, as Mr. Locke supposes, consists of twelve questions and answers. The style and orthography is an attempted imitation of the language of the 15th century. How far successful the attempt has been will be discussed hereafter.

Masonry is described to be the skill of Nature, the understanding of the might that is therein and its various operations, besides the skill of numbers, weights and measures, and the true manner of fashioning all things for the use of man, principally dwellings and buildings of all kinds, and all other things that may be useful to man.

Its origin is said to have been with the first men of the East, who were before the Man of the West, by which Mr. Locke,¹ in his note, says is meant Pre-Adamites, the "Man of the West" being Adam. The Phœnicians, who first came from the East into Phœnicia, are said to have brought it westwardly by the way of the Red and Mediterranean seas.

It was brought into England by Pythagoras, who is called in the document "Peter Gower," evidently from the French spelling of the name, "Pétagore," he having traveled in search of knowl-

¹ It will be seen that in this and other places I cite the name of Mr. Locke as if he were really the author of the note, a theory to which I by no means desire to commit myself. The reference in this way is merely for convenience.

edge into Egypt, Syria, and every other land where the Phoenicians had planted Masonry, Having obtained a knowledge of the art in the Lodges of Masons into which he gained admission, on his return to Europe he settled in Magna Grecia (the name given by the ancients to Southern Italy), and established a Grand Lodge at Crotona, one of its principal cities, where he made many Masons. Some of these traveled into France and made many Masons, whence in process of time the art passed over into England.

Such is the history of the origin and progress of Masonry which is given in the *Leland Manuscript*. The remainder of the document is engaged in giving the character and the objects of the Institution.

Thus it is said, in relation to secrecy, that Masons have at all times communicated to mankind such of their secrets as might generally be useful, and have kept back only those that might be harmful in evil hands—those that could be of no use unless accompanied by the teachings of the Lodge, and those which are employed to bind the brethren more strongly together.

The arts taught by Masons to mankind are enumerated as being Agriculture, Architecture, Astronomy, Geometry, Arithmetic, Music, Poetry, Chemistry, Government, and Religion.

Masons are said to be better teachers than other men, because the first of them received from God the art of finding new arts, and of teaching them, whereas the discoveries of other men have been but few, and acquired only by chance. This art of discovery the Masons conceal for their own profit. They also conceal the art of working miracles, the art of foretelling future events, the art of changes (which Mr. Locke is made in a note to interpret as signifying the transmutation of metals), the method of acquiring the faculty of Abrac, the power of becoming good and perfect without the aid of fear and hope, and the universal language.

And lastly it is admitted that Masons do not know more than other men, but only have a better opportunity of knowing, in which many fail for want of capacity and industry. And as to their virtue, while it is acknowledged that some are not so good as other men, yet it is believed that for the most part they are better than they would be if they were not Masons. And it is claimed that Masons greatly love each other, because good and true men, knowing each other to be such, always love the more the better they are.

"And here endethe the Questyonnes and Awnsweres."

There does not appear to be any great novelty or value in this document. The theory of the origin of Masonry had been advanced by others before its appearance in public, and the characteristics of Masonry had been previously defined in better language.

But no sooner is it printed in the *Gentleman's Magazine* for the month of September, and year 1753, than it is seized as a *bonne bouche* by printers and writers, so that being first received with surprise, it was soon accepted as a genuine relic of the early age of English Masonry and incorporated into its history, a position that it has not yet lost, in the opinion of some. The forgeries of Chatterton and of Ireland met a speedier literary death.

Of the genuine publications of this document, so much as this is known.

It was first printed, as we have seen, in the *Gentleman's Magazine*, in September, 1753. Kloss records a book as published in 1754, with no place of publication, but probably it was London, with the title of *A Masonic Creed, with a curious letter by Mr. Locke*. This, we can hardly doubt, was the *Leland Manuscript* with a new title. The republications in England pursued the following succession. In 1756 it was printed in Entick's edition of the *Constitutions* and in Dermott's *Ahiman Rezon*; in 1763, in the *Free-Masons' Pocket Companion*; in 1769, in Wilkinson's *Constitutions* of the Grand Lodge of Ireland, and in Calcott's *Candid Disquisition*; in 1772, in Huddesford's *Life of Leland*, and in Preston's *Illustrations of Masonry*; in 1775, in Hutchinson's *Spirit of Masonry*; and in 1784, in Northouck's edition of the *Constitutions*.

In Germany it first appeared in 1776, says Krause, in J. G. L. Meyer's translation of Preston; in 1780, in a translation of Hutchinson, published at Berlin; in 1805, in the *Magazin für Freimaurer* of Professor Seehass; in 1807, in the collected Masonic works of Fessier; in 1810, by Dr. Krause in his *Three Oldest Documents*; and in 1824, by Mossdorf in his edition of Lenning's *Encyclopädie*.

In France, Thory published a translation of it, with some comments of his own, in 1815, in the *Acta Latomorum*.

In America it was, so far as I know, first published in 1783, in Smith's *Ahiman Rezon* of the Grand Lodge of Pennsylvania; it was also published in 1817, by Cole, in his *Ahiman Rezon* of Maryland, and it has been copied into several other works.

In none of these republications, with one or two exceptions, is

there an expression of the slightest doubt of the genuineness of the document. It has on the contrary been, until recently, almost everywhere accepted as authentic, and as the detail of an actual examination of a Mason or a company of Masons, made by King Henry VI., of England, or some of his ministers, in the 15th century.

Of all who have cited this pretended manuscript, Dr. Carl Christian Friederich Krause is perhaps the most learned, and the one who from the possession of great learning, we should naturally expect would have been most capable of detecting a literary forgery, speaks of it, in his great work on *The Three Oldest Documents of the Fraternity of Freemasons*, as being a remarkable and instructive document and as among the oldest that are known to us. In England, he says, it is, so far as it is known to him, accepted as authentic by the learned as well as by the whole body of the Craft, without a dissenting voice. And he refers as evidence of this to the fact that the Grand Lodge of England has formally admitted it into its *Book of Constitutions*, while the Grand Lodge of Scotland has approved the work of Lawrie, in which its authenticity is supported by new proofs.

And Mossdorf, whose warm and intimate relations with Krause influenced perhaps to some extent his views on this as well as they did on other Masonic subjects, has expressed a like favorable opinion of the *Leland Manuscript*. In his additions to the *Encyclopädie* of Lenning, he calls it a remarkable document, which, notwithstanding a singularity about it, and its impression of the ancient time in which it originated, is instructive, and the oldest catechism which we have on the origin, the nature, and the design of Masonry.

The editor of Lawrie's *History* is equally satisfied of the genuine character of this document, to which he confidently refers as conclusive evidence that Dr. Plot was wrong in saying that Henry VI. did not patronize Masonry.

Dr. Oliver is one of the most recent and, as might be expected from his peculiar notions in respect to the early events of Masonry, one of the most ardent defenders of the authenticity of the manuscript, although he candidly admits "that there is some degree of mystery about it, and doubts have been entertained whether it be not a forgery."

But, considering its publicity at a time when Freemasonry was beginning to excite a considerable share of public attention, and that

the deception, if there was one, would have been publicly exposed by the opponents of the Order, he thinks that their silence is presumptive proof that the document is genuine.

"Being thus universally diffused," he says, "had it been a suspected document, its exposure would have been certainly attempted—if a forgery, it would have been unable to have endured the test of a critical examination. But no such attempt was made, and the presumption is that the document is authentic."

But, on the other hand, there are some writers who have as carefully investigated the subject as those whom I have referred to, but the result of whose investigations have led them irresistibly to the conclusion that the document never had any existence until the middle of the 18th century, and that the effort to place it in the time of Henry VI. is, as Mounier calls it, "a Masonic fraud."

As early as 1787, while the English Masons were receiving it as a document of approved truth, the French critics had begun to doubt its genuineness. At a meeting of the Philalethes, a Rite of Hermetic Masonry which had been instituted at Paris in 1775, the Marquis de Chefdebien read a paper entitled *Masonic Researches for the use of the Primitive Rite of Narbonne*.¹ In this paper he presented an unfavorable criticism of the *Leland Manuscript*. In 1801 M. Mounier published an essay *On the Influence attributed to the Philosophers, the Freemasons and the Illuminati in the French Revolution*,² in which he pronounces the document to be a forgery and a Masonic fraud.

Lessing was the first of the German critics who attacked the genuineness of the document. This he did in his *Ernst und Falk*, the first edition of which was published in 1778. Others followed, and the German unfavorable criticisms were closed by Findel, the editor of the *Bauhütte*, and author of a *History of Freemasonry*, first published in 1865, and which was translated in 1869 by Bro. Lyon. He says: "There is no reliance, whatever, to be placed on any assertions based on this spurious document; they all crumble to dust. Not even in England does any well-informed Mason of the present day, believe in the genuineness of this bungling composition."

In England it is only recently that any doubts of its authentic-

¹ "Recherches Maçoniques à l'usage des Frères du Régime Primitif de Narbonne."

² "De l'Influence attribuée aux Philosophes, aux Franc-Maçons et aux Illuminés sur la Revolution de France," per F. F. Mounier.

ity have been expressed by Masonic critics. The first attack upon it was made in 1849, by Mr. George Sloane, in his *New Curiosities of Literature*. Sloane was not a Freemason, and his criticism, vigorous as it is, seems to have been inspired rather by a feeling of enmity to the Institution than by an honest desire to seek the truth. His conclusions, however, as to the character of the document are based on the most correct canons of criticism. Bro. A. F. A. Woodford is more cautious in the expression of his judgment, but admits that "we must give up the actual claim of the document to be a *manuscript* of the time of King Henry VI., or to have been written by him or copied by Leland." Yet he thinks "it not unlikely that we have in it the remains of a Lodge catechism conjoined with a Hermetic one." But this is a mere supposition, and hardly a plausible one.

But a recent writer, unfortunately anonymous, in the *Masonic Magazine*,¹ of London, has given an able though brief review of the arguments for and against the external evidence of authenticity, and has come to the conclusion that the former has utterly failed and that the question must fall to the ground.

Now, amid such conflicting views, an investigation must be conducted with the greatest impartiality. The influence of great names, especially among the German writers, has been enlisted on both sides, and the most careful judgment must be exercised in determining which of these sides is right and which is wrong.

In the investigation of the genuineness of any document we must have resort to two kinds of evidence, the external and the internal. The former is usually more clear and precise, as well as more easily handled, because it is superficial and readily comprehended by the most unpracticed judgment. But when there is no doubt about the interpretation, and there is a proper exercise of skill, internal evidence is freer from doubt, and therefore the most conclusive. It is, says a recent writer on the history of our language, the pure reason of the case, speaking to us directly, by which we can not be deceived, if we only rightly apprehend it. But, although we must sometimes dispense with external evidence, because it may be unattainable, while the internal evidence is always existent, yet the combination of the two will make the conclusion to

¹ Vol. vi., No. 64, October, 1878, p. 148.

which we may arrive more infallible than it could be by the application of either kind alone.

If it should be claimed that a particular document was written in a certain century, the mention of it, or citations from it, by contemporary authors would be the best external evidence of its genuineness. It is thus that the received canon of the New Testament has been strengthened in its authority, by the quotation of numerous passages of the Gospels and the Epistles which are to be found in the authentic writings of the early Fathers of the Church. This is the external evidence.

If the language of the document under consideration, the peculiar style, and the archaic words used in it should be those found in other documents known to have been written in the same century, and if the sentiments are those that we should look for in the author, are in accord with the age in which he lived, this would be internal evidence and would be entitled to great weight.

But this internal evidence is subject to one fatal defect. The style and language of the period and the sentiments of the pretended author and of the age in which he lived may be successfully imitated by a skillful forger, and then the results of internal evidence will be evaded. So the youthful Chatterton palmed upon the world the supposititious productions of the monk Rowley, and Ireland forged pretended plays of Shakespeare. Each of these made admirable imitations of the style of the authors whose lost productions they pretended to have discovered.

But when the imitation has not been successful, or when there has been no imitation attempted, the use of words which were unknown at the date claimed for the document in dispute, or the reference to events of which the writer must be ignorant, because they occurred at a subsequent period, or when the sentiments are incongruous to the age in which they are supposed to have been written, then the internal evidence that it is a forgery, or at least a production of a later date, will be almost invincible.

It is by these two classes of evidence that I shall seek to inquire into the true character of the *Leland Manuscript*.

If it can be shown that there is no evidence of the existence of the document before the year 1753, and if it can also be shown that neither the language of the document, the sentiments expressed in it, nor the character attributed to the chief actor, King Henry VI.,

are in conformity with a document of the 15th century, we shall be authorized in rejecting the theory that it belongs to such a period as wholly untenable, and the question will admit of no more discussion.

But in arriving at a fair conclusion, whatever it may be, the rule of Ulpian must be obeyed, and the testimonies must be well considered and not merely counted. It is not the number of the whole but the weight of each that must control our judgment.

Those who defend the genuineness of the *Leland Manuscript* are required to establish these points:

1. That the document was first printed at Frankfort, in Germany, whence it was copied into the *Gentleman's Magazine* for September, 1753.

2. That the original manuscript was, by command of King Henry VIII., copied by John Leland from an older document of the age of Henry VI.

3. That this original manuscript, of which Leland made a copy, was written by King Henry VI.

4. That the manuscript of Leland was deposited in the Bodleian Library.

5. That a copy of this manuscript of Leland was made by a Mr. C——ns, which is said to mean Collins, and given by him to John Locke, the celebrated metaphysician.

6. That Locke wrote notes or annotations on it in the year 1696, which were published in Frankfort in 1748, and afterward in England, in 1753.

The failure to establish by competent proof any one of these six points will seriously affect the credibility of the whole story, for each of them is a link of one continuous chain.

1. Now as to the first point, *that the document was first printed at Frankfort in the year 1748*. The Frankfort copy has never yet been seen, notwithstanding diligent search has been made for it by German writers, who were the most capable of discovering it, if it had ever existed. The negative evidence is strong that the Frankfort copy may be justly considered as a mere myth. It follows that the article in the *Gentleman's Magazine* is an original document, and we have a right to suppose that it was written at the time for some purpose, to be hereafter considered, for, as the author of it has given a false reference, we may conclude that if he had copied it

at all he would have furnished us with the true one. Kloss, it is true, has admitted the title into his catalogue, but he has borrowed his description of it from the article in the *Gentleman's Magazine*, and speaks of this Frankfort copy as being doubtful. He evidently had never seen it, though he was an indefatigable searcher after Masonic books. Krause's account of it is, that it first was found worthy of Locke's notice in England; that thence it passed over into Germany — "how, he does not know" — appeared in Frankfort, and then returned back to England, where it was printed in 1753. But all this is mere hearsay, and taken by Krause from the statement in the *Gentleman's Magazine*. He makes no reference to the Frankfort copy in his copious notes in his *Kunsturkunden*, and, like Kloss, had no personal knowledge of any such publication. In short, there is no positive evidence at all that any such document was printed at Frankfort-on-the-Main, but abundant negative evidence that it was not. The first point must therefore be abandoned.

2. The second point that requires to be proved is *that the manuscript was, by command of King Henry VIII., copied by John Leland from an older document of the age of Henry VI.* Now, there is not the slightest evidence that a manuscript copy of the original document was taken by Leland, except what is afforded by the printed article in the *Gentleman's Magazine*, the authenticity of which is the very question in dispute, and it is a good maxim of the law that no one ought to be a witness in his own cause. But even this evidence is very insufficient. For, admitting that Locke was really the author of the annotations (an assertion which also needs proof), he does not say that he had seen the Leland copy, but only a copy of it, which had been made for him by a friend. So that even at that time the *Leland Manuscript* had not been brought to sight, and up to this has never been seen. Amid all the laborious and indefatigable researches of Bro. Hughan in the British Museum, in other libraries, and in the archives of lodges, while he has discovered many valuable old records and Masonic Constitutions which until then had lain hidden in these various receptacles, he has failed to unearth the famous *Leland Manuscript*. The hope of ever finding it is very faint, and must be entirely extinguished if other proofs can be adduced of its never having existed.

Huddesford, in his *Life of Leland*, had, it is true, made the following statement in reference to this manuscript: "It also appears

that an ancient *manuscript* of Leland's has long remained in the Bodleian Library, unnoticed in any account of our author yet published. This Tract is entitled *Certayne Questyons with Awnsweres to the same concernynge the mystery of Maconrye*. The original is said to be the handwriting of K. Henry VI., by order of his highness K. Henry VIII."¹ And he then proceeds to dilate upon the importance of this "ancient monument of literature, *if its authenticity remains unquestioned*."

But it must be remembered that Huddesford wrote in 1772, nineteen years after the appearance of the document in the *Gentleman's Magazine*, which he quotes in his Appendix, and from which it is evident that he derived all the knowledge that he had of the pseudo-manuscript. But the remarks on this subject of the anonymous writer in the *London Masonic Magazine*, already referred to, are so apposite and conclusive that they justify a quotation.

"Though Huddesford was keeper of the Ashmolean Library, in the Bodleian, he does not seek to verify even the existence of the *manuscript*, but contents himself with 'it also appears' that it is from the *Gentleman's Magazine* of 1753. He surely ought not to have put in here such a statement, that an ancient *manuscript* of Leland has long remained in the Bodleian, without inquiry or collation. Either he knew the fact to be so, as he stated it, or he did not; but in either case his carelessness as an editor is, to my mind, utterly inexcusable. Nothing would have been easier for him than to verify an alleged *manuscript* of Leland, being an officer in the very collection in which it was said to exist. Still, if he did not do so, either the *manuscript* did exist, and he knew it, but did not think well, for some reason, to be more explicit about it, or he knew nothing at all about it, and by an inexcusable neglect of his editorial duty, took no pains to ascertain the truth, and simply copied others, by his quasi recognition of a professed *manuscript* of Leland."

But it is utterly incredible that Huddesford could have known and yet concealed his knowledge of the existence of the *manuscript*. There is no conceivable motive that could be assigned for such concealment and for the citation at the same time of other authority for the fact. It is therefore a fair inference that his only knowledge of the document was derived from the *Gentlemans Magazine*. There

¹ Huddesford's "Life of John Leland," p. 67.

is, therefore, no proof whatever that Leland ever copied any older manuscript.

Referring to certain obvious mistakes in the printed copy, such as *Peter Gower* for *Pythagoras*, it has been said that it is evident that the document was not printed from Leland's original transcript, but rather from a secondary copy of an unlearned. Huddesford adopts this view, but if he had ever seen the *manuscript* of Leland he could have better formed a judgment by a collation of it with the printed copy than by a mere inference that a man of Leland's learning could not have made such mistakes. As he did not do so, it follows that he had never seen *Leland's Manuscript*. The second point, therefore, falls to the ground.

3. The third point requiring proof is *that the original manuscript, of which Leland made a copy, was written by King Henry VI*. There is a legal rule that when a deed or writing is not produced in court, and the loss of it is not reasonably accounted for, it shall be treated as if it were not existent. This is just the case of the pretended manuscript in the handwriting of Henry VI. No one has ever seen that manuscript, no one has ever had any knowledge of it; the fact of its ever having existed depends solely on the statement made in the *Gentleman's Magazine* that it had been copied by Leland. Of a document "in the clouds" as this is, whose very existence is a mere presumption built on the very slightest foundation, it is absurd to predicate an opinion of the handwriting. Time enough when the manuscript is produced to inquire who wrote it. The third point, therefore, fails to be sustained.

4. The fourth point is *that the manuscript of Leland was deposited in the Bodleian Library*. This has already been discussed in the argument on the first and third point. It is sufficient now to say that no such manuscript has been found in that library. The writer in the *London Masonic Magazine*, whom I have before quoted, says that he had had a communication with the authorities of the Bodleian Library, and had been informed that nothing is known of it in that collection. Among the additional manuscripts of the British Museum are some that were once owned by one Essex, an architect, who lived late in the last century. Among these is a copy of the *Leland Manuscript*—evidently a copy made by Essex from the *Gentleman's Magazine*, or some one of the other works in which it had been printed. I say evidently, because in the

same collection is a copy of the *Grand Mystery*, transcribed by him as he had transcribed the *Leland Manuscript*, as a, to him perhaps, curious relic. The original *Leland Manuscript* is nowhere to be found, and there the attempt to prove the fourth point is unsuccessful.

5. The fifth point is *that a copy of Leland's MS. was made by a Mr. C—ns, and given by him to Locke*. The *Pocket Companion* printed the name as "Collins," upon what authority I know not. There were only two distinguished men of that name who were contemporaries of Locke—John Collins, the mathematician, and Anthony Collins, the celebrated skeptical writer. It could not have been the former who took the copy from the Ashmolean Library in 1696, for he died in 1683. There is, however, a strong probability that the latter was meant by the writer of the prefatory, since he was on such relations with Locke as to have been appointed one of his executors,¹ and it is an ingenious part of the forgery that he should be selected to perform such an act of courtesy for his friend as the transcription of an old manuscript. Yet there is an uncertainty about it, and it is a puzzle to be resolved why Mr. Locke should have unnecessarily used such a superabundance of caution, and given only the initial and final letters of the name of a friend who had been occupied in the harmless employment of copying for him a manuscript in a public library. This is mysterious, and mystery is always open to suspicion. For uncertainty and indefiniteness the fifth point is incapable of proof.

6. The sixth and last point is *that the notes or annotations were written by Mr. Locke in 1696, and fifty-two years afterward printed in Frankfort-on-the-Main*. We must add to this, because it is a part of the story, that the English text, with the annotations of Locke, said to have been translated into German, the question—was it translated by the unknown brother in whose desk the document was found after his death?—and then retranslated into English for the use of the *Gentleman's Magazine*.

It is admitted that if we refuse to accept the document printed in the magazine in 1753 as genuine, it must follow that the notes

¹ It is strange that the idea that the Collins mentioned in the letter was Collins, the friend and executor of Locke, should not have suggested itself to any of the defenders or opponents of the document. The writer in the "London Masonic Magazine" intimates that he was "a book-collector, or dealer in MSS."

supposed to have been written by Locke are also spurious. The two questions are not necessarily connected. Locke may have been deceived, and, believing that the manuscript presented to him by C——ns, or Collins, if that was really his name, did take the trouble, for the sake of Lady Masham, to annotate it and to explain its difficulties.

But if we have shown that there is no sufficient proof, and, in fact, no proof at all, that there ever was such a manuscript, and therefore that Collins did not transcribe it, then it will necessarily follow that the pretended notes of Locke are as complete a forgery as the text to which they are appended. Now, if the annotations of Locke were genuine, why is it that after diligent search this particular one has not been found? It is known that Locke left several manuscripts behind him, some of which were published after his death by his executors, King and Collins, and several unpublished manuscripts went into the possession of Lord King, who in 1829 published the *Life and Correspondence of Locke*. But nowhere has the notorious *Leland Manuscript* appeared. "If John Locke's letter were authentic," says the writer already repeatedly referred to, "a copy of this *manuscript* would remain among Mr. Locke's papers, or at Wilton House, and the original *manuscript* probably in the hands of this Mr. Collins, whoever he was, or in the Bodleian."

But there are other circumstances of great suspicion connected with the letter and annotations of Locke, which amount to a condemnation of their authenticity. In concluding his remarks on what he calls "this old paper," Locke is made to say: "It has so raised my curiosity as to induce me to enter myself into the fraternity; which I am determined to do (if I may be admitted) the next time I go to London, and that will be shortly."

Now, because it is known that at the date of the pseudo-letter, Mr. Locke was actually residing at Oates, the seat of Sir Francis Masham, for whose lady he says that the annotations were made, and because it is also known that in the next year he made a visit to London, Oliver says that there "he was initiated into Masonry." Now, there is not the slightest proof of this initiation, nor is it important to the question of authenticity whether he was initiated or not, because if he was not it would only prove that he had abandoned the intention he had expressed in the letter. But I cite the

unsupported remark of Dr. Oliver to show how Masonic history has hitherto been written—always assumptions, and facts left to take care of themselves.

But it is really most probable that Mr. Locke was not made a Freemason in 1697 or at any other time, for if he had been, Dr. Anderson, writing the history of Masonry only a few years afterward, would not have failed to have entered this illustrious name in the list of "learned scholars" who had patronized the Fraternity.

It appears, from what is admitted in reference to this subject, that the *Leland Manuscript*, having been obtained by Mr. Collins from the Bodleian Library, was annotated by Mr. Locke, and a letter, stating the fact, was sent with the *manuscript* and annotations to a nobleman whose rank and title are designated by stars (a needless mystery), but who has been subsequently supposed to be the Earl of Pembroke. All this was in the year 1696. It then appears to have been completely lost to sight until the year 1748, when it is suddenly found hidden away in the desk of a deceased brother in Germany. During these fifty-two years that it lay in abeyance, we hear nothing of it. Anderson, the Masonic historian, could not have heard of it, for he does not mention it in either the edition of the *Constitutions* published in 1723, or in that more copious one of 1738. If anyone could have known of it, if it was in existence, it would have been Anderson, and if he had ever seen or heard of it he would most certainly have referred to it in his history of Masonry during the reign of Henry VI.

He does say, indeed, that according to a record in the reign of Edward IV. "the *charges* and *laws* of the Freemasons have been seen and perused by our late Sovereign, King Henry VI., and by the Lords of his most honourable Council, who have allowed them and declared that they be right good and reasonable to be holden as they have been drawn out and collected from the records of ancient times," etc.¹

But it is evident that this is no description of the *Leland Manuscript*, which does not consist of "charges and laws," but is simply a history of the origin of Masonry, and a declaration of its character and objects. And yet the fact that there is said to have been something submitted by the Masons to Henry VI. and his Council was

¹ Anderson's "Constitutions," edition of 1738, p. 75.

enough to suggest to the ingenious forger the idea of giving to his pseudo-manuscript a date corresponding to the reign of that monarch. But he overleaped the bounds of caution in giving the peculiar form to his forgery. Had he fabricated a document similar to those ancient constitutions, many genuine manuscripts of which are extant, the discovery of the fraud would have been more difficult.

But to continue the narrative: The *manuscript*, having been found in the desk of this unknown deceased brother, is forthwith published at Frankfort, Germany, in a pamphlet of twelve pages and in the German language.

Here again there are sundry questions to be asked, which can not be answered. Had the tale been a true one, and the circumstances such as always accompany the discovery of a lost document, and which are always put upon record, the replies and explanations would have been ready.

Was the letter of Locke, including of course the catechism of the *Leland Manuscript*, which was found in the desk of the unknown brother, the original document, or was it only a copy? If the latter, had it been copied in English by the brother, or translated by him into German? If not translated by him, by whom was it translated? Was the pamphlet printed in Frankfort merely a German translation, or did it also contain, in parallel columns, the English original, as Krause has printed the English documents in his *Kunsturkunden*, and as, in fact, he has printed this very document? These are questions of very great importance in determining the value and authenticity of the Frankfort pamphlet. And yet not one of them can be answered, simply because that pamphlet has never been found, nor is it known that anyone has ever seen it.

The pamphlet next makes its appearance five years afterward in England, and in an English translation in the *Gentleman's Magazine* for September, 1753. Nobody can tell, or at least nobody has told, how it got there, who brought it over, who translated it from the German, how it happened that the archaic language of the text and the style of Locke have been preserved. These are facts absolutely necessary to be known in any investigation of the question of authenticity, and yet over them all a suspicious silence broods.

Until this silence is dissipated and these questions answered by the acquisition of new knowledge in the premises, which it can hardly now be expected will be obtained, the stain of an imposture

must remain upon the character of the document. The discoverer of a genuine manuscript would have been more explicit in his details.

As to internal evidence, there is the most insuperable difficulty in applying here the canons of criticism which would identify the age of the manuscript by its style.

Throwing aside any consideration of the Frankfort pamphlet on account of the impossibility of explaining the question of translation, and admitting, for the time, that Mr. Locke did really annotate a copy of a manuscript then in the Bodleian Library, which copy was made for him by his friend Collins, how, with this admission, will the case stand?

In Mr. Locke's letter (accepting it as such) he says: "The *manuscript*, of which this is a copy, appears to be about 160 years old." As the date of Locke's letter is 1696, this estimate would bring us to 1536, or the thirty-first year of the reign of Henry VIII. Locke could have derived his knowledge of this fact only in two ways: from the date given in the manuscript, or from its style and language as belonging, in his opinion, to that period.

But if he derived his knowledge from the date inserted at the head of the manuscript, that knowledge would be of no value, because it is the very question which is at issue. The writer of a forged document would affix to it the date necessary to carry out his imposture, which of course would be no proof of genuineness.

But if Locke judged from the style, then it must be said that, though a great metaphysician and statesman, and no mean theologian, he was not an archaeologist or antiquary, and never had any reputation as an expert in the judgment of old records. Of this we have a proof here, for the language of the *Leland Manuscript* is not that of the period in which Leland lived. The investigator may easily satisfy himself of this by a collation of Leland's genuine works, or of the Cranmer Bible, which is of the same date.

But it may be said that Locke judged of the date, not by the style, but by the date of the manuscript itself. And this is probably true, because he adds: "Yet (as your Lordship will observe by the title) it is itself a copy of one yet more ancient by about 100 years: For the original is said to have been in the handwriting of K. H. VI."

Locke then judged only by the title—a very insufficient proof, as I have already said, of authenticity. So Locke seems to have

thought, for he limits the positiveness of the assertion by the qualifying phrase "it is said." If we accept this for what it is worth, the claim will be that the original manuscript was written in the reign of Henry VI., or about the middle of the 15th century. But here again the language is not of that period. The new English, as it is called, was then beginning to take that purer form which a century and a half afterward culminated in the classical and vigorous style of Cowley. We find no such archaisms as those perpetrated in this document in the *Repressor of over-much Blaming of the Clergy*, written in the same reign, about 1450, by Bishop Pecock, nor in the Earl of Warwick's petition to Duke Humphrey, written in 1432, nor in any other of the writings of that period. It is not surprising, therefore, that the glossary or list of archaic words used in the document, by which from internal evidence we could be enabled to fix its date, has, according to Mr. Woodford, "always been looked upon with much suspicion by experts."

If I may advance an hypothesis upon the subject, I should say that the style is a rather clumsy imitation of that of Sir John Mandeville, whose *Voiage and Travaile* was written in 1356, about a century before the pretended date of the *Leland Manuscript*.

An edition of this book was published at London in 1725. It was, therefore, accessible to the writer of the Leland document. He being aware of the necessity of giving an air of antiquity to his forgery, and yet not a sufficiently skillful philologist to know the rapid strides that had taken place in the progress of the language between the time of Mandeville and the middle of the reign of Henry VI., adopted, to the best of his poor ability, the phraseology of that most credulous of all travelers, supposing that it would well fit into the period that he had selected for the date of his fraudulent manuscript. His ignorance of philology has thus led to his detection. I am constrained, from all these considerations, to indorse the opinion of Mr. Halliwell Phillips, that "it is but a clumsy attempt at deception, and quite a parallel to the recently discovered one of the first *Englishe Mercurie*."

But the strangest thing in this whole affair is that so many men of learning should have permitted themselves to become the dupes of so bungling an impostor.

PART TWO
HISTORY OF FREEMASONRY

HISTORY OF FREEMASONRY

CHAPTER I

PRELIMINARY OUTLOOK

IF the reader has bestowed any attention on the preceding part of this work, he will have been enabled to discover that what I have designated as "Prehistoric Masonry" is nothing more than a collection of legends and traditions derived from various sources and, apparently, invented at different periods during the Middle Ages, when the Fraternity of Freemasons was a thoroughly Operative association, composed of architects and builders, with a few unprofessional men of rank and wealth, who had been accepted by the Craft as patrons or honorary members.

It is, however, only in compliance with the usage of historians that I have consented to adopt the use of this term "prehistoric" in reference to the present subject, and not because I have considered it to be an absolutely correct one when applied to the history of Freemasonry.

Anthropologists have divided the chronological series of events in every nation or race into two distinct periods — the prehistoric and the historic. The former includes the time when the inhabitants of a country were in a condition of utter barbarism, from which they gradually raised themselves to a higher state of civilization.

Of the fact even of the existence of such a primitive people we have no evidence, except certain myths and legends, in which they appear to have embodied their ideas of religious belief, and, at a somewhat later period in their progress toward civilization, some

fragmentary records, to be found principally in the hieroglyphic monuments of ancient Egypt and in the cuneiform inscriptions of old Assyria.

But when a nation or race began, by the natural process of advancement, to emerge from this lower sphere of intellectual debasement to a higher one, its first labor was to preserve the evidences of its existence and the memorial of its transactions in written records.

All before this era of emergence from oral traditions to records has been called by anthropologists the "prehistoric period"—all after it, the "historic."

Now, it is very evident that no such division can, in strictness, be applied to the history of Freemasonry. Viewed as an association of builders, when there ceases to be a record of the association, it must be supposed that it did not exist. There are no legends or traditions whose existence can be traced to a period anterior to that which contains historic records of the society.

These legends and traditions, all of which have been given in the first part of this work, were not, like the primeval myths of the prehistoric nations, the outgrowth of an uneducated religious sentiment wholly unconnected with and independent of any record of real events which occurred, or were occurring, at the same time.

On the contrary, they sprang up in the Middle Ages, at the very time when Freemasonry was making its indelible record in the history of Europe. They were fabricated by Freemasons who had long before been recognized in history as an association of some importance. They were not the spontaneous growth of some primitive body of builders, known to us only by these legends which had been orally transmitted from the earliest prehistoric times. They were the inventions of a later period, most of the facts which they detailed being borrowed from historical records, principally from the Bible or from ecclesiastical historians, and they were indebted for their fabrication partly to a desire to magnify the antiquity of the Institution and partly to the influence of that legendary spirit which prevailed in the Middle Ages, and which we find still more extensively developed in the legends of the Saints which have been accepted by the Roman Catholic Church.

These Masonic legends differ also in another respect from the prehistoric myths of antiquity.

As soon as a nation began to make its history, its myths were

relegated to their proper place in the region of mythology, and the history continued to be written without any admixture with them. They were considered as things of the past. They had their inevitable influence upon the religion of the people, but they were not intruded into its political history.

But from the very time of the fabrication of the Masonic legends and traditions, they were accepted as a part of the annals of the association and were incorporated into it as a portion of its true history. As such they have been maintained almost to the present day. In this way we have two histories of Freemasonry which have always been presenting themselves to our consideration with the assumption of an equal claim to our credence.

We have, in the first place, the authentic history, gathered from the records of all the building guilds and confraternities from the time of Numa, and which, assuming various forms at different periods, finally has culminated in the Speculative Freemasonry of the present day.

And then we have a mass of legends and traditions fabricated in the Middle Ages, and some others of a later day. These have been obtruded into the authentic history, have grown up alongside of it, and have presented and sought to preserve a different and, of course, an apocryphal form of history.

Looking at the time and manner of the fabrication of these legends, and the persistent way in which for some centuries they have traveled down the stream of time *pari passu* with the authentic history, it would perhaps have been better to designate them as "extra-historic," rather than "pre-historic"—something not before history, but something outside of history.

Yet, as they have been made to assume the appearance of pre-historic legends, and have claimed, however incorrectly, to be traditions of the origin and progress of the Institution at a time when there were no written records of its existence, I have felt myself excusable, and perhaps even justifiable, in tolerating temporarily this mistaken view, under the protest of this explanation, and of adopting the usage of historians in their treatment of the histories of nations.

As a matter, therefore, of convenience I have used the term "pre-historic," although I am well convinced that there is no such thing as a "prehistoric Freemasonry."

There is, unquestionably, a prehistoric architecture. The art of building, so as to secure shelter from the inclemencies of the seasons and protection from the incursions of wild beasts, was practiced at a period long antecedent to the existence of any written records of the existence of the arts. The Troglodytes must have made alterations for their greater comfort, convenience, and security in the rude caves which they made their homes, and the lake-dwellers of prehistoric Helvetia exhibited, as we may judge from their remains, considerable skill and ingenuity in the construction of their lacustrine houses.

But architecture, when it is not united with and practiced by an organized craft, guild, or fraternity, is not Freemasonry.

Therefore prehistoric architecture and prehistoric Freemasonry are two entirely different things. Of the former we have monumental records; of the latter we have no evidence, and the term is used only as a *façon de parler*, as a matter of convenience, and as a concession to common usage in the treatment of historical subjects.

There is one very marked difference in character between the prehistoric myths of antiquity and the legends of Freemasonry, which, for the reason just assigned, I have placed in the supposititious prehistoric period of that institution.

The myths of the earliest peoples found their origin and groundwork in an enforced observance of the contending powers of nature. The nomadic races, wandering over the wide plains and lofty mountains of the East, were necessarily struck by the alternate changes of darkness and light, of night and day. They saw and they feared the dark sky with its diadems of glittering stars and its murky clouds; these they beheld dispersed by the rosy dawn, before which stars and clouds and darkness fled as the wild game flees before the hunter. Then they beheld the glorious sun, ushered in by the dawn, traverse the sky, at length to be destroyed in the far West by the recuperated forces of night, which again reigned supreme over the earth, until it was anew dispersed by the ever-renewing dawn.

This perpetually recurring elemental strife gave rise to the formation of myths, which formulated fables of the wars of these opposing forces of nature, just as, later, men in the historic period described the battles of contending armies.

These simple myths were undoubtedly the first acts of the human

mind.¹ As time passed onward and the intellect became more cultivated, the myths were developed into a definite form of religious faith. The forces of nature were impersonated as actual, living deities.

The primitive Aryans, out of the fire which descended from the clouds in the forked lightning, and the fire which they brought by friction out of the wood, both of which they deemed to be identical, made their god Agni.²

At a later period their Greek descendants symbolized the all-healing and purifying sun, whose rays disperse the morbid influences of malaria, as Herakles destroying the hydra of the Lernean marshes, or as the light-diffusing Phœbos Apollo, who pictured the solar rays by his flowing locks of golden hair and his quiver filled with arrows.

Thus it was that the simple nature-myths of the primeval nations, Aryan and Semitic, were in the progress of time resolved into a system of complicated mythology that became the popular religion of the ancient nations.

But this mythology was perfectly separated from political and national history. The prehistoric mythology of Greece and Rome was always distinct from Grecian and Roman authentic history.

Though in the earliest period when history began to emerge from tradition there was, undoubtedly, some confused admixture of the two, yet, as each nation began to keep its records, the two streams were made to flow in different channels, and the mythical and the historical elements were not permitted to intermingle. The priests preserved the former in their temple services, and the poets only referred to them in their epics and in their odes; the philosophers and the historians confined their instructions to the latter.

But it has not been so with the legends, which may be called the myths, of Freemasonry. Springing into existence not at any early, prehistorical period, but receiving their form at the very time when Masonry was already an historical institution, these traditions

¹ Goldziher says that the myth is the result of a purely psychological operation, and is, together with language, the oldest act of the human mind. "Mythology Among the Hebrews," ch. i., p. 3.

² In the old Vedic faith, Agni is sometimes addressed as the one great god who makes all things, sometimes as the light which fills the heavens, sometimes as the blazing lightning, or as the clear flame of earthly fire. "Con. Aryan Mythology," vol. ii., p. 190.

have traveled down contemporaneously with its authentic narratives, not in two independent and separated streams, but in one comingled current.

At the period when the speculative element of Masonry withdrew itself from the alliance which it had always maintained, the traditions contained in the *Legend of the Craft*, which constitute the great body of Masonic myths, were incorporated into and made an inseparable part of the true history. Nothing was rejected; everything was accepted as authentic; and indeed other legends borrowed from or suggested by Rabbinical and Talmudical reveries were added.

Hence has arisen that inextricable and deplorable confusion of tradition and history, of false and true, of apocryphal and authentic, that we find in all the so-called histories of Freemasonry which were written in the 18th century. Nor did this false method of writing cease with the expiration of that period. It was continued into the 19th century, and its influence is still felt, not only in the opinions entertained by the masses of the Fraternity, but in the statements made in annual addresses before lodges, by men not always unlearned or unscholarly, but who do not hesitate to advance traditions and legends as a substitute for the true history of the Order.

Of this mode of writing Masonic history, let us take at random a single passage from one of the works of the most eminent of the writers of this school.

"The Druidical Memoranda," says Dr. Oliver,¹ "were made in the Greek character, for the Druids had been taught Masonry by Pythagoras himself, who had communicated its *arcana* to them, under the name he had assigned to it in his own country. This distinguished appellation (Mesouraneō), in the subsequent declension and oblivion of the science, during the dark ages of barbarity and superstition, might be corrupted into MASONRY, as its remains, being merely operative, were confined to a few hands, and these artificers and working Masons."

Here are no less than five positive assertions, of which but one rests on the slightest claim of authority, while the whole of them are absolutely unhistorical.

1. The statement that the Druids used the Greek character in

¹ "Antiquities of Freemasonry," Period I., ch. i., p. 17.

their secret writing is made on the authority of a casual remark of Cæsar; but later authorities, much better than Cæsar, on the subject of Druidism have shown that the character used by them was the old Irish Oghum alphabet.

2. The assertion that the Druids practiced or were acquainted with Masonry is altogether untenable. It is known that the dogmas and practices of their religion were antagonistic to those of Masonry.

3. The statement that they were taught Masonry by Pythagoras is met by the simple fact that that philosopher never visited Britain.

4. All that is said about the Greek word *Mesouraneō*, as the term under which Masonry was known to Pythagoras and communicated by him to the Druids, is a mere fable. It had its origin in a whimsical etymology first proposed by Hutchinson, and which has never been accepted by competent philologists.

5. The implied doctrine contained in the close of the paragraph, that the first form of Masonry was Speculative, and that the Operative branch was merely what remained after the declension and decay of the science, to be practiced by working Masons, is in direct violation of all historic truth, which makes the Speculative element an after-thought and a development out of the Operative.

When history is thus caricatured, what chance is there that the unlearned shall find the truth; and what labor must be imposed on the learned in striving to extract the pure gold of facts from the worthless ore of tradition in which it has been imbedded?

The mode of writing Masonic history which was adopted in the 18th century, and which, with some honorable exceptions, has been pursued almost to the present day, was one which was by no means calculated to elicit truth or to satisfy the inquiring mind.

A groundwork for the history of Freemasonry was found in the *Legend of the Craft*. All the statements in that old document were accepted as authentic narratives of events that had actually occurred. Hence the origin of the institution was placed at a period anterior to the flood. All the patriarchs were declared to have been Masons; Noah and his sons were said to have been the means of transmitting its tenets from the antediluvians to the post-diluvians. Its progress was traced from Noah to Moses, who was said to have practiced its mystic rites in the wilderness. From Moses it was made to pass over to Solomon, who, in some incomprehensible way, was

supposed to have organized, as its first Grand Master, an association which, however, according to the preceding history, appears to have been in existence thousands of years before. From the King of Israel it was made to pass over from Palestine to Europe, and is landed with little respect, or at least with no accounting for the lapse of time, in the kingdom of France, and in the time of Charles Martel. From him it crosses the Channel, and is reorganized in England in the reign of King Athelstan and by his brother Edwin.

Such is the history of Freemasonry that for a century and a half has claimed and received almost universal belief from the Craft. And yet, perhaps there never was a history of any kind that could present so few claims to belief.

It is fragmentary in its details. Centuries are passed over with no connecting link. From Abraham, who, it is said, "had learned well the science and the art" (that is, Geometry and Operative Masonry), to Moses, who is called the Grand Master of the Jewish Masons, a period of more than four centuries passes with the most inefficient and unsatisfactory account, if it can be called an account at all, of how this science and art were transmitted from the one to the other. From Moses to Solomon there occurs a vast chasm of fifteen centuries, with scarcely an attempt to fill it up with a consecutive series of intervening events. And so the fragmentary history goes on in intermittent leaps from Solomon to Zerubbabel, from Zerubbabel to Augustus, from Augustus to Charles Martel, and finally from him to Athelstan.

It is contradictory in its statements. Claiming for the Institution a purely Hebrew character, it intermixes with strange inconsistency the labors and the patronage of Jewish patriarchs and Pagan monarchs, and finds as much of true Masonry in the works of the idolatrous Nebuchadnezzar as in those of King Solomon.

But perhaps the most important fault of these 18th century historians of Freemasonry is the entire absence of all citation of authority for the records which they have made. They assume a statement to suit their theory, but give no evidence or support from contemporary profane or sacred writers that it is a genuine fact and not a bare assumption. The scholar who is seeking in his historical studies for truth and truth only, finds himself thus involved in a labyrinth of doubts, from which all the canons of criticism fail, however skillfully applied, to extricate him. He knows not when the

writer is acting on the results of his own or some predecessor's invention, or when he is reciting events that have really occurred.

We are not to attribute to those writers who have thus made a romance instead of a history any willful intention to falsify the facts of history. At first led astray by a misinterpretation of the *Legend of the Craft*, they had on this misinterpretation framed a theory of the antiquity of Freemasonry in a wrong direction, and then, as has occurred thousands of times before, they proceeded to fit the facts to the theory, and not, as they should have done, the theory to the facts. The doctrines of the new school of anthropology, which does not admit that the origin of the whole human family is to be found solely in the Semitic race, were, in their day, unknown. If Freemasonry was older than the era of the revival and the establishment of the Grand Lodge of England, its antiquity was to be sought only in the line of the Jewish patriarchs. Thus it became venerable, not only by its age but by its religious character. To this line they wished, therefore, to confine the direction of its rise and progress, and they thought that they could find the proofs of this line of progress in their own interpretation of *the Legend of the Craft*, and the application to it of certain passages of Holy Writ. They succeeded in this, at least to their own satisfaction, because "the wish was father to the thought."

But as they recognized the symbolic character of Freemasonry, and as they found some of the most important and expressive of these symbols prevailing in the Pagan associations of antiquity, they thought it necessary to account for this contemporary prevalence of the same ideas in two entirely different systems of religion in such a way as not to impair the validity of the claim of Masonry to a purely Semitic origin.

This they did by supposing that while the Divine truths inculcated by Speculative Masonry were preserved in their purity by those of the descendants of Noah who had retained the instructions which they had received from their great ancestor, there was at some era, generally placed at the time of the attempted building of the Tower of Babel, a secession of a large number of the human race from the purer stock.

These seceders rapidly lost sight of the Divine truths which they had received at one time, and fell into the most grievous religious errors. Thus they corrupted the purity of the worship and the or-

thodoxy of the faith, the principles of which had been originally communicated to them.

In this way there sprung up two streams of Masonry, distinguished by Dr. Oliver as the "Pure" and the "Spurious." The former was practiced by the descendants of Noah in the Jewish line; the latter by his descendants in the Pagan line.

It is thus that these theorists account for the presence of a Masonic element though a perverted one, in the mysteries of the ancient Pagan nations.

There was afterward a union of these two lines, the Pure and the Spurious, at the building of the Temple of Jerusalem, when King Solomon invoked the assistance and the co-operation of the heathen and idolatrous workmen of the King of Tyre,

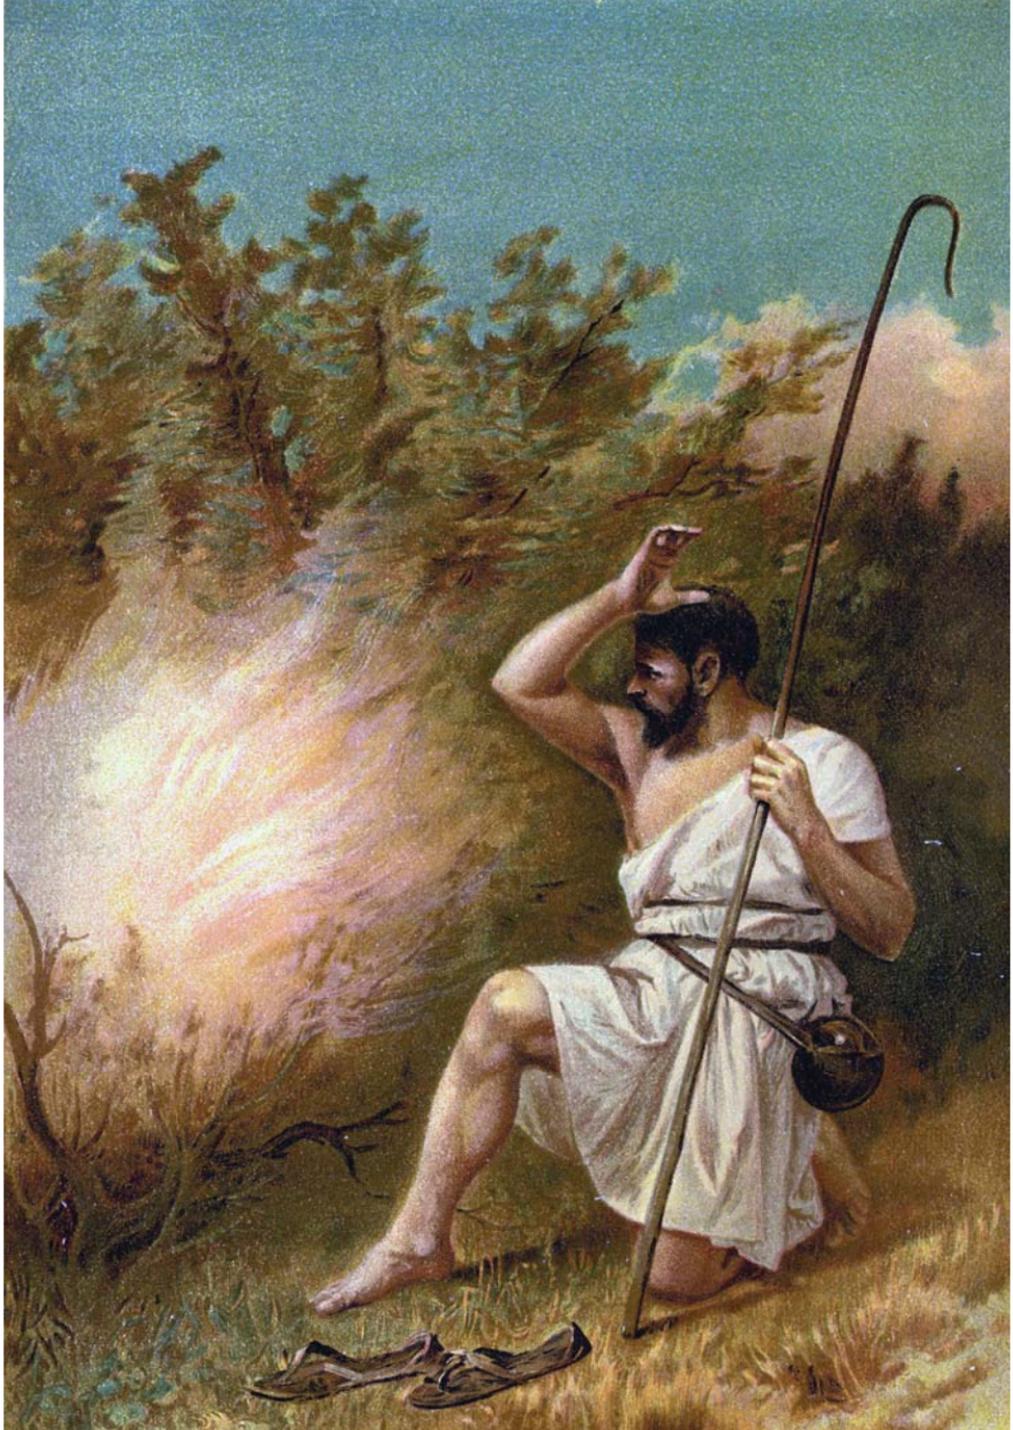

The Spurious Freemasonry did not, however, cease to exist in consequence of this union at the Temple of the Jewish and Tyrian Freemasons. It lasted, indeed, for many centuries subsequent to this period. But the Jewish and Tyrian co-operation had effected a mutual infusion of their respective doctrines and ceremonies, which eventually terminated in the abolition of the two distinctive systems and the establishment of a new one, which was the immediate forerunner of the present Institution.

This delightful romance, in which the imagination has been permitted to run riot, in which assumptions are boldly advanced for facts, and in which statements are made which there is no attempt to corroborate by reference to authority, has for years been accepted by thousands upon thousands of the Fraternity, and is still accepted by the masses as a veritable history of the rise and progress of Freemasonry.

In my younger days, when my researches were directed rather to the design and to the symbolism of the Order than to its history, which I was willing to take from older and more experienced heads, I had been attracted by the beauty and ingenuity of this romantic tale, and gave, without hesitation, my adhesion to it.

But when my studies took an historical direction, and I began to apply the canons of criticism to what I was reading on this subject, I soon found and recognized that the landscape which I had viewed with so much pleasure was, after all, only a wonderful *mirage*.

I have, therefore, been compelled to abandon this theory and to seek for one more plausible and more consistent with the facts of

history. I have come to this conclusion, I admit, with great reluctance, because I was unwilling to throw aside the picture which I had so long admired and which was the work of masters whose labors I respected and whose memory I venerated. But I am forced to say, with Aristotle, that though Plato and Socrates be my friends, yet truth is a greater friend and one that I must value above them both.

When we look at the course pursued by these Masonic historians of the early part of the 18th century, it is lamentable to think how many glorious opportunities of preserving facts in the history of the Institution have been lost by the mistaken direction of their views. We have in the *History of St. Mary's Lodge*, by Bro. J. Murray Lyon, a fair sample of what might have been done by Dr. Anderson, if he had pursued a similar plan in the composition of the two editions of the *Constitutions* compiled by him.

In 1723 he must have had access to many documents of great importance bearing on the history of Masonry in the latter part of the 17th and in the beginning of the 18th century. There were undoubtedly minutes of lodges which were accessible to him, but the lodges are now extinct and the records perhaps forever lost. In these he would have found authentic evidence of the manners and customs, the organization and the regulations, of the Operative Masons, and could have accurately defined the line through which Operative Masonry passed in its transmission and transmutation to a purely Speculative system.

But on these subjects he has maintained unbroken silence. In the first edition he has not said a single word of the actual condition of Freemasonry at the time of his writing. But he has wasted pages in an inaccurate and unauthentic history of the rise and progress of architecture, which had been already written by far better authority, because a professional architect with equal ability can write history of his own science more skillfully than can a doctor of divinity.

Even of the four lodges which in 1717 organized the Grand Lodge of England, a few lines comprise the brief account that he gives. He tells us their names and the locality in which they held their meetings, and no more. And yet these lodges must have had their history, there must have been a minute-book of some kind, however brief and imperfect might have been the records. And these minute-books, only three or four, must have been in existence

before Anderson began the compilation of his book, and from his position in the Order must have been accessible to him. And yet he has treated these invaluable records—invaluable to the future Masonic historian and which should have been invaluable to him—with a silence bordering almost on contempt.

Comparing this treatment of the early English records with the manner in which Lyon has treated those of Scotland, we can not too much deplore this neglect of the real duties of a historian. The result of this difference of treatment of the same subject by two different historians has been that while we are made by Lyon familiar with the true history of the Scottish Lodges in the 17th century—with their regulations, their usages, their modes of reception, and almost everything that appertains to their internal organization—we are, so far as we can gather anything from Anderson, absolutely as ignorant of all that relates to the English Lodges of the same period as if no such bodies had ever existed.

Such neglect of opportunities never to be recalled, such obdurate silence on topics of the deepest interest, and such waste of time and talent in the compilation of a jejune history of architecture instead of an authentic narrative of the Masonic history which was passing before his eyes, or with which he must have been familiar from existing documents, and from oral communication with many of the actors in that history, is to be not only deeply regretted, but to be contemplated almost as a crime.

Anderson's compilation has been that which gave form and feature to all subsequent histories of Freemasonry until a recent period. Smith, Calcott, Preston, and Oliver have followed in his footsteps, only pouring, as it were, from one vial into another, so that all the treatment of early Freemasonry anterior to the year 1717, as treated by English and French writers, has been almost wholly without the necessary element of authenticity. These historians have dealt in hypotheses, suggestions, assumptions, and romantic legends, so as to lead the scholar who studies their pages in search of historical light into an inextricable web of doubt and confusion.

The Germans have done better, and bringing the Teutonic instinct of laborious research to the investigation of Masonic history, they have made many approximations to the discovery of truth. And later English Masons, forming a school of iconoclasts, have begun, by the rejection of anachronisms and improbabilities, to give

to that history a shape that will stand the crucial test of critical examination.

It must be evident to the reader, from what has been said, that the history of Freemasonry, upon which this book is about to enter, will be treated in a method that seeks to approach that accuracy with which authentic history should always be written. From the causes already assigned, there must often be an embarrassment in finding proper evidence to authenticate the material offered to the inspection of the reader. But in no case will assumption be presented in the place of facts. When the supposed occurrence of events can not be proved by contemporaneous authority, such events will not be recorded as historical. It may be conjectured that such events may have occurred, and such a conjecture is entirely legitimate, but its value will be determined by its plausibility. It will be a matter of logical inference, and not of historical statement. Thus one of the great errors of Anderson will be avoided, who continually presents his conjectures as facts, without discrimination, and thus leaves his reader in doubt as to when he is writing history and when indulging in romance or in assumptions.

Pursuing this method, I am compelled to reject the universally received hypothesis that Freemasonry received its organization at the Temple of Solomon.

I reject it because there is no historical evidence of the fact. The only authorities on this subject are the books of Kings and Chronicles. That of Josephus need not be referred to, because it is simply a compilation of Jewish history made up out of the Scriptural account.

Now, the account of the events that occurred at the building of the Temple is very briefly related in those books, and it gives us no authority for saying that there was any organization of the builders, at that edifice, at all like the one described in our Masonic histories.

Similar objections may be urged against all other propositions or theories which seek to connect the rise of the Masonic Institution from bodies which were not architectural in their character.

I fall back, therefore, upon that theory which since the time of the Abbé Grandier has been gradually gaining strength, and which connects the Speculative Masonry of our own times with the Operative Masonry of the Middle Ages.

Never abandoning, for a moment, the predominant idea that Freemasonry, in whatever aspect it may be viewed, whether as Operative or Speculative, whether as ancient or modern, has always been connected in some way with the art of building and with a guild organization, I shall proceed to trace its early history not in religious communities or in social fraternities, but solely in the associations which have been organized for the pursuit and practice of architecture.

Finding such associations among the ancient Romans, I shall endeavor to pursue the course of these associations, from their birth in the imperial city and in the time and under the fostering care of Numa, to their dissemination with the Roman legions into the conquered provinces of Gaul, Germany, and Britain; their subsequent establishment in these countries of confraternities which they called Colleges of Workmen (*Collegia Fabrorum*), out of which, after the decay of the Empire and the extinction of the armies, was developed in the gradual course of civilization the societies of Traveling Freemasons, who sprang from the school of Como in Lombardy.

Thence, by slow but certain steps, we shall advance to the time of the Operative or Stonemasons of Germany, France, and Britain, who were a development and result of the Comacine Fraternity.

And lastly this will bring us to the era when the Operative system was wholly abandoned as a practice, and when the society was delivered up to the pursuit of a Speculative Philosophy, still, however, retaining the evidence within itself of its architectural parentage, by the selection of its symbols and its peculiar language as well as by many features of its internal organization.

The connection, according to this theory, of Freemasonry with the art of building, a connection that has never, even in its Speculative form, been wholly severed, will necessarily lead to digressions in the course of this history upon the subjects of Roman, Byzantine, and Gothic architecture.

These subjects will have to be discussed, not as architectural studies, but solely in their close relationship to Freemasonry, and in respect to the reciprocal influences that were exerted upon Freemasonry and its followers by the varying systems of architecture and that produced on them by the skill and intelligence of the Freemasons.

There will be no attempt to write a history of Architecture and

to call it, as Dr. Anderson has unfortunately done, a history of Freemasonry, but the effort will be made to write a history of Freemasonry in its connection with, and its reference to, Architecture.

"Every Freemason," said the Chevalier Ramsay, in his visionary hypothesis, "is a Templar." The truer doctrine is that in the olden time every Freemason was an architect, using this word in its purest and primitive meaning, to signify a builder.

Mr. Hallam says, in his *History of the Middle Ages*, that "the curious subject of Freemasonry has unfortunately been treated of only by panegyrists or calumniators, both equally mendacious." And he thinks that it would be interesting to know more of the history of the Craft during a period in which they were literally architects.

The desire here expressed, it is the object and the design of this work to gratify. Whether the object has been successfully achieved can be determined only when the work is finished.

Let me say, in concluding this preliminary essay—and I say it lest there should be any misconception of my views—that the theory which I shall seek to establish is not that the Freemasons of the present day are in direct and uninterrupted descent from the Roman Colleges of Artificers, but that these latter associations brought, by the Roman legions from the civilization of the Empire, into the comparatively unenlightened provinces of Gaul, Germany, and Britain, those sentiments of architectural beauty, as well as those principles of architectural skill, which gave rise to the establishment of associations of builders, who in time constituted themselves into the form of guilds.

These guilds, or fraternities, at a very early period assumed an important place in the history and practice of the building art, and associated themselves together for the purpose of disseminating the principles and practice of building over certain parts of Europe.

Thence arose the association known as "Traveling Freemasons," who, starting from their school in Lombardy, perambulated the continent and erected many important edifices, mostly of a religious character, such as monasteries and cathedrals.

From these the Stonemasons of Germany, of France, and of England borrowed the system of guild-formation, that is to say, the usages and regulations of a guild in the practice of their profession.

These Operative Masons at various times admitted into the membership and privileges of their guild many persons of rank, influence, and learning, who were not professionally connected with the building art. These honorary admissions accomplished two objects: they were received as gratifying compliments by the non-professional members, and at the same time secured their good wishes and protection for the guild.

But eventually a schism took place between the Operative Masons and the honorary members. The former adhered to the Operative Craft, but the latter, eliminating altogether the Operative element, formed a new guild or fraternity of Speculative Masons whose only connection with architecture or building was that they preserved much of its technical language and implements, but consecrated them to symbolical purposes.

Having thus abandoned the professional practice of the craft of building, and assumed a merely ethical character, they became the Freemasons, or the Speculative Masons, of the present day»

Such is a brief outline of the plan which will be pursued in the future prosecution of this history of the rise and progress of the Order of Freemasonry.

CHAPTER II

THE ROMAN COLLEGES OF ARTIFICERS

It will be evident, from what has been said in the preceding chapter, that the plan upon which it is intended to write the history of Freemasonry in the present work will utterly preclude any search for the origin of the Institution among the purely religious associations of antiquity, whether they be of Jewish or of Gentile character.

Hence I reject as untenable either of the hypotheses which traces the rise of the Order to the Patriarchal religion, the ancient Mysteries, the workmen at the Temple of Solomon, the Druids, the Essenes, or the Pythagoreans.

If we contemplate the Speculative Freemasonry of the present day as the outgrowth of the Operative system which prevailed in the Middle Ages, we must look for the remote origin of the former in the same place in which we shall find that of the latter.

Now, the mediaeval Operative Masons, known as the *Steinmetzen* of Germany, the *Tailleurs de pierre* of France, and the *Freemasons* of England, were congregated and worked together under the form and regulations of a *Guild*. But as all institutions in their gradual growth and development are apt to preserve some of the most important features of their original construction, notwithstanding all the changes and influences of surrounding circumstances to which they are subject in the course of time, we may very legitimately come to the conclusion that whatever was the original body or prototype from which the Masonry of the Middle Ages derived its existence, or of which it was a continuation, that prototype must have had some of the forms of a *Guild*.

It is true that when the Operative Masons organized themselves into an association, at some period between the 10th and the 17th centuries, which period is not at this time and in this place to be accurately determined, they may as an original body have assumed a

form, independent of all previous influences. But we know that such is not the fact, and the Masons of that period were the successors of other bodies that had preceded them, and that they only developed and improved the principles of art that had already been long in existence.

Then the body of men — the association, the sodality — of which they were the outgrowth must have some features in its form and character that were imitated by the body of Masons who succeeded them, who pursued the same objects, and only developed and improved the same principles.

Now, what were the features that must distinguish and identify the original, the exemplar, of which the more modern Freemasonry was an outgrowth?

I answer to this question that those features, to which we must look for an identification of the original body, are at least two in number:

First, the original body must have had the form and character of a sodality, a confraternity, or what in more modern times would be called a *Guild*.

And secondly, that this sodality, confraternity, or guild must have consisted of members who were engaged in the practice of the art of building.

The absence of either of these two features will make a fatal break in the process of identification, by which alone we are enabled to trace a connection between the original and the copy.

We can easily find in the records of ancient history numerous instances of sodalities or confraternities, but as they had no reference to the art of building, it is clear that not one of them could have been the exemplar or source of mediaeval Masonry.

The members of those religious associations of antiquity, which were called the "Mysteries," and to which Speculative Masonry is thought, not altogether incorrectly, to bear a great similitude, were undoubtedly united in a sodality or confraternity. They had admitted into their association none but those who had been duly chosen, and reserved to themselves the power of rejecting those whom they did not deem worthy of a participation in their rites; they had ceremonies of initiation; they adopted secret methods of recognition; and in many other ways secured the isolation of an exclusive society. They were in every respect a confraternity, and

their organization bore a very striking resemblance to that of the modern Freemasons. And hence it is that some writers have professed to find in these religious Mysteries of the ancient pagans an origin to which they might trace the Masonic Institution. But the hypothesis is untenable, because these religious associations had no connection with architecture or the art of building. Freemasonry, which always has been either an operative art or been closely connected with it, could not, by any possible contingency, have derived its origin from what was a wholly religious association.

The Society of Dionysiac Artificers, who flourished in Asia Minor, did indeed unite with the observance of the Mysteries of Dionysus the practice of architecture. Hence the compiler of Lawrie's *History of Masonry* has pretended to trace the origin of our modern system to the connection of the Pagan Dionysiaks with the Jewish builders at the construction of King Solomon's Temple. There would be a great deal of plausibility in this theory, if it could be proved that the Dionysiaks as architects were contemporaneous with Hiram of Tyre and Solomon of Israel. But unfortunately the authentic annals of chronology prove that they were only known as builders of temples, palaces, and theaters about seven hundred years after the era of the building of the Temple at Jerusalem.

So, too, of the Essenes, we may say that the doctrine can not be sustained which attributes to them the continuation and preservation of the Masonry of the Temple builders, and which assigns to them the origin of the modern Speculative system. Leaving out of the question the fact that it is impossible to account for the lapse of time which occurred between the construction of the Temple and the first appearance of the Essenes, about the era of the Maccabees, we meet with the insurmountable objection that the Essenian sect was wholly unconnected with architecture.

So, too, of all the other schemes of tracing Masonry to the Druids, the Pythagoreans, or the Rosicrucians, we always have the invincible obstacle in our way, that all of these were associations not devoted to, nor pursuing the art of building. It is impossible to trace the origin of a fraternity of working Masons, all of whose ideas, principles, pursuits, usages, and customs prominently and exclusively connected them with the cultivation of architecture and the art of building, not theoretically but practically, to any other and

older sodality which knew nothing of architecture and whose members never were engaged in the construction of edifices.

But if we should discover in long-past time a sodality, whose members were builders and who were congregated together for the purpose of pursuing their professional labors, in a society which partook of the main features of a modern guild, we should be encouraged to make the inquiry whether such a sodality may not have given birth, and suggested form, to the mediæval associations of Operative Masons, from whom afterward sprang, in direct succession, the Speculative Masons of the 18th century.

Now just such a sodality will be found in the Roman Colleges of Artificers — the *Collegia Fabrorum* — which are said to have been instituted by Numa, the successor of Romulus, and, therefore, the second king of Rome.

That the establishment of these colleges of workmen of various crafts was one of the numerous reforms instituted by Numa, among his subjects, is a fact that has not been denied by historians. The evidence of the existence of these colleges in the later days of the empire and of their dispersion into various provinces, is attested by numerous inscriptions in votive tablets and other monuments that remain to the present day.

The important relation which it is supposed that the Roman colleges bore to mediæval stonemasonry, makes it proper that something more than a mere glance should be given at the history of their origin and progress as well as at their character and design.

Of Numa himself, a few words may be said. He was undoubtedly one of those great reformers who, like Confucius, Moses, Buddha, and Zoroaster, have sprung up at different periods in the world's history and have changed the character and the religion of the people among whom they lived and placed them on the first steps of the march of civilization. That such was the career of Numa, is testified by the fact that he so transformed the military disorder of the heterogeneous multitude that had been left by Romulus, into the orderly arrangements of a well-regulated municipality, that, as Livy says, that which the neighboring nations had hitherto called a camp, they now began to designate as a city.

Numa, who was a native of Cures, a considerable city of the Sabines, was, on account of his nationality, selected, through the

influence of the Sabine population of Rome, to succeed Romulus, and was called to the throne, according to the generally received chronology, 686 years before the Christian era.

Having borne in his private life the character of a wise and just man, with no distinction as a warrior, he cultivated, when he assumed the reins of government, all the virtues of peace. He found the Romans a gross and almost barbarous people. He refined their manners, purified their religion, built temples, instituted festivals, and established a regular order of priesthood.

As Plutarch says, the most admirable of all his institutions was his distribution of the citizens according to their various arts and trades. Before his accession to the throne, the different craftsmen had been confusedly mixed up with the heterogeneous Roman and Sabine population, and had no laws or regulations to maintain their rights or to secure their skill from the rivalry of inexperienced charlatans.

But Numa divided the several trades into distinct and independent companies, which were designated as *Collegia* or colleges. Plutarch names but eight of these colleges, namely: musicians, goldsmiths, masons, dyers, shoemakers, tanners, braziers, and potters, but he adds that the other artificers were also divided into companies, so that the exact number of colleges that were instituted by Numa cannot be learned from the authority of Plutarch. If we suppose that the other artificers alluded to by him comprehended all the remaining crafts, which were united in another college, which was afterward developed into new societies, the whole number which, according to Plutarch, were originally instituted by Numa would amount to nine.

But as, besides the *Collegia*, such as those of the augurs and priests which were specially established by legal authority, there were many others formed by the voluntary association of individuals, the number of the colleges of handicraftsmen became in the later days of the republic, and especially of the Empire, greatly increased.

There were, among the Greeks, sodalities or fraternities which they called *etaireiai*. They were established by Solon, and Gaius thinks that the Roman colleges borrowed some of their regulations from them. But this could not have been the case in reference to any regulations established by Numa, since Solon lived about a century after him. The Greek *etaireiai* were, however, not confined to

craftsmen but, according to the law of Solon, cited by Gaius,¹ they comprehended brethren assembled for sacrifices, or sailors, or people who lived together and used the same sepulcher for burial, or who were companions of the same society, or who, inhabiting the same place, were united in the pursuit of any business, which last division might be supposed to refer to workmen of the same craft. All of these were permitted to make regulations for their own government, provided they were not forbidden by the laws of the state.

Among the Romans a college generally signified any association which, being permitted by the state and recognized as an independent association, devoted itself to some determined object.

Its recognition by the state gave to the college the character of a legal personage, such as is now called a corporation.

If we examine the laws which were made for the establishment and the government of the colleges, we shall be impressed with their similarity to those which have always existed among the Masonic Lodges, both Operative and Speculative. The identity of regulations are amply sufficient to warrant us in believing that the regulations of the one were derived from, or at least had been suggested by, the other.

The laws and usages by which the workmen at the Temple of King Solomon were distributed into classes and regulated, which have been given by Masonic historians, and by none more extensively than by Dr. Oliver, are all supposititious and apocryphal; but those that describe the government of the Roman colleges or guilds of craftsmen have been recorded by various historians, and especially in the different codes of the Roman law and have, therefore, all the character and value of authenticity. Whatever conclusions we may think proper to deduce in connecting these colleges with the modern Masonic guilds, must of course be judged according to their logical weight, but the facts on which these conclusions are based are patent and have an authentic record.

It was required by the Roman law that a college should not consist of less than three members. It is hardly necessary to remind the reader that a Lodge can not be composed of less than three Masons. As in Freemasonry there are "regular Lodges" which have been

¹ Gaius, lib. iv., ad Legem duodecim tabularum.

established by competent authority, and "clandestine Lodges" which have been organized without such authority, and whose members are subject to the severest Masonic penalties, so there were legal colleges — *Collegia licita* — which were formed by authority of the government—and illegal colleges — *Collegia illicita* — which assembled under no color of law and which were strictly prohibited.

Illicit colleges, says Ulpian,¹ are forbidden, under the same penalties as are adjudged to men violating public places or temples; and Marcian² says that they must be dissolved by virtue of the decrees of the Senate, but their members when they separate are permitted to divide the common property.

According to the Justinian code, no college of any kind was permitted to assemble unless by an act of the Senate, or a decree of the emperor.³

Each college was permitted to make its own internal regulations, provided that they were not in contravention of the laws of the state. The regulations were proposed by the officers, and after due deliberation adopted or rejected by a vote of the members, in which a majority ruled.

The members of a college (*sociales*), says Gaius,⁴ were permitted to make their own regulations if they did not contravene the public law; and he shows that the same privilege was granted by Solon to the Greek *etaireiai* or fraternities.

The colleges had also the right of electing their officers, and of receiving members by a vote of the body on their application. The applicants for admission were required to be freemen; but the Justinian code permitted slaves to be received into a college if it was done with the consent of the *Domini* or Masters; but not otherwise, under a penalty of one hundred pieces of gold to be inflicted on the *Curatores* or Wardens.⁵

As in the mediaeval Lodges of Freemasons we find that distinguished persons not belonging to the Craft were sometimes admitted, so a similar usage prevailed in the Roman colleges. To them the law had granted the privilege of selecting from the most honorable of the Roman families, persons who were not connected with the Craft, as patrons and honorary members. That they exercised this

¹ Ulpian, "De Officiis Pro Consulibus," lib. ii, p. 7.

³ "Digest," lib. xlvii., tit. xxii., § 1.

⁴ "Ad Legem," xii., tab. lib. iv.

⁵ "Digest," ut supra, § 2.

privilege is evident from inscriptions and some remaining lists of members.¹

We have also the authority on this point of Pliny, who in his correspondence when he was governor of Bithynia with the Emperor Trajan, shows by implication that it was the usage of the colleges of builders to admit non-professional persons into their guild. A conflagration having destroyed a great part of the city of Nicomedia, Pliny applied to the Emperor for permission to establish a College of Workmen — COLLEGIUM FABRORUM, to consist of one hundred and fifty men; and knowing that it was the custom in these colleges to admit persons who were not of the Craft, he adds: "I will take care that no one not a workman shall be received among them, and that they shall not abuse the privileges conceded to them by their establishment."²

Each college had also its area, or common chest, in which the funds of the guild were kept. These funds were collected from the monthly contributions of the members, and were, of course, devoted to defraying the expenses of the college. At a later period when these societies, or sodalities, had become objects of suspicion to the government, in consequence of their sometimes engaging in political intrigues, they were forbidden to assemble. But there is a decree of the Emperor Severus, cited by Marcianus, which, while it forbids the governors of provinces to permit COLLEGIA SODALITIA or confraternities, even of soldiers, in the camps, yet allows the poorer soldiers to make a monthly contribution in a common chest, provided they did not meet more than once a month, lest under this pretext they should form an illicit college. The permission thus given to make monthly contributions (what in modern Freemasonry we should call "monthly dues") was most probably derived from the custom long before practiced by the Colleges of Workmen.

The members of the colleges were exempt by Constantine from the performance of public duties; but this exemption appears to have applied to all craftsmen as well as to those who were united in corporations. And the reason assigned was that they might have better opportunities of acquiring skill in their professions or trades

¹ Krause, "Kunsturkunden," iv., p. 136.

² Ego attendam ne quis nisi faber, recipiatur, neve jure concesso in aliud utatur. Pliny, "Epistolæ," lib. x., ep. 42.

and of imparting it to their children. And therefore this immunity from public employments was confined in the colleges to those members who were really craftsmen, and in the code of Theodosius¹ it was expressly declared that this immunity should not be granted promiscuously to all who had been received in the colleges, but only to the craftsmen. Patrons and honorary members were not to be included in the exemption.

The meetings of a college were held in a secluded hall called a *Curia*, which was the name originally given to the Senate-house, but afterward came to signify any building in which societies met for the transaction of business or for the performance of religious rites. Each of these corporations, says Smith, had its common hall, called *Curia*, in which the citizens met for religious and other purposes.² In the old inscriptions we frequently meet with this word in connection with a college, as the *Curia Saliorum*, or the Hall of the College of the Priests of Mars, and *Curia Dendrophorum*, or the Hall of the College of Woodcutters.³ Krause says that they sometimes met in private houses. He does not give his authority for this statement, but it was probably in cases where the college was too poor to afford the expense of owning or hiring a common hall or *Curia*.

Officers were elected by the members to preside or to perform other duties in the college. There seems to have been some variety at different periods and under different circumstances in the titles of these officers.

The officer who presided was called the *Magister* or Master. It would seem that in some of the legionary colleges he was called the *Profectus* or Prefect. In the Justinian code he is styled the *Curator*.⁴

Corresponding in some sense to our Masonic Wardens were the *Decuriones*, whose number was not however confined to two. In a list of the officers and members of a college, which has been preserved and which is given by Muratori, there are seven *Decuriones*.

A *Decurio* denoted, as the word imports among the Romans,

¹ "Cod. Theodos. de excus. Artificum," lib. v., § 12.

² "Diet. Greek and Roman Antiq.," citing Dionysius of Halicarnassus, ii., 23.

³ This was one of the original colleges of Numa. There is some dispute about their occupation; but the one given above is the most plausible.

⁴ "Digest," lib. xlvii., tit. xxii., § 2.

one who commanded or ruled over ten men. Hence Dr. Krause supposes that the members of a college were divided into sections of about ten, over each of which a *Decurio* presided. It will be remembered that Sir Christopher Wren states in the *Parentalia*, while describing the regulations that prevailed among the Traveling Freemasons of the Middle Ages, that "the members lived in a camp of huts reared beside the building on which they were employed; that a surveyor or Master presided over and directed the whole; and that *every tenth man* was called a Warden and overlooked those who were under his charge." This is at least a coincidence, and it may give some color to the hypothesis of Krause, that the *Decuriones* of the Roman colleges presided over sections of ten men.

Reference has been made to a list of the officers of a college, which has been preserved by the celebrated Italian antiquary, Muratori, in his work on inscriptions. Similar lists are to be found in the works of Gruter, who has made the best collection of ancient inscriptions.

These lists, like those published at this day by the Masonic Lodges, were intended to preserve the names of the officers and members for the information of the government.

In the list published by Muratori we find the following names and titles of officers, which will give us a very good idea of the manner in which the internal government of a Roman College of Artificers was regulated.

In this list first appears the names of fifteen Patrons, who, as has already been said, were not craftsmen. The last of these is called the *Bisellarius of the college*.

There is some difficulty in coming to an exact understanding of the meaning of this word. A *bisellium* was a double seat—a seat capable of holding two—as Hesychius calls it, "a distinguished and splendid seat," remarkable for its size and grandeur. It might be compared to the "Oriental chair" appropriated to the use of the Worshipful Master in our modern Lodges. It was, in short, a chair of state, capable of holding two persons; though it is evident, from several specimens which were found at Pompeii and which were accompanied by a single footstool, that it was occupied only by one. These chairs were used in the theaters and other public places at Rome and in the provinces as seats of honor. The privilege of

occupying a *bisellium* was granted as an honor by a decree of the Senate or an edict of the emperor, and the person to whom the privilege was granted was called a *Bisellarius*.

Its form was like that of a modern ottoman, but larger and higher, and there was also a stool or *supp daneum*, on which the feet rested.

Krause says that some of the colleges had several *Bisellarii* among their members, and he thinks the word is equivalent to honorary member. But as the Patrons were generally persons of wealth and distinction, selected by the college to defend and promote its interests, it is not likely that of the fifteen named in Muratori's list only one should have been elected an honorary member. But as the privilege of a *Bisellarius* was a dignity conferred as an honor on certain persons, it is more probable that of the fifteen the last one only had arrived at this honor, and that the record of it was made in the list, just as in the present day titles are appended to the names of persons in catalogues.

The next officers mentioned in this list are seven *Decuriones*. Then follow the names of the following officers: An *Haruspex*, a Soothsayer and Diviner, who may be considered as equivalent to our modern chaplain, and whose duty it was to attend to the sacrifices and conduct the religious services of the college; a *Medicus*, or Physician; a *Scriba Perpetuus*, or Permanent Secretary, and a *Scriba*, or Secretary. Against the names of two of the members is written the word *immunes*, or exempt, to show that for some reason, not explained, these members were relieved from the payment of the monthly contribution.

In this list no title of *Magister* or Master appears. The same occurs in an inscription on a marble plinth, which has been preserved by Gruter. It is dedicated on the front side by the College of Carpenters (*Collegium Fabrorum Tignariorum*) to the Emperor M. Aurelius Antoninus. On the other side are forty names, many of which have the title affixed of *Honoratus*, or Honorary. The last six names have the title of *Scriba*, or Secretary, attached to each; hence Krause thinks it probable that each *Decuria*, or section of ten men, had its Master, who was a *Decurio*, its Secretary and its Patron, and, besides, its own property, obtained from bequests or donations.

If this be true, a college would not appear to have been a single lodge, but rather an aggregation of lodges. The mediæval divis-

ion, described by Wren, where in a building the workmen were divided into tens, each having its own warden, would precisely meet this ancient condition of the *Decuriæ*.

In the time of the Empire, when the government began to be suspicious of the revolutionary tendencies of the craftsmen, care was taken to place officers over the colleges who might have a control of their arts. These officers differed at different times and in different places. Sometimes he was called a *Procurator*, or Superintendent; sometimes a *Præpositus*, or Overseer, and sometimes a *Præfectus*, or Prefect. In fact, the legionary colleges, which accompanied the legions and which were principally concerned in the fabrication of weapons, as armorers and smiths, had an officer over them who was called the *Præfectus Fabrum*, or Prefect of the Workmen.

But originally the title of *Magister*, or Master, was applied to him who was over the *Decuriones*, and who controlled all the acts, the labors, and the hours of rest of the members of the college, as well as their sacrifices and other religious ceremonies. There is abundant evidence of this in the inscriptions, and from them also we learn that the Master was chosen annually, and afterward with all the other officers quinquennially. But sometimes he was elected for life, a custom that was observed at a long subsequent period by the French Lodges, whose Venerables were chosen *ad vitam*.

Thus we meet with such inscriptions as *Magister quinquennatis Collegium Fabrorum Tignariorum* and *Magister quinquennatis Collegium Aurificum*, that is, Quinquennial Master of the College of Carpenters and Quinquennial Master of the College of Goldsmiths. Sertorius also refers to certain peculiar powers of the *Magister Collegium*, or Master of the College. There can be no doubt that this was a well-recognized title of the presiding officer of those sodalities.

But the Patrons, who were selected from the most wealthy and influential families of Rome, and who were not craftsmen, seemed to have exercised very important powers. Chosen that they might protect the interests of the society, no regulation was enacted, no contracts were made, and no work undertaken without their sanction. The kings, prelates, and nobles so often recorded as Grand Masters by Dr. Anderson in his history of early English Masonry, may very well be supposed to correspond in position and duties to these Patrons of the Roman Colleges.

Dr. Krause thus describes the internal organization of these colleges:

"It was only the Masters who could undertake any work. The members of the *Decuriae* (or sections) who corresponded to the Fellow Crafts of the present day, worked under them; and under these and under the Masters, were the *Alumni* or Apprentices, who were still being instructed in the schools (attached to the college) and whose names, as they were not yet members of the college, are not mentioned in any of the Inscriptions."¹

That there was a distinction of ranks among the members of a college is very evident from several of the inscriptions, and from passages in the codes. It is, besides, in the nature of things that in every trade or craft there should be some well skilled and experienced in the Mystery, who will take the highest place; others with less knowledge who must be subordinate to these; and finally scholars or apprentices who are only beginning to learn the principles of their art. As in the Lodges of Operative Masons, in the Middle Ages, there were Masters, Journeymen, and Apprentices, so must there have been in the colleges of Rome, a similar division of ranks.

The passage in the Justinian code, already referred to, provides that slaves could be received in the colleges only with the consent of their masters; if received without this consent the *Curator* or Master of the College was liable to a penalty of one hundred pieces of gold. This would indicate that in the Roman colleges, the distinction of bond and free, so much insisted on in the modern Masonic system, was not recognized among the craftsmen of Rome. But it must be remembered that among the Romans, a condition of servitude did not always imply the debasement of ignorance. Slaves were sometimes instructed in literature and the liberal arts, and many of them were employed in trade and in various handicrafts. It was these last who were to be conditionally admitted into the Colleges of Artificers.

It is evident that with the prosecution of their craft, the members of the colleges connected the observance of certain religious rites. In the list from Muratori, heretofore cited, it is seen that among the officers designated was a *Haruspex* or Sacrificer. This semi-religious character, first introduced in their establishment by

¹ Krause, "Kunsturkunden," iv., 165.

the pious Numa, continued to prevail to the latest days of the Empire. It was in the spirit of paganism, which connected the transaction of all private as well as public business with sacrificial rites.

Hence every college had its patron deity, which was called its *Genius*, under whose divine protection it was placed. The *Curia*, or hall of the college, was often built in the near vicinity of the temple of this god, and meetings of the guild were sometimes held in the body of the temple. Sacrifices were offered to him; festival days were kept in his honor, and were often celebrated by public processions. Among the paintings discovered at Pompeii is one that represents a procession of the College of Carpenters.

Krause gives ample proof that the Colleges of Artificers made use of symbols derived from the implements and the usages of their craft. We need not be surprised at this, for the symbolic idea was, as we know, largely cultivated by the ancients. Their mythology, which was their religion, was made up out of a great system of symbolism. Sabaism, their first worship, was altogether symbolic, and out of their primitive adoration of the simple forces of nature, by degrees and with the advancement of civilization was developed a multiplicity of deities, every one of which could be traced for his origin to the impersonation of a symbol. It would, indeed, be strange if, with such an education, the various craftsmen had failed to have imbued their trades with that same symbolic spirit which was infused into all their religious rites and their public and private acts.

But it is interesting to trace, as I think we may, the architectural symbolism of the mediaeval builders to influences which were exerted upon them by the old builders of Rome, and which they in turn communicated to their successors, the Speculative Masons of the 18th, and perhaps the 17th century.

This is, I think, one of the most important links in the chain that connects the Roman colleges with modern Freemasonry. Nothing of the kind can be adduced by those who would trace the latter institution to a Jewish or Patriarchal source. The Jews were not an aesthetic people. They rejected as vainly superstitious the use of painting and sculpture in their worship.

Though we find among them a few symbols of the simplest kind, symbolism was not cultivated by them as an intellectual science. Christian iconography, which succeeded the Jewish and the Pagan,

has been more indebted for its eminently symbolic character to the latter than to the former influences.

It is the same with the symbolism that has always been cultivated in Masonry, both in its Operative and in its Speculative form. It has been indebted for its warmth and beauty rather to the Roman colleges than to the Jewish Temple.

The most important of these colleges in the present inquiry were the *Collegia Fabrorum*, which has generally been translated the Colleges of Artificers.

The word *Faber*, in the Latin language, means generally one who works in any material, but the signification is limited by some adjoining word. Thus *faber tignarius* meant a carpenter, *faber ferrarius* a blacksmith, *faber aurarius* a goldsmith, and so on. But it was very generally used to designate one who was employed in building—a stone-cutter or mason.

We meet in Gruter, and elsewhere, with many inscriptions in which the word can only bear this meaning. In the passage above cited from Pliny, we see that when he asks the imperial consent to establish a society of artisans to reconstruct the burned edifices of Nicomedia, for which purpose builders only could be of use, he calls the desired society a *Collegium Fabrorum*, which may be fairly interpreted a College or Guild of Masons.

There were, of course, colleges of other trades, such as the *Collegium Pistorum*, or College of Bakers, the *Collegium Sutorum*, or College of Shoemakers, of whom a votive tablet was found at Osma in Castile,¹ and many others. But, as Dalloway says, the *Fabri* were "workmen who were employed in any kind of construction and were subject to the laws of Numa Pompilius."²

It is to these *Collegia Fabrorum*, or Roman guilds of Masons or Builders, that Dr. Krause, whose opinion on this subject I adopt with some modifications, has sought to trace the origin of the Mediæval corporations of stonemasons and the more recent Lodges of Freemasons.

In concluding this survey of the character and internal organization of these Roman colleges, the prototypes of the modern Masonic guilds, it will not be inappropriate to cite the language on this

¹ Don Cean-Bermudez, "Sumario de las Antiguadas Romanas que hay in España," Madrid, 1832, p. 179.

² "Master and Freemason," p. 400.

subject of the latest and most classical writers on the antiquities of Greece and Rome. The following brief description is taken from Guhl and Komer's able work on *The Life of the Greeks and Romans*.¹

"Mechanics guilds (*Collegia Opipium*) existed at an early period, their origin being traced back to King Numa. They were nine in number, viz., pipers, carpenters, goldsmiths, dyers, leather-workers, tanners, smiths, and potters, and another guild combining, at first, all the remaining handicrafts, which afterward developed into new, separate societies. Amongst these later guilds, frequently mentioned in inscriptions, we name the goldsmiths, bakers, purple-dyers, pig-dealers, sailors, ferry-men, physicians, etc. They had their separate inns (*curia, schola*), their statutes and rules of reception and expulsion of members, their collective and individual privileges, their laws of mutual protection and their widows' fund, not unlike the mediæval guilds. There was, however, no compulsion to join a guild. In consequence, there was much competition from freedmen—foreign, particularly Greek, workmen who settled in Rome, as also from the domestic slaves who supplied the wants of the large families—reasons enough to prevent the trades from acquiring much importance.

"They had, however, their time-honored customs, consisting of sacrifices and festive gatherings at their inns, on which occasions their banners (*vexilla*) and emblems were carried about the streets in procession. A wall-painting at Pompeii is most likely intended as an illustration of a carpenters' procession. A large wooden tray (*ferculum*) surmounted by a decorated baldachin is being carried on the shoulders of young workmen. On the tray stands a carpenter's bench in miniature, with two men at their work, the figure of Dædalus being seen in the foreground."

In reading this brief description, the principal details of which have already been given in our preceding pages, the reader can hardly fail to be struck with the far closer resemblance the usages of Freemasonry bear to those Roman colleges or guilds, than they do those of the Jewish workmen at the Temple, as we learn them from the very imperfect and unsatisfactory allusions contained in the Bible or in the *Antiquities* of Josephus. One can hardly fail to see that

¹ Hueffer's Translation from third German edition, New York, 1875, p. 519.

the derivation of Masonry from the former is a far more reasonable hypothesis than a derivation from the latter.

Though but indirectly and remotely connected with this subject, one fact may be mentioned that shows how much the spirit of the guild organization, itself the spirit of Freemasonry, had imbued the common life of the Romans.

The benefit societies of the present day, which are said to be and most probably are but coarse imitations of the Masonic Lodges, were not unknown to the ancient Romans. They had their burial-clubs, called *Collegia Tenuirom*, the literal meaning of which is Guilds of the Poor. They were, as their name imports, societies formed by the poorer classes, from whose funds, derived from annual contributions, the expenses of the burial of a member were defrayed and a certain sum was paid to the surviving family.¹

Having shown that there existed among the Romans guild-like associations of craftsmen, presenting a very close resemblance in their usages and purposes to the guilds or corporations of Stonemasons of the Middle Ages, who are admitted to have been the predecessors of the Speculative Freemasons of the 18th century and of the present day, the further connection of these two institutions can be identified only by tracing the progress of the Roman colleges from their rise in the reign of Numa, to their dissolution at the time of the decline and fall of the Empire, and their absorption into the architectural associations which sprang up in those parts of Europe which had once been Roman provinces.

The inquiry into this difficult but interesting topic must be the appropriate subject of the following chapter.

¹ Hueffer's Translation from third German edition, New York, 1875, p. 591.

CHAPTER III

GROWTH OF THE ROMAN COLLEGES

It has been shown in the preceding chapter that Numa, in his sagacious efforts to improve the civilization of the early Romans, and to reconcile the heterogeneous elements of which the population was composed had instituted colleges or guilds of mechanics.

I do not intend to complicate this question by any reference to the theory of Niebuhr and his disciples who have ignored the existence of any true history at that period, but who deem every theory connected with regal Rome as merely mythical and traditionary. I content myself with the fact that when Roman history began to present itself under the authentic form of records, the pre-existence of these guilds was fully recognized. It is sufficient for the present purpose to accept the generally received opinion, and while it is not denied that in primitive Rome such guild-formations prevailed, we may safely attribute their origin to some early reformer, who may be represented by the name of Numa as well as by any other.

In treating the subject of the rise and progress of these colleges or guilds, I shall pursue the course of Roman history as it has been generally received by scholars. As we advance to later times we shall find ourselves amply fortified by the contemporaneous authority of classical writers, and by numerous monuments and inscriptions. Except the mere question whether they were first established by Numa or by somebody else, in what Niebuhr would call prehistoric Rome—a question of but little or no importance in reference to their connection with the mediæval guilds—there is no statement concerning them that is not a part of authentic history.

It has therefore been proved that these colleges were guild-like in their organization; that they had all the legal rights of a corporation; that they elected their own members; that they were governed

by certain officers chosen by the votes of the society; that they were supported by monthly contributions; that they had a guild-chest or common fund, which was the property of the corporation; that they had a tutelary deity, in honor of whom they performed religious rites; that they had honorary members not belonging to the Craft, who, as patrons of the colleges, and being selected from the wealthiest and most influential families of the Republic or the Empire, protected their interests; and finally, that they had, like our modern corporations, laws, regulations, usages, and a jurisdiction which were all sanctioned by the authority of the state.

In tracing the progress of the Colleges of Artificers, through the reigns of the seven kings, the long period of the Republic and the rise and fall of the Empire, we need not dwell upon the age of Romulus. Though the narrative of his reign was accepted as authentic by Dionysius and Plutarch, by Livy and Cicero, the incredulity of modern scholars, stimulated by their researches, has led to the very general opinion that the first of the Roman kings was a mythical personage, and that his history was founded, as Niebuhr says, on a heroic lay. Yet even he admits that portions of the narrative are to be accepted as matters of fact. Made up as it has been of traditions, which were believed from the earliest periods, the reign and the character of Romulus may be considered as an exposition of that of the time in which he is supposed to have lived.

From these traditions we learn that he was, as the founder of an empire might well be supposed to be, a warlike king, who was engaged in constant contests with the inhabitants of neighboring and rival cities. Though claimed to have been a legislator of the highest order, who exercised his skill in the organization of a new state, the necessity of defending his territory from aggression and of increasing its limits, gave him but little opportunity or inclination to cultivate the arts of peace.

He is said to have created those religious institutions of the Romans, which were afterward developed into greater maturity by Numa and some of his successors. But he discouraged the cultivation of the arts, and interdicted the citizens from the practice of all mechanical and sedentary trades, which were left to foreigners and slaves, while the free Romans were confined to agricultural labors and warlike pursuits.

His successor, Numa, was, on the contrary, distinguished for his

pacific character. During his long reign of forty-three years, the state over which he ruled enjoyed an uninterrupted flow of peace. There were no domestic dissensions and no foreign wars. He was not only a king but a philosopher, and by an anachronism which Niebuhr attempts, but vainly, to explain, he was considered as a disciple of the sage Pythagoras. He established the religious institutes and pontifical regulations, whose cruder form had been attributed to Romulus; he built several temples, especially that of Janus; he reformed the calendar; instituted public markets and festivals; encouraged the pursuit of agriculture and the mechanic arts; and created the brotherhoods or corporations of the trades and handicraftsmen, which continued to exist through the whole history of the Roman state under the name which he had originally given them of Colleges of Artificers.

Tullus Hostilius was the successor and the contrast of Numa. He was a warlike monarch, and his reign was marked by a series of military successes. He was not, like his predecessor, of a religious turn of mind, and it was only in moments of trepidation, says Livy,¹ that he made vows to build temples or had recourse to expiatory sacrificial rites. Heineccius² thinks it probable that he abolished the craft associations which had been instituted by Numa, because they were calculated to divert the citizens from military pursuits and to deprive him of the services of active soldiers.

Ancus Martius, the fourth king, was the grandson of Numa. He revived the institutions of his grandfather and brought the Romans back from the warlike habits of the previous reign to a cultivation of the arts of peace. With this view he caused the sacred institutes of Numa to be written out by the Pontifex Maximus upon tablets and to be exhibited to the inspection of the public.³ Under his reign, the colleges must have revived from the oppression they had experienced under his predecessor.

The history of the next king, Tarquinius Priscus, if we are to judge from the legends upon which it is founded, afford no reason for believing that his reign was unfavorable to the craft associations. He is said to have been a patron of architecture and of a construc-

¹ "In re trepida," lib., i., 27.

² "De Collegiis et corporibus opificum."

³ Sir George Cornwall Lewis, "An Inquiry into the Credibility of the Early Roman History," ii., 465.

tive character. He is said to have adorned the Forum, to have formed the Circus Maximus, to have constructed the *Cloacæ* or sewers, to have laid the foundations of the temple of Jupiter Capitolinus, and to have built a stone wall around the city. All these labors would have required the aid of architects and builders, and we suppose that the corporations or colleges of these craftsmen were encouraged by a monarch so well disposed to the cultivation of the arts of construction.

Servius Tullius, the sixth king, has had the reputation of a reformer. He was the first to make a census of the people, and to distribute them into classes.

Florus says that he made the division in curiæ and colleges, and that things were so ordered that all distinctions of property, station, age, occupation, and office must have been well marked. In this reign the colleges and craftsmen took a recognized position among the classes of the community.

Tarquinius Superbus, the last of the race of Roman kings, whose name has been stained by the record of his tyranny, was the enemy of the people. His life was that of a despot. He surrounded himself with a body-guard to protect his person; he prohibited all assemblies of the people either in the country or in the city, so that no opportunity might be afforded them of consulting on the affairs of the state; he occupied them in forced labors for the construction of the sewers and the completion of the Circus; he repealed all the popular laws of his predecessor; abolished the equitable distribution into classes which had been made by the census; and suppressed the colleges and craft sodalities. As the natural and expected result of this oppressive course, the people rose to the assertion of their liberties. Tarquin and his family were perpetually banished, the monarchy ceased to exist, and the republic rose on its ruins.

For a time after the expulsion of the King the Patricians ruled over the Plebeians with a hand not always light. Dissensions sprang up between the oppressors and the oppressed, and the Colleges of Artificers became a subject of suspicion and dislike to the former class, because as these associations were wholly made up out of the latter, they were supposed to be the fomenters of discontent and bodies in which seditious factions would be nourished.

Nevertheless, one of the first acts of the Consular government was to re-establish the mild and beneficent laws of Servius Tullius,

and to permit the free assemblage of the people, whence resulted the restoration of the colleges.

The severity of a famine which occurred in the Year of the City 276, is attributed by Dionysius of Halicarnassus to the fact that the number of women, children, slaves, and handicraftsmen who were unproductive classes, was three times greater than that of the citizens who were engaged in agricultural pursuits.

Though history, such as it was at that time, is silent on the subject, yet it must be evident that the continual discords for many of the early years of the Republic, between the Patricians and the Plebeians, must have seriously affected the interests of the Colleges of Artificers and secured to them only intermittent periods of spasmodic activity.

But when the people had extorted from the Senate the Tribuneship by which they became a part of the governing power, and the right of holding offices of honor and of entering the priesthood, the colleges of handicraftsmen appear to have been more firmly established. The laws of the Twelve Tables, which were adopted in the Year of the City 302, confirmed their privileges, a decree which Gaius in his Commentary on these laws thinks was suggested by and copied from the decree of Solon in reference to similar associations among the Greeks.

In the Year of the City 687, the Senate had suppressed the colleges, but eight years afterward they were restored by the Tribune Publius Clodius.

From that time the Roman citizens began to pay much attention to the arts and to mechanics. But though the craftsmen were united in the Tribes and had the right of voting, they were not highly respected and were not permitted to serve in the army except on extraordinary occasions, such as domestic seditions.¹

Yet a great many new colleges were created, some by legal enactment and some by voluntary association. Such, for example, were the colleges of Ship Carpenters, of Smiths, and especially the *Collegia Structorum*, or Colleges of Builders, who were the same as the *Fabrii Cæmentarii*, or as it must be literally translated, the Stonemasons.

But these guilds or Colleges of Artificers were not confined to

¹ "Sigonio de ant. jur. civil. Rom."

the city of Rome. They spread into the provinces and the municipal cities, or those which had been invested with the right of Roman citizenship.

For a long time these corporations of workmen pursued a quiet and exemplary course, engaged in the lawful pursuit of the various trades and handicrafts.

But the number in time greatly increased; Clodius, the Tribune, in abrogating the decree of the Senate which had suppressed them, unfortunately had extended the privilege to slaves and foreigners of creating new colleges or of uniting with the old ones. Hence many of these sodalities gradually degenerated into factions and political clubs, and thus became dangerous to the state.

In addition to this fault, the classical writers speak in terms of denunciation of the sumptuous feasts in which many of the colleges indulged. They carried this species of dissipation to such an extent, that Varro complains that the extravagant banquets of the colleges had greatly enhanced the price of food at Rome.

These follies were of gradual growth. The colleges continued to exercise their functions during the existence of the Republic, and were found in a flourishing condition at the advent of the Empire.

It is not to be supposed that in a change of government from the simplicity of a democracy to the corruptions of a monarchy, based on a revolution, the faults of political intrigue and extravagant conduct would not increase rather than abate.

Hence we find the emperors generally opposed to the increase of these sodalities, and there are frequent decrees suspending or suppressing them. But it must be remarked that this opposition appears to have been directed rather against the creation of new corporations than to the suppression of the old ones.

To properly appreciate the true condition of the Roman Colleges of Workmen, we must advert to the fact that while there were a certain number of them which had existed from the earliest period, being the continuation of the primitive system which had been established by Numa, and which had, except at intermittent periods of suspicion, been tolerated and even patronized by the government, there were many others which had sprung up in later times, and which were formed by the voluntary association of individuals.

These bodies were for the most part the creation of political factions, whose revolutionary designs were sought to be concealed in

the exclusiveness of secret consultations, or sometimes of less worthy craftsmen who, not having been admitted into the fellowship of the old colleges, were willing to set up a rivalry in business.

Hence had arisen a distinction well recognized in the decrees of the Senate, or of the emperors, and constantly referred to in the various codes of Roman law.

This distinction was into lawful and unlawful colleges, or, to use the legal terms, into *Collegia licita* and *Collegia illicita*. The voluntary associations, to which allusion has just been made, were of the latter class. They were illicit or illegal colleges, and held a somewhat similar position to the old and lawful colleges that, in modern times, an unincorporated society does in its privileges and franchises to a corporation. The analogy goes so far at least as this, that the illicit colleges, like the unincorporated societies of the present day, had no recognition in law—in other words, possessed no rights which the law recognized. But, in another respect, the analogy fails. The illicit colleges were not only not recognized, but were actually discountenanced by the state, an interference to which our unincorporated associations are not subjected. If the law does not protect them, it does not persecute them. They are allowed, if guilty of no violation of the laws, to continue without let or hindrance.

But this was not the happy lot of the illegal colleges. They were repeatedly denounced and suppressed by the state, which looked upon them always as associations of a dangerous character.

It has been supposed that it was the policy of the Empire to destroy the corporations of craftsmen which had been originally instituted by Numa, and decrees and laws have been quoted to prove the statement. If such had been the case, we should meet with an insurmountable difficulty in tracing back the corporations of builders of the Middle Ages, to the Roman colleges. The total and permanent suppression at any time of these, would naturally destroy the links of that chain of continuity which is absolutely necessary to identify the one with the other in the progress of history.

But we can not find any evidence that the primitive colleges, and especially those of the builders, ever were suppressed. The decrees of the Senate and of the emperors were directed against the new, and not against the old, associations of craftsmen.

Thus Suetonius tells us that Julius Cæsar abolished "all colleges

except those which had been anciently constituted; "the same author informs us that Augustus "dissolved all colleges except the old and legitimate."¹

The same reservation is made in all references through the Digest of Justinian, to any decrees or enactments which affected these corporations. It is only *Collegia illicita* against which the penalties of law are to be enforced. "It is permitted to assemble for religious purposes," says the Digest, "provided that by this the decree of the senate prohibiting illicit colleges is not contravened." Ulpian says that "illicit colleges are forbidden under the same penalties as are adjudged to armed men who take possession of temples or public places."

There was a very wholesome dread, both in the times of the republic and under the emperors, of those illegal associations, voluntarily assembled, too often for the promotion of factions or the encouragement of political opinions which were dangerous to the state.

When the greater part of the city of Nicomedia had been destroyed by fire, Pliny,² who was then the governor of Bithynia, applied to Trajan for permission to organize for the purpose of rebuilding a College of Masons (*Collegium Fabrorum*), which should not consist of more than one hundred and fifty artisans, and in which he would take care, by the exclusion of every person who was not a Mason, that the purposes of the new college should not be diverted into an improper direction.

There is a good deal of suggestive history in this passage of Pliny's letter to the Emperor.

It indicates, in the first place, that it was not unusual to create new Colleges of Masons³ for special purposes, which purposes being accomplished, the colleges were dissolved. Pliny would hardly have asked permission to perform an act of such importance, if it had not been sanctioned by previous custom.

But this brings us very near to the similar custom of the Stone-

¹ "Cuncta Collegia prætor antiquitus constituta distraexit" and "Collegia prætor antiqua et legitima dissolvit" are the expressions of the Roman biographer.

² See the 42d and 43d Epistles for the correspondence on this subject between Pliny and the Emperor Trajan.

³ I cannot hesitate to translate the words "Collegium Fabrorum" into the English "College of Masons." The whole tenor of the classical writings and especially the inscriptions show that it was not usual to add to the generic word *faber* the distinctive one *marmorarius* to show that he was a worker in stone or in marble.

masons in the Middle Ages, who, we know, were accustomed to create their temporary or especial Lodges of workmen, when any building was to be undertaken. We see in this, if not a proof of the direct continuation of the mediaeval Masons from the Roman colleges (which Mr. Findel is unwilling to admit), at least a very exact imitation in an interesting point, by the former of the customs of the latter.

And in the next place, we learn from this epistle of Pliny that it was not unusual to admit into these colleges of workmen members who were not of the Craft, and that this was often done for an evil purpose.

On this fact, indeed, was based the objection of the state to illicit colleges. Voluntary associations were often formed which, assuming the name and pretending to practice the professions of the regular colleges, consisted really, in great part, of non-operatives who met together in secret to concoct political and insurrectionary schemes.

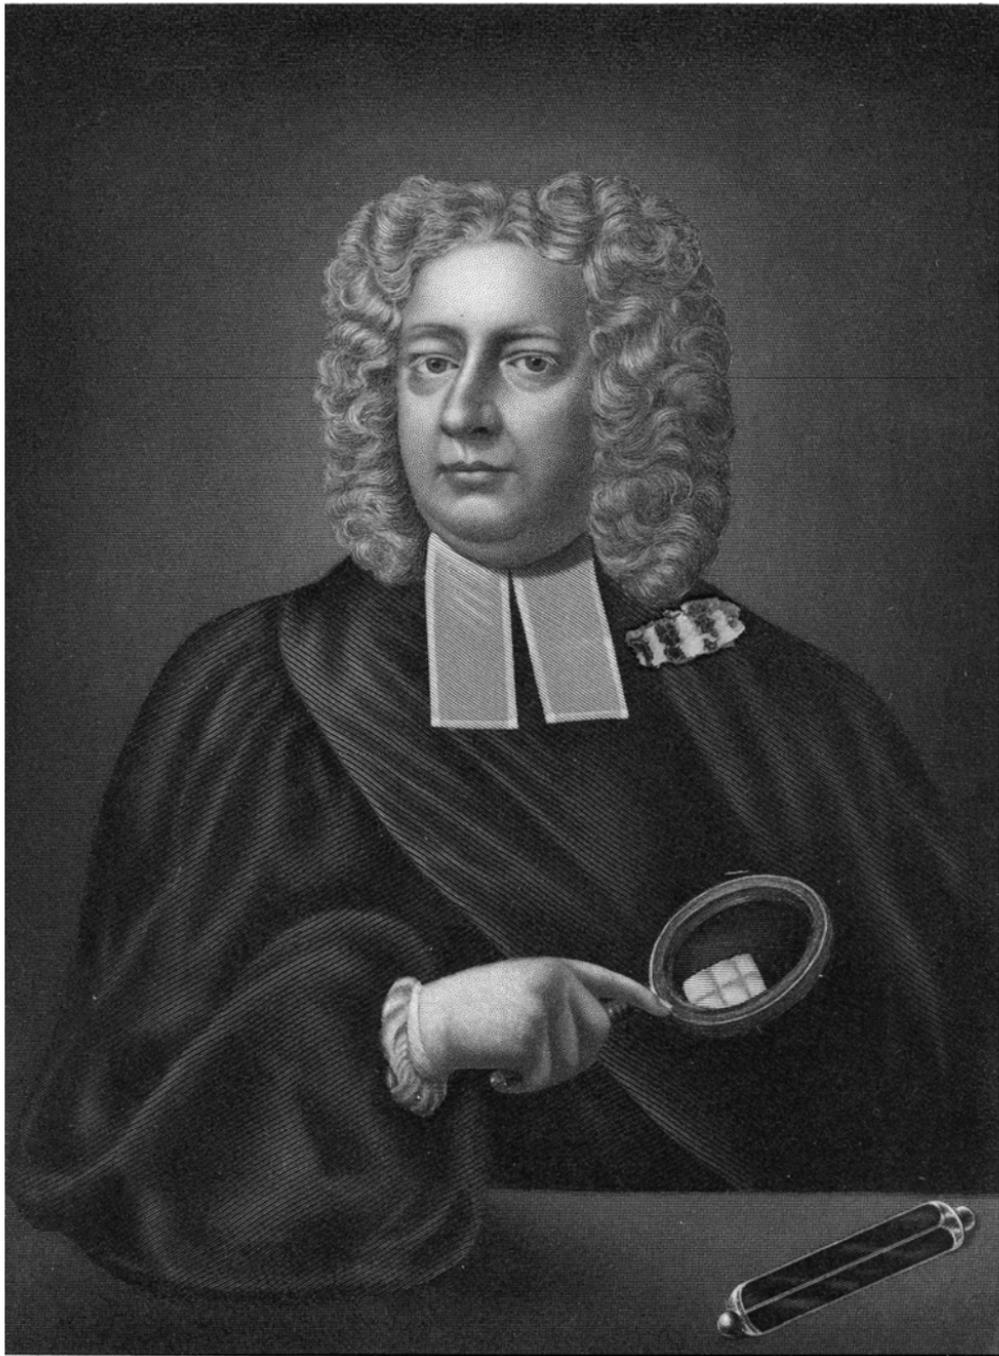

If the illicit colleges had confined themselves to a rivalry in work with the regular bodies, it is not likely that the state would have meddled with the contests between regular and irregular workmen, or, as in after times they were called, Freemasons and Cowans. Government does not at this day, in any country, interfere between constitutional and clandestine Lodges of Masons. It leaves, as it is probable that it would have done in Rome, the settlement of the controversy to the Masonic law.

But it was the admission of these non-operative members into the illicit colleges, who converted them from bodies of honest workmen into political clubs, that made all the evil and awoke the suspicions and the interference of the state.

Trajan consequently declines to permit the creation of a new and temporary college at Nicomedia, and he assigns the reason for his refusal in these words.

He says, in reply to Pliny: "You have suggested the establishment of a College of Masons (*Collegium Fabrorum*) at Nicomedia, after the example of many other cities. But we should not forget that this province, and especially its cities, have been greatly troubled by this kind of factions. Whatever name we may give to them for any cause, bodies of men, however small in number, who are drawn together by the same design, will become political clubs."

The last two words are in the original *hetæriæ*. This from the Greek, among which people *hetæriæ* or *hetairiai* were associations originally instituted for convivial purposes or for mutual relief, like our benefit societies. They became, in later times, very common in the Greek cities of the Roman Empire, but, as Mr. Kennedy says, "were looked on with suspicion by the emperors as leading to political combinations."¹

I think, therefore, that we may safely arrive at the conclusion that the primitive colleges of artisans, who derived their origin from the time of Numa, and to which we may trace the idea of the mediæval guilds of Masons, were generally undisturbed by the government, whether regal, republican, or imperial, and continued their existence and their activity to a very late period in the history of the empire. The persecutions, suppressions, and dissolutions of colleges of which we read, refer only to those illegal and irregular ones, which, not confining their operations within the legitimate limits of their craft, were voluntary associations made up, for the most part, of non-operative members, who were engaged in factious schemes against the powers of the state.

This point being settled, we may next direct our attention to the condition of these colleges, and especially the Colleges of Masons, or *Collegia Fabrorum* (for with them only are we concerned), in the empire and in., the provinces until the final overthrow of the Roman power.

The Romans, in the earlier portion of their history, were without any taste or refinement. The people were entirely military in their character, and they cultivated the rude arts of war rather than the polished ones of peace. Architecture, therefore, was in a debased condition. The principles of building extended only to the construction of a shelter from the weather. Their houses were of the rudest form, and, as their name imported, were merely coverings from the sun and rain. "These sheds of theirs," says Spence, "were more like the caves of wild beasts than the habitations of men; and rather flung together, as chance led them, than formed into regular streets and openings. Their walls were half mud; and their roofs pieces of boards stuck together."²

¹ Smith, "Dictionary of Greek and Roman Antiquities," article *Eranoi*.

² Spence, "Polymatis," Dialogue V., p. 36.

The builders of the college established by Numa could at that time have been occupied only in the most inglorious part of their profession. They were engaged in works of utility and absolute necessity, and could have had no knowledge of or inclination for ornament. The most bungling carpenter or bricklayer of the present time must have greatly surpassed them in skill.

During that period the colleges furnished no architects to the army. The only workmen that we find there were the smiths and the carpenters; they were soldiers who exercised with but little need of skill the mysteries of these trades, being employed in the renovation of weapons and in needful repairs about the camp. It was not until centuries afterward that workmen were supplied by the colleges and authorized by the state to accompany the legions in their campaigns and in their occupation of conquered provinces.¹

It was not until about the era of Augustus—that monarch who boasted that he had found Rome a city of brick and left it a city of marble—that the Romans began to exhibit a fondness for the fine arts, and especially for architecture. Marcellus, the conqueror of Syracuse, had, two centuries before, implanted the seeds of a refined taste in his countrymen, and invited the invectives of the ascetic Cato, by the works of Grecian art which he brought to Rome from the spoliation of the city which he had conquered. To him, therefore, has been attributed the introduction of the arts into Rome.

But it is to Augustus that architecture was indebted for the high position as an art that it assumed among the Romans, and from the period of his reign must we date the rise of the Colleges of Builders, as associations of architects, whose cultivated and encouraged genius produced its influence upon the conquered provinces into which they migrated with the Roman legions.

Pittacus says, in his *Lexicon of Roman Antiquities?* that those workmen who at first confined their labors to the city of Rome, afterward spread over the whole of Italy and then into the various provinces of the empire, furnishing everything that was needed by the army.

The government seems to have taken especial care of these

¹ Pittacus, "Lexicon Antiquitatum Romanorum," article *Fabri*.

² "Lexicon Antiquitatum Romanorum," article *Collegium*.

colleges, for besides the officers elected by the members themselves, the state placed over them other officers, whose duty it was to give them a general superintendence. In the provinces this duty was entrusted to the proconsul or government. Thus we have seen that Pliny, as governor of the province of Bithynia, proposed to create a College of Builders, over which he was to exercise a control such as would regulate it in the admission of its members. In the municipal cities this officer was called sometimes a Procurator, and sometimes a *Propositus*. In every legion the artisans were under the government of a Prefect, who was styled the *Præfectus Fabrum*, or Prefect of the Artisans. I am not willing to confound this officer with the Prefect of the Camp, who was, like our modern quartermaster, of a purely military character. There is an inscription copied by Reinesius, in which occur the words *Faber et Præf. Fabr. Leg., XX.*, i.e., Artificer and Prefect of the Artificers. This would seem to imply that the Prefect himself was sometimes, if not always, an artificer and "one of the Craft."

Under the officer appointed by the state, as the general superintendent of the artificers of the college, was a subordinate one, appointed also by the state or perhaps by himself, whose duty it was to inspect and to direct the labors of the workmen, and to see that everything was done in an artistic and workmanlike manner. He was, in fact, what in later times the Freemasons called the *Magister Operis*, or Master of the Work.

When, therefore, we meet in Gaul, in Britain, or in any other province which had been penetrated by the legions, with a monument of the labors of these Roman Masons, which some well-preserved inscription attests to have been the work of a *Collegium Fabrorum*, or College of Masons, we may suppose that it was accomplished in the following manner.

In the first place, the men, the materials, the site, the character of the building, and all other matters relating to the general design, were determined by the Proconsul, Procurator, Commander of the Legion, or whomsoever had been appointed by the state or the emperor as superintendent of the artificers and the colleges.

The workmen being then assembled, commenced their labors by congregating themselves, or being congregated, into a college, if such a college did not already exist, and they were placed under the immediate control and direction of a subordinate officer, who was

an artificer or an architect, and who regulated their labors, made designs or plans, and corrected the errors of the workmen.

In all this we see a great analogy to the method pursued by the operative Stonemasons of the Middle Ages.

First, there was a prelate, nobleman, or man of wealth and dignity, who had formed the design of building a cathedral, an abbey, or a castle. In the old English Constitutions this great personage is always referred to as "the Lord," and the work or building was called "the Lord's work."

Having congregated in huts or temporary dwellings around the site of the edifice they were about to erect, they formed a Lodge, which was under the control of a Master. And then there was the architect or Master of the Works, who was responsible for the faithful performance of the task.

The convenience of military operations, such as the establishment or removal of camps, and the passage of armies from one place to another, required that the legions should carry with them in their marches architects and competent workmen to accomplish these objects. Bergerius, who wrote a treatise *On the Public and Military Roads of the Roman Empire*,¹ estimates, with perhaps some extravagance, that the number of architects and workmen engaged in the Roman states in the repairs of roads, the construction of bridges and other works of a similar kind, exceeded those employed in the building of the Pyramids of Egypt and the Temple of Solomon.

Of these a great number were distributed among the legions; accompanied them in their marches; remained with them wherever they were stationed; created their colleges and proceeded to the erection of works, sometimes of a temporary and sometimes of a more permanent character.

Dr. Krause says, citing as his authority the *Corpus Juris* and the inscriptions, that in every legion there were corporations or colleges of workmen who were employed for building and other purposes needed in military operations.

Hence, in tracing the advance of the Roman legions into different colonies, we are also tracing the advance of the Roman architects and builders who accompanied them. And when the legion

¹De publicis et militaribus Imperii Romani Viis," contained in vol. x. of the "Thesaurus Antiq. Rom." of Grævius.

stopped in its progress and made any colony its temporary home, it exercised all the influence of a conquering army of civilized soldiers over a country of barbarians. Of all these influences of civilization the one that has been the most patent was that of the architects who substituted for the rude constructions which they found in the countries which had been invaded, the more refined principles of building. The monuments of the edifices erected in Spain, in Gaul, and in Britain have, for the most part, disappeared under the destructive agencies of time; but their memorials remain to us in ruins, in inscriptions, and in the history of the improved condition of architecture, among these barbarous and uncultivated peoples. It was, it is true, developed in subsequent times, and greatly modified by the instructions of Byzantine artists, but the first growth and outspring of the architecture practiced by the mediaeval guilds of Freemasons must be traced to the introduction of the art into the Roman provinces by the Colleges of Builders which accompanied the Roman legions in the stream of conquest which these victorious armies followed.

Having thus presented the details of the history of these Roman Colleges of Builders from their organization by Numa, through the successive eras of regal, of republican, and of imperial Rome; having shown their continued existence and eventually their spread into the municipal or free cities and into the conquered provinces, impressing everywhere the evidences of an influence on the art of building, it is proper that we should now pause to examine the memorials of their labors in the different provinces and colonies.

It is thus that we shall be enabled to establish the first link in that chain which connects the Freemasonry of the mediaeval and more recent periods of Europe with the building corporations of Rome.

CHAPTER IV

THE FIRST LINK: SETTLEMENT OF ROMAN COLLEGES OF ARTIFICERS IN THE PROVINCES OF THE EMPIRE

THE first link of the chain which connects the Roman Colleges of Artificers with the building corporations of the Middle Ages, is found in the dispersion and settlement of the former in the conquered colonies of Rome.

It has been satisfactorily shown that the Masons at Rome were incorporated into colleges, where the principles of their art were diligently studied and taught to younger members who stood for that purpose in the place occupied by the Apprentices in the Stonemasons' lodges at a long subsequent period. We have seen that an immunity from all public services was granted by the Emperor Constantine to workmen, and among others to architects for the express reason that they might have the opportunity of acquiring a knowledge of their professions and of imparting it to their disciples.

Now these architects, one of whom was always appointed to a legion with workmen from the colleges under him, carried the skill which they had been enabled to acquire at home, with them into the colonies or provinces which they visited, and there, if they remained long enough, which was usually the case, as the legions were for the most part stationed for long periods, they erected, besides the military defences constructed for the safety of the army, and the roads which they opened for its convenience, more permanent edifices, such as temples. Of this we have abundant evidence in the ruins which still remain of some of these structures, ruins so dilapidated as to supply us with only meagre and yet sufficient evidence of their former existence and even splendor, but more especially in the numerous inscriptions on stone or marble tablets, hundreds of which, in every province, have been collected by Gruter, Muratori, Reine-

sius and other writers who have devoted themselves to the study of Roman antiquities.

Thus we shall find in Spain, in Gaul, and in Britain abundant evidences, of the kind referred to, of these labors of the Roman architects, while these provinces were under Roman domination. It can not be denied that this must have exercised a certain influence on the original inhabitants and have introduced a more refined taste and a superior skill in the art of building. Nor was the influence thus exerted of an altogether ephemeral nature. When the Roman domination ceased, and the legions were withdrawn to sustain the feeble powers of a decaying empire, threatened by the barbarian hordes of the north with extinction, not all the Romans who had come with the legions, or since their advent immigrated into the country, left with them. A very long series of years had passed, and many of these architects and builders had been naturalized, as it were, and were unwilling to depart from the homes which they had made. They remained, and continued to perpetuate among the people with whom they were domiciliated the skill and the usages which they had originally brought from Rome.

M. Viollet-le-Duc says, in his *Dictionary of Architecture*,¹ that in the Middle Ages the workmen of the southern cities of Europe preserved the Roman traditions, and that in them the corporations or colleges did not cease to exist, but that these bodies were not established in the northern cities until the time of the enfranchisement of the communes.

Even if this were the fact, it would only be lengthening the chain of connection, for it is fair to suppose that the corporations of the north, at whatever later period they were established, must have adopted the system of confraternities from the southern cities where they had long existed as a part of the Roman tradition. So that even in this view the chain is uninterrupted which binds the corporations of builders of the Middle Ages with those of Rome.

But I think that it will hereafter be shown to be historically true that the traditions and the usages of the Roman colleges were well preserved in the early period of English architecture, and that out of these traditions sprang, in part, the regulations of the Saxon

¹ "Dictionnaire Raisoné de l'Architecture de XI^me au XVI^me siècle," tome vi., p. 346

guilds. But this is a question for future consideration when we come to the investigation of the post-Roman architecture of Gaul and England.

The evidences of the influence of the Roman colleges on the province of Spain are very abundant, arising from the peculiar relations of that province to the Empire.

Upon the expulsion of the Carthaginians from Spain, which occurred 206 B.C., it was erected into a Roman province, at least so much as had been conquered by the Romans under the Scipios, which did not include more than half of the peninsular. Thenceforward it was governed sometimes by one prætor and sometimes by two, and two legions were always kept stationary in the province.

The influence of this political arrangement was of the most important character. The soldiers intermarried with the native women, and thus became so estranged from Italy that when the legions were disbanded, many of them refused to return home, and continued their residence in Spain.¹

A little more than a century after its conquest, such a system of internal communication had been established by the opening of roads, and especially the military one of Pompey over the Pyrenees, that the country was laid open to travelers, many of whom settled there. In the time of Strabo, a portion of the province had been so Romanized in manners as to have become almost Roman. The great privilege of citizenship had been granted to many of the inhabitants, and they had even forgotten their native language.

Spain, thus becoming more intimately connected with the Empire than any of the other provinces, furnished, as it is well known, some distinguished names to Latin literature, such as Lucanus, the poet, the older and the younger Seneca, Columelle, Quintilian, and the epigrammatist, Martial.

In the reign of Augustus many considerable colonies were founded, represented by the modern cities of Zaragossa, Merida, Badajoz, and many others. In these cities the art of building flourished, and they were adorned with some of the finest productions of Roman architecture, of many of which the magnificent ruins still remain, while temples, theaters, baths, circuses, and other public edifices, which had been erected by the Roman masons, have perished through the

¹ Niebuhr, "Lectures on Roman History," ii., p. 208.

waste of time and the destructive influences of invasions and intestine wars.

It is well known that while Spain was, from the earliest times, an object of the grasping ambition of foreign peoples, and that it was in turns invaded and conquered by the Phœnicians, the Greeks, the Romans, the Goths, and the Arabs, all of whom were attracted by the delights of the climate, the fertility of the soil, and the richness of the mines, the Romans, from the longer duration of their domination and from the more solid character of the edifices which they constructed, have left a greater number of architectural monuments, and these in a greater state of preservation, than the other nations who preceded or followed them.¹

But the invasion of the Goths, after the departure of the Romans, and the subsequent more permanent occupation of the peninsula by the Saracenic Arabs or Moors, so completely withdrew the architects of Spain from all communication with those of the rest of Europe, and so completely obliterated all effects of the earlier Roman influence, that it is impossible to trace a continued and uninterrupted connection between the Roman Colleges of Masons, who left behind such wonderful evidences of their skill, and the mediæval guilds or corporations of the Middle Ages, who in other countries were their successors.

It is a curious historical fact that while of all the Roman provinces Spain was the one in which the Roman domination was most firmly established, it was also the one in which, after the decay of the Empire, all the results of that domination were the most thoroughly obliterated.

Spain has, therefore, been alluded to on the present occasion not with any intention of making it a part of that train of succession which, beginning with the colleges of Numa, ended in the mediæval guilds of Stonemasons, but because it furnishes a very complete instance of how these Roman Colleges of Artificers extended their labors and introduced their art into foreign countries.

In the three other provinces of the western empire, the two Gauls and Britain, the connection of the Roman colleges with the guilds or corporations which subsequently sprang up may be more readily traced.

¹ Don Caen-Bermudez, "Sumario de las Antigüedades Romanas que hay in España," Madrid, 1852, p. 2.

Cisalpine or Citerior Gaul was the name given by the classical writers to that part of Gallia which was south of the alpine mountains, and which constituted what is more familiarly known as northern Italy. Deriving its first settlement, if we may trust to the authority of Livy, which, however, Niebuhr rejects, by an immigration of the Gauls beyond the mountains, in the time of Tarquinius Priscus, these people were for centuries engaged in struggles with the Romans, whose attempts to subdue them were always unsuccessful. When Hannibal, the Carthaginian general, invaded Italy and sought the destruction of Rome and the Roman power, many of them willingly became his allies. But about two hundred years before the Christian era, the two most important tribes, the Insubrians and the Boians, were subdued by the Roman legions under the Consuls C. Cornelius Cethegus and Q. Minucius Rufus, and from that time to the reign of Augustus, Cisalpine Gaul came slowly but surely under the Roman domination. When it was established as a Roman province, it was rapidly filled with a Roman population, and became one of the most valuable of the Roman possessions. Most of the towns received that political status known as the *Jus Latii*, or the *Latinitas*, by which they were placed in a middle position between strangers and the Roman citizens, and the pure right of citizenship was bestowed on their magistrates, which was, in the time of Cæsar, extended to all the inhabitants, the larger towns being made municipalities.

Fifty years before Christ all Cisalpine Gaul had been invested with the right of citizenship, and consisted of Roman communities organized after the Roman fashion. This would necessarily indicate the introduction among the people of Roman civilization and refinement. Among the arts that were encouraged, that of architecture was not the least, and we have ample evidence in still remaining monuments and in inscriptions that the Roman architects or members of the colleges were industriously employed in the labors of their Craft.

The proofs of this are to be found in the modern cities of northern Italy, which are the successors of the Cisalpine colonies, and which have preserved in their museums or in private collections the memorials and relics of their ancient prosperity and refinement.

Thus Mutina, now the modern Modena, was one of the most

flourishing of the Lombard towns. Cicero did not hesitate to call it "the strongest and most splendid colony of the Roman people." It was so wealthy as to have been able to support for a long time the large army of Brutus. It fell at length into decay, but was never abandoned, and again rose to prosperity in the Middle Ages under the name of Modena, by which it is still known. Although the magnificent architectural remains of the ancient city were employed in the construction of the cathedral and other public buildings of the modern one, or were buried under the depositions of alluvial soil, yet the Museum of Modena contains a valuable collection of sarcophagi and of inscriptions which have been excavated at various times and which furnish the evidence of the existence and the labors of the Roman architects and builders under the empire.

There was another town of Cisalpine Gaul, called Aquileia, which was built by the Romans to defend the fertile plains of Italy on the northeast from the incursions of barbarians. Two centuries before Christ it was settled by several thousand colonists from Rome and became a place of great commercial prosperity. In the 5th century it was plundered and burnt by Attila, King of the Huns; but though it never again became a place of importance, it was always inhabited, and in the 6th century was the See of a bishop, and, to borrow the language of Mr. Bunbury,¹ "It maintained a sickly existence throughout the Middle Ages." At the present day it is an obscure village, with only a cathedral. Although it contains no vestiges of Roman edifices, the site, says the same writer, "abounds with remains of antiquity, coins, engraved stones, and other minor objects as well as shafts and capitals of columns, fragments of frieze, etc., the splendour and beauty of which sufficiently attest the magnificence of the ancient city." Among the inscriptions found there are some which relate to the temple and the worship of Belenus, a local sun-god whom the Romans identified with Apollo. All the works of which we have these memorials must have been effected by the Roman architects, who, with their colleges, were surely among the six or seven thousand who emigrated from Rome and built up the city.

Bononia, or the modern Bologna, was built, it is supposed, by the Tuscans, and was raised to the rank of a Roman colony about

¹ Smith's "Dictionary of Greek and Roman Geography."

two centuries before Christ. It continued to be an important and flourishing city under the empire. Though it suffered decay, it was able, in the 5th century, to withstand successfully the attacks of Alaric. It never lost the continuity of its existence, but after the fall of the empire regained, in a great measure, its prosperity, and at length assumed, in the Middle Ages, a pre-eminence among the cities of northern Italy which it still retains. It is not probable that it had soon lost its traditions of those arts which it practiced when a Roman colony, and which are attested by fragments of sculpture and traditions which have been preserved.

The modern city of Ivrea, which is an important place, was the ancient Eporedia, a Roman colony founded about one hundred years before Christ. The strength of its position, as commanding two important passes of the Alps, gave it great military value, and it does not, therefore, appear to have been subjected to any great process of decay. As late as the close of the 4th century it was a considerable town and occupied, as a military station, by a portion of a legion. The modern city still contains a fine Roman sarcophagus and some other remains of its ancient splendor.

But the most interesting of all the cities of Cisalpine Gaul, in a reference to the connection of the Roman colleges, which labored in them, with the sodalities of the Middle Ages which succeeded them, is Comum, an important city at the foot of the Alps and on the borders of the Lake of Como. The present name of the city is Como. It is supposed to have been the birthplace of both the elder and the younger Pliny, the latter of whom made it his favorite residence, and established in it a school of learning. It was under the empire a flourishing municipality, and its prosperity was secured by the beauty and convenience of its position at the extremity of the lake, for it became the point of embarkation for travelers who were proceeding to cross the Rhætian Alps. It retained its prosperity to the close of the Roman Empire. In the 4th century a fleet was stationed there for the protection of the lake. Cassiodorus speaks of it in the 6th century as one of the military bulwarks of Italy, and extols the richness of the palaces with which the shores of the lake in its vicinity were adorned. It continued to retain its importance in the Middle Ages, and it is from there that the "Masters of Como," the Traveling Freemasons, proceeded to traverse Europe in the 10th century, and to erect cathedrals, monasteries, and palaces in

the various countries which they visited. But this body, whose acts form the most valuable portion of the historical testimony of the connection between the Roman Colleges of Artificers and the corporations of Freemasons in the Middle Ages, will be hereafter discussed and described in a more extended manner. For the present, this simple allusion to them must suffice.

We next come to the consideration of the architectural condition of Transalpine Gaul, or Gaul proper, under the Roman domination. This subject may be briefly discussed, as the early condition of Roman architecture in Gaul will be more diffusely treated in a subsequent chapter.

The name of Transalpine Gaul was given by the Romans to that country which extended from the Pyrenean mountains to the river Rhine, within which limits modern France is embraced. It was first conquered by the Roman arms under Julius Cæsar, and remained a province of the empire until its final decline. The Gauls are represented to have been a ferocious and sanguinary people, though at the time of the conquest Cæsar found an improvement in the manners of some of the tribes. But their progress toward civilization and refinement was rapid after they came under the dominion of the Romans. Cæsar had formed a legion of Gaulish soldiers whom he armed and drilled after the Roman fashion, and subsequently when he had arrived at the Dictatorship he made them Roman citizens, and sent Roman colonies to several of the cities.

Under the Emperor Augustus, Gaul became rapidly Romanized. Schools were established in the large towns, and the Latin language and the Roman law were adopted. In religion there was a compromise and there was a mixture of Gallic and Roman worship, though wherever the Romans made a permanent settlement, temples were erected to the Roman deities.

Architectural works were pursued with great energy but with little prudence. Temples and other public buildings, together with bridges, roads, and aqueducts, were erected over all the country. These must have cost immense sums, and as the expenditure was wholly defrayed by the inhabitants without aid from the mother-government, great distress began to prevail among the people, which led to several mutinies.

But though the embellishments of the Roman architects had impoverished the colonists, the influences of refinement in art con-

tinued long after these troubles to prevail, and in Gaul we find an almost uninterrupted connection between the architecture of the Roman colleges and that of the mediæval Freemasons.

That part of Gaul which lay along the shore of the Mediterranean Sea, and which the Romans emphatically called the Province (Provincia), had been civilized and Romanized long before the conquest of the other parts of the country. It was in the towns of this province that the most extensive operations in architecture were exhibited. It must be remarked, however, that all over Gaul outside of the Provincia, as well as within it, there are ample evidences of the splendid style of architecture that was cultivated by the architects who accompanied the legions, or the colonists who went from Rome to settle in Gaulish towns.

Bætterræ, now Beziers, received a colony of soldiers of the seventh legion, who constructed a causeway, of which some traces still exist. There are also the vestiges of an amphitheater and the remains of an aqueduct.

Arelate, now known as Aries, was a city of the Provincia. The Roman remains are very numerous there; among them an obelisk of Egyptian granite which was excavated some centuries ago, and in 1675 was set up in one of the public squares. The amphitheater was estimated as capable of holding twenty thousand persons. There is also an old cemetery which contains many ancient tombs, both Pagan and Christian.

Nemausus, the modern Nîmes, which was also a city of the Provincia, contains many remains of the skill of the old Roman architects and the splendor of their works. The amphitheater, not quite as large as that of Aries, is in a good state of preservation. There is also a temple still existing which, as Arthur Young says, in his *Travels in France*, is beyond comparison the most light, elegant, and pleasing building that he ever beheld. Under the modern name of "Maison Carrée" it is now used as a museum of painting and antiquities.

But the noblest monument that the Romans have left in Gaul is the aqueduct now called the *Pont du Gard*, which is between three and four leagues from Nîmes. The bridge on which the aqueduct is laid is still solid and strong, and is, says Mr. George Long, "a magnificent monument of the grandeur of Roman conceptions, and of the boldness of their execution."

It is useless to extend these descriptions farther. All over Gaul were cities colonized by the Romans, who imparted to the native inhabitants a portion of their skill, their taste, and their refinement. Temples, amphitheatres, theatres, aqueducts, and public and private buildings of every kind are to be found in all the large and many of the small cities of modern France, which, sometimes well preserved and sometimes in ruins, always indicate that the spirit of architectural enterprise was imparted to the people under the Roman government and by Roman architects and builders. How well that spirit was preserved and how it became afterward developed in the Freemasonry of the Middle Ages will remain to be elucidated in our further historical researches.

Britain was twice invaded by Cæsar, but on neither occasion did he stay long enough in the island to effect any influence on the inhabitants. Augustus afterward planned an expedition to Britain, but the plan was never consummated. It was not until the time of Claudius that any serious attempt at conquest was made. Under his orders an army was led by Aulus Plautus into the southeastern part of the island. The city of Camalodunum, now Maiden, was taken. Claudius, who had visited Britain to partake of the triumphs of the victory, returned to Rome and assumed the surname of Britannicus in attestation of his success, leaving his general, Plautus, to complete the conquest, which, however, he did not accomplish.

Vespasian soon after subdued the Isle of Wight and took twenty of the *oppida* or British towns. His son Titus also distinguished himself in many battles with the native tribes.

But though the island was at this time penetrated to some extent by the Roman legions, and the southern coasts were occupied by them, the island was not yet conquered. The struggle between the independent spirit of the natives and the ambitious designs of their Roman invaders lasted for nearly half a century, and the subjection of the whole island was not achieved until the reign of Domitian. Thereafter Britain took the form and felt all the influences of a Roman province, but unlike Spain and Gaul, a discontented one.

It is hardly germane to the objects of the present work to trace, with any particularity of detail, the progress of the Roman power under the various emperors who governed the island from the date

of its conquest to the final withdrawal of the Roman armies in the beginning of the 5th century.

It is sufficient to say that during the period of time intervening between these two epochs, Britain had become completely Romanized. Colonies were founded, cities possessing the right of Roman citizenship were established, legions were distributed in various places, veteran soldiers and immigrants from the imperial city had made permanent settlements, so that, as Gildas says, it was to be viewed not as a British but as a Roman island.

"Britain," says Sharon Turner, "was not now in the state in which the Romans had found it. Its towns were no longer barricaded forests, nor its houses wood cabins covered with straw, nor its inhabitants naked savages with painted bodies or clothed with skins. It had been, for above three centuries, the seat of Roman civilization and luxury. Roman emperors had been born and others had reigned in it. The natives had been ambitious to obtain and hence had not only built houses, temples, courts, and market-places in their towns, but had adorned them with porticoes, galleries, baths, and saloons, and with mosaic pavements, and emulated every Roman improvement. They had distinguished themselves as legal advocates and orators and for their study of the Roman poets. Their cities had been made images of Rome itself, and the natives had become Romans."¹

It can not be doubted that the skill and experience of the Roman architects who accompanied the legions or who came from Rome to Britain after its conquest had been imparted to the native Britons, and that the chain of connection between the Roman colleges and the local Colleges of Artificers in the island was well established. Of this, numerous inscriptions and the remains of Roman buildings, found everywhere in modern England, furnish ample evidence.

In Dorchester, which was the Roman Durnovaria, besides the remains of the old Roman ruins and several camps, those of what was probably an amphitheater attest its former importance and the labors of the Roman builders.

In Dover, the ancient Dubris, there is now an octagon tower attached to a church, and which is almost built of Roman bricks. It is supposed to have been a light-house in the time of the Romans.

¹ "History of the Anglo-Saxons," vol. i., p. 136.

London, or Londinium, was a very old city, and was the capital of ancient Britain as it now is of modern England. Though not invested by the Romans with the rights of a municipality, it was always, as Tacitus says, from the abundance of its trade, a place of great importance. The remains of Roman monuments which have been found in London show that it contained many splendid buildings. When the foundations of an old wall which bordered the river were laid open, several years ago, it was found to be composed of materials that had been previously used in the construction of ancient buildings.

"The stones of which this wall was constructed," says Mr. Charles Roach Smith,¹ "were portions of columns, friezes, cornices, and also foundation-stones. From their magnitude, character, and number, they gave an important and interesting insight into the obscure history of Roman London, in showing the architectural changes that had taken place in it." Architectural fragments, and the remains of tessellated pavements in great number have been discovered, which attest the magnificence of the Roman city, and traces of temples have also been found.

It has been said that London was the station of a cohort of native Britons, which was contrary to the usage of the Roman Emperors, who never stationed auxiliaries in their native countries, but we know that a colony of veterans had been established at Camalodunum or Maiden not far off, and there are inscriptions which attest the presence, at various times, of the soldiers of the second, sixth, and twentieth legions in the city. It is easy, therefore, to trace, as we must, the construction of these magnificent works to Roman architects, supplied by the legions or the colonies.

Eboracum, or York, is familiar to the Masonic scholar from the important part that it plays in the traditional history of English Freemasonry. It was a town of much importance in the times of the Romans, and seems to have been a favorite place of residence. It was the permanent station of the sixth or victorious legion. The Emperors Severus and Constantius died there, and it is said to have been the birthplace of Constantine the Great. Among the memorials of the Roman domination which have been found at York are numerous remains of temples, baths, altars, votive tablets, and even

¹ Dr. William Smith's "Dictionary of Greek and Roman Geography."

private residences. Of the many inscriptions that have been preserved, one dedicated to the Egyptian god Serapis, and a tablet or slab containing the carved figure of a man with a cap and chlamys, or short mantle, who is stabbing a bull, indicate the introduction by the Romans of the worship of a foreign god as well as the cultivation of the mystical rites of Mithras.

In the beginning of the 5th century, the Roman Empire being imminently threatened with downfall, the legions and the Roman authority, which had ruled and protected Britain for so long a period, were withdrawn. The people were left to defend themselves from the incursions of the Danes and other barbarous invaders from the opposite shores of the Continent. Many changes took place in the laws, the language, and the habits of the island. In time, after many wars, Britain became Anglo-Saxon England.

But, as on the retirement of the Romans, many voluntarily remained, because they had become habituated to the country and, in numerous cases, had been connected by intermarriages with the natives, Britain did not altogether lose the influence of the seed that had been sown. Especially in the art of building, although there was a deterioration, all the effects of the Roman civilization were not lost. And it will not, I think, be difficult to trace the development of the system of trade guilds which afterward existed among the Anglo-Saxons and the English to the suggestions of the similar guilds of the Roman colleges. But the consideration of this question must be postponed to a future chapter.

What has been here attempted has been to show that the Roman colleges, sending their architects to the colonies and cities established in the conquered provinces of the Roman Empire, had secured, in an uninterrupted succession, not only the principles of architecture but the co-operative and well-regulated system of work which, beginning at the earliest period of Roman history in the Colleges of Artificers, was to be carried throughout its acquired dominions by its legions and its colonists, and finally to be developed in a modern form in the corporations of operative Masons of the Middle Ages, and finally in the lodges of Speculative Masons of the present day.

So far the first and second links of this chain of connection have been shown; we here close the history with the fall of the Roman dominion over the provinces at the beginning of the 5th century.

As we proceed in our investigations our inquiries must bring us successively to the condition of architecture and its gradual growth into new systems and various styles in all the countries which were once under the Roman dominion.

We shall, I believe, find the principles of architecture changing from the influences of different causes exerted at different times. Architecture will be constantly changing its features. The Roman, the Byzantine, the Gothic, and other styles will succeed and displace each other, but the system of co-operative or guild labor, which is the true connecting chain between the ancient and the modern methods of building, will always prevail and show, in every successive age, the unweakened influence of the old Roman guild or college.

CHAPTER V

EARLY MASONRY IN FRANCE

WITH the condition of Masonry in Gaul, which afterward became France, immediately subsequent to the decadence of the Roman Empire, and afterward up to the Middle Ages, we are by no means as familiar as we are with its condition during the same period in Germany and in Britain. French Masonic writers have been too speculative in their views, and have given too loose a rein to their imaginations, to permit us to attach any value to the authenticity of what they present as historical statements.

This is a fault, which it is but fair to say has been shared by the English writers of what has been called Masonic history. Clavel and Thory are hardly to be considered more reliable as historians than Anderson and Oliver. In the works of each of these distinguished writers we find many statements which are hardly plausible, and which, although offered as historical facts, are wholly unsupported by any authentic authority.

But recently in England a new school of Masonic history has sprung up, which is rapidly clearing away the cobwebs of absurdity and inconsistency, of doubt and error which had been woven around the pure form of history by the older writers of the last and the beginning of the present century.

In France, no such school has been established. In that country there have been no Hughans, Woodfords, or Lyons to exhume from their sepulcher, on the shelves of national or private libraries, the old charters and capitularies which might throw some light on the real condition of the Masonic sodalities which were left behind in Gaul on the retreat of the Roman legions, and which were afterward developed, by a gradual but uninterrupted growth, into the building corporations of the Middle Ages.

If the scholars of France supply us with no valuable assistance

in our inquiries on this subject, we shall look in vain for aid from English or German writers.

These have, in general, thought it a task sufficiently arduous to seek the elucidation of the Masonic history of their own countries, and have not, therefore, found either time or inclination to labor, to any great extent, in other fields.

Even Findal, who is somewhat exhaustive in his account of the early and mediæval Masonry of Britain, and more especially of Germany, passes over that of France without notice. Indeed, he begins his chapter on French Masonry with the year 1725 as his starting-point, and thus entirely ignores all the events that preceded the organization of the modern lodges in Paris after the revival, as it is called, which took place in London in the year 1717.

Hence his history is not really that of Masonry in France, but only that of the French Grand Lodge.

From Kloss, another German writer of eminence, we derive no better information. He wrote in two volumes a *History of Freemasonry in France, Drawn from Authentic Documents*, but his theory is that the Institution was introduced into France from England, and he goes, like Findal, no farther back than to the organization of a French lodge in 1725, under the auspices of the Grand Lodge of England.

It will be seen, when we come to the consideration of the origin of the Grand Lodge of Speculative Masons in France, that there is great question of the correctness of this date, for the researches of Bro. Hughan have led to the doubt whether there was a legal lodge in France, deriving its authority from the English Grand Lodge before the year 1732. This, however, is not germane to the present inquiry.

It is altogether in vain that we look in the pages of French Masonic writers, such as Thory and Clavel, for any documentary history of French Freemasonry anterior to the beginning of the 18th century.

Thory, in his *Acta Latomorum*, commences his annals, so far as they relate to France, with the year 1725, and the establishment of a lodge in Paris by the titular Earl of Derwentwater. Not a single word does he say of the condition of the association, either as Operative or Speculative, previous to that date.

Clavel, in his *Histoire Picturesque*, gives a very loose and indefi-

nite account of the origin of Freemasonry in France. He traces it, and in so far he is correct, to the Roman Colleges of Artificers through the architects of Lombardy, and passes very rapidly on to the connection of the French operative Masons with the building corporations of Germany and the Grand Lodge of Strasburg. But he does not attempt to show how that connection was effected. There is no objection to the theory which he propounds. His principal fault, as an historian, lies in his extreme generalization and in the meagerness of his details. Taking as his point of departure the Roman colleges, he leaps almost at a bound from them to the mediaeval corporations. He devotes no attention to the period which immediately succeeded the fall of the empire, nor to the influences exerted on, or the methods pursued by, the Roman and Gallic Masons who were left in Gaul on the departure of the legions, and which led to the gradual development of the guilds, sodalities, or lodges which sprang up in time as the successors of the Roman colleges.

But another failing of Clavel as an historian, and one which produces the most unsatisfactory results upon the minds of his readers. is that he produces no documents, does not even refer to any, and cites no authority to corroborate any of the statements that he makes.

Even in a writer of acknowledged care and attention to the credibility and genuineness of the facts that he records, such a method of treating an historical narrative would be objectionable. But what little claim Clavel's unsupported assertions have to our respect, and how far they are from necessarily demanding our belief, may be learned from the fact that he cites as an undoubted instance of the existence of a Masonic lodge in the year 1512, what is now known to have been merely a convivial society of literary men who met at Florence in that year under the title of the "Society of the Trowel."¹

¹It counted some of the most distinguished inhabitants of Florence among its members. Its symbols were the trowel, the square, the hammer, and the level, and its patron saint was St. Andrew. Vasari describes it as a festive association of Florentine artists, who met annually to dine together. He describes the origin of its existence and its title to the merely accidental circumstance that certain painters and sculptors, dining together in a garden, observed in the vicinity of their table a mass of mortar in which a trowel was sticking. Some rough practical jokes passed thereupon, such as casting portions of the mortar on each other and the calling for the trowel to scrape it off. They then re-

The allusion to an implement of operative masonry in the title of the society, led Clavel, as it has done Reghellini, Lenning, and some others, to believe that it was a Masonic organization. But a reference to the authority of Vasari, in his *Lives of the Painters*, would have shown that the apparently professional title was actually selected by a mere accident and in reference to a jocular proceeding which suggested the name.

There is hardly any necessity to refer to the writings of the Chevalier Ramsay, as throwing any light on the early history of Masonry in France. His theory is that Freemasonry originated among the Crusaders and was introduced into France by the Templars, who brought it with them on their return from Palestine. This hypothesis is now generally, perhaps I should say universally, admitted to be untenable. It comprises a history, or the figment of a history, not founded on facts nor supported by any documentary evidence, but one that was simply invented to sustain a preconceived theory. The theory was first invented and then the history was written. Hence it has been rejected by all scholars and has fallen into utter extinction together with the system of Strict Observance that was founded in it. In this work, which seeks to trace Freemasonry back to the Colleges of Artificers of Rome, it can of course have no place.

Rebold is a pleasing exception to the rest of his countrymen who have treated or attempted to treat this subject, though it is to be regretted that he has not thought proper to corroborate his statements by a reference to authorities, or by what would have been most valuable, the citation of any old records or constitutions. On the whole, however, he is more satisfactory than any other writer of early French Masonic history, and gives a fuller account of the institution as it existed when Gaul emerged from the dominion of Rome.

His history,¹ briefly analyzed, is to the following effect. He says that Masonry was introduced into Gaul by the Roman confraternities of builders, one of which was attached to each legion of the army. He describes the vicissitudes to which these architects were

solved to dine together annually, and as a memorial of the ludicrous event that had led to their organization as a dinner-club they called themselves the *Società della Cuechiara*, or the *Society of the Trowel*.

¹ "Histoire des Trois Grandes Loges de Franc-maçons en France," Paris, 1864.

subjected during the repeated conflicts of the Romans with the hordes of barbarians, whose alternate defeats and successes were followed by the destruction or the renewal of the labors of the Masons. At length, in the year 426, the victorious arms of Clovis, King of the Franks, put an end to the Roman domination, and the armies of the empire left, forever, the soil of Gaul.

But the confraternities of builders, which had come into the country with the Roman legions, remained there after their departure. They, however, underwent material alterations in their organization, and developed a new system, which Rebold thinks became the basis of that Freemasonry which existed for a long time afterward in France.

Moller, in his *Memorials of German Gothic Architecture*,¹ when referring to the fact that the Roman architecture of the 5th and 6th centuries prevailed at a much later period in Italy, Spain, Gaul, and Britain, explains the circumstance as follows:

"The conquerors did not exterminate the old inhabitants, but left to them exclusively, at least in the first periods of their invasion, the practice of those arts of peace, upon which the rude warrior looked with contempt. And even at a later time, the intimate connection with Rome, which the clergy, then the only civilized part of the nation, entertained, and the unceasing and generally continued use of the Latin language in the divine service, gave considerable influence to Roman arts and sciences. This must have been so much more the case, from the constant obligation of all freemen to devote themselves to war; whereby the practice of the arts was left almost exclusively to the clergy."

The corporations of builders which had been attached, some to the legions and some to the governors of the provinces, under whose orders they had constructed many great edifices, then began to admit into their bosom a large number of native Gauls who had been converted to Christianity.

The most important modification, however, to which they were compelled to submit, was this, that being originally a general association of artisans, whose central sect and school of instruction was at Rome, they were obliged to abandon this relation on the retreat of the Roman armies from Gaul, and the severance of all

¹ Translation by W. H. Leeds, London, 1836, p. 17.

political connection between the province and the imperial government.

The builders, as well as the other craftsmen, then divided themselves into a variety of sodalities, each being occupied with the cultivation of a different art or trade.

It is here that Rebold should have cited some authority for his statement of a fact that is contrary to what has always been supposed to be the true character of the Roman colleges. The division into different trades, which he supposes to have been a forced necessity in Gaul, was in existence if history be correct, from the first organization of the colleges by Numa, when they were ten in number, which was subsequently increased to a large extent under the empire.

These sodalities of different trades, he says, subsequently gave rise to the corporations or guilds of the Middle Ages.

Of these sodalities, that of the builders, or Masons, being the most important, and the one most needed in the countries where they were left after the departure of the Romans, especially in Gaul and Britain, were alone enabled to retain the ancient organization and the ancient privileges which they had possessed under the domination of the Romans.

But amid the continued invasions of barbarians, and the wars and political disturbances that followed, the confraternities of builders were at last everywhere without occupation. The arts and architecture among them, paralyzed by international contests, found a refuge only in the monasteries, where they were successfully cultivated by the ecclesiastics who had been admitted into the fraternity of Masons.

Among the most celebrated architects of France who were the products of those monastic schools of architecture, Rebold mentions St. Eloi, Bishop of Noyon; St. Fereol, of Limoges; Dalmac, of Rodez; and Agniola, of Chalons, all of whom flourished in the 7th century. But he says that there were among the laity, also, architects not less distinguished, under whose direction numerous edifices were built in Gaul and in Britain at a later period.

The most distinguished of those whom Rebold has described as architects and as the disciples of the monastic schools of architecture was St. Eloi, or Eligius. But St. Eloi was not an architect, but a goldsmith, having regularly served an apprenticeship

to that trade, even after his appointment by Clothaire II. to the position of treasurer, or master of the mint. Subsequently, when fifty-two years of age, he was elevated to the bishopric of Noyon, for which he was obliged to prepare himself by two years of study and admission to ecclesiastical orders.

As a prelate he patronized, as many others had done, the architects by the erection of churches and monasteries. But his connection with Operative Masonry is rather through the guild organizations than through any close connection with the craft of building. He organized the monks of his abbey, according to St. Croix,¹ into a guild or school of smiths, for whom he drew up a code of regulations.

According to the same authority the statutes for the government of the craftsmen of Paris, prepared in the 14th century by Stephen Boileau, were but a transcript of those of St. Eloi.

Whittington says that St. Eloi belonged, properly, to the class of professional artists who were magnificently patronized and held in high estimation by him.²

The writer of his life in the *Spicilegium* describes him as "a very skillful goldsmith and most learned in all constructive arts."³

It is very evident that Rebold has so far given us the early history of architecture in France rather than that of Freemasonry. In this respect, his work follows, in its spirit, that of Dr. Anderson in the first and especially in the second edition of the *Book of Constitutions*. To the student of Masonic history such annals are of value only because of the traditional relations that exist between the Operative and the Speculative systems.

Well-authenticated history leaves us no room to doubt that the Romans introduced architecture into France, or, to speak more correctly, into Gaul at a very early period, and many magnificent ruins are still remaining in the older cities as Aries, Avignon, Nîmes, and other ancient places, which are the vestiges of the labors of builders and architects under the Roman domination. In fact, when the barbarians began their irruptions into Gaul, the soil was covered with the monuments of Roman art. Many of these were destroyed,

¹ "Les Arts au Moyen Age et la Renaissance."

² "Ecclesiastical Antiquities of France," p. 27.

³ Aurifex partissimus atque in omni arte fabricaudi doctissimus. "Spicilegium," t. v., in Vita S. Eligii.

but there still remained, in the 6th century, a great number of public and private edifices which had been spared. In fact, there is at Nîmes a temple and an aqueduct still remaining in a state of excellent preservation. The former is now used as a museum of antiquities, and the latter, known as the *pont du gard*, is solid and strong, and is admitted by antiquaries to be the noblest Roman monument in France.

The people, during a long period of subjection to the Roman rule, had been traditionally educated in the architectural taste and spirit of Rome, and hence with the revival of the art of construction in the 6th, 7th and 8th centuries, the Christian churches became but the reflection of the Pagan basilica, and the palaces of kings and the castles of nobles were but copies of the Romano-Gallic villas.

Hence French Masonic writers have, with a great claim to plausibility, assumed that the Masons of France were a continuation in regular and uninterrupted descent of the Roman Colleges of Artificers. This view has been strengthened by another historical fact, that admits of no doubt, that Charlemagne, whose name and that of his grandfather Charles Martel are frequently referred to as patrons of Masonry in the old English records, was distinguished for his zeal in the erection of churches and palaces and brought many architects from Byzantium into France, founding there, or rather transplanting there, the Byzantine Order of Architecture which, however, afterward gave place to the Gothic, or that Order of which the mediaeval Freemasons were, it is generally conceded, the inventors.

Rebold,¹ who, as an historian, occupies a middle term between the incredulous iconoclasm of the modern school and the facile credulity of the early Masonic annalists, says that after the final evacuation of Gaul by the Romans, about the end of the 5th century, though many of the Colleges of Artificers which had been established under the Roman domination remained in Gaul, yet their organization underwent important modifications. In the first place the general association of the different artisans who were necessary to the pursuit of architecture, religious, naval, and hydraulic, or the building of temples, of ships, and of bridges and aqueducts, being no longer able to maintain itself in a country which had been abandoned by the Romans, and having lost its center of action and its principal school at

¹ "Histoire des Trois Grandes Loges," p. 24.

Rome, no longer practiced architecture as a profession in common and under one head, but was divided into various associations, each of which occupied itself thereafter with only the study and practice of a single art or trade.

It is in this way that he accounts for the rise of the corporations which flourished subsequently in the Middle Ages, and which were in the transition period between the ancient colleges and the modern lodges.

Of these different sodalities, which sprang out of the general association of artisans existing under the Roman Empire, the corporation of builders or masons, as being the most important fraction, preserved, says Rebold, their ancient organization and their ancient privileges, because the countries in which they resided after the departure of the Romans, being greatly in need of their services as builders, freely accorded to them the privileges which they had possessed under the Romans.

The Teutonic invaders of Gaul who drove out the Romans, though barbarians, were wise enough not to destroy the old monuments of Roman art and civilization, but to make use of and profit by them.

But in the same century the cathedral erected by Naumatus, Bishop of Auvergne, surpassed that of Perpeticus. Gregory of Tours, who was a native of Auvergne, describes the edifice with much eloquence of phrase in his *Historia Francorum*, and states the fact, interesting as showing the connection of high ecclesiastics with operative Masonry, that he built it according to his own designs — *ecclesiam suo studio fabricavit*.

The invasion of the Franks into Gaul in the 6th century caused at first, amid the tumult of war, while the arts of peace were silent, the destruction of religious edifices. But the conversion and baptism of Clovis placed Christianity on a firm foundation and caused the preservation of the remaining monuments of the ancient civilization.

The Franks, who were a bold, enterprising and warlike offshoot from the great Teutonic race, and who were the real founders of the kingdom which afterward became modern France, were notwithstanding their intestine broils and their conflicts with neighboring people, inclined to cultivate the arts of peace. They occupied, says Mr. Church, a land of great natural wealth and great geographical

advantages, which had been prepared for them by Latin culture; they inherited great cities which they had not built, and fields and vineyards which they had not planted; and they had the wisdom not to destroy but to use their conquest.¹

The Franks were indeed friendly to Roman culture; preserved many of the Roman laws and customs, and accepted for their vernacular a modified form of the Latin language.

Hence architecture, which had languished during the stormy period when the Romans were unsuccessfully striving to defend their acquired provinces and the very existence of the empire itself from the barbarous hordes of northern invaders, began, in the 5th and 6th centuries, to revive. The confraternities of builders and the art of architecture to some extent, says Rebold,² resumed activity.

The fact, already adverted to elsewhere, that the art of building, especially of religious edifices, had passed into the hands of the monks, is found to prevail also in the history of the art in France at this early period. The remarks of Mr. Whittington on this subject in his *Historical Survey* are well worthy of quotation.

"The ancient writers often mention instances of an abbot giving a plan which his convent assisted in carrying into execution. The edifices of religion owed their first existence to the zeal of the clergy. The more enlightened prelates invented or procured the plans and carried them into execution. But although from record as well as from probability we may conclude that the arts in this age were principally cultivated by the clergy, it is no less certain that there were persons who practiced them as a profession. What that powerful Order found necessary to promote by their own exertions, they did not fail to patronize in others, and to the common masons and carpenters who might be found in the different cities of France persons of superior skill and intelligence were added who were invited from distant quarters by the enterprising liberality of the bishops. The superstition of the times and the authority of the Church secured them employment and protection; they gradually increased in numbers and improved in science, till at length they produced the most able artificers from among themselves. France, in fact, at this

¹ "The Beginning of the Middle Ages," by R. W. Church, Dean of St. Paul's, p. 85.

² "Histoire des Trois Grandes Loges," p. 25.

time was not without professional artists, but they seem to have been neither numerous nor eminent, and the clergy were frequently left to their own exertions and resources. Gregory of Tours (who flourished in the 6th century) speaks of several of his predecessors as if they had superintended the building of their churches, particularly Ommatius, who rebuilt the Church of Sts. Gervase and Protasius and began that of St. Mary; and he expressly affirms that Leo, Bishop of Tours, was an artist of great skill, particularly in works of carpentry, and that he built towers which he covered with gilt bronze, some of which had lasted till his time. One general spirit indeed seems to have prevailed among the French Bishops of the 6th century to establish new churches and to improve the towns of their dioceses."¹

The progress of architecture in the 7th century under St. Eloi, or Eligius, and during the reign of Clothaire II., has already been referred to. In the 7th and 8th centuries the mode of building and the artistic taste of the builders remained about the same as in the 6th, but the features were somewhat enlarged and enriched, and towers and belfries became common.

In the 9th century, architecture and operative Masonry received a new impetus under the fostering care of Charlemagne. The buildings erected in his reign exceeded in taste and extent the works of preceding monarchs. There was an increased intercourse with the East and with Byzantine artists. Italian architects were brought from Lombardy, and the monuments of ancient Rome were imitated.²

The anonymous Monk of the Monastery of St. Gall, who wrote the *Gestes de Charlemagne*, in describing the cathedral of Aix-la-Chapelle, which was erected by Charlemagne, says that it surpassed in splendor the works of the ancient Romans, and that for its construction he called together masters and workmen from all parts of the continent.³

Rebold thinks that the fact that Charlemagne had sought for builders in other countries is an evidence of their diminution in

¹ "Historical Survey of the Ecclesiastical Antiquities of France," p. 22.

² *Ibid.*, p. 30.

³ "Basilica, antiquis Romanorum operibus præstantiore, brevi ab eo fabricata, ex omnibus cismarinis regionibus, magistris et opificibus advocatis." Legend, lib. i., cap. xxxii.

France. This is scarcely a legitimate conclusion. The monarch might very properly avail himself of the skill and experience of foreign artists, without necessarily indicating by their importation that there were none in his own country. The wrecks of the ancient Roman colleges were still remaining in Lombardy, and it has already been shown that there was a flourishing school of architecture at Como.

Indeed it cannot be doubted that the intercourse established by Charlemagne, between France and other countries of Europe, was very favorable to the progress and improvement of the arts. The number of artists was greatly increased, and they were supplied with better models for imitation.

"Charlemagne," says Sismondi, "was one of the greatest characters of the Middle Ages. Contrasted with his contemporaries, he possessed all the advantages of a man who was a stranger to his age. As we have seen before his time, extraordinary men who have subjugated a civilized people by the energy of a character half savage, so in him we see a man who, being in advance of the civilization of his times, has subdued barbarians by the force of his intellect and by his knowledge. He combined the qualities of a legislator with those of a warrior, and united the genius which creates with the vigilant prudence which preserves and maintains an empire. He drew together in one chain barbarians and Romans, the conquerors and the conquered, and united them in a new empire. He laid the foundations of a new order for Europe, an order which essentially reposed on the virtues of a hero, and on the respect and admiration which he inspired."¹

Such has been at all times the concurrent opinion of all historians with the exception of Voltaire, and perhaps a few others. And even they, while charging him with unproved faults and even crimes, admit the magnificence of his enterprises and the splendor of his reign. It is therefore singular that in the traditions of the early Masons his name has not been permitted to occupy a place.

In the *Legend of the Craft*, found in the Old Records of the English Masons, the introduction of Masonry into France is attributed to a certain Greek artist who had been at the building of the Temple of Solomon, and came into France in the time of Charles

¹ Sismondi, "Histoire des Republique Italiennes," tome i., chap. i., p. 19.

Martel, who patronized the Craft, made Masons, and gave them charges.¹

The gross anachronism of making a workman at Solomon's temple a visitor at the court of Charles Martel at once, exposes the great ignorance and the liability to error of the original composer of the Legend. It is not, therefore, at all improbable that he confounded Charles Martel with his grandson Charlemagne.

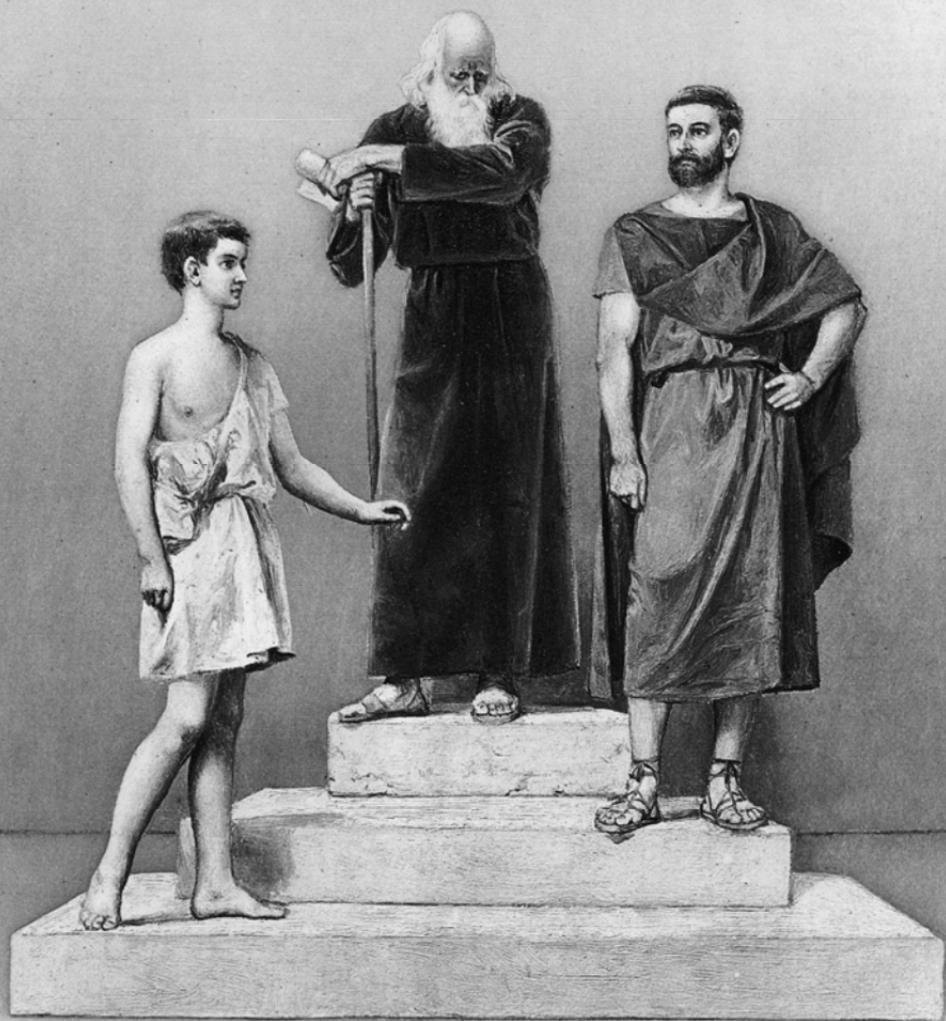

It is very evident that the spirit of the Legend does not apply to Martel, who, during his administration under two feeble kings, was fully occupied in wars with rebellious subjects, with the Saxons on the north and the Saracens from Spain in the south, and who had neither time nor inclination to devote to the arts of peace. The monks, who were then the principal builders, were not his favorites, and St. Boniface has not hesitated to call him "the destroyer of monasteries." It is hardly to be doubted that he destroyed more than he built.

Charlemagne, on the contrary, was, as we have seen, the patron of the arts of civilization, and might, with but a little stretch of imagination, be called the founder of operative Masonry in France. His intercourse with Byzantium and the East gives color also to the legend that he was visited by a Greek architect, which is simply a symbolic expression of the idea that Byzantine architecture and Greek art and culture were beginning to be introduced into France and the West during the period in which Charlemagne reigned.

We may, therefore, I think very safely correct the English

¹It may be well to note here an error as to the signification of the name of this celebrated Mayor of the Palace, who, without assuming the title, exercised all the functions of a king. It has been the universal custom to derive the word *Martel* from the French *Marteau*, which signifies a *hammer*, and it has been supposed that he obtained the cognomen from the fact that he crushed the barbarians with whom he fought, as with a hammer as potent as that of Thor. And so it has been very usual with English writers to Anglicize his name as Charles the "Hammer." But M. de Feller (*Biographie Universelle*), a very competent authority on French etymology, has shown that *Martel* is only a synonym of *Martin*; that Martin was a familiar name in the family of Pepin, of which Charles Martel was a member, and that it was adopted in the spirit of devotion to St. Martin, who was then the favorite saint of the Franks. This note is not exactly germane to the history we are pursuing, but the subject is interesting enough to claim a passing notice. It must, however, in fairness be admitted that M. Michelet (*Histoire de France*, lib. ii., p. 112), an authority as good, at least, as M. de Feller, recognizes the current derivation from *Marteau*, which he thinks referred to the hammer of the Scandinavian god Thor, and he thence concludes that Charles was not a Christian.

YOUTH, MANHOOD AND OLD AGE

Legend of the Craft by substituting the name of Charlemagne for that of Charles Martel.

Louis the Feeble, the son and successor of Charlemagne, though, as the sobriquet which was bestowed upon him imports, a prince of no force of character, yet patronized architecture, and in his reign many religious structures were built, under the superintendence of his architect. The name of this artist was Rimalde. We know scarcely more of him than the fact that he was the architect of Louis. Whittington thinks it probable that he was not an ecclesiastic, since it is clear that he practiced his art as a profession, and professional architects were at that time becoming common.

The universal belief that prevailed in the 10th century, in the approaching destruction of the world and the advent of the millennium, had naturally the effect of paralyzing all industrial arts, and architecture made little or no progress.

But in the nth century there was a revival, and the records of that period contain the names of many distinguished architects, who were not monks but professional architects, for Masonry had for some time been passing away out of the hands of the ecclesiastics in those of the laity and the guilds.

The guilds, or trade corporations, in France began about this time to take an active existence and to exert a powerful interest on the progress of the arts. The consideration of their history is well worthy of a distinct chapter. But our attention must now be turned to the early history of Masonry in other countries.

CHAPTER VI

EARLY MASONRY IN BRITAIN

FROM the time of the conquest of Britain by Claudius to the final evacuation of the island by the Romans in the beginning of the 5th century, a period of about three hundred and fifty years had elapsed. During this long occupation the Romans had held, if not undisputed, at least dominant sway over the greater part of the island. Roman legions had been permanently stationed in different towns; Roman colonies had been established; Roman citizens had immigrated and settled in greater numbers; Roman arts and civilization had been introduced; and, as we have already shown in a preceding chapter, the native inhabitants had become almost Romanized in their manners and customs.

It is not to be supposed that the domination for so long a continuity of years of a powerful empire, distinguished for its cultivation of the arts, should not have been productive of the effects that must always result from the protracted mixture of a refined with an uncivilized people.

Among the arts introduced by the Romans, there is none that could have so much attracted the attention of the natives as that of architecture. Of all the methods of human industry that are intended to supply the wants or promote the comforts of life, the art of building is placed in the most prominent position. All the arts, says Cicero, which relate to humanity have a certain bond of union and a kind of kinship to each other. But it must be acknowledged that the art which proposes to secure to man a protection from the elements and a shelter from the inclemencies of the seasons must hold the highest place in the family scale. It is the first art that man cultivates in his progress from utter barbarism to civilization. It is the most salient mark of that progress. No sooner did the primitive Troglodytes emerge from their cave dwellings than they began to erect, however rudely, huts for their habitation.

And so when a nation or a tribe begins to make an advancement in civilization, its first step is to improve its mode of dwelling. When conquest brings a superior race to an ignorant and uncultured people, the industrial arts of the former are speedily diffused among the latter, and architecture, as the most striking and the most useful, more speedily attracts the attention and is more readily imitated than any other.

When the Romans first invaded Britain they found the country inhabited by various tribes deriving their origin from different nomadic stocks, and therefore somewhat heterogeneous in their condition and their habits. The Belgians, for instance, who had passed over from Gaul and occupied, by the right of conquest, the coast bordering on the British Channel, were an agricultural people, and are described by Caesar as being more advanced in the arts of civilized life than the tribes in the interior who were pastoral, who lived on milk and flesh and were clothed in skins.

Mela Pomponius, the Roman geographer, who wrote about the same time, describes the Britons as being in general uncivilized and much behind the continental nations in their social culture. Fields and cattle constituted their only wealth.

Mr. Wright, in an *Essay of the Ethnology of South Britain at the Extinction of the Roman Government*, says that "we may form a notion best and most correctly of the mode of life and of the degree of civilization of the ancient Britons, by comparing them with what we know of those of the wild Irish and of the Celtic highlanders of Scotland in the Middle Ages. Living in septs or clans, each collected round a petty chieftain, who had his residence or place of refuge in the least accessible part of his little territory, they had no towns, properly so-called, and no tie of union except the temporary one of war or a nominal dependence on some powerful chieftain who had induced, by some means, a certain number of the smaller clans to acknowledge his sovereignty."¹

Their houses, says Turner, were chiefly formed of reeds or wood, and were usually seated in the midst of woods, a space being cleared on which they built their huts and folded their cattle.²

The improved condition of Britain, in consequence of their in-

¹ Thomas Wright, "Essays on Archæological Subjects," vol. i., p. 68.

² "History of the Anglo-Saxons," vol. i., p. 64.

tercourse with their more civilized conquerors, is thus described by Mr. Wright:¹

"Under the Romans, on the contrary, Britain consisted politically of a number of cities or towns, each possessing its own independent municipal government, republican in form and principle within themselves, but united under the empire through the fiscal government of the province to which they were tributary. Each of these cities inhabited by foreigners to the island, was expected to defend itself if attacked, while three legions and numerous bodies of auxiliaries protected the province from hostilities from without and held it internally in obedience to the imperial government. The country was unimportant and the towns were everything."

The numerous inscriptions found in England in recent times prove another fact, namely, that the legionary troops which were sent from Rome to Britain did not pay merely ephemeral or transitory visits, from which no important influence could have been derived, but that they remained in the same locality during the whole occupation of the country by the Romans, and actually constituted military colonies, making homes in the towns in which they lived, and insensibly imparting the use of the Latin language and the adoption of Roman manners to the people. So much, in fact, did they become identified with the native inhabitants, that they often made common cause with them in tumults or insurrections against the imperial government.

The result of this constant intercommunication must have been just that which might anywhere, under such circumstances, have been expected. The architects who accompanied the legions in their visits to Britain and who remained with them during its occupation did not confine their labors to the construction of military works, such as the erection of defensive walls and fortresses. They engaged during the period of tranquillity which had been secured by the presence of strong bodies of troops in the peaceful avocations of their art. They organized their Colleges of Artificers, which, considering the works in which they were engaged, might correctly be designated as Colleges of Masons; they began the building of temples and other public edifices; they took to their assistance the more intelligent natives, and introduced their Roman architecture by methods which imitated those of the Colleges at home.

¹ "Essays on Archæological Subjects," vol. i., p. 69.

The rude huts of the native Britons were replaced by more comfortable houses, and the art of building, under the guidance of the Roman Masons, assumed a new form and was prosecuted by new methods, which thus introduced the character and customs of the Roman Colleges into the island, and thus by the example of associated workmen continued the chain of connection which was to be more fully extended in Anglo-Saxon times by the establishment of building guilds.

Tacitus has shown us, in his *Life of Agricola*, how and at what an early period this system of Romanizing Britain began. In the last quarter of the 1st Christian century, Agricola arrived in Britain, having been appointed governor of the province. The island, which had hardly yet recovered from the recent insurrection of Queen Boadicea, was still in an insurgent condition. The first efforts of Agricola were of course directed to the restoration of peace and order, and to the correction of civil and political abuses. His next business was to introduce a system of regulations whose tendency should be to civilize the natives. He encouraged them, therefore, says Tacitus,¹ by his exhortations and aided them by public assistance to build temples, courts of justice, and commodious dwellings. He praised those who were cheerful in their obedience; he reproached those who were slow and uncomplying, and thus excited a spirit of emulation. He established a plan of education and caused the sons of the chiefs to be instructed in learning and to cultivate the Latin language. The Roman dress was adopted by many, and the Britons, allured by the luxurious example of their conquerors, began to erect baths and porticoes and to indulge in sumptuous banquets.

To do all this was not within the narrow scope of native skill. In the erection of these improved edifices the Britons, being only partly reclaimed from their pristine barbarity, must have invoked and received the advice and assistance of the Roman architects.

The co-operative and guild-like methods of building practiced by these, as well as their skill in architecture, was thus imparted to the Britons. What had been wisely begun by Agricola was as wisely imitated by his successors in the provincial government, and the Roman Collegiate system was completely established in the island long before the extinction of the Roman domination and the fall of the Roman empire.

¹ "Vita Agricolaë," cap. xxi.

That the builders or Masons introduced into Rome, or educated there by their Roman Masters, had increased to a very great number is evident from a remark of the panegyrist Eumenius in his *Panegyric of the Emperor Maximian*. He describes the ancient Gallic city of Bibracte, afterward Augustodunum, but now the modern Autun, which abounds in the remains of Roman architecture, many of them in a good state of preservation. The re-edification of private houses and the construction of temples and other buildings with which Maximian had embellished the city, he attributes to the concourse of architects whom the emperor had brought from Britain, which province, he says, abounded with them. The number of these Roman architects in Britain was so great and their skill so pre-eminent, that, as we shall hereafter see, they were exported into many of the continental cities to construct buildings in the Roman method.

The remains of Roman buildings found at different times in England and a multitude of ancient inscriptions testify to the fact that the conquerors had brought their architectural art with them into Britain. But the mere existence of pieces of architecture would not alone serve to establish the connection of these Roman architects and their British disciples with the mediaeval guilds. In this way we might, as Anderson has done, write a history of architecture, but would hardly be authorized to call it a history of Freemasonry. It is necessary to show that the Roman architects not only brought with them their skill in the art of building but also introduced the associated methods of organization which had been practiced by the ancient Roman Colleges. Of this we have ample evidence.

The Reverend James Dallaway, in his *Collections for an Historical Account of Masters and Free Masons*, appended to his *Discourses upon Architecture in England*, says that the first notice that occurs of an associated body of Roman artificers who had established themselves in Britain is a votive inscription in which the College of Masons dedicate a temple to Neptune and Minerva, and to the safety of the family of Claudius Cæsar. It was discovered at Chichester in the year 1725. It is a slab of gray Sussex marble and was found by the workmen who were digging a cellar and who ignorantly or carelessly fractured it. Having been pieced together the slab is now preserved at Goodwood, the seat of the Duke of Richmond, near Chichester.

In his *History of West Sussex*, Mr. Dallaway gives a fac-simile of the slab and the inscription, which is in the following words:

EPTVMO ET MINERVAE
 TEMPLVM
 B. SALVTE. DO. DIVINAE
 AVCTORITA. CLAVD.
 GIDVBNI, R. IC. CAI. BRIT.
 . . GIVM. FABROR. E. QVI. IN. FO.
 C.D.S.D. DONANTE. AREAM.
 . . . ENTE. PVDENTINI. FIL.

The original is here given, to furnish to the unlearned reader an idea of the character of the inscriptions, which are the palpable monuments of the labors of these Colleges of Artificers, which have been found in all countries into which the Romans extended their power. The literal, but in some places conjectural, translation of this inscription is as follows:

"The College of Artificers and they who there preside over the sacred rites by authority of King Cogidubnus, the Legate of Tiberius Claudius Augustus in Britain, dedicated this Temple to Neptune and Minerva, for the welfare of the imperial family. Pudens, the son of Pudentinus, having given the site."

In an article on the *Origin and Progress of Gothic Architecture*, by Governor Pownall, inserted in the 9th volume of the *Archæologia* of the London Society of Antiquaries, this subject of the influence of the Roman artists on the native Britons is exhibited in an interesting point of view.

"When the Romans conquered and held possession of our isle," says Governor Pownall, "they erected every sort of building and edifice of stone or of a mixture of stone and brick, and universally built with the circular arch. The British learned their arts from these Masters."

But the Continent being more subject to the ravages of invading barbarians than the isolated province of Britain, many of the Gaulish cities and the fortresses on the Rhine were destroyed. And when Constantius Chlorus resolved, at the close of the 3d century, to rebuild them, he sent to Britain for architects to execute the work of re-edification.

By this withdrawal of the builders from the island of Britain and by transferring them to the Continent, Britain itself soon lost the knowledge which it had formerly acquired of the Roman architecture.

But after the establishment of the Christian religion in the empire, missionaries being sent to the provinces to convert the inhabitants, they brought with them from Rome not only the new religion but a revived knowledge of the arts, and especially of architecture, which was necessary for the building of churches.

As to the influence produced upon the Britons by their conversion to Christianity, Camden tells us that no sooner was the name of Christ preached in the English nation, than with a most fervent zeal they consecrated themselves to it and laid out their utmost endeavors to promote it by discharging all the duties of Christian piety, by erecting churches and endowing them; so that no part of the Christian world could show either more or richer monasteries.¹

Thus the skill, which for a time had been suspended if not lost, was again revived by the architects and builders who were again brought from Rome to Britain by the Christian missionaries, who, says Pownall, "were the restorers of the Roman architecture in stone."

The huge buildings of stone erected by the monks in England, ought perhaps to be attributed to a later period when the Saxons had gained possession of the island. But as Christianity had been introduced into England before that period and under the Roman domination, we may accede to the hypothesis that some of that kind of work was done at that early period.

We may, therefore, grant a large amount of plausibility to that part of the *Legend of the Craft* which reports the tradition that under the usurped reign of Carausius, St. Alban had organized the fraternity of Masons and bestowed upon them his patronage.

Whether the Legend is correct or not in attributing this important work to the protomartyr, it may at least be accepted as traditionally preserving the historical fact that Freemasonry was re-organized after the Roman method by the Christian missionaries.

There is abundant evidence in the old chronicles that the method of building in stone and with circular arches was always designated as *opus Romanum* or the Roman work, and an edifice so constructed was said to be built *more Romanum*, or according to the Roman method.

¹ Camden, "Britannia," p. cxxxii.

The error of the legendists, however, is that they attributed personally to Carausius, the usurper of the imperial power, the patronage of Masonry and the appointment of St. Alban as his chief architect or Master Mason; an error in which they have been followed by Anderson and all other Masonic writers.

Of this statement there is no competent historical evidence. Bede, Matthew of Westminster, and all the other old chroniclers, describe Carausius as a man of very mean extraction, treacherous to the government which employed him, unfaithful to the people whom he was sent to protect, sacrificing their interests to his own greed for spoil, and distinguished only for his ability as a soldier.

Of the piety and Christian constancy of Alban the same writers are lavish in their praises, but they make no reference to his skill as an architect or to his labors under Carausius as a builder. Even of his martyrdom there are said to be great chronological difficulties. Matthew of Westminster places its date eleven years after the death of Carausius. This would not militate against his previous employment by Carausius as "the steward of his household," to use the words of Anderson, and the Master of his works, if there were any historical evidence of the fact.

If we appeal to the testimony of Camden, whose laborious researches have left no authority uncollected and no statement unexamined which refer to the early history of Britain under the Romans, we shall find no support for the traditions of the legendists or for their expansion by Anderson and the writers who have servilely followed him.

Of Carausius we only learn from Camden that after his reconciliation with Maximian, he governed Britain in perfect peace, and that he repaired the wall at the mouth of the Clud and fortified it with seven castles.¹ The only reference made by Camden to St. Alban is in a passage where he says that toward the end of Diocletian's and Maximian's reign a long and bloody persecution broke out in the Western Church and many Christians suffered martyrdom, among the chief of whom he names Albanus Verolamiensis or St. Alban. But he makes no allusion to him as an architect, nor does he mention the name of the apocryphal Amphibalus. Further on he attributes to the town of Verulam the honor of having

¹ Camden, "Britannia," p. lxxiv.

given birth to St. Alban, whom he calls "a man justly eminent for his piety and steadiness in the Christian faith; who with an invincible constancy of mind suffered martyrdom the first man in Britain."¹ He relates the legends which were extant in connection with his passion, but while he dwells on his piety and his constancy to the faith which gave him all his fame, he says nothing of his labors as an architect nor does he in any way connect him with Carausius.

We must, therefore, reject the whole story of Carausius and St. Alban as apocryphal; so far as it implies that the Emperor was a great patron of Masonry and the Saint his Master Workman, we find no historical foundation for it; but we may accept it as a mythical statement, the true interpretation of which is that there was a revival of Masonry in England toward the time of the extinction of the Roman domination, through the influence of the Christian missionaries, a fact for the truth of which we have, as has already been seen, sufficient authority.

Anderson says that "the true old Masonry departed from Britain with the Roman legions; for though many Roman families had settled in the south and were blended with the Britons, who had been well educated in the science and the art, yet the subsequent wars, confusions, and revolutions in this island, ruined ancient learning, till all the fine artists were dead without exception."²

Mr. Fergusson, a more learned and more accurate writer than Anderson, has arrived at almost the same conclusion. He says:

"When Rome withdrew her protecting care, France, Spain, and Britain relapsed into, and for centuries remained sunk in, a state of anarchy and barbarism as bad, if not worse than that in which Rome had found them three or four centuries before. It was in vain to expect that the hapless natives could maintain either the arts or the institutions with which Rome had endowed them."³

But Fergusson subsequently makes a very important admission which greatly modifies the opinion he had just expressed when, in continuing the paragraph, he says:

"But it is natural to suppose that they would remember the evidences of her greatness and her power, and would hardly go back for their sepulchers to the unchambered mole-hill barrows of their fore-

¹ Camden, "Britannia," p. 296.

² "Constitutions," second edition, p. 59.

³ Fergusson, "Rude Stone Monuments," p. 394.

fathers, but attempt something in stone, though only in such rude fashion as the state of the arts among them enabled them to execute."¹

This is all that the theory advanced in this work contends for. The assertion of Anderson is altogether too sweeping and general. That of Fergusson admits that the influences of Roman domination had not been entirely obliterated by the departure of the legions. Rome, which had administered the government for centuries, "could hardly fail," to use his own language, "to leave some impress of her magnificence in lands which she had so long occupied."

The concurrent testimony of all historians will not permit us to deny or to doubt that after the extinction of the Roman dominion in Britain, there was a decadence of architecture as well as of the other arts. But this did not amount to a total destruction, but only to a suspension. Nations who have emerged from barbarism to civilization, and who for centuries have enjoyed the refinements of culture, do not at once relapse into their primitive savage state. There was certainly not sufficient time for the exhibition of this ethnological curiosity in the period embraced between the departure of the Romans and the firm establishment of the Anglo-Saxons. Nor was there that isolation which was necessary to hasten this fall from national light to national darkness. The southern parts of Britain, at least, were in too close a propinquity to more civilized and more Romanized Gaul to lose at once all traces of Roman refinement. And above all, the presence and the influence of the Christian missionaries who, coming from Rome, were uninterruptedly engaged in the task of converting the natives to the new faith, must have been a powerful stay to any downward progress to utter barbarism.

The links of the chain that united the builders of Britain with those of Rome had only rusted; they were not rudely snapped asunder. The influence of the methods of building pursued by the Roman Colleges of Artificers, who had done so much work and left so many memorials in Britain, were still to be felt and to be renewed when these links were strengthened and brightened by the Anglo-Saxons.

But this is anew and an important subject that demands consideration in another chapter, for it brings us to an interesting phase in the history of Freemasonry.

¹ Fergusson, "Rude Stone Monuments," p. 394.

CHAPTER VII

MASONRY AMONG THE ANGLO-SAXONS

AFTER the departure of the Roman legions and the withdrawal of the Roman protection, Britain, left to its own resources, was soon harassed by the invasions of Scots and Picts, by predatory excursions of barbarians from the opposite shores of the North Sea, and by civil distractions which were the natural result of the division of power among many rival petty principalities.

Among the Britons there was one leader, Gwotheyrn, or, as he is more generally called, Vothgern, who seems to have assumed, if he did not legally possess it, a predominating position over the other British princes. Feeling, after various unsuccessful attempts, that he could not, by his unaided forces, repulse the invaders, he sought the assistance of the Saxons.

The Saxons were a tribe of warlike sea-kings who occupied the western shore of what has since been known as the Duchy of Holstein, with the neighboring islands on the coast. Brought across the sea by the invitation of the Britons, they soon expelled the Picts and Scots. But, attracted by the delights of the climate and the fertility of the soil, so superior to the morasses of their own restricted and half-submerged territory, they remained to contest the possession of the island with its native inhabitants.

Hence there followed a series of conflicts which led at last to the expulsion of the native Britons, who were forced to retire to the southwestern parts of the island, and the establishment of the Saxon domination in England.

During the period of intestine wars which led to this change, not only of a government, but of a whole people, it is not to be supposed that much attention could have been paid to the cultivation of architecture or Masonry. Amid the clash of arms the laws are silent, and learning and the arts lie prostrate.

Yet we are not to believe that all the influences of the preceding four or five centuries were wholly paralyzed. Gildas, it is true, complains in querulous language and an involved style,¹ in the *Epistle* which is annexed to his *History*, of the wickedness both of the clergy and the laity, but the greatest licentiousness is not altogether incompatible with the preservation of some remains of the architectural skill and taste which had been originally imparted by the Roman artificers.

The Saxons themselves were not a thoroughly barbarous people. The attempts to subdue the tribes of Germany as they had those of Spain, of Gaul, and of Britain were not very successful. The ferocious bravery of the Germans under the leadership of the great Hermann, romanized into Herminius by Tacitus, was able to stem the progress of the Roman legions in the interior of the country and to confine them eventually to the possession of a few fortresses on the Rhine.

The German tribes, among whom we are, of course, to count the Saxons, were thus enabled to retain their own manners, customs, and language, while their communication with the legions, both in war and in peace, must have imbued them with some portion of Roman civilization.

"Many new ideas, feelings, reasoning and habits," says Mr. Turner, "must have resulted from this mixture, and the peculiar minds and views of the Germans must have been both excited and enlarged. The result of this union of German and Roman improvement was the gradual formation of that new species of the human character and society which has descended, with increasing melioration, to all the modern states of Europe."²

Dr. Anderson, when describing the Saxon invasion of Britain, says that "the Anglo-Saxons came over all rough, ignorant heathens, despising everything but war; nay, in hatred to the Britons and Romans, they demolished all accurate structures and all the remains of ancient learning, affecting only their own barbarous manner of life, till they became Christians."³

¹ Of all the post-classical writers in Latin none is so difficult to comprehend or to translate as Gildas. Besides, the fact that there are in existence only two codices of the original manuscript, and that subsequent editions have indulged in many, various, and sometimes contradictory readings, add to the difficulty of a correct interpretation of his writings.

² "History of the Anglo-Saxons," i., p. 96.

³ "Constitutions," 2d edition, p. 60.

Entick and Northouck, in their subsequent editions of the *Book of Constitutions*, have repeated this slander, which, even if it were a truth, could not have forever obliterated the connection which we are seeking to trace between the Masonry of the Roman Colleges and that of mediæval England; because, although it might have been suspended by Saxon barbarism, it is easy to prove that it could have been renewed by subsequent intercourse with the architects of France.

But against this careless misrepresentation of Anderson and his subsequent editors, let us place the more accurate and better digested views of the historian of the Anglo-Saxons.

Mr. Turner, when writing of the arrival of Hengist with his Saxon followers in England, says:

"The Anglo-Saxon invasion of Britain must therefore not be contemplated as a barbarization of the country. Our Saxon ancestors brought with them a superior domestic and moral character, and the rudiments of new political, juridical, and intellectual blessings. An interval of slaughter and desolation unavoidably occurred before they established themselves and their new systems in the island. But when they had completed their conquest, they laid the foundations of that national constitution, of that internal polity, of those peculiar customs, of that female modesty, and of that vigor and direction of mind, to which Great Britain owes the social progress which it has so eminently acquired."¹

The fact is that, though the Saxons introduced a style of their own, to which writers on architecture have given their name, they borrowed in their practice of the art the suggestions left by the Romans in their buildings, and used the materials of which they were composed. Thus a writer² on this subject says that the Saxons appear to have formed for themselves a tolerably regular and rude style, something midway between the indigenous and the Roman in its details, and he attributes this to the buildings left by the Romans in the country, which, though rare, must have been sufficiently abundant long after their departure from the island.

Abundant evidence will be shown in the course of the present chapter that there was not a total disruption of Saxon architecture

¹ "History of the Anglo-Saxons," i., p. 179.

² Paley, "Manual of Gothic Architecture," p. 14.

and Masonic methods of associated labor from that which was first introduced into Britain by the architects of the Roman Colleges. There were, of course, some modifications to be attributed partly to a want of experienced skill, partly to the suggestions of new ideas, and partly to the influence of novel religious relations. The temple, for instance, of the Romans had to be converted into the church of the Christians, but the Roman *basilica* was the model of the Saxon church, and the Roman architect was closely imitated, as well as could be, by his Saxon successor. The spirit and the influence and the custom of the Roman College was not lost or abandoned.

Scarcely more than a century elapsed between the arrival of the Saxons and the entire subjugation of the country, and that space of time is to be divided among the briefer periods required for the continued successes of different chieftains. Thus it took Hengist only eight years after his first coming to firmly establish himself in the kingdom of Kent.

Only forty years after the establishment of the Saxon octarchy, Pope Gregory sent St. Augustine from Rome with missionaries to convert the Saxons to the faith of Christianity.

During all this interval many Roman buildings had existed in England, which, from their size and magnificence of construction, must have become models familiar to the Saxons. The temples of the Saxon idols had been constructed of wood, and as Gregory permitted them to be converted into Christian places of worship, the Saxon churches at first were almost all of that material. There was a deficiency of better materials. But we find an effort to use them whenever they could be obtained, so that a kind of construction called "stone carpentry" prevailed, in which we find a wood design contending with stone materials.¹ But in not much later times, and long before the Norman Conquest or the introduction of Gothic architecture, the Saxons built their churches, monasteries, and other public edifices entirely of stone.

Although it may be admitted that the pagan Saxons on their first arrival did indeed destroy many of the churches which had been erected by the British Christians and expelled the priests, yet it must be remembered that by the subsequent advent of Augustine from

¹ Paley, "Manual of Gothic Architecture," p. 12.

Rome a new life was restored to architecture and the arts, and that as Mr. Paley says, "the frequent missions and pilgrimages to Rome, together with the importation of Italian churchmen, which took place as early as the end of the 7th century, must have exercised great influence upon ecclesiastical architecture in England."¹

It will be seen hereafter that the Saxons repeatedly resorted to the aid of foreign workmen from Rome or from Gaul in the construction of their churches, so that the influences of the Roman system which was derived in former times from the Roman Colleges continued at frequent intervals to be renewed, and the link of connection was thus kept unbroken.

The principal difference between the works of the Roman and the Saxon architects has been supposed to be that the former built in stone and the latter in wood. And if this were true, it is evident that all inquiry into the nature of Saxon architecture must be at an end; for as the wooden edifices must have long since perished, all the remains of stone structures which have been excavated in England will have to be attributed to the age of the Roman domination before the invasion of the Saxons, or to that which succeeded the conquest by the Normans. The perishable fabrics of timber erected by the Saxons would have left no traces behind.

The erroneous opinion that the Saxons built all their churches of timber was first advanced by Stow, in his *Survey of London*, and afterward by Mr. Somner, in his *Antiquities of Canterbury*, who says that "before the Norman advent most of our monasteries and church buildings were of wood," and he asserts that upon the Norman Conquest these fabrics of timber grew out of use and gave place to stone buildings raised upon arches.

But the Rev. J. Bentham, in his *History of the Cathedral Church of Ely*, has refuted the correctness of this view with unanswerable arguments. He has shown that although there were some instances of wooden edifices, yet that the Saxon churches were generally built of stone, with pillars, arches, and sometimes vaultings of the same material. And he adds the following remarks, which are important in the present connection as showing that the Roman influence continued to be felt in the Saxon times, and thus that the chain which we are tracing remained unbroken.

¹ Paley, "Manual of Gothic Architecture," p. 13.

"There is great probability that at the time the Saxons were converted the art of constructing arches and vaultings and supporting stone edifices by columns was well known among them; they had many instances of such kind of buildings before them in the churches and other public edifices erected in the times of the Romans. For notwithstanding the havoc that had been made of the Christian churches by the Picts and Scots, and by the Saxons themselves, some of them were then in being. Bede mentions two in the city of Canterbury. . . . Besides these two ancient Roman churches it is likely there were others of the same age in different parts of the kingdom, which were then repaired and restored to their former use."¹

Of the two Roman churches for whose existence Bentham refers to the authority of Bede, that venerable historian says, "There was on the east side of the city a church dedicated to the honor of St. Martin, built while the Romans were still in the island, wherein the queen, who, as has been said before, was a Christian, used to pray,"² and of the other that "Augustine recovered in the royal city a church which he was informed had been built by the ancient Roman Christians, and consecrated it to our Saviour."³

In an article on Anglo-Saxon architecture, published in the *Archæological Journal* for March, 1844, Mr. Thomas Wright (no mean authority on antiquarian science) has, like Mr. Bentham, successfully combated the doctrine that all the Saxon churches were wooden. "I think," he says, "the notion Anglo-Saxon churches were all built of wood will now hardly find supporters." He admits, which none will deny, that there were structures of this kind. A few wooden churches are mentioned in Domesday Book, and we learn from other authorities that there were some others. But he contends that "a careful perusal of the early chroniclers would afford abundant proof that churches were not only abundant among the Anglo-Saxons, but that they were far from being always mean structures."

Speaking of the Saxon churches, which Odericus Vitalis tells us were repaired by the Normans immediately after the conquest, he remarks that "if they had been mean structures and in need of repairs,

¹ "History of the Cathedral Church of Ely," sec. v., p. 17.

² Bede, "Histoire Ecclesiastique," lib. i., cap. 26.

³ *Ibid.*, lib. i., cap. 33.

it is more probable that the Normans would have built new ones." The conclusions which are to be drawn from Mr. Wright's article are that while there were undoubtedly some wooden structures, just as there are in this day, the Anglo-Saxons built many churches, and built them sumptuously of stone, and in the Roman manner.

The Rev. Richard Hart is therefore right when he says, on the authority of the architect Mr. Rukman, that "in the construction of their churches, the Anglo-Saxons imitated Roman models; as might naturally be expected, considering that Rome was the source from which their Christianity had been derived, the birthplace of many of their prelates and clergy, and at that period the very focus of learning and civilization."¹

It has been conceded that during the comparatively brief period that was occupied by the Saxons after their arrival in Britain until they obtained complete possession of the country, the intestine wars between them and the natives must have had the effect of suspending the pursuit of architecture. But it has been shown that this suspension did not altogether obliterate the influence of the Roman builders, who had established their methods of building when the island was a province of the empire. And it has also been seen that the destruction by the Saxons of the Christian churches which had been built by Roman architects was not so thorough or so universal as has been supposed by some writers, and that they did not, as Northouck, amplifying the language of Anderson, says, "root out all the seeds of learning and the arts that the Romans had planted in Britain."²

On the contrary, we have the evidence of the Venerable Bede and the repeated testimony of modern excavations that there were at the time of the Saxon conversion to Christianity at least two Roman churches standing which might serve as models for the Saxon Masons, and numerous remains of Roman buildings which afford materials for new structures.

And now, after the conversion, we find the chain connecting Roman Masonry with that pursued by the Saxons renewed and strengthened not only by these models, but by the direct influence of the prelates who were sent from Rome, and who brought with

¹ "Ecclesiastical Records," ch. v., note 2, p. 217.

² Northouck, "Constitutions," Part II., ch. ii., p. 90.

them or sent for workmen to Rome and Gaul, who might carry out *More Romano* (in the Roman manner) their designs in the building of churches and monasteries.

Butler, in his *Lives of the Saints*, a work, however, in which we must not place implicit confidence, says that on the permanent settlement of Augustine in Britain, at the close of the 6th century, when Ethelbert, the King, had been converted, and the people generally were accepting the new religion, the princes and nobles were very zealous in building and endowing churches and religious houses, and many of them travelled to Rome and other foreign parts to improve themselves in the sacred sciences.¹

That there was at that time a constant and uninterrupted communication between Rome and Britain is evident from the frequent epistles from Gregory, the Pontiff, to Augustine and to the King, Ethelbert. Missionaries were also sent to Britain to assist Augustine in his pious work, and it is not at all improbable that Masons came with them from Rome, or from Gaul, to be employed in the construction of churches and monasteries, with which the land was being rapidly filled.

But we have more to rely on than mere supposition. There are abundant records showing that workmen were imported from abroad for the purpose of building, and that thus the Roman method was renewed in the island.

Anderson is not, therefore, strictly correct when he says that the Anglo-Saxons, "affecting to build churches and monasteries, palaces and fine mansions, too late lamented the ignorant and destructive conduct of their fathers, but knew not how to repair the public loss of old architecture."² It has been shown that there were some models of Roman buildings still remaining, and there was no ignorance of the need of obtaining workmen from Rome or Gaul, and no want of opportunity to obtain them.

He is, therefore, more historically right when he adds, though it contradicts his former assertion, that these works "required many Masons, who soon formed themselves into societies or lodges by direction of foreigners who came over to help them."³

¹ "Lives of the Saints," vol. v., pp. 418, 419.

² "Constitutions," 2d edition, p. 61.

³ *Ibid.* He is altogether wrong in saying that the Saxons adopted the Gothic style in building. That style of architecture was not invented until long afterward.

In the year 627, Edwin, King of Northumbria, who had been converted by Paulinus, one of the missionaries of Augustine, was baptized in the city of York, the capital of his kingdom. While receiving the necessary religious instructions he built a temporary church of timber, in which the sacrament of baptism might be administered. But immediately afterward, under the direction of Bishop Paulinus, he caused the foundation to be laid of a larger and nobler church, of stone, which, although immediately begun, was not finished until after his death, by his successor, Oswald.¹

Although Bede, in narrating the event, says nothing of any foreign aid that had been asked or received in its construction, yet it is evident from the facts that the church was built of stone and in a square form, like a Roman *basilica*,² and would imply the necessity of Roman Masons, or other foreigners imbued with the Roman method, to superintend the work.

In the assembling of foreign Masons at York to erect St. Peter's Church, under the auspices of King Edwin, is supposed by modern Masonic writers to be the assembly incorrectly referred to in the *Legend of the Craft* as an assembly held at York, under the patronage of Prince Edwin, the son of Athelstan, three hundred years afterward. But this subject has been so thoroughly discussed in the preceding part of this work, under the head of the *York Legend*, that it is unnecessary to renew the controversy.

Besides St. Peter's, at York, Paulinus built many other churches. Some of them we know were of stone, and the others might have been of the same material, as Bentham says, "for aught that appears to the contrary." He was certainly a great patron of ecclesiastical architecture, but Anderson makes no mention of him, although, according to his fashion, he should have styled him, as he does Charles Martel, a "Right Worshipful Grand Master."

Another distinguished architect, of a not much later period, was Benedict Biscop, Abbot of Weremouth, whom the Roman Church has canonized. In the year 675 he built a church at Weremouth, and two monasteries, one at Weremouth and one six miles distant

¹ Bede, "History," lib. ii., cap. 14.

² This is the very word used by Bede. "Majorem et augustiorem de lapida fabricare curavit *basilicam*." The Roman *basilica*, or Hall of Justice, was the model of all the early churches built by Roman architects, and the old *basilicae* were often converted with but little change into churches by the Christian emperors.

from Jarrow. Of these Bede has given a particular account in his history of them. He tells us that the abbot went over into France to engage workmen to build his church after the Roman manner, and brought many back for that purpose. The work was prosecuted with such vigor that within a year the church was completed and divine service performed in it.

But a very important fact stated by Bede is that when the church was nearly finished Benedict sent over to France for artificers skilled in the mystery of making glass (an art hitherto unknown in Britain), who glazed the windows and taught the art to the Saxons. We learn from this statement that it was customary with the Saxons to seek assistance from the skill of the continental artists and handicraftsmen. This will explain the true meaning of the passage in the *Legend of the Craft*, which refers to the introduction of French and other Masons into England in the 7th century, in the time of Charles Martel, and afterward at the supposed Assembly at York, in the 10th century. And it affords a confirmation of what has been frequently said in the previous part of this work, that the *Legend of the Craft*, though often chronologically absurd and incorrect in many of its details, yet has throughout in its most important particulars a really historical foundation.

The historians of that period supply us with many proofs that churches and monasteries were erected by the Saxons of stone after the Roman manner, or that they sent abroad for architects to superintend the construction of their buildings.

Eddius Stephanus, who flourished at the beginning of the 8th century, and whose name has been transmitted to posterity by his *Life of Saint Wilfrid*, informs us that that saint, who was also Bishop of York about the middle of the 7th century, erected many sumptuous buildings in his diocese and thoroughly repaired the church of St. Peter at York, which had been much injured in the war between the Mercians and the Northumbrians. But Eddius especially refers to two churches built by Wilfrid, the one at Ripon in Yorkshire and the other at Hexham in Northumberland.

Of the former he says that Wilfrid built a church at Ripon from the foundations to the top of polished stone,¹ and supported it with

¹ *Polito lapide* is the language used by Eddius. "Vita S. Wilfridi," cap. xvii., p. 59. He uses the same words in describing the materials of the church at Hexham.

various columns and porticos. This polished stone as a material and these columns and porticos, where arches would probably be required, indicate the presence and the instruction of Roman architects, whether they came from Rome or Gaul.

But of all his works, the church of St. Andrew at Hexham seems to have been the most magnificent. Hexham was a part of the crown-lands of the Kings of Northumbria, and, having been settled in dower on Queen Ethelreda by King Egfrid, a grant of it was made to Wilfrid for the purpose of erecting it into an episcopal see.

Wilfrid began to lay the foundations of the cathedral church in the year 674. Eddius speaks of it in terms of great admiration, and says that there was no other building like it on this side of the Alps. He describes its deep foundations and the subterranean rooms, all of wonderfully polished stones, and of the building consisting of many parts above ground, supported by various columns and many porticos, ornamented with a surprising length and height of walls, and surrounded by mouldings, and having turnings of passages sometimes ascending or descending by winding stairs, so that he asserts that he had not words to explain what this priest, taught by the spirit of God, had contemplated doing.

Five centuries after, in 1180, the remains of this famous church were still standing, though in a condition of decay. Richard, Prior of Hexham, who lived at that time, describes the church with still more minuteness. He says that the foundations were laid deep in the earth for crypts and subterranean oratories, and the passages underground which led to them were contrived with great exactness. The walls were of great length and height, and divided into three separate stories, which were supported by square and other kinds of well-polished columns. The walls, the capitals of the columns which supported them, and the arch of the sanctuary were decorated with historical representations, images, and various figures in relief, carved in stone and painted in an agreeable variety. The body of the church was encompassed with penthouses and porticos which, above and below, were divided with wonderful art by partition walls and winding stairs. Within the staircases and upon them were flights of stone steps and passages leading from them, both ascending and descending, which were disposed with so much art that multitudes of people might be there and go all around the church without being perceived by any one who was in the nave. Many beautiful

private oratories were erected with great care and workmanship in the several divisions of the porticos, in which were altars in honor of the Blessed Virgin, of St. Michael, Archangel, of St. John the Baptist, and of the holy Apostles, martyrs, confessors, and virgins, with the proper furniture for each. Some of these, Prior Richard says, were remaining at his day, and appeared like so many turrets and fortified places.¹

Of a church of such grand proportions, such massive strength, and such artistic construction, it cannot, for a single moment, be supposed that it was built by the uncultivated skill of Saxon Masons. The stone material, the supporting arches, the intricate passage, the winding stairs, all proclaim the presence of foreign architects and a continuation or a resumption in England of the methods of Roman Masonry.

Nor is this at all improbable. Wilfrid, although a Saxon, had from an early age received his ecclesiastical education in Rome, and after his return to Northumberland had not only maintained a constant correspondence with, but had made several visits to, the imperial city, and was personally well acquainted with France. When, therefore, he commenced the construction of important religious houses of such magnitude, he had every facility for the importation of foreign workmen, and there can be no reason for denying that he availed himself of the opportunities which were afforded to him. Indeed the Venerable Bede confirms this when he says that the most reverend Wilfrid was the first of the English bishops who taught the churches of the English nation the Catholic, that is the Roman, mode of life.²

During the long period of forty-five years, in which he occupied the Episcopal See of York, Bishop Wilfrid caused a very great number of churches and monasteries to be built, and must in that way have greatly enlarged and improved the architectural skill of his people by the introduction of foreign artists.

Singularly enough, neither Anderson nor his successors, Entick and Northouck, in the various editions of the *Book of Constitutions* have thought him to be worthy of the slightest mention, though undoubtedly we have historical evidence that he was far better entitled than that less important and less useful man, St.

¹ "Richardi, Prior Hagustal," lib. i., chap. iii.

² Bede, "History," lib. iv., cap. ii.

Alban, to have it said of him that "he loved Masons well and cherished them much."

Indeed all that is said in the *Legend of the Craft* of the proto-martyr might with more plausibility be ascribed to Wilfrid, Bishop of York.

Bentham, in his *History of the Cathedral Church of Ely*,¹ has said of Wilfrid, relying on the almost contemporaneous authority of Bede, of Eddius Stephanus, and of Richard, the Prior of Hexham, that in consequence of the favor and the liberal gifts bestowed upon him by the kings and the nobility of Northumberland, he rose to a degree of opulence so as to vie with princes in state and magnificence, and was thus enabled to found several rich monasteries and to build many stately edifices. In the prosecution of these great undertakings he gave due encouragement to the most skillful builders and artificers of every kind who were eminent in their several trades. He kept them in his service by proper rewards, or, as the *Legend of the Craft* says of St. Alban, "he made their pay right good."

Some of these he obtained at Canterbury, whither they had been introduced by Augustine to aid him in the construction of the churches in Kent. Eddius is distinct on this point, for he says, in his *Life of Wilfrid*, that when he returned home from his visit to Canterbury, he brought back not only skillful singers, who might instruct his choirs in the Roman method of singing, but also Masons and artists of almost every kind.²

Richard, Prior of Hexham, says that he secured from Rome, Italy, France, and other countries where he could find them, Masons and skillful artificers of other kinds, whom he brought to England for the purpose of carrying on his works.³

William of Malmesbury also says that to construct the buildings that Wilfrid had designed Masons had been attracted from Rome

¹ "History of the Cathedral Church of Ely," p. 23.

² Eddius, "Vita S. Wilfridi," cap. xiv. *Cæmentariis* is the word employed by Eddius. Now, *cæmentarius* was the word used in mediæval Latin to designate an Operative Mason. Ducange cites *Magister cæmentariorum*, the "Master of the Masons," as used by mediæval writers to denote one who presided over the building, him whom he calls the Master of the Works.

³ De Roma quoque, et Italia, et Francia, et de aliis terris ubicumque invenire poterat, *cæmentarios* et quoslibet alios industrios artifices secum retinuerat, et ad opera sua faciendi secum in Angliam adduxerat. "Richardi, Prior Hagustal," lib. i., cap. v.

by the hope of liberal rewards,¹ and both Eddius, his biographer, and William of Malmesbury concur in declaring that he was eminent for his knowledge and skill in the science of architecture.

The spirit of improvement and the skill in architecture which had been introduced into Northumberland by its Bishop were not confined to his own country, but through his influence were extended to the other kingdoms of the Heptarchy. They made their way even into the more northern parts of the island, for Bede informs us² that in the beginning of the 8th century, Naitan, King of the Picts, sent messengers to Ceolfrid, Abbot of the Monastery of Weremouth, praying to have architects sent him to build a church in his nation after the Roman manner.

"Hence," says Bentham, "it should seem that the style of architecture generally used in that age in England was called the Roman manner, and was the same that was then used at Rome in Italy and in other parts of the empire."³

Mr. John M. Kemble, when commenting on circumstances like these in the learned Introduction to his *Diplomatic Codex of the Saxon Æra*, has very justly said that "the great advance in civilization made especially in Northumberland before the close of the 7th century proves that even the rough denizens of that inhospitable portion of our land were apt and earnest scholars."⁴

The next eminent Saxon patron of Masonry of whom we have any record is Albert, who in 767 became the successor of Egbert as Archbishop of York. The church which had been built by Paulinus in the 7th century, having been much dilapidated by a conflagration and not having been sufficiently repaired, was wholly taken down by

¹ "Cæmentarios, quos ex Roma spes munificentæ attraxerat. Gulilm. Malsmb. de Gestis Pontif." Angl., p. 272. The "spes munificentæ" was the expectation of higher wages, just what the "Legend of the Craft" says that St. Alban established. It is curious to remark how everything that that Legend ascribes to St. Alban may with equal propriety be attributed on historic authority to St. Wilfrid. It is strange that the later Masonic writers as well as the legendists should have completely ignored St. Wilfrid, who was the real reformer, if not actual founder, of the English Masonry in connection with the Roman.

² In Book V., chapter xxi. of his "Ecclesiastical History."

³ "History of the Cathedral Church of Ely," p. 25.

⁴ "Codex Diplomaticus Aevi Saxonici." This learned and laborious work, edited by Mr. Kemble and published in 1839, in six large octavo volumes, by the English Historical Society, contains copies either in Saxon or in Latin of nearly all the royal and other charters issued during the Saxon domination which have been preserved in various collections.

Albert, who determined to rebuild it. This he did with the assistance of two eminent architects, his disciples, Eanbald, who succeeded him in the see of York, and the celebrated Alcuin, who afterward introduced learning into the court of Charlemagne, of whom he became the preceptor. Alcuin, in a poem *On the Pontiffs and Saints of the Church of York*,¹ has given a full description of the rebuilding of the church, from which we may learn the degree of perfection to which architecture had then arrived. We find in that description the account of a complete and exquisitely finished piece of architecture, "the new construction of a wonderful church," as Alcuin expresses it, consisting of a tall building supported by solid columns, with arches, vaulted roofs, splendid doors and windows, porticos, galleries, and thirty altars variously ornamented. This templum, says the poem of Alcuin,² was built under the orders of the Master Albert by his two disciples, Eanbald and Alcuin, working harmoniously and devotedly.

The predatory aggressions of the Danish pirates, and their more permanent invasion in the latter part of the 9th century, though marked by all the atrocities of a barbarous enemy, and with the destruction of innumerable churches and monasteries and the burning of many towns and villages, must of course have suspended for a time all progress in architecture. But it could have been only a temporary suspension. Their occupancy lasted but twelve years, and the knowledge of the Roman method which had been acquired by the Saxons could not have been lost in that brief period, nor were all the monuments of their skill destroyed. Enough remained for models, and many of the old Masons must have been still living when civilization was renewed in England by the restoration of Alfred to the throne.

Asser, the contemporary and the biographer of Alfred or whoever assumed his name,³ admits that during the Danish domination

¹ "Pontificibus et Sanctis Ecclesiæ Eboracensis." It was published in 1691 by Dr. Thomas Gale in his "Historiæ Britaniæ," Saxonix et Anglo-Danicæ Scriptores quindecim, usually cited as "Gale's XV Scriptores."

² "Hoc duo discipali templum doctore jubente,
Ædificarunt Eanbaldus et Alcuinus, ambo
Concordes operi devota mente studentes."

Alcuin De Pontifet Sanct. Eccl. Ebor.

³ Doubt has been entertained by Mr. Wright, and plausible reasons assigned for the doubt, of the authenticity of Asser's "Life of Alfred," which work he is disposed to be-

the arts and sciences had begun to be neglected, but the wise and vigorous measures pursued by Alfred on his accession soon restored them to more than their former condition of prosperity.

Matthew of Westminster, a Benedictine monk who lived in the 14th century and whose narrative of events is valuable because it is that of a careful observer, tells us that with a genius of his own, not hitherto displayed by others, Alfred occupied himself in building edifices which were venerable and noble beyond anything that had been attempted by his predecessors, and that many Frenchmen and natives of other countries came to England, being attracted by his amiable and affable character and by the protection and gifts which he bestowed on all strangers of worth, whether noble or low-born. Among these foreigners we must naturally suppose that there were many architects and builders from France and Italy, who came to find employment in the various works on which the king was engaged.¹ Matthew also tells us that Alfred bestowed one-sixth of his revenues on the numerous artisans whom he employed and who were skillful in every kind of work on land.²

Florence of Worcester, a monk who wrote in the 12th century, says that among the other accomplishments of Alfred he was skilled in architecture and excelled his predecessors in building and adorning his palaces, in constructing large ships for the security of his coasts, and in erecting castles in convenient parts of the country.³

Indeed all the chroniclers of his own and following ages concur in attributing to the great Alfred, the best and wisest monarch who ever sat on the English throne, the resuscitation of Saxon architecture and the introduction anew into the kingdom of foreign architects from Italy and France, so that the connection between the Roman and the Saxon was continued without material interruption.

In the last year of the 9th century, Alfred was succeeded by his eldest son, Edward, a prince who has been described as inferior to his father in learning and the love of literature, but who by his martial prowess greatly extended the boundaries of his dominions.

lieve was written as late as the latter part of the 12th century ("Essays on Archæology," i., 183). But even if this were correct, it would not affect the truth of the statement in the text.

¹ "Matthew of Westminster," c. xvi., ad annum 871.

² *Ibid.*, ad annum 888.

³ Flor. Wegorn, ad annum 871, 887. He calls him "in arte architectonica sumo»nus" (pre-eminent in the art of architecture).

Though not so great a patron of architecture as his predecessor, the science was not deteriorated during his reign. He founded or repaired some churches and monasteries, and built several cities and towns, which he encompassed with massive walls as a protection against the sudden incursions of the Danes.

In 924 Edward was succeeded by his illegitimate son, Athelstan. Although the records of the old chroniclers of England speak only of a few monasteries that were founded by Athelstan, the legendary history of the Craft assigns to him an important character as having granted a charter for the calling of an Assembly of Masons at the city of York. And to this Assembly the legendist as well as all modern writers up to a very recent period have sought to trace the origin of Freemasonry in England.

This subject has already been very fully discussed in the chapter on the *York Legend*, in the first part of the present work, and it will be unnecessary to renew the discussion here. I will only add that since writing that chapter I have diligently examined all the charters granted by King Athelstan, copies of the originals of which are contained in the *Codex Diplomaticus*, published by the English Historical Society, and have failed to find in them any one in which there is the slightest allusion to the calling of an Assembly of Masons at York. If such a charter ever existed (of which I have no idea), it has been irretrievably lost. The non-appearance of the charter certainly does not prove that it never was granted, but its absence deprives the advocates of the York theory of what would be the best and most unanswerable evidence of the truth of the Legend.

In fact Edgar, his nephew, who ascended the throne in 959, after the brief reigns of his father, Edmund, his uncle, Edred, and his brother, Edwy, was a greater encourager of architecture, or, as the old historians of Masonry would have called him, "a better patron of the Craft," than Athelstan. During his reign the land was so seldom embroiled in strife that the early chroniclers have styled him "Edgar the Pacific." Thus was he enabled to devote himself to the improvement of his kingdom and the condition of his subjects. He founded more than forty monasteries, and among them the magnificent abbey of Ramsay, in Huntingdonshire. From a description of this abbey, given in its history, which has been preserved by Gale, we are led to believe that in the reign of Edgar the

old style of building churches in the square form of a basilica or Roman Hall of Justice was beginning to be abandoned for the cruciform shape, as more symbolically suited to a Christian temple. He built also the old abbey church of Westminster, which Sir Christopher Wren says, in the *Parentalia*, "was probably a good, strong building after the manner of the age, not much altered from the Roman way."

This way, Wren says, was with piers or round pillars (stronger than Tuscan or Doric), round-headed arches and windows. And he refers, as instances of this method borrowed from the Roman, to various buildings erected before the Conquest.

Whatever may be said of the private and personal character of Edgar, and he can not be acquitted of the charge of licentiousness, as a monarch he certainly sought to improve the condition of his kingdom, to secure the comfort of his subjects, and to encourage the cultivation of the arts and sciences, among which architecture was not the least prominent.

It is hardly necessary to pursue the details of the condition of the art of building in the few remaining years of the Anglo-Saxon dynasty. Such a plan would be appropriate to a professional history of English architecture. But enough has been said to maintain the hypothesis of the origin and rise of Masonry, which is the special object of the present work.

It has already been shown that the system of associated workmen in the craft of building arose in the Roman Colleges of Artificers, of Builders, or of Masons, call them by either name; that this system, with the skill that accompanied it, was introduced from Rome into Britain at the time of the real conquest of that island by Claudius, by the artisans who followed the legions and became colonists of the province; that on the accession of the Saxons to the government of the country, though the Britains were driven to the remoter parts of the island in the West, monuments of the Roman workmen remained to perpetuate the method; that the Saxons themselves were not a wholly barbarous people, and that by their rapid conversion to Christianity the communication with Rome was renewed through the missionaries who came to them from that city; that when the monks began the construction of religious houses they sent to Italy or to Gaul for workmen who were educated in the Roman method; and that thus, by the architectural

works which were accomplished under ecclesiastical auspices, the continuous chain which connected the Masons of the Roman Colleges with the Saxon builders remained unbroken.

From the death of Edgar to the final extinction of the Saxon dynasty and the establishment of the Norman race upon the throne of England, though history records few great architectural achievements, nothing was absolutely lost of the skill and the methods of Masonry which had been acquired in the lapse of centuries and from continual communications with foreign artists. Even the interpolation of the reigns of three Danish kings, of which two were very brief, produced no disastrous effects. So when Harold, the last Saxon monarch, was slain at the battle of Hastings, in the year 1066, and the crown passed into the possession of the Norman William, many specimens of Saxon architecture were still remaining.

There is one episode in the history of the Anglo-Saxons which is of too much importance to be passed over without an extended notice. I allude to the establishment of Guilds. These were confraternities which, as will hereafter be shown, gave "form and feature" to the organization of the modern Masonic Lodges.

But this is a subject of so much interest in the present inquiry that it can not be dismissed at the close of the investigation of a different though cognate topic. Its consideration must therefore be deferred to the succeeding chapter.

CHAPTER VIII

THE ANGLO-SAXON GUILDS

GUILD signified among the Saxons a fraternity or sodality united together for the accomplishment by the co-operative exertions of the members of some predetermined purpose.

The word is derived from the Anglo-Saxon verb *gildan*, "to pay," and refers to the fact that every member of the Guild was required to contribute something to its support. Hence Cowel defines Guilds to be "fraternities originally contributing sums towards a common stock."

Assuming that the characteristic of a Guild organization is that it is a society of men united together for mutual assistance in the accomplishment of an object, or for the cultivation of friendship, or for the observance of religious duties, we may say that the Guild has under some of these aspects existed in all civilized countries from the earliest ages.

The priesthood of Egypt was a fraternity containing in its organization much that resembles the more modern Guild, the priests possessing peculiar privileges and constituting a body isolated from the rest of the nation, by the right of making their own laws and electing their own members, who were received into what may be appropriately called the sacerdotal Guild, by certain ceremonies of initiation. The trades and handicrafts were divided into their various professions. Thus the artificers and the boatmen of the Nile were each a separate class,¹ and as the practice of a trade was made hereditary and was restricted to certain families, we may well suppose that each of these classes constituted a Guild. And it may be remarked, in passing, that while the handicraftsmen and traders were generally held by the higher orders among the Egyptians in low re-

¹ Kenreck, "Ancient Egypt," vol. ii., p. 36.

pute, the art of building seems to have occupied a higher place in the national estimation, for while we find no record on the funeral monuments of any of the other working-classes, the names of architects alone appear in the inscriptions with those of priests, warriors, judges, and chiefs of provinces, the only ranks to which the honor of a funeral record was permitted.¹

The *Eranos* among the Greeks was in every minute respect the analogue of the Guild. Donnegal defines it to be "a society under certain rules and regulations, having a fund, contributed by the members, formed for various purposes, such as succoring indigent members."²

Clubs or societies of this kind established for charitable or convivial purposes, and sometimes for both, were very common at Athens, and were also found in other cities of Greece. These Grecian Guilds were founded on the principle of mutual relief. If a member was reduced to poverty, or was in temporary distress for money, he applied to the *Eranos*, or Guild, and the relief required was contributed by the members. Sometimes it was considered as a loan, to be repaid when the borrower was in better circumstances. The *Eranos* met at stated periods, generally once a month, had its peculiar regulations, was presided over by an officer styled the *Eranarckes*, and the *Eranistai*, or members, paid each a monthly contribution. There does not really appear to have been any material difference between the organization of these sodalities and the Saxon and mediaeval social Guilds.

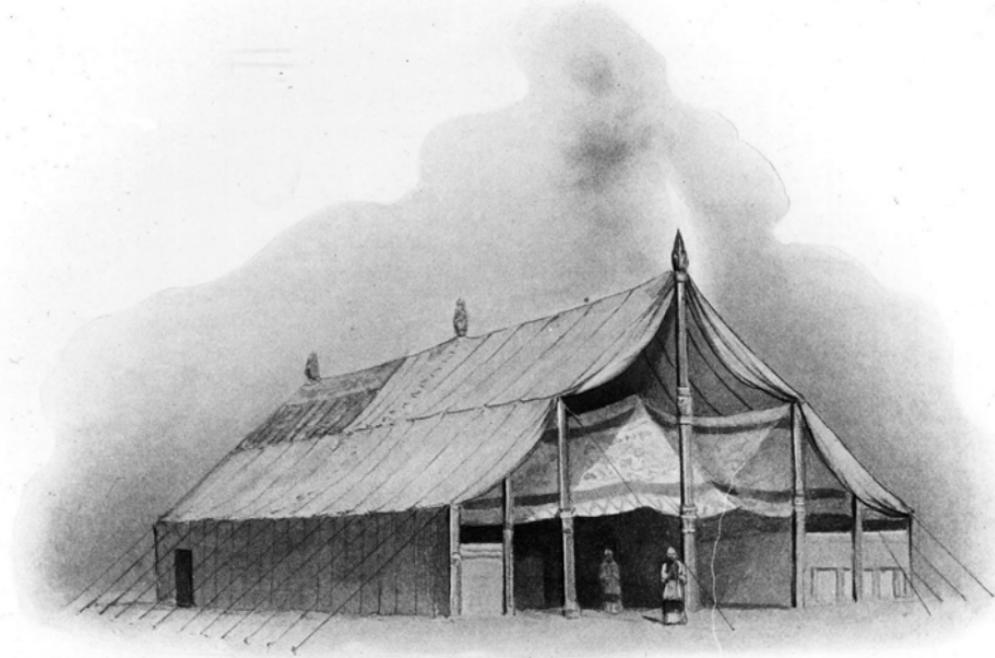

It is scarcely necessary, after the description that has already been given of the Roman Colleges of Artificers, to say that they were analogous to the Craft Guilds. Indeed, it is a part of the hypothesis maintained in the present work, that the latter derived, directly or indirectly, the suggestion of their peculiar form as associated craftsmen from the former.

The *Agapæ* or Love Feasts of the early Christians, though at first established for the commemoration of a religious rite, subsequently became guild-like in their character, as they were sustained by the contributions of the members, and funds were distributed for the relief of widows, orphans, and the poorer brethren. Indeed, they are supposed by ecclesiastical writers to have imitated the Gre-

¹ Kenreck, "Ancient Egypt," vol. ii., p. 37.

² "Lexicon," in voce.

THE ARK OF THE COVENANT, AND THE TABERNACLE

cian *Eranos*. The Government looked upon them as secret societies, and they were consequently denounced by imperial edicts.

Brentano, who has written a learned introduction to Toulmin Smith's *English Guilds*, published by the Early English Text Society, is disposed to trace the origin of Guilds to the feasts of the old German tribes from Scandinavia, which were also called Guilds. Among the German tribes, all events that especially related to the family, such as births, marriages, and deaths, were celebrated by sacrificial feasts in a family reunion. Similar feasts took place on certain public occasions and anniversaries, which often afforded an opportunity for the conclusion of alliances for piracy and plunder by one tribe or another.

I am not inclined to trace the origin of the Saxon and English Guilds to so degenerate a source, and I subscribe to the opinions expressed by Wilda,¹ one of the ablest of the German writers on this subject, who cannot find anything of the true nature of the Guild in these Scandinavian feasts of the family. Hartwig,² who has also investigated this point, agrees with Wilda.

Yet it is very evident that the sentiment of the Guild—that is, the desire to establish fraternal relations for mutual aid and protection—was not peculiar to the Saxons. It may rather be contemplated as a human sentiment, arising from the innate knowledge of his own condition, which makes man aware of his infirmity and weakness in isolation, and causes him to seek for strength in association with his fellow-man.

The similitude, therefore, if not the exact form of the Guild, has appeared in almost all civilized nations, even at the remotest periods of their own history. Wherever men accustom themselves to meet on stated occasions, to celebrate some appointed anniversary or festival and to partake of a common meal, that by this regular communion a spirit of fraternity may be established, and every member may feel that upon the association with which he is thus united he may depend for relief of his necessities or protection of his interests, such an association, sodality, or confraternity, call it by whatever name you may, will be in substantial nature a Guild.

Wilda thinks that the peculiar character of the Guilds was de-

¹ "Das Gildwesen in Mittelalter."

² "Untersuchungen über die ersten Anfänge des Gildveerens."

rived from the Christian principle of love, and that they actually originated in the monastic unions, where every member shared the benefits of the whole community in good works and prayers, into the advantages of which union laymen were afterward admitted.

But the untenableness of this theory is evident from the fact that the same characteristic of mutual aid existed in the pagan nations long before the advent of Christianity, and was presented in those sodalities which represent the form of the modern Guild.

Besides the admission of Wilda and Hartwig that the early Saxon Guilds were so tinctured with the superstitious customs of the pagan sacrificial feasts, and that the Church had to labor strenuously and for a long time for their suppression, would prove that we must look beyond the monasteries for the true origin of the Guild.

I am inclined, therefore, to attribute them to that spirit of associated labor and union of refreshment which had existed in the Roman Colleges of Artificers, where, as has been already shown, there existed that organized union of interests which continued to be displayed in the Guilds.

I will not aver that the Guilds were the legitimate and uninterrupted successors of the Roman Colleges, but I will say that the suggestion of the advantages to be derived from an association in work, regulated by ordinances that had been agreed on, governed by officers who might judiciously direct the exercise of skill and the employment of labor, the result of all of which was a combination of interests and the growth of a fraternal feeling, was suggested by these Roman institutions, and more especially adopted by the Craft Guilds, which, at a later period in the Middle Ages, directed all the architectural labors in every country of Europe.

Of these Craft Guilds many authors have traced the origin to the Roman Colleges. Brentano does not absolutely deny this hypothesis, but he thinks it needs to be proved historically by its defenders. He thinks it more probable that they descended from "the companies into which, in episcopal and royal towns, the bond handicraftsmen of the same trade were ranged under the superintendence of an official, or that they took their origin from a common subjection to police control or from common obligations to pay certain imposts."¹

¹ "English Guilds," in Early English Text Society Publications, p. 114.

It was in Germany that these episcopal communities existed. Arnold, in his *Constitutional History of the German Free Cities*,¹ describes one at Worms in the 11th century. To the Manor of the Bishop were attached, among other dependants, a class of villeins or bondsmen called *dagewardi*. These were divided into *coloni*, or workmen on the country manor, and *operarii*, or handicraftsmen, who were ranged, according to their trades, into different unions or societies. And it is from these that the continental Guilds of the Middle Ages have been erroneously supposed to have been derived. Still, when their bondage ceased, these societies may have developed themselves into Free Guilds; but the Free Guilds existed before, and the bond unions enforced by episcopal authority must have been organized simply for the convenience of the employer. There could not have been in them any of the peculiar characteristics of the free and independent Guild.

But even if this speculative notion of Brentano, that the Guilds were derived from the enforced association of the episcopal and royal bond handicraftsmen, were admitted to be correct, it would be only lengthening the chain which connects them with the Roman Colleges by the insertion of another link, for we should have to look to these Roman sodalities for the idea of union and concerted action, which in either of those instances must have influenced the combination of handicraftsmen.

However, Brentano immediately repudiates the views which he had just advanced, and admits that they deserve no further consideration, because Wilda has shown that the Craft Guilds did not spring from subjection, but arose from the freedom of the handicraft class.

Now, it is precisely in this point that the Craft Guilds most resemble the Roman Colleges. Founded originally in the earliest days of Rome for the express purpose of giving to the working-classes a separate and independent place in the public polity, they preserved this independence to the latest times and cultivated the spirit of freedom which sprang naturally from it. Their spirit of freedom and independence indeed often bordered upon excess. Thus they were watched and feared in the latter days of the republic and during the empire, because their love of freedom sometimes led them to inaugurate conspiracies against the Government, which

¹ "Verfassungsgeschichte der Deutschen Freistädte."

they supposed had the design of subverting or diminishing their privileges. To protect these privileges and to preserve this freedom they instituted the office of Patrons, men of distinction and influence, not of their trade, but selected from the order of patricians, who were to be the conservators of their franchises.

There is abundant historical evidence that the system of Guilds was well known to the Anglo-Saxons. Mr. Toulmin Smith, to whom we are indebted for the collection of Guild charters of a later date, says that "English Guilds, as a system of widespread practical institutions, are older than any kings of England. They are told of in the books that contain the oldest relics of English laws. The old laws of King Alfred, of King Ina, of King Athelstan, of King Henry I., reproduce still older laws in which the universal existence of Guilds is treated as a well-known fact, and in which it is taken to be a matter of course that everyone belonged to some Guild. As population increased Guilds multiplied; and thus, while the beginnings of the older Guilds are lost in the dimness of time and remain quite unknown, the beginnings of the later ones took place in methods and with accompanying forms that have been recorded."¹

But it is not upon those laws alone that we have to depend for proof of the antiquity of the Saxon Guilds. The records of a few of the old Guilds still remain and show that the idea of association for mutual assistance, which is the very spirit of the Guild organization, was prevalent at least twelve centuries ago among our Saxon ancestors.

Among the laws of Ina, who reigned from 688 to 725, are two which relate to the liability of the brethren of a Guild in the case of slaying a thief.² King Alfred also refers to the duties of the Guild when he decrees that in the case of a crime the Brothers of the Guild (gegyltan) shall pay a portion of the fine.³

The *Judicia Civitatis Lundoniæ*, or Statutes of the City of London, contain several ordinances for the regulation of the various Guilds, and prescribing the duties of the members. The "Cnyhten Gyld," or Young Men's Guild, is mentioned by Stow as existing in the time of King Edgar, who granted the liberty of a Guild forever to "thirteene knights or soldiers well beloved of the king

¹ "Traditions of the Old Crown House," p. 28.

² Thorpe's "Anglo Laws," Ina 16, 21.

³ "Leges Ælf," 27.

and the realme (for service by them done), which requested to have a certaine portion of land on the east part of the citie, left desolate and forsaken by the inhabitants by reason of too much servitude."¹

Thirteen was a favorite number in the religious Guilds. Ducange explains the reason in a quotation which he makes from an *Epistle to the Church of Utrecht*, wherein it is said that "a fraternity, commonly called a Guild, was formed, consisting of twelve men to represent the twelve apostles, and one woman to represent the Virgin Mary."²

The text of the "writing," or charter, by which Orky instituted a Guild at Abbotsbury has been preserved. Orky was the "huscarl," or one of the household troops,³ of Edward the Confessor, and there is a charter of that monarch extant in which he gives permission to Tole, the widow of Orky, or Urk, to bequeath her lands to the monastery at the same place in which the Guild was established.

The original charter of Orky's Guild, as written in the Anglo-Saxon language, with a generally correct translation into English, has been inserted by Thorpe in his *Diplomatarium*) As it is one of the earliest of the Saxon charters that is extant, and as it will be interesting in enabling the reader to collate its provisions with those of the later Guilds on the pattern of which the Masonic Guilds, or Fraternities, were formulated, it is here presented entire. It must, however, be observed that it was not a Craft, but a religious Guild, and hence we find no allusion to the privileges and obligations of the former, which always composed a part of their ordinances.

ORKY'S GUILD AT ABBOTSBURY.

"Here is made known in this writing that Orky has given the Guildhall and the place at Abbotsbury to the praise of God and St. Peter, and for the guildship to possess now and henceforth of him and his consort for long remembrance. Who so shall avert this, let him account with God at the great day of judgment.

¹ "Survaye of London," p. 85.

² Ducange, "Glossarium" in voce, *Gilda*.

³ The "huscarlas," says Kemble, were among the Saxons, and, until after the Norman Conquest, the household troops or immediate body-guard of the King. "The Saxons in England," vol. ii., p. 118.

⁴ "Diplomatarium Ang.," pp. 605-608. I have ventured to make a few alterations in Thorpe's translation, to conform more strictly to the Anglo-Saxon original.

"Now these are the covenants which Orky and the guild brothers at Abbotsbury have chosen to the praise of God and the honor of St. Peter and their souls' need.

"This is first: Three nights before St. Peter's Mass, from every guild brother one penny, or one penny worth of wax, whichever be most needed in the monastery, and on the mass' eve one broad loaf, well raised and well sifted, for our common alms; and five weeks before Peter's Mass day let each guild brother contribute one guild-sester full of clean wheat, and let that be rendered within two days, on pain of forfeiting the entrance fee (ingang), which is three sesters of wheat. And let the wood be rendered within three days after the corn contribution, from every full guild brother (riht gegyldan)¹ one burthen (byrthene) of wood, and two from those who are not full brothers, or let him pay one guild sester of corn. And he who undertakes a charge, and does it not satisfactorily, let him be liable in his entrance fee, and let there be no remission. And let the guild brother who abuses another within the guild, with serious intent, make atonement to all the society to the amount of his entrance, and afterward to the man whom he abused, as he may settle it, and if he will not submit to compensation, let him forfeit the fellowship and every other privilege of the Guild. And let him who introduces more men than he ought, without leave of the steward and the purveyors (feomera), pay his entrance. And if death befall any one in our society, let each guild brother contribute one penny at the corpse for the soul, or pay according to three guild brothers (gylde be pry gegildum).² And if any one of us be sick within sixty miles, then we shall find fifteen men who shall fetch him; and if he be dead thirty; and they shall bring him to the place which he desired in his life. And if he die in the vicinity, let the steward have warning to what

¹ There is some difficulty here. The words "riht gegyldan" in the original mean literally "lawful members of the Guild;" and the word "ungyldan" signifies "those who are not members," for the particle un has the privative power in Anglo-Saxon as in English. Thorpe translates as "regular and non-regular guild brothers." I have adopted with hesitation Kemble's translation ("Saxons in England," i., 511). But what are "non-regular" or "not full brethren?" As "gegyldan" also means "to pay a contribution," we might suppose that the "riht gegyldan" were those who had paid their dues to the guild, and the "ungyldan" were those who were in arrears. This would be a reasonable explanation of the passage; but there are grammatical difficulties in the way.

² Literally translated, but unintelligible. Kemble does not attempt a translation, but gives the passage the benefit of a blank.

place the corpse is to go, and let the steward then warn the guild brothers, as many as ever he can ride to or send to, that they come thereto and worthily attend the corpse and convey it to the monastery and earnestly pray for the soul. That will rightly be called a guildlaw which we thus do and it will beseem it well both before God and before the world; for we know not which of us shall soonest depart hence. Now we believe through God's support that this aforesaid agreement will benefit us all, if we rightly hold it.

"Let us fervently pray to God Almighty that he have mercy on us; and also to his holy Apostle St. Peter, that he intercede for us and make our way clear to everlasting rest; because for love of him we have gathered this guild (gegaderodon). He has the power in heaven that he may let into heaven whom he will, and refuse whom he will not; as Christ himself said to him in his Gospel: 'Peter, I deliver to thee the key of heaven's kingdom; and whatsoever thou wilt have bound on earth, that shall be bound in heaven, and whatsoever thou wilt have unbound on earth, that shall be unbound in heaven.' Let us have trust and hope in him that he will ever have care of us here in the world, and after our departure hence, be a help to our souls; May he bring us to everlasting rest."

These covenants, which in later Guild charters are called ordinances, and by the Mason Guilds constitutions, very clearly define the objects of the association. These were not connected with the pursuit of any handicraft, but were altogether of a religious and charitable nature. Infirm brethren were to be supported, the dead were to be buried, prayers were to be said for the repose of their souls, and religious services were to be performed. There was an annual meeting on the feast of St. Peter, and regulations were made for the collection of alms on that day for the benefit of the poor. Especial attention was paid to the preservation of fraternal relations of mutual kindness between the members.

In all this we see the germ of those similar regulations which are met with in the "Constitutions of the Freemasons," compiled in the 15th, 16th, and 17th centuries, and which were, *mutatis mutandis*, finally developed in the regulations of the Speculative Masons in the 18th century.

The essence of the regulations of this as well as of two other Guilds established about the same time, one at Exeter and the third at Cambridge, was the binding together in close fraternal union of

man to man, which was sometimes fortified by oaths for the faithful performance of mutual help.

The charter of the "Thanes' Guild at Cambridge" has been published by both Thorpe and Kemble from a Cottonian manuscript. As it contains some points not embraced in the charter of the Orky Guild, it is here presented, as a further means of collation with the charters of the later Craft Guilds. The original is of course in Anglo-Saxon, and I have adopted the translation of Thorpe, with the exception of a few emendations.

THE THANES' GUILD AT CAMBRIDGE.

"Here in this writing is the declaration of the agreement which this society has resolved in the Thanes' Guild at Cambridge. That then is first that each should take an oath to the others on the halidom of true fidelity before God and the world. And all the society should support him who had most right. If any guild brother die let all the guildship bring him to where he desired; and let him who should come thereto pay a sester (about eight quarts) of honey; and let the guildship inherit of the deceased half a farm. And let each contribute two pence to the alms and thereof bring what is fitting to St. Ætheldryth. And if any guild brother be in need of his fellows' aid and it be made known to the fellow nearest to the guild brother and, unless the guild brother himself be nigh, the fellow neglect it, let him pay one pound. If the lord neglect it, let him pay one pound unless he be on the lord's need or confined to his bed. And if any one slay a guild brother let there be nothing for compensation but eight pounds. But if the slayer scorns the compensation let all the guildship avenge the guild brother and all bear the feud. But if a guild brother do it let all bear alike. And if any guild brother slay any man and he be an avenger by compulsion and compensate for his violence and the slain be a nobleman let each guild brother contribute half a mark for his aid; if the slain be a churl (ceorl) two oras (100 pence) if he be Welch one ora. But if the guild brother slay any one through wantonness and with guile, let himself bear what he has wrought. And if a guild brother slay his guild brother through his own folly let him suffer on the part of the kindred for that which he has violated, and buy back his guildship with eight pounds, or forever forfeit our society and friendship.

And if a guild brother eat or drink with him who slew his guild brother unless it be before the king or the bishop of the diocese or the aldermen, let him pay one pound unless with his two bench comrades (gesetlung) he can deny that he knew him. If any guild brother abuse another let him pay a sester of honey unless he can clear himself with his two bench comrades. If a servant (cniht) draw a weapon let the lord pay one pound and let the lord get what he can and let all the guildship aid him in getting his money. And if a servant wound another let the lord avenge it and all the guildship together, so that seek he whatever he may (sece whet he sece) he have not life (feorh). And if a servant sit within the storeroom let him pay a sester of honey; and if any one have a footstool let him do the same. And if any guild brother die out of the land or be taken sick let his guild brethren fetch him and convey him, dead or alive, to where he may desire, under the same penalty that has been said, if he die at home and the guild brother attend not the corpse. And let the guild brother who does not attend his morning discourse (morjen space) pay his sester of honey."

In this agreement of an early Guild, we will again notice that, though the regulations are few, they all partake of that spirit of mutual kindness which has characterized the Guild organizations of all ages, and of which the Masonic Lodge is but a fuller development.

The principal points worthy of notice are as follows:

1. There was an oath of fidelity.
2. The sick were to be nursed and the dead buried.
3. A brother was bound to give aid to another brother if he were called upon.
4. If a member got into trouble or difficulty the Guild was to come to his assistance.
5. The injuries or wrongs of a member were to be espoused by the Guild.
6. To associate knowingly with one who had done injury to a member was a penal offense.
7. The severest punishment that could be inflicted on a member was expulsion from the body.

These seven points embrace the true spirit of the Masonic institution, and may be advantageously collated with the mediæval

Constitutions, and with the regulations and obligations of the modern Lodges.

That this collation of the older and the newer Constitutions may be more conveniently made, it will be necessary to anticipate the chronological sequence, and to present the reader the ordinances of two Craft Guilds, both of the 14th century.

The first of these Constitutions, though the date affixed to it makes it apparently sixty years later than the second, was really much older. Toulmin Smith says that "the internal evidence shows that the substance of the ordinances is older than the date given." As, in the beginning, they are said to be ordinances "made and of ancient time assigned and ordained by the founders of the Guild," he conjectures that they were first written in Latin, and that what we have "are the early translation of a lost original with some later additions and alterations."

The document now presented to the reader, and which has been taken from Toulmin Smith's collection of English Guilds, which was published by the Early English Text Society, is the Guild of the Smiths of Chesterfield. The Guild united with that of the Holy Cross of Merchants in 1387. But, as has already been said, the date of its institution must have been much earlier.

GUILD OF THE SMITHS OF CHESTERFIELD.

(The paragraphs are numbered for the convenience of future reference. There is no numbering in the original.)

1. "This is the agreement of the Masters and brethren of the Guild of Smiths of Chesterfield, worshipping before the greater cross in the nave of the church of All Saints there. The head men are an Elder Father, Dean, Steward and four Burgesses by whose oversight the guild is managed. Lights are to be found and be burnt before the cross on days named.

2. "If any brother is sick and needs help, he shall have a half-penny daily from the common fund of the guild until he has got well. If any of them fall into want they shall go, singly, on given days, to the houses of the brethren where each shall be courteously received, and there shall be given to him, as if he were the Master of the house, whatever he wants of meat, drink and clothing, and he shall have a halfpenny like those that are sick, and then he shall go home in the name of the Lord.

3. "On the death of a brother twelve lights shall be kept burning round the body, until buried, and offerings shall be made. Round the body of a stranger or of the son of a brother, dying in the house of a brother four lights shall be kept burning.

4. "If it befall that any of the brethren, by some hapless chance, and not through his own folly, is cast into prison, all his brethren are bound to do what they can to get him freed and to defend him.

5. "If any sick brother makes a will, having first bequeathed his soul to God, his body to burial and the altar gifts to the priests, he shall then not forget to bequeath something to the guild according to his means.

6. "Whenever any one has borrowed any money from the guild, either to traffic with or for his own use, under promise to repay it on a given day, and he does not repay it, though three times warned, he shall be put under suspension, denunciation and excommunication—all contradiction, cavil and appeal aside—until he shall have wholly paid it. If he has been sick, the claim of the guild must be first to be satisfied. And if he dies intestate, his goods shall be held bound to the guild, to pay what is owing to it, and shall not be touched or sequestrated until full payment has been made to the guild.

7. "Should it happen, [which God forbid] that any brother is contumacious; or sets himself against the brethren; or gainsays any of these ordinances; or being summoned to a feast will not come; or does not obey the Elder Father when he ought nor show him due respect; or does not abide by what has been ordained by the Elder Father and greater part of the guild; he shall pay a pound of wax and half a mark. Moreover he shall be put under suspension, denunciation and excommunication, without any contradiction, cavil or appeal.

8. "Any one proved to be in debt, or a wrong-doer, shall be deemed excommunicate, and shall presume to come to the meetings of the brethren, his company shall be shunned by all, so that no brother shall dare to talk with him, unless to chide him, until he has fully satisfied the Elder Father and the brethren, as well touching any penalty as touching the debt or wrong doing.

9. "To keep and faithfully perform these constitutions, all the brethren have bound themselves by touch of relics."

Although, as its name imports, this is the sodality of a body of handicraftsmen, yet there is no reference to any regulations for work. In this respect it more resembles a Social than a Craft Guild. This deficiency is, however, supplied in the ordinances of the Tailors' Guild at Lincoln, which is next to be given. This circumstance is one of the internal evidences that the Smiths' Guild was much older than its charter purports.

The Tailors' was a Craft Guild, and its provisions for the regulation of labor, though few, are striking and may be profitable compared with the more developed system subsequently adopted by the Masonic Craft Guilds. The date of the institution of the Tailors' Guild is the year 1328. The paragraphs are here numbered for reference, as in the case of the former Guild.

THE TAILORS' GUILD AT LINCOLN.

1. "All the brethren and sisters shall go in procession in the feast of Corpus Christi.

2. "None shall enter the Guild as whole brother until he has paid his entry, a quarter of barley, which must be paid between Michaelmas and Christmas. And if it is not then paid, he shall pay the price of the best malt as sold in Lincoln Market on Midsummer day. And each shall pay 12 pence to the ale.

3. "If any one of the Guild falls into poverty (which God forbid) and has not the means of support he shall have every week 7 pence out of the goods of the Guild; out of which he must discharge such payments as become due to the Guild.

4. "If any one dies within the city, without leaving the means for burial, the Guild shall find the means according to the rank of him who is dead.

5. "If any one wishes to make pilgrimage to the Holy Land each brother and sister shall give him a penny; and if to St. James or to Rome a halfpenny; and they shall go with him outside the gates of the city of Lincoln, and on his return they shall meet him and go with him to his mother church.

6. "If a brother or sister dies outside the city on pilgrimage or elsewhere, and the brethren are assured of his death they shall do for his soul what would have been done if he had died in his own parish.

7. "When one of the Guild dies, he shall, according to his means, bequeath 5 shillings or 40 pence or what he will to the Guild.

8. "Every brother and sister coming into the Guild, shall pay to the chaplain as the others do.

9. "There shall be four mornspeeches held in every year, to take order for the welfare of the Guild; and whoever heeds not his summons shall pay two pounds of wax.

10. "If any Master of the Guild takes any one to live with him as an apprentice in order to learn the work of the tailors' craft, the apprentice shall pay 2 shillings to the Guild or his Master for him, or else the Master shall lose his Guildship.

11. "If any quarrel or strife arises between any brethren or sisters of the Guild, (which God forbid) the brethren and sisters shall with the advice of the Graceman and Wardens do their best to make peace between the parties, provided the case is such as can be thus settled without a breach of the law. And whoever will not obey the judgment of the brethren shall lose his Guildship, unless he thinks better of it within three days, and then he shall pay a stone of wax, unless he have grace.

12. "On feast days, the brethren and the sisters shall have three flagons and six tankards with prayers and the ale in the flagons shall be given to the poor who most need it. After the feast, a Mass shall be said and offerings made for the souls of those who are dead.

13. "Four lights shall be put round the body of any dead brother or sister until burial and the usual services and offerings shall follow.

14. "If any Master of the Craft keeps any lad or sewer of another Master for one day after he has well known that the lad wrongly left his Master, and that they had not parted in a friendly and reasonable manner he shall pay a stone of wax.

15. "If any Master of the Craft employs any lad as a sewer, that sewer shall pay 5 pence or his Master for him.

16. "Each brother and sister shall every year give 1 penny for charity when the Dean of the Guild demands it, and it shall be given in the place where the giver thinks it most needed together with a bottle of ale from the store of the Guild.

17. "Officers who are elected and will not serve are to pay fines."

It will be seen, on an inspection of these seventeen ordinances, that the Guild of Tailors of Lincoln combined the character of a Religious and a Craft Guild. The 15th and the 16th statutes regu-

late the conduct of the Masters in the prosecution of their trade, but all the others are appropriate to the regulation of religious services, to the practice of charity, and the inculcation of friendly and fraternal relations among the members.

In process of time the Craft Guilds, without losing altogether their religious features, which have been preserved to this day in the institution of Speculative Masonry, which is descended from them, began to enlarge the number of their ordinances for the regulation of work and workmen. As it will be necessary to give directly a specimen of the old Constitutions of the English Mediaeval Masons, which were nothing more nor less than ordinances of Masonic Craft Guilds, it will be proper, at the expense of a little recapitulation, to glance at the progress of these Craft Guilds. Some of the facts will refer equally to the Craft Guilds of the Continent, but only incidentally, as that topic will be treated hereafter as an independent topic. For the present our attention must be directed exclusively to the rise and growth of the English Guilds of Craftsmen.

It has been already seen that in the nth century, and even before, the inhabitants of a town were divided by the officers who governed the municipality, into freemen and bondsmen. To this last class belonged the handicraftsmen who were subjected to the payment of certain taxes and the performance of certain feudal services.

But there was also a class of free handicraftsmen who were not, as respects the carrying on of their business, subjected to the same servile indignities as the bondsmen. As the law made the distinction between the bond and free craftsmen, there was no necessity for the latter to enter into any association for the protection of their rights and privileges. They already formed a part of the governing and law-making power of the municipality, and were thus able to protect themselves.

But by a course of revolutions, which it is unnecessary to detail, the free handicraftsmen lost their place in the general Guild of the citizens. The burghers then began to feel a desire to subject them to the same imposts as were paid by the bond craftsmen.¹ These burghers, anxious for the prosperity of their towns, allowed foreigners, on the payment of a fee, to carry on their trade, which of course

¹ Brentano, "Development of Guilds," p. 115.

greatly affected the interests of the free craftsmen, by introducing competition.

Hence arose the necessity of association for that mutual protection of interests, which could not have been effected if the craftsmen continued in an isolated state, and from this arose the formation of Craft Guilds, which took the suggestion of their form from the older Guilds which had preceded them, most of which were, however, of a social or religious character.

The Craft Guilds thus established to suppress the encroachments of the burghers on their rights consisted at first, both in England and on the Continent, in France and in Germany especially, of the most eminent of the Craftsmen who were free, freedom being an indispensable qualification for admission into the fraternity.

But after the bond craftsmen were, by the liberal and humanizing progress of the age, emancipated from their bondage, many of them, leaving the companies into which they had been distributed during their bondage by their masters, became members of the Guilds of free craftsmen.

So now the handicrafts were divided into those who had always been free and those who had originally been bondsmen. And the only way in which the *ci-devant* bond craftsman could mingle on equal terms with the free craftsmen was by obtaining admission into and becoming, as it is called, "free of the Guild." This was a high privilege and not easily conceded or obtained.

The free craftsman always held aloof from the craftsman who was not free, the word *free* not being used as the opposite of *bondsman*, but only to indicate one who was not a freeman of the Guild and who worked outside of its regulations.

We find that this allusion to freemen of the Guild is constantly used in the old charters. Such expressions as Free Carpenters, Free Weavers, Free Tailors, are not, it is true, to be found on record, though it is not unlikely that they were in colloquial use. But in the charter of the Guild of Tailors of Exeter, granted by Edward IV., and the original of which is in the archives of the Corporation of Exeter, whence it was copied by Toulmin Smith,¹ is the following heading of one of the sections of the Ordinances: "The Othe of the Free Brotherys"—i.e., The Oath of the Free Brothers.

¹ "English Guilds," in Early English Text Society Publications, p. 318.

"Free Brothers" was a recognized expression in the early period of the organization of Craft Guilds, to indicate one who was a free-man of the Guild. The Masons appear to have preserved the use of the epithet with great pertinacity, and used the term "Free-mason" to distinguish those who were free of the Guild from those "rough layers" or "cowans" who had not been admitted to the privileges of the fraternity and with whom they were forbidden to work.

In every Masonic Constitution that has been preserved is the ordinance that "no Mason shall make any mould, square, or rules to any rough layer." The Free Mason could not, by the laws of the Guild, engage in labor with one who was not free.

It is thus that I trace the derivation of the word "Freemason," used now exclusively to indicate the member of a Lodge of Speculative Masons, but originally to denote a Mason who was free of his Guild.

I think this derivation much better than that which traces the origin of the term to the French *Frère Maçon*, or Brother Mason. Such a derivation would necessarily assign the birth of the English Masonic Guilds to a French parentage, a theory not only wholly unsupported by historical authority, but actually in contradiction to it. Indeed, the French themselves have repudiated the idea, for they call a Freemason not a "Frère Maçon," or brother Mason, but a "Franc Maçon," *Franc* being the old French for *free*.

At first the Craft Guilds were voluntary associations, and could enforce their regulations only by the common consent of the members, but as in time some of these, unwilling to submit to the restrictions laid upon them, would withdraw and carry on their trade independently, it was found necessary to obtain the authority from the law of the land to punish such contumacy and to protect the interests of the Guilds.

This was effected by a confirmation of the Guild ordinances by the lord, the citizens, or afterward by the King, and in this way arose the charters under which, after the time of Henry I., all the Craft Guilds acted and continued to act to the present day.

This process did not, however, entirely cure the evil, and in the 12th century artisans of different trades and mysteries in London, being unwilling to unite with the incorporated Guilds or being unable to obtain admission into them, erected themselves into fraterni-

ties without the necessary powers of incorporation. These were not recognized by the companies of freemen and were condemned by the king for their contumacious proceedings.¹ They were opprobriously denominated "Adulterine Guilds," and they remind us of the *Collegia illicita*, or unlawful Colleges, among the Romans, as well as of the "clandestine Lodges" among the modern Speculative Masons.

The number of these Adulterine Guilds in the year 1180 was, according to Madox in his *History of the Exchequer*, fourteen, but no Guild of Masons is enumerated in the list.

Before proceeding to a comparison of the statutes, ordinances, or regulations of these early Guilds with the Masonic constitutions contained in the Old Records of the Order, it will be proper, at the expense of some recapitulation, to survey briefly the condition and character of these Saxon and Norman Craft Guilds. I have said on a former occasion, and here repeat the assertion, that an investigation of the usages of these Mediaeval Guilds and a comparison of their regulations with the old Masonic Constitutions will furnish a fertile source of interest to the Masonic archæologist and will throw much light on the early history of Freemasonry.

The custom of meeting on certain stated occasions was one of the most important of the Guild regulations. These meetings of the whole body of the Guild were sometimes monthly, but more generally quarterly. At these meetings all matters concerning the common interests of the Guild were discussed, and the meetings were held with certain ceremonies, so as to give solemnity to the occasion. The Guild chest, which was secured by several locks, was opened, and the charter, ordinances, and other valuable articles contained in it were exposed to view, on which occasion all the members uncovered their heads in token of reverence.

The Guild elected its own officers. This was a prerogative peculiar to the English Guilds. On the Continent the presiding officer was frequently appointed by the municipal or other exterior authorities.

In the early Saxon Guilds, and for some time after the Conquest, the presiding officer was called the "Alderman." At a later

¹ Allen, "New History of London," vol. i., p. 61.

period we find him designated sometimes as the "Graceman," sometimes as the "Early Father," and sometimes by other titles.

But eventually it became the uniform usage to call the chief officers of the Guild the "Master and Wardens," a usage which has continued ever since to prevail and which was adopted by the Speculative Masons.

The Craft Guilds not only directed themselves to the welfare of their temporal concerns, such as the regulation of their trade, which was called a "Mystery," but also took charge of spiritual matters, and for that purpose employed a priest or chaplain, who conducted their religious services and offered up masses or prayers for the dead. In this connection each Guild appears to have had a patron saint, and they were often connected with a particular church, where, on appointed occasions, they performed special services, and received in return a participation in the advantages of all the prayers of the church.

In these respects they resembled the Roman Colleges of Artificers, which, it will be remembered, were often connected with a particular temple, and the College was dedicated to the God worshipped therein.

Almsgiving was also practiced by the Guild, and while there was a general distribution of food and money to the poor indiscriminately, special attention was paid to the wants of their own indigent members, their widows and orphans.

To support the current expenses of the Guild an entrance-fee was demanded from every one on his admission, and all the members contributed monthly or quarterly a certain sum to the general fund.

The Guild administered justice among its members, and inflicted punishments for offenses committed against the statutes of the Guild. These punishments consisted of pecuniary fines, or of suspension, or even expulsion, commonly called excommunication. They discouraged suits at law between the members, and endeavored to settle all disputes, if possible, by arbitration.

Finally, there was an annual festival on the day of the patron saint of the Guild, when the members assembled for religious worship, almsgiving, and feasting. It was deemed an offense for anyone to be absent from this general assembly without sufficient excuse.

There was also a ceremony of admission and an oath adminis-

tered to the candidate on his reception. As these will be of great importance in a comparison of the usages of the Saxon Guilds with the Masonic sodalities, I copy the following form of admission and oath from the charter of St. Catherine's Guild at Stamford. The date of this charter is 1494, but Smith observes that there is internal evidence showing that the Guild was established at a much earlier period.

ADMISSION OF BROTHERS AND SISTERS IN THE GUILD OF ST.
CATHERINE.

"Then it is ordained that when the said first even-song is done, the Alderman and his brethren shall assemble in their hall and drink; and there have a courteous communication for the weal of the said Guild. And then shall be called forth all those that shall be admitted brethren or sisters of the Guild; and the Alderman shall examine them in this wise: 'Sir or Syse be ye willing to be brethren among us in this Guild and will desire and ask it in the worship of Almighty God, our Blessed Saint Mary and of the Holy Virgin and Martyr Saint Catherine in whose name this Guild is founded and in the way of charity?' And by their own will they shall answer, 'Yea' or 'Nay.' Then the Alderman shall command the Clerk to give this oath to them in form and manner following:

"This hear you. Alderman: I shall true man be to God Almighty, to our Lady Saint Mary, and to that Holy Virgin and Martyr Saint Catherine in whose honor and worship this Guild is founded; and shall be obedient to the Alderman of this Guild and to his successors and come to him and his brethren when I have warning and not absent myself without cause reasonable. I shall be ready at scot and lot and all my duties truly pay and do; the ordinances, constitutions and rules what with the council of the same Guild, keep, obey and perform and to my power maintain to my life's end; so help me God and halidome and by this book.' And then kiss the book and be lovingly received with all the brethren; and then they drink about; and after that depart for that night."

Such is a brief sketch of the principal characteristics of the early Guilds. The main object of presenting it has been to enable the reader to compare these regulations with those of the Old Masonic

Constitutions of the 15th, 16th, and 17th centuries, so as to show the growth and development of the Masonic law from them. It will, for the sake of convenient reference, be therefore necessary to select from these Old Masonic Constitutions one at least, and one of the earliest, that the reader may in making his comparison have the regulations of the Guild and the charges of the Masons side by side before him. But this investigation will perhaps be better continued in a separate chapter.

CHAPTER IX

THE EARLY ENGLISH MASONIC GUILDS

O Brother William James Hughan are we indebted, more than to any other person, for the collection and publication of all the Masonic Guild ordinances that have been preserved in the British Museum, in the archives of old Lodges, or in private hands.

In the beginning of his work on *The Old Charges of the British Freemasons* (a book so valuable and so necessary that it should be in the library of every Masonic archaeologist), Brother Hughan says:

"Believing as we do that the present Association of Freemasons is an outgrowth of the Building Corporations and Guilds of the Middle Ages, as also a lineal descendant and sole representative of the early, secret Masonic sodalities, it appears to us that their ancient Laws and Charges are specially worthy of preservation, study and reproduction. No collection of these having hitherto been published we have undertaken to introduce several of the most important to the notice of the Fraternity."

As Brother Hughan is distinguished for the accuracy and fidelity with which he has himself made, or caused to be made by competent scribes, copies of these Constitutions from the originals, I shall select from one of the earliest of them the ordinances or regulations, which shall be collated with those of the early Saxon Guilds, specimens of which have been given in the preceding chapter.

An account of these Old Records, as they are sometimes called, will be found in the first part of this work, where the subject of the *Legend of the Craft*, which they all contain, is treated. It will be unnecessary therefore to repeat here that account.

I might have selected for collation the statutes contained in the poem published by Halliwell, or those in the Cooke manuscript, as

both are of an older date than any in the collection of Hughan. But as they are all substantially the same in their provisions, and the latter have the advantage of greater brevity, I shall content myself with referring occasionally, when required, to the former.

The manuscript which is selected for collation is that known as the Landsdowne, whose date is supposed to be 1560. The date of the manuscript is, however, no criterion of the date of the Guild whose ordinances it recites, for that was of course much older. It is thought to be next in point of antiquity to the poem published by Mr. Halliwell, to which the date of 1390 is assigned, and Hughan says that "the style of caligraphy and other considerations seem to warrant so early a date being ascribed to it." In copying the statutes from the copy published by Brother Hughan, I have made an exact transcript, except that I have numbered the statutes consecutively instead of dividing them, as is done in the original, into two series. This has been done for convenience of collation with the Guild ordinances inserted in the preceding chapter and which have been numbered in a similar method. The orthography, for a similar reason, has been modernized.

CHARGES IN THE LANDSDOWNE MANUSCRIPT.

1. "You shall be true to God and Holy Church and to use no error or heresy, you understanding and by wise men's teaching, also that you shall be liege men to the King of England without treason or any falsehood and that you know no treason or treachery but that you amend and give knowledge thereof to the King and his Council; also that ye shall be true to one another (that is to say) every Mason of the Craft that is Mason allowed, you shall do to him as you would be done to yourself.

2. "Ye shall keep truly all the counsel of the Lodge or of the chamber and all the counsel of the Lodge that ought to be kept by the way of Masonhood, also that you be no thief nor thieves to your knowledge free; that you shall be true to the King, Lord or Master that you serve and truly to see and work for his advantage; also you shall call all Masons your Fellows or your Brethren and no other names.

3. "Also you shall not take your Fellow's wife in villainy, nor deflower his daughter or servant, nor put him to disworship; also you

shall truly pay for your meat or drink wheresoever you go to table or board whereby the Craft or science may be slandered."

These are called "the charges general that belong to every true Mason, both Masters and Fellows." Then follow sixteen others, that are called "charges single for Masons Allowed." The only difference that I can perceive between the two sets of charges is that the first set refer to the moral conduct of the members of the Guild, while the second refer to their conduct as Craftsmen in the pursuit of their trade. The former were laws common or general to all the Guilds, the latter were peculiar to the Masons as a Craft Guild. The second set is as follows:

4. "That no Mason take on him no Lord's work, nor other mens, but if he know himself well able to perform the work, so that the Craft have no slander.

5. "That no Master take work but that he take reasonable pay for it, so that the Lord may be truly served and the Master live honestly and pay his Fellows truly; also that no Master or Fellow supplant others of their work (that is to say) if he have taken a work or else stand Master of a work that he shall not put him out without he be unable of cunning to make an end of his work; also that no Master nor Fellow shall take no apprentice for less than seven years and that the apprentice be able of birth that is freeborn and of limbs whole as a man ought to be, and that no Mason or Fellow take no allowance to be made Mason without the assent of his Fellows at the least six or seven and that he be made able in all degrees that is freeborn and of a good kindred, true and no bondsman and that he have his right limbs as a man ought to have.

6. "Also that a Master take no apprentice without he have occupation sufficient to occupy two or three Fellows at least.

7. "Also that no Master or Fellow put away lords work to task that ought to be journey work.

8. "Also that every Master give pay to his Fellows and servants as they may deserve, so that he be not defamed with false working.

9. "Also that none slander another behind his back to make him lose his good name.

10. "That no Fellow in the house or abroad answer another ungodly or reprovably without cause.

11. "That every Master Mason reverence his elder; also that a Mason be no common player at the dice, cards or hazard nor at

any other unlawful plays through the which the science and craft may be dishonored.

12. "That no Mason use no lechery nor have been abroad whereby the Craft may be dishonored or slandered.

13. "That no Fellow go into the town by night except he have a Fellow with him who may bear record that he was in an honest place.

14. "Also that every Master and Fellow shall come to the Assembly if it be within fifty miles of him if he have any warning and if he have trespassed against the Craft to abide the award of the Masters and Fellows.

15. "Also that every Master Mason and Fellow that have trespassed against the Craft shall stand in correction of other Masters and Fellows to make him accord and if they cannot accord to go to the common law.

16. "Also that a Master or Fellow make not a mould stone, square nor rule to no, lowen nor set no lowen work within the Lodge nor without to no mould stone.¹

17. "Also that every Mason receive or cherish strange Fellows when they come over to the country and set them on work if they will work as the manner is (that is to say) if the Mason have any mould stone in his place on work and if he have none the Mason shall refresh him with money unto the next Lodge.

18. "Also that every Mason shall truly serve his Master for his pay.

19. "Also that every Master shall truly make an end of his work task or journey which soever it be."

Now, in the collation of these "Charges" with the ordinances of the early Guilds we will find very many points of striking resemblance, showing the common prevalence of the Guild spirit of religion, charity, and brotherly love in each, and confirming the

¹The Freemason must not make for one who is not a member of the Guild a mould or pattern stone as a guide for construction of mouldings or ornaments, whereby he would be imparting to him the secrets of the Craft. The word "lowen," which is found in no other manuscript, is supposed to be a clerical error for "cowan." It is just as probable that it is a mistake for "layer," a word used in other manuscripts and denoting a "rough mason." The stone-mason and the bricklayer are at this day separate trades. But whether the correct word be "cowan" or "layer," the object of the law was the same, namely, that a member of the Guild should not work with one who was not.

opinion of Hughan, and the hypothesis which has been constantly advanced, that the one was an outgrowth of the other.

The religious spirit which pervaded all the Guilds is here exhibited in number 1, which requires the Mason to be true to the Church and to use no error or heresy.

The charge in number 2, to keep the counsel of the Lodge, is met with in nearly all the Guild ordinances. Thus in the ordinances of the Shipmen's Guild, of the date of 1368, it is said:

"Whoso discovereth the counsel of the Guild of this fraternity to any strange man or woman and it may have been proved . . . shall pay to the light two stone of wax or shall lose (forfeit) the fraternity till he may have grace. That is he shall be suspended from the Guild until restored by a pardon."

The same regulation is found in the ordinances of several other Guilds, whose charters have been copied by Toulmin Smith. In those of the Guild of St. George the Martyr, dated 1376, there is no option afforded of a pecuniary fine. The words of the statute are that "no brother nor sister shall discover the counsel of this fraternity to no stranger on the pain of forfeiture of the fraternity forevermore." Nothing short of absolute expulsion was meted out to the betrayer of Guild secrets.

In the "Charges of a Free Mason," said to be "extracted from the ancient Records," published by Anderson in 1723, and adopted by the Grand Lodge, soon after the Revival, for the government of the Speculative Masons, this principle of the Guilds has been preserved. It is there said, in Charge VI., sec. 5, that the Mason is "not to let his family, friends, and neighbors know the concerns of the Lodge." It is at this day an almost unpardonable crime to disclose the secrets of the Lodge. The spirit of the Guild has been preserved in its successor, the modern Lodge.

The prohibition in the fourth charge, to dishonor a brother, or "put him to disworship," is found in the earliest of the Guilds. That of Orky, for example, prescribes a punishment to any member who "misgretes," that is, insults, abuses, or injures another member. The Guild was always careful to preserve a feeling of brotherly love and harmony among its members, a disposition which is also the characteristic of the Masonic fraternity. Hence we find the tenth point of these Masonic charges declaring that "none shall slander another behind his back." But the very language of the fourth

point of the charges would appear to have been borrowed from the ordinances of some of the Guilds.

In those of the Guild of the Holy Trinity, whose date is 1377, we meet with these statutes:

"No one of the Guild shall do anything to the loss or hurt of another, nor allow it to be done so far as he can hinder it, the laws and customs of the town of Lancaster being always saved.

"No one of the Guild shall wrong the wife or daughter or sister of another, nor shall allow her to be wronged, so far as he can hinder it."

From the fifth to the twentieth charge, the regulations principally relate to the government of the Craft in their work. There is some difficulty in comparing these with the early Craft Guilds, from the paucity of charters of the latter which have been preserved. But wherever there are any points common to both, the analogy and resemblance between the two is at once detected.

Thus in the Charter of the Guild of Fullers at Lincoln, which Guild was begun in 1297, it is said that "none of the Craft shall work at the wooden bar (full cloth), with a woman, unless with the wife of a Master or his handmaid."

Toulmin Smith says that he cannot explain this restriction. But it was in fact only an effort of the Guild spirit common to all the Craft Guilds, which forbade one who was a member or freeman of the Guild from working with one who was not a member.

The Guild of the Tailors of Exeter had an ordinance that "no one shall have a board or shop of the Craft unless free of the city." And in the charter of the Guild of Tylers or Poyntours (pointers of walls) of Lincoln it is said that "no Tyler or Poyntour shall stay in the city unless he enters the Guild."

The same spirit of exclusiveness is shown in the seventeenth point of the Masonic Constitutions, which forbids a Master or Fellow from working with a Cowan, or one who was not a "Mason Allowed," that is to say, one who has been admitted into the fraternity or Guild.

This exclusion from a participation in labor of all who were not members of the sodality was a regulation common to all the Craft Guilds, but was perhaps more fully developed and more stringently urged in the Constitution of the Masonic Guild than in those of any of the others. It is from this principle of exclusiveness that the

modern Lodges of Speculative Masonry have derived their strict regulation of holding no communication with Masons who have not been "duly initiated," or with Lodges which have not been "legally constituted."

Contumacy, rebellion, or disobedience to the laws of the Craft or of the Guild was severely punished. The ordinances of the Smiths' Guild of Chesterfield prescribed that any brother who is "contumacious or sets himself against the brethren or gainsays any of these ordinances" shall be suspended, denounced, and excommunicated. A similar regulation is to be found in other Guilds.

According to the Landsdowne Statutes, a Mason is required to be true to every member of the Craft, and to reverence his elder or superior, and in the points of the statutes of the Masonic Guild, as set forth in the Halliwell MS., it is said that the Mason must be "true and steadfast to all these ordinances wheresoever he goes."

Suits at law between the members were discouraged and forbidden, except as a last resort, in all the Saxon Guilds.

The Shipmen's Guild provided that the Alderman (or Master) and the other members should do their best to adjust a quarrel, but if they were unable, then the Alderman should give them leave "to make their suit at common law."

In the Guild of the Holy Cross it was declared that no brother or sister of the Guild should go to law for a debt or a trespass until he had asked leave of the Alderman and of the men of the Guild.

The Statutes of the Guild of St. John the Baptist, enacted in 1374, are more explicit. There it is said that a member "cannot sue until he has shown his grievance to the Alderman and Guild brethren that are chief of the Council," and it adds that "the Alderman and the Guild brethren shall try their best to make them agree; and if they cannot agree they may make their complaint in what place they will."

The same provision is met with in all the Constitutions of the Masonic Guild. The earliest of them, the Halliwell MS., prescribes in case of a dispute a "love-day," or arbitration. The Landsdowne says that when a wrong is done by one of the members to another, the other Masters and Fellows must try to make them agree, and if they cannot agree they may then "go to the common law," which is the very expression used in the Shipmen's Guild above cited.

It is a very strong proof of the connection between the early Guilds and the modern Lodges that this reluctance to permit the brethren to carry their personal disputes out of the Craft and into the publicity of the courts was fully developed in the "Charges of the Speculative Masons," adopted in 1723. In these it is said, in the true spirit of the old Guilds to which Speculative Masonry succeeded, that, "with respect to Brothers or Fellows at law, the Master and Brethren should kindly offer their mediation, which ought to be thankfully accepted by the contending brethren; but if that submission is impracticable, they must, however, carry on their process or law-suit without wrath and rancor."

It is needless to extend these comparisons. Sufficient has been done to show that there is a close resemblance in their mode of organization, method of action, constitution, and spirit between the Saxon Guilds and the modern Masonic Lodges, which actually are, under another name, only Masonic Guilds. This resemblance indicates an historical connection between the two, and this connection may be more closely traced through the civic companies of London and other cities of England. That these latter were the direct offshoot from the former is a fact generally admitted by writers on the subject, and of it there can be no doubt. "In the Trade Guilds," says Mr. Thorpe, "we may see the origin of our civic companies."¹

To these civic companies, and to one of them particularly, the Masons' Company in Basinghall Street, the reader's attention must be invited.

¹ "Diplomatarium Anglicum Ævi Saxonici," Preface, p. xvi.

CHAPTER X

THE LONDON COMPANIES AND THE MASONS' COMPANY

ABOUT the middle of the 14th century, perhaps a little earlier, and in the reign of Edward III., the various trades began to be reconstituted under the name of Livery Companies and to change their name from Guilds to Crafts and Mysteries. There was, however, very little real difference between their new and their old organization, and the Guild spirit of fraternity remained the same.

There has been a difference of opinion as to the meaning of the word "Mystery," which was applied to these companies in such phrases as "the Mystery of the Tailors," or "the Mystery of the Saddlers."

Herbert says that the preservation of their trade-secrets was a primary ordination of all the fraternities, and continued their leading law as long as they remained actual "working companies," whence arose the names of "Mysteries" and "Crafts," by which they were for so many ages designated.¹

This derivation is a reasonable one, especially when we remember that the word "craft," which was always associated with the word "mystery" in its primitive usage, signified art, knowledge, or skill.

But this explanation has not been universally accepted, and the word "Mystery," in its application to a trade or handicraft, has more generally been derived from the old or Norman French, where *mestière* was used to denote a craft, art, or employment. There is no certainty, however, that the word was not employed to denote the trade-secrets of a Guild or Company, as Herbert suggests. If *mestière* denoted, in old French, a trade, *mestre* meant, in the same language, a mystery, and the former word may have been de-

¹ "History of the Twelve Great Livery Companies," vol. i., p. 45 .

rived from the latter. But the modern Masons, in borrowing the word "Mystery" from the old companies, where they find their origin, undoubtedly use it in the sense of something hidden or concealed.

The origin of the livery and other companies out of the earlier Guilds is a matter of historical record.

Guilds, it has been already shown, existed in England from a very early period, but, as all tradesmen and artificers did not belong to Guilds, or, if they did, often acted irregularly in buying and selling a variety of wares or working in different handicrafts, a petition was presented to Parliament in the year 1355, in consequence of which it was enacted that all artificers and "people of mysteries" should choose forthwith each his own mystery, and, having chosen it, should thenceforth use no other.

It is here that we may assign the origin of the chartered companies, many of which exist to the present day, and among whom we shall find at a later period the Masons' Company, which was the direct predecessor of the Masons' Lodges, both of the Operative before and the Speculative after the beginning of the 18th century.

In a document found in the records of the City of London, of the date of 1364, and which has been published by Mr. Herbert,¹ we find the names of the principal, if not the whole of the city companies, which were in existence in that year. This document is an account, in Latin, of the sums received by the city chamberlain from those companies as gifts to the King, to aid him in carrying on the war with France.

The list records the names of thirty-two companies. Though we find several Craft Guilds, such as the Tailors, the Glovers, the Armorers, and the Goldsmiths, there is no mention of a Guild or Company of Masons. Whether such a body did not then exist as a chartered company, or whether, if in existence, it was too poor to make a contribution, which seems to have been a voluntary act, are questions which the document gives us no means of deciding.

Five years afterward, in 1369, a law was enacted by the municipal authorities of London, which must have tended to encourage the organization of these Companies. By this law the right of election of all city dignitaries, and all officers, including members of

¹ "History of the Twelve Great Livery Companies," vol. i., p. 30.

Parliament, was transferred from the representatives of the wards, who had hitherto exercised this franchise, to the trading companies. A few members of each of these were selected by the Masters and Wardens, who were to repair to Guildhall for election purposes. This right has ever since remained, with some subsequent modifications in the twelve Livery Companies of London.

The effect of this law in increasing the number of Companies very speedily showed itself. In a list in Norman French of the "number of persons chosen by the several mysteries to be the Common Council" in the year 1370, it appears that the Companies had increased from thirty-two to forty-eight.

In this list we find the seventeenth to be the *Company of Freemasons*, and the thirty-fourth the *Company of Masons*. The former appears to have been a more select, or at least a smaller, Company than the latter, for while the Masons sent four members to the Common Council the Freemasons sent only two. Afterward the two Companies were merged into one, that of the Masons, to which I shall hereafter again revert.

The constitution and government of these Companies appear to have been framed very much after the model of the earlier Guilds.

They had the power of making their own by-laws or ordinances, and of enforcing their observance among their members. These ordinances were called "Points." The word is first used in the charters of Edward III., who wills that the said ordinances shall be kept and maintained *en touz pointz*, or "in all points." We find the same word in the *Constituciones Geometric* in the Halliwell MS., where the ordinances are divided into fifteen articles and fifteen points. It is also met with in all subsequent constitutions. As a technical term the word is preserved in the Speculative Masonry of to-day, whose obligations of duty are to be obeyed by initiates into the fraternity in all their "arts, parts, and points." These little incidents serve to show the uninterrupted succession of our modern Lodges from the early Guilds and the later Companies which were formed out of them. They are therefore worthy of notice in a history of the rise and progress of Freemasonry.

It has been seen that in the most of the Saxon Guilds the principal officer was called the Alderman. After the Guilds were chartered as Companies, the chief officers received the title of Masters

and Wardens, titles still retained in the government of Masonic Lodges.

The ordinances required that there should be held four meetings in every year to treat of the common business of the Company. These were the quarterly meetings to which reference is made by Dr. Anderson when, in his *History of the Revival of Masonry*, in the year 1717, he says that "the quarterly communication of the officers of the Lodges" was revived.

The regulation of apprentices formed an important part of the system pursued by the Companies. No one was admitted to the freedom or livery of any Company unless he had first served an apprenticeship, which was generally for the period of seven years. And even then he could not be admitted into the fellowship except with the consent of the members. Masters were not permitted to take more than a certain number of apprentices, lest the trade or art should be overstocked with workmen and the journeymen or fellows find less opportunity for employment.

Care was taken that one member should not undersell another member, or work for a less, amount of pay or interfere with his contracts for labor. It was the duty of the Company to protect the interests of all alike.

There were judicious regulations for the settlement of disputes between the members, so as to avoid the necessity of a resort to law. The spirit of the early Guild was in this exactly followed. "If any debate is between any of the fraternity," says an ordinance of one of these Companies, "for misgovernance of words or asking of debt or any other things, then anon the party plaintiff shall come to the Master and tell his grievance and the Master shall make an end thereof."¹

To speak disrespectfully of the Company; to strike or insult a brother member; to violate the regulations for clothing or dress; to employ or work with men who were not free of the Company, and who were generally designated as "foreigners," or to commit any kind of fraud in carrying on the trade or handicraft, were all offenses for which the ordinances provided ample punishment.

The feeling of brotherly love exhibited in charity to an indigent or distressed member prevailed in all the Companies. When

¹ "Ordinances of the Company of Grocers," anno 1463.

GEORGE OLIVER, D.D.

a member became poor from misfortune or sickness, he was to be assisted out of the common fund.

All of these regulations will be found copied in the Old Constitutions of the Operative Masons, a fact which conclusively proves that they were originally a Company following the general usage which had been adopted by the other Companies, whether Trade or Craft, such as the Grocers, the Mercers, the Goldsmiths, or the Tailors.

The subject of "Liveries" is one that will be interesting to the Speculative Freemason, from the rule with which he is familiar, that a Mason, on entering his Lodge, must be "properly clothed." The word "clothing" here indicates the dress which he should wear, especially and imperatively including his "lambskin apron."

We have the very important and very authentic evidence of the fact that secret societies existed in the 14th century, marked by all the peculiarities we have seen distinguishing the English Companies.

In the year 1326 the Council of Avignon fulminated what has been called the "Statute of Excommunications," its title being "Concerning the Societies, Unions and Confederacies called Confraternities, which are to be utterly extirpated."

This statute is contained in Hardouin's immense collection of the arts of Councils.¹ The following is a part of the preamble, and it shows very clearly that the Church at that time recognized and condemned the existence of those Guilds, Companies, or Societies for mutual help, some of which were the precursors of the modern Masonic Lodges, against which the Romish Church exhibits the same hostility.

The statute passed at Avignon commences as follows:

"Whereas, in certain parts of our provinces, noblemen for the most part, and sometimes other persons have established unions, societies and confederacies, which are interdicted by the canon as well as by the municipal laws, who congregate in some place once a year, under the name of a confraternity, and there establish assemblies and unions and enter into a compact confirmed by an oath that they will mutually aid each other against all persons whomsoever, their own lords excepted, and in every case, that each one will

¹ "Acta Conciliorum et Epistolæ Decretales æ Constitutiones Summorum Pontificum," Paris, 1714, tome vii, p. 1, 507.

give to another, help, counsel and favor; and sometimes *all wearing a similar dress* with certain curious signs or marks, they elect one of their number as chief to whom they swear obedience in all things."

The decree then proceeds to denounce these confraternities, and to forbid all persons to have any connection with them under the penalty of excommunication. And here again is a pointed reference to the subject of livery:

"They shall not institute confraternities of this kind; one shall not give obedience nor afford assistance or favor to another; nor shall they *wear clothing which exhibits the signs or marks of the condemned thing.*"

That the mediæval Masons wore a particular dress when at work, which was the same in all countries, is evident from the plates in several illuminated manuscripts from the 10th to the 16th centuries, copies of which have been inserted by Mr. Wright in his essay on mediæval architecture.¹ The dress of the Masons in all these plates, whether in England, in France, or in Italy, is similar. "In reviewing and comparing these various representations," says Mr. Wright, "of the same process at so widely distinct periods, we are struck much less with their diversity than with the close resemblance between both workmen and tools, which continues amid the continual, and sometimes rapid, changes in the condition and manners of society. Whether this be in any measure to be attributed to the circumstance of the Masons forming a permanent society among themselves, which transmitted its doctrines and fashions unchanged from father to son, it is not very easy to determine."²

The question is not, however, of so difficult a solution as Mr. Wright supposes, when we see that every Guild or Company of tradesmen or artificers had its form of dress peculiar to itself, which was called its "livery." The Masons, as a Company, followed the usage and adopted their own livery or clothing. The modern Speculative Masons preserve the memory of the usage by declaring that none shall enter a Lodge or join in its labors unless he is "properly clothed;" that is, wears the livery of the fraternity.

According to the authority of Stow, in his *Survey of London*, liveries are not mentioned as having been worn before the reign of

¹ "Essays on Archæological Subjects," vol. ii., pp. 129-250.

² *Ibid.*, p. 136.

Edward I., or about the beginning of the 14th century. That is, they were then first licensed at that time or mentioned in the charters of the Companies, but he admits that they had assumed them before that time without such authority. And this is confirmed by the illuminated manuscripts to which allusion has been made above, which show that the Masons used a particular clothing as far back as the 10th century.

In the "Statute of Excommunications," passed in the beginning of the 14th century by the Council of Avignon, societies or confraternities are denounced which had been established for mutual aid, and which are described as "all wearing a similar dress with certain curious signs or marks."

About the middle of the 14th century there began a separation between the wealthier and the more indigent Companies, which ended after a long contention in the exclusion from the municipal government of all except what are now called "The Twelve Great Livery Companies," namely, the Companies of Mercers, Grocers, Drapers, Fishmongers, Goldsmiths, Skinners, Merchant Tailors, Haberdashers, Salters, Ironmongers, Vintners, and Clothworkers. These Companies, as distinguished by wealth, by political power and commercial importance from the minor Companies, which were often only voluntary associations of men of the same trade or craft, were called the "substantial companies," the "principal crafts," the "chief mysteries," and other similar titles which were intended to imply their superiority, though many of the so-called "minor companies," as the weavers and bakers, were really of greater antiquity, of more public utility and importance.

Among these "minor companies," the one of especial importance to the present inquiry is the "Masons' Company."

Of this Company, Stow gives the following account in his *Survey of London*:

"The Masons, otherwise termed free masons, were a society of ancient standing and good reckoning, by means of affable and kind meetings divers times and as a loving brotherhood should use to do, did frequent their mutual assemblies in the time of King Henry IV. in the 12th year of whose most gracious reign they were incorporated."

A fuller account of the Company is given by Chiswell in the *New View of London*, printed in 1708, in the following words:

"Masons' Company was incorporated about the year 1410, having been called the *Free Masons*, a fraternity of great account, who have been honored by several Kings, and very many of the Nobility and Gentry being of their Society. They are governed by a Master, 2 Wardens, 25 Assistants, and there are 65 on the Livery.

"Their armorial ensigns are, Azure, on a Chevron Argent, between 3 Castles Argent, a pair of Compasses, somewhat extended, of the first Crest, a Castle of the 2nd."¹

The Hall of the Company, in which they held their meetings, was "situated in Masons Alley in Basinghall street as you pass to Coleman street."²

Maitland, who published his *London and its Environs* in 1761, gives a later date for the charter. He says that "this Company had their arms granted by Clarencieux, King-at-Arms in 1477, though the members were not incorporated by letters patent till they obtained them from King Charles II. in 1677."³

The conflict in dates between Stow, with whom Chiswell agrees, and Maitland, the former ascribing the charter of the Company to Henry IV., in 1410, and the latter to Charles II., in 1677, may be reconciled by supposing that the original charter of Henry was submitted to a review and confirmation, which was technically called an "*inspeximus*" an act which we constantly meet with in old charters. In other words, the Masons first received a charter for their Company from Henry IV. in 1410, which charter was confirmed by Charles II. in 1677.

These Companies of traders and craftsmen were not confined to London, but were to be found in other cities. The Masons, however, do not appear to have always maintained a separate organization, but seem sometimes to have united with other craftsmen. Thus among the thirteen Companies which were incorporated in the city of Exeter, the thirteenth consisted of the Painters, Joiners, Carpenters, Masons, and Glaziers, who were jointly incorporated into a Company in 1602. It may be remarked that all of these crafts were connected in the employment of building. Each, however, had its separate arms, that of the Masons being described by Izacke in

¹ "New View of London," vol. ii., p.611.

² Ibid.

³ "London and its Environs," vol. iv., p. 304.

his *Antiquities of Exeter* thus: "Sable, on a chevron between 3 towers argent, a pair of Compasses, dilated Sable."¹

This will be an appropriate place to examine this subject of the Masonic Arms as historically connecting the Operative Craft with the Speculative Grand Lodge.

According to Stow, the Arms of the "Craft and Fellowship of Masons" of London were granted to them by William Hawkeslowe, Clarencieux King-of-Arms in the twelfth year of Edward IV., that is, in 1473, and were subsequently confirmed by Thomas Benott, Clarencieux King-of-Arms in the twelfth year of Henry VIII., or in 1521. These arms, which are blazoned in the original grant, now in the British Museum, are as follows: "Sable, on a chevron, engrailed argent between 3 castles of the second, with doors and windows of the field, a pair of compasses extended of the first." Translating the technical language of heraldry, the arms may be plainly described as a silver or white scalloped chevron, between three white castles with black doors and windows on a black field, and on the chevron a pair of compasses of a black color. Woodford says that these arms are supposed to have been adopted by the Grand Lodge of Speculative Masons in 1717. Kloss gives the same arms, except that the chevron is not scalloped (engrailed), but plain, as the seal of the Grand Lodge of England in 1743 and in 1767. The arms adopted by the Grand Lodge of England at the union in 1813, and still used, consist of a combination of the old Operative arms (the colors being, however, changed) with those of the Athol Grand Lodge, which are impaled. But as the latter arms were most probably an invention of Dermott, they are of no historical value.

From all this we see, so far as heraldry throws a light on history, that the English Speculative Masons have to the present day claimed to deduce their origin from the Operative Masons who were incorporated as a Company in the 15th century. They claimed to be their heirs, and according to the law of heraldry assumed their arms.

To resume the subject of the Masons' Companies, we have no records of the existence of those organizations under that name in more than a few places in England.

¹ "Remarkable Antiquities of the City of Exeter." By Richard Izacke, heretofore chamberlain thereof. Second edition, London, 1724, p. 68.

But the Masons seem often to combine with other Guilds for purposes of convenience. Several instances of this kind occur in old records, as in an appendix to the charter of the Guild of Carpenters of Norwich, begun in 1375, where it is stated that "Robert of Elfynghem, Masoun, and certeyn Masouns of Norwiche" had contributed two torches or lights for the altar of Christ's Church at Norwich. Now, as that church was the place where the Carpenters' Guild celebrated their mass, and as the fact of the contribution is noted in their charter, it is reasonable to suppose that the Masons, having no Guild or Company of their own in Norwich, had united in religious services with the carpenters.

The impossibility of obtaining any continuous narrative of the transactions of the Masons' Company; which was one of the forty companies of London mentioned by Stow, must render many of the deductions which may be drawn from certain portions of the Harleian MS. altogether conjectural. The probability or correctness of the conjecture will have to be determined by the reason and judgment of the reader.

The Masonic public has in its possession at this day, and easily accessible by any student, some twenty or thirty documents printed from manuscripts ranging in date from the end of the 14th to the beginning of the 18th century. These documents are usually denominated "Masonic Constitutions." A very few of them were known to Dr. Anderson, and he has given inaccurate quotations from them in both of his editions of the *Book of Constitutions*. But for the greater number, new until a recent period, to the world, we are indebted to the researches of Masonic archaeologists, by whose unpaid industry they have been unearthed, as we may say, from the shelves of the British Museum, from the archives of old Lodges, or from the libraries of private collectors.

But though we possess transcripts of these Constitutions correctly made from the original manuscripts, there is nothing on record to tell us by whom they were written, nor under what authority. Internal evidence alone assures that they are all, except the first two, copies of some original not yet found, and that they contain the legend or traditionary history of Freemasonry which was believed and the laws and regulations which were obeyed by the Operative Masons who lived from the 15th to the 18th century, if not some centuries before.

To make any conjecture as to the source whence they have emanated and for what purpose they were written, we must recapitulate what little we know of the history of the Masons' Company of London.

The Masons' Company was incorporated, according to Chiswell, in the year 1410, or thereabouts, by King Henry IV., which charter was renewed by Charles II. in 1677, I suppose by an "*inspeximus*" or confirmation of the original charter, as was usual.

But we know from the list contained in the records of the city of London, and published by Herbert, which has already been referred to, that in the year 1379, in the reign of Edward III., there were in London a company of Freemasons and a company of Masons, the former of which sent two and the latter four members to the Common Council of the city. These two were wholly distinct from each other, but Stow tells us that at a subsequent period they united together and were merged into one Company.

What was the difference between these two Companies, is a question that will naturally be asked, and which can not very easily be answered.

My own conjecture, and it is merely a conjecture, though I think not an unpalatable one, is that the Company of Freemasons was the representative in England of that body of Traveling Freemasons who had spread, under the auspices of the Church, over every country of Europe, and whose history will constitute hereafter an important portion of the present work; while the Company of Masons was the representative of the general body of the Craft in the kingdom, who had formed themselves into a Guild, Company, or Sodality, just as the Mercers, the Grocers, the Tailors, the Painters, and other tradesmen and mechanics had done at the same period. The two companies were, however, afterward merged into one, which retained the title of "The Company of Masons."

Each of the Trade and Craft Guilds or Companies kept a book in which was contained its ordinances and a record of its transactions. The language of these books was at first the Norman-French; sometimes, says Herbert, intermixed with abbreviated Latin, or the old English of Chaucer's day. Afterward, during the reign of Henry V., and by his influence, the ordinances were translated into the vernacular language of the period, and the books of the Companies were thereafter kept in English.

We find just such changes in the dialect of the old Masonic Constitutions from the archaic and, to unused ears, almost unintelligible style of the Halliwell poem to the modern English of the later manuscripts.

If the Masons' Company had had an historian like Herbert, who would have given a detailed history of its transactions from its origin, as he has done in respect to the twelve Livery Companies of London, we should, I think, have had no difficulty in defining the true character of the Old Constitutions. Many heroes have lived before Agamemnon, but they have died unwept because they had no divine poet to record their deeds.¹ So, too, we are left to dark conjecture in almost all that relates to the early history of the Masonic Craft in their primary Guild-life, for want of an authentic chronicler.

It may, however, be assumed, as a more than plausible conjecture, that there must have been for the Masons' Company a book of records and of their ordinances, just as there were for the other Trade and Craft Companies.

Indeed, Dr. Anderson says, in his second edition, that "the Freemasons had always a book in manuscript called the *Book of Constitutions* (of which they had several very ancient copies remaining), containing not only their Charges and Regulations, but also the history of architecture from the beginning of time."

Dr. Plot, also, in his *Natural History of Staffordshire*, tells us that the society of Freemasons "had a large parchment volume amongst them containing the history and rules of the craft of Masonry." And the contents of that volume, as he describes them, accord very accurately with what is contained in the Old Constitutions that are now extant.

We have, then, good reason to believe that the manuscript Constitutions, which consist of the *Legend of the Craft* and the statutes or Ordinances of the Guild, are all copies of an original contained in the archives of the Company, and which original Anderson says was called the *Book of Constitutions*.

It is not necessary that we should contend that the title given by Anderson is the right one, or that he had authority for the statement. It is sufficient to believe that there was a book in the ar-

¹ Horace, Carm., lib. iv., 9.

chives of the Masons' Company, as there was a similar book in the archives of the other Companies, and that the manuscript Constitutions, as we now have them, were copied at various times and by different persons from that book.

But it must be evident, to anyone who will carefully collate these manuscripts, that there must have been two originals at least. The *Legend of the Craft* and the set of ordinances differ so materially in the Halliwell poem from those in the later manuscript as to indicate very clearly that the latter could not have been copied from the former, but must have been derived from some other original.

Now, in 1410 there were, according to the catalogue given by Herbert from the London records, two distinct Companies, that of the Freemasons and that of the Masons. It is very reasonable to conclude that each of these Companies had a *Book of Constitutions* of its own. If so, the Halliwell Constitutions may have found their original in the Company of Freemasons, and the later manuscripts, so unlike it in form and substance, may have had their original in the Company of Masons.

If, as Findal and some others have supposed, the Halliwell Constitution was of German or Continental origin, the invocation to the Four Crowned Martyrs leading to that supposition, then the fact that this manuscript of Halliwell was copied from the *Book of Constitutions* of the Company of Freemasons would give color to the hypothesis which I have advanced, that the Company of Freemasons, as distinguished from that of the Masons in the year 1410, was an offshoot from the sodality of Traveling Freemasons, who, at an earlier period, sprang from the school of Como in Lombardy.

A new charter, or rather, as I suppose, a confirmation of the old one, was granted to the Masons' Company in 1677 by King Charles II. About this time we might look for some changes in the long-used *Book of Constitutions* of the old Masons' Company, which had been incorporated in 1410, and of which the earlier manuscripts, from the Landsdowne to the Sloane, are exemplars.

Now, just such changes are to be found in the Harleian MS., which has been conjecturally assigned to the approximate date of 1670. An examination of this manuscript will show that it materially differs in several important points from all those that preceded it. Besides the old ordinances, which are much like those in the preceding manuscripts, but couched in somewhat better lan-

guage, there are in the Harleian MS. fifteen "new articles," as recognizing for the first time a distinction between the Company and the Lodges.

Article 30, which is the fifth of the new articles, is in the following words:

"That for the future the said Society, Company, and Fraternity of Free Masons shall be regulated and governed by one Master and Assembly and Wardens as the said Company shall think fit to choose at every yearly General Assembly."

There are several points in this article which are worthy of attention, as throwing light on the condition of the fraternity at that time.

1st. The words *for the future* imply that there was a change then made in the government of the Society, which must have been different in former times.

2d. The use of the word *Company* shows that these regulations, or "new articles," were not for the government of Lodges only, but for the whole Company of Masons. The existence of the Masons' Company is here for the first time recognized in actual words.

3d. The word "Assembly" is entirely without meaning in its present location, or if there is any meaning it is an absurd one. It can not be supposed that the Company at a General Assembly would choose an Assembly to govern it. Doubtless this is a careless transcription of the original by a copyist, who has written "Assembly" instead of "Assistants." In the charters of the other Companies we frequently see the provision that besides the Master and Warden a certain number of "Assistants" shall be appointed out of the Guild, to aid the former officers by their counsel and advice. For instance, in a charter of the Drapers' Company, after providing for the election of a Master and four Wardens, it is added that there may and shall be constituted and appointed certain others of the Guild "who shall be named assistants of the Guild or fraternity aforesaid, and from that time they shall be assisting and aiding to the Master and Wardens in the causes, matters, business, and things whatsoever touching or concerning the said Masters and Wardens."

Now, as assistants formed no part of the government of a Lodge, but were common in the Livery Companies, it is evident

¹ See the Charter in Herbert's "Twelve Great Livery Companies," vol. i., p. 487.

that the article under consideration, and therefore that the Harleian MS., in which it is contained, were copied from the Book of the Masons' Company.

4th. This article decides the fact that there was at that day a "yearly assembly" of the Company. We are not, however, to infer that this "yearly assembly" of the Masons' Company constituted, as some of our earlier histories have supposed, a Grand Lodge. If so, as the Master of the Company must necessarily have presided over the General Assembly, he would have been its Grand Master, and as there were other Masons' Companies in other parts of England, there would have been several Grand Lodges as well as several Grand Masters, all of which is unsupported by any historical authority. Indeed, neither the words "Grand Master" nor "Grand Lodge" are to be met with in any of the Old Constitutions, from the Halliwell MS. onward to the latest. Both titles seem to have come into use at the time of what is called the Revival, in 1717, and not before.

There are some other articles in this Harleian MS. that are worthy of attention, as showing the condition and the usages of the Craft in the 17th century, and which will be again referred to when that subject is under consideration in a subsequent chapter.

CHAPTER XI

THE GENERAL ASSEMBLIES AND THE LODGES OF MEDIÆVAL MASONS

HERE were two conditions of the Craft in the period embraced between the 14th and 17th centuries which are peculiarly worth the notice of the student of Masonic history. These are the General Assembly of the Craft at stated periods, and their more customary meetings in Lodges.

It is to be regretted that the early records of English Masonry furnish but the slightest and most unsatisfactory accounts of the transactions of either of these bodies, so that most of our information on this subject is merely conjectural.

"We possess," says Mr. Halliwell, "no series of documents, nor even an approach to a series, sufficiently extensive to enable us to form any connected history of the ancient institutions of Masons and Freemasons. We have, in fact, no materials by which we can form any definite idea of the precise nature of those early societies."¹

This is very true, and the historian finds himself impeded in every step of his labor in tracing the early progress of the institution. "We must therefore," as he continues to observe, "rest contented with the light which a few incidental notices and accidental accounts, far from being altogether capable of unsuspected reliance, afford us."

In the forty years which have elapsed since this passage was written, the energetic industry of Masonic archaeologists has brought to light many old records which are "of unsuspected reliance," which, though still too few to form a complete series of historic stages, will enable us to understand better than we did a half century ago the real condition of the Masonic sodalities in the Middle Ages. Had these records been in Mr. Halliwell's possession when he presented the first of them as a valuable contribution to Ma-

¹ "Society of Antiquaries," April 18, 1839, p. 444.

sonic history, he would hardly have erred as he did in his belief of the truth of the Prince Edwin story, or of the authenticity of the Leland MS.

As the geologist has been enabled to trace the gradual changes in the earth's surface, and in the character of its living inhabitants at the remotest period, by the fossil which he finds embedded in its early strata, or as the anthropologist learns the true character of prehistoric man from the stone and bronze implements that he has discovered in ancient caves and mounds, so the archaeologist can form a very correct notion of the state of mediæval Freemasonry from the scattered records of that period, which, long preserved in the obscurity of neglected archives or in the vast collections of the British Museum, have at length been published to the world, to form the authentic materials of a Masonic history.

They confirm many statements hitherto supposed to be without authority, and enable us by their silence to reject much that has been fancifully presented as authentic.

Thus in the manuscript which was discovered and published by Mr. Halliwell, and which he very correctly considered to be the earliest document yet brought forward connected with the progress of Freemasonry in Great Britain, we may learn that at least as early as toward the end of the 14th century the Masons met on specified occasions and under certain rules and regulations in a body which they called the "Congregation" or the "Assembly." Of this there can not be the slightest doubt, since the genuineness of the Halliwell poem is universally recognized as having been written between the years 1350 and 1400, and as containing an authentic account of the condition of the Craft at that period.

In the second article of the Constitutions contained in this work it is said that "every Mason who is a Master, must be at the general congregation if he is informed in sufficient time where that assembly is to be holden, unless he should have a reasonable excuse."¹

¹ "That every Mayster that ys a mason
Most ben at the generale congregacyon,
So that he hyt resonably y-tolde
Where that the semble schal be holde;
And to that semble he most nede gon
But he have a resenabul skwsacyon."

Halliwell MS., lines 107-112.

I have spared the reader the archaic and, to most persons, unintelligible language, but have given the true meaning in the translation, and append the original in a marginal note.

From this law it would appear that in the 14th century it was the usage of Master Masons to assemble from various parts of the country for purposes connected with the business or interests of the Craft.

In the Cooke MS., whose date is at least an hundred years later, the writer gives an account of the origin of this custom. It arose, he says, in the time of King Athelstan, who ordained that annually, or every three years, all Master Masons and Fellows should come up from every province and country to congregations, where the Masters should be examined in the laws of the Craft, and their skill and knowledge in their profession be investigated, and where they should receive charges for their future conduct.

As this, however, is a mere tradition, founded on the legend of Athelstan's, or rather Prince Edwin's, Assembly of Masons at York, it can not be accepted as a foundation for any historical statement.

But in the same manuscript we find the evidence that it was the custom of Masters coming from their Lodges or places where they worked with the Fellows under them, and their Apprentices, to some sort of gathering which was presided over by one of the Masters as the principal or chief of the meeting. It is the second article of the Constitutions, according to the Cooke MS., which is in the following words. I again translate the archaic language into modern English.

"That every Master should be previously warned to come to his congregation, that he may come in due time unless excused for some reason. But those who had been disobedient at such congregations, or been false to their employers, or had acted so as to deserve reproof of the Craft, could be excused only by extreme sickness, of which notice was to be given to the Master that is principal of the assembly."¹

I say that this is evidence that in the latter part of the 15th century, which is the date of the manuscript, the custom did exist of several Masters assembling from different points for purposes of consultation, because a law would hardly be enacted for the due ob-

¹ "Cooke MS.," lines 740-755.

servance of a certain custom unless that custom had a substantial existence. This is not a tradition or legend, but the statement in a manuscript constitution of the existence of a law. The manuscript is admitted to be genuine. That it tells us what were the regulations of the Craft that were in force when it was written is not denied. And therefore, as it gives us the rules that were to govern Masters in their attendance upon an assembly or congregation of Masters, we must recognize the historical fact that at that time such assemblies or congregations did exist among the Craft of Masons.

These assemblies were probably extemporaneous, or called at uncertain times, as necessity required. If they were held at stated and regular periods, it would hardly have been required that a Master must have received previous notice to render him amenable to punishment for non-attendance. This would also lead us to presume that there was some person in whom, by general concurrence, was vested the authority to designate the time of meeting, and whose duty it was to give the necessary warning. And it would seem that this person must have been the one to whom excuses were to be rendered, and who is styled, in the quaint language of the manuscript, "pryncipall of that gederyng."

What was the circuit within which the jurisdiction of such an assembly extended, or what was the distance from which Master Masons were expected to repair to it, we must learn from later manuscript Constitutions, for the Cooke MS. leaves us in ignorance on the subject. It tells us only that assemblies were occasionally held, but says nothing of the number of representatives who constituted them nor of the circuit of country which they governed.

This is, however, determined by the later Constitutions. In the Landsdowne MS., whose date is sixty years after that of the Cooke, it is said that "every Master and Fellow shall come to the Assembly if it be within fifty miles of him." This distance is repeated in the York MS., dated 1600, in the Grand Lodge MS. of 1632, in the Sloane MS. of 1646, in the Lodge of Antiquity MS. of 1686, and in the Alnwick MS. as late as 1701.

There is, however, a discrepancy not to be explained in some of the Constitutions. The Harleian MS., whose ascribed date is 1650, says that the Mason must come to the Assembly if it be within ten miles of his abode, and in the Constitutions in the Lodge of Hope MS., whose date is 1680, and those in the Papworth MS., whose date

is as late as 1714, but must undoubtedly have been a mere copy of some older one, the distance is reduced to five miles.

Those who, in this reference to what is called sometimes a congregation, sometimes a general assembly, and once, as in the Papworth MS., an association, have sought to discover the evidence of the existence before the 18th century of a Grand Lodge for England and a Grand Master presiding over all the Craft in the kingdom, will not find themselves supported by any expressions either in these Old Constitutions or in any other records of the times which will warrant such an interpretation of the nature of these meetings of the Craft.

The object of these Assemblies, as described with great uniformity in all the Constitutions, was to submit those who had trespassed against the rules of the Craft to the judgment and award of their brethren, and where there were disputes to endeavor to reconcile the difference by a brotherly arbitration. If we may rely on a statement made in what is called the Roberts MS., from which we get the earliest printed book in Masonry, and which manuscript could not have been later than the latter part of the 17th century, these General Assemblies had also the power of making new regulations for the government of the Craft.

A book was printed in 1722 by J. Roberts, under the title of *The Old Constitutions belonging to the Ancient and Honourable Society of Free and Accepted Masons*. This book was, he says, "taken from a Manuscript wrote above five hundred years since," but the internal evidence shows that it could not have been written earlier than about the middle of the 17th century. It has indeed all the appearance of being a careless copy of the Harleian MS., with some additional matter which is not found in that document, the source of which is not known.

In this book of Roberts are some new regulations which are said to be "additional orders and Constitutions made and agreed upon at a General Assembly held at . . . on the eighth day of December, 1663."

Dr. Anderson, who, it is very probable, had seen this statement in the work of Roberts, has with an unwarranted inaccuracy, of which the Masonic historians of the 18th century were too often guilty, materially altered the statement in the second edition of his *Book of Constitutions*, and says that "Henry Jermyn, Earl of St

Albans as their Grand Master held a General Assembly and Feast on St. John's Day 27 Dec. 1663."

It will be seen that the Roberts Constitution says nothing of the Earl of St. Albans, nothing of his having exercised the functions or assumed the title of Grand Master, nothing of a feast, and nothing of the time of assembly being on St. John the Evangelist's day, which is an entirely modern Masonic festival. All that Anderson has here said is merely supposititious, and by this act of unfairness, Bro. Hughan very correctly says, his "character as an accurate historian is certainly not improved."

It has been seen that the earlier manuscript Constitutions do not speak of any specific time when the Assembly was held, and it is possible, or perhaps probable, that at first they were called at extemporaneous periods and according to the needs of particular districts where there were Master Masons engaged. This is, however, altogether conjectural.

But it would seem that about the middle of the 17th century, and indeed perhaps long before, there was instituted an annual assembly. The Harleian MS. leaves us no doubt upon the point, for it says, "that for the future the sayd Society, company and fraternity of Free Masons shal bee regulated and governed by one Master and Assembly and Wardens, as the said Company shall think fit to choose at every *yearely general Assembly*."

That this was to be done "for the future" would seem to imply that it had not been done theretofore, or it might mean that what had formerly been an authorized usage was thereafter to be confirmed as a law by this new regulation, and this is probably the more correct interpretation.

It is, however, very satisfactorily shown by this Harleian document that at the time when it was written, namely, in 1670, the Masons had begun to meet in an annual assembly, even if they did not do so before.

There is another feature in the mediæval condition of Freemasonry, which we may discover from an examination of these old manuscript Constitutions. While it is very clear that the Masons were in the habit of assembling annually, or perhaps at more frequent periods, in congregations, for general consultation on the interests of the whole body of craftsmen, they also united in other associations of a local character, which, in the earliest records to which we have

obtained access, were known by the name of "Lodges." This was an institution peculiar to the Masons. We hear of the Guilds, and afterward of the Company of Carpenters, the Company of Smiths, the Company of Tailors, and others belonging to various crafts, but we have no knowledge that there ever existed any lodges of Carpenters, Smiths, or Tailors. The Masons alone met in these local sodalities, which were of course in some way connected with the Company, after it had been chartered, and even before, when it existed as a Guild without incorporation.

The existence of these Lodges is not conjectural, but capable of the most convincing historical proof derived from these old manuscripts, whose genuineness has never been and can not be doubted, as well as from the testimony of other writers, some of them not of Masonic character, and therefore less suspicious.

The proofs of the existence of Lodges in which Masons in different parts of the kingdom met may be first presented as they are found in the Old Constitutions.

The Halliwell poem, which is the earliest of these manuscript records, plainly refers to the fact. In the 4th Article of the Constitutions which it prescribes, the Master Mason is forbidden to take a bondman as an Apprentice. And the reason assigned why this prohibition is made is that the lord whose bondman he is has the right to bring him away from any place where he might go, and if he were to take him from the Lodge it would be a cause of great trouble.

"For the lorde that he ys bonde to
 May fache the prentes whersever he go.
 Gef yn the *logge* he were y-take
 Much desese hyt myght ther make."¹

And in the third point of the same Constitution it is forbidden to the Apprentice to tell anyone the private concerns of his Master's house or whatsoever is done in the Lodge.

"The prevystye of the chamber telle he no man,
 Ny yn the *logge* whatsoever they done."²

The Cooke MS.,³ which is the next of these old records that have been brought to light by modern researches, repeats these two prohibitions. It goes more at length into the causes which should

¹ "Halliwell MS."

² Ibid.

³ "Cooke MS.," lines 769-777.

prevent a bondman from being made a Mason, and explains the nature of the trouble, briefly alluded to in the former manuscript, which might arise if the lord should seek to seize his bondman in the lodge. The bondman, it says, should not be received as an Apprentice, because his lord to whom he is bound might take him, as he had the right to do, from his business, and lead him "out of his *logge* or out of the place where he is working, and the trouble that might then be apprehended, would be that his fellows would peradventure help him and dispute for him and therefrom manslaughter might arise."

And in the third point of these Constitutions it is said that the Mason "can hele (must conceal) the counsel of his fellows in *logge* and in chamber."¹

In the later manuscripts we find the same recognition of the lodge as in these first two.

In the Lansdowne MS. it is said that Masons must "keep truly all the councell of the lodge or of the chamber." This is repeated in substantially similar words in all the subsequent Constitutions. The lodge is also recognized as a place where the work of Operative Masonry was pursued, for the Freemason is forbidden to set the cowan to work within the lodge or without it.

We see, also, that there were many lodges as distinct organizations, but all connected by one bond of fellowship, scattered over the country. One of the regulations in all these Constitutions was that strange Fellows were to be cherished and put to work, if there were any work for them, and if not, they were "to be refreshed with money and sent unto the next lodge."

These Operative Lodges were as exclusive in relation to any connection with cowans, rough layers, or Masons who were not accepted as free of the Guild, as the modern Speculative Lodges are in relation to any connection with the uninitiated, or, as they are often called, "the profane."

Thus we find in all the Constitutions up to the year 1701 a regulation which forbade the giving of employment to "rough layers," or Masons of an inferior class, who had not been admitted into the society. "Noe Mason," says the latest of these Constitutions, "shall make moulds, square or Rule to any Rough Layers, alsoe

¹ "Cooke MS.," lines 441-453.

² "Alnwick MS.," anno 1701.

that noe Mason sett any Layer within a Lodge or without to hew or mould stones with noe mould of his own makeing." In brief words, he was to give such an intruder no work that was connected with the higher principles of the art, for the mould was the model or pattern constructed by the geometrical rules that were the most important secrets of the mediaeval builders. It is probable that these unfreemen were sometimes employed in the more menial occupations of the craft.

The Papworth MS., whose date is 1714, is the only one which omits this prohibition. Whether this omission arose from the growth at that late period of a more liberal spirit, or whether it was the clerical error of a careless copyist, are questions not easily determined. It is, however, probable that the latter was the case, as the spirit of exclusiveness adhered to the Masonic Guilds as it did to all the guilds of other crafts, and is continued to the present day by the Livery Companies, which are the successors of the early guilds, where the same spirit of exclusiveness prevailed.

The system of apprenticeship, which was common to all the guilds, was maintained with very strict regulations by the Masons.

No Master or Fellow was to take an Apprentice for less than seven years, nor was any Master to take an Apprentice unless his business was so extensive as to authorize the employment of at least two or three Journeymen. The spirit of monopoly is plainly perceptible in this regulation. The Fellows or Journeymen were unwilling to give to Masters of moderate means the opportunity, by the employment of Apprentices who might soon learn the trade, to add to the number of craftsmen and thus to diminish the value of their labor.

Great regard was paid to the physical condition of the Apprentice. In all the constitutions, from the very earliest to the latest, care is taken to declare that the Apprentice must be able-bodied. "The Master," says the Halliwell MS., "shall for no consideration of profit or emolument make an Apprentice who is imperfect, that is whose limbs are not altogether sound. It would be a great disgrace to the craft to make a halt and lame man. An imperfect man of this kind would do but little good to the craft. So every one may know that the craft wishes to have a strong man." And the compiler of the Constitutions quaintly adds the warning that "a maimed

man has no strength, as will be known long before night; "that is, he will show his weakness by failing in his work.

" . . . maymed mon, he hath no might,
Ye mowe hyt knowe long yer night."

This was written about the end of the 14th century. A hundred years afterward the Cooke MS. repeats the admonition in these words: "The sixth article is this, that no Master for no covetousness nor no profit take no Apprentice to teach that is imperfect, that is to say, having any maim for the which he may not truly work as he ought to do."

The same rigid rule of physical perfection in the Apprentice is perpetuated in all the subsequent constitutions. Thus the Landsdowne MS. (1560) says he "of limbs whole as a man;" the York MS. (1600), he must be "able of body and sound of limbs;" the Grand Lodge MS. (1632), he must be "of limbs as a man ought to be;" the Harleian MS. (1670), he must have "his right and perfect limbs and personal of body to attend the said science," and the Alnwick MS. (1701), that he must have "his right limbs as he ought to have."

When, in 1717, the Speculative superseded the Operative order, this regulation, which had been enforced for at least three centuries, was abandoned, and in the charges adopted by the Grand Lodge in 1722, Masons were required to be only good and true men, freeborn, and of mature age.

Sixteen years afterward, when Anderson compiled and published the second edition of the *Book of Constitutions*, he, apparently without authority, restored the original rule of the guild, for in the same charge the words in that edition were altered by the insertion of the regulation that the men made Masons must be "hail and sound, not deformed or dismembered at the time of their making."

I say that this change was apparently made without authority, for in the subsequent editions of the *Book of Constitutions*, published after the death of Anderson, the language of the first edition was restored. Hence the present Grand Lodge of England does not require bodily perfection as a preliminary qualification for initiation.

But as Dermott in compiling his *Ahiman Rezon* for the use of the Grand Lodge of Ancients or the Schismatic Grand Lodge,

adopted Anderson's second edition as the basis of his work, all the lodges emanating from that Grand Lodge exacted the rigid guild law of corporeal perfection. As a very large number of the lodges in the United States had been chartered by the Grand Lodge of Ancients, it has happened that the old rule of the guild has been retained sometimes in its full extent and sometimes with slight modifications in the Constitutions of the American Grand Lodges, all of which forbid the initiation into Masonry of one who is deficient in any of his limbs or members.

The American usage, however much it may be objected to because it sometimes closes the door of the lodges to worthy men on certain occasions, has certainly maintained more perfectly than the English the connection between the old Operative and the more modern Speculative branch, a connection whose preservation is important because it constitutes a part of the history of the Order.

Another fact in the character of the mediaeval Guild or Company of Masons that shows the connection with that association and the Speculative Masonry that grew out of it is the system of secrecy that was practiced. It has been hitherto shown that all the early guilds, whether Masonic or otherwise, required their members to keep the secret counsels of the body. And this regulation has been very correctly supposed to allude to the secrets of the trade, in their transaction of business if it were a Commercial Guild, or if it were a Craft Guild the methods of work. These secrets could only be acquired by a long apprenticeship to the trade or art, and it was unlawful to impart them to any persons who were not members of the guild.

The evidence of this has already been shown by extracts from various guild ordinances, and from the old Masonic Constitutions. But the secrets of the Guild or Company of Masons seems to have been maintained more rigidly by their statutes than were those of any other guild. What the secrets of mediaeval Freemasonry were will be discussed when we come to treat of the Traveling Freemasons, who spread in the 11th and 12th centuries from Lombardy over Europe, and established themselves in all the countries which they visited; that their arcana consisted of a secret system adopted by the Freemasons in building. Of this, as Mr. Paley¹ has observed,

¹ "Manual of Gothic Architecture," chap. vi., p. 208.

little or nothing has ever transpired, and we may reasonably attribute our ignorance on the subject to the conscientious observance by the members of the fraternity of the oath of secrecy administered to them on their admission into the society.

The earlier Masonic Constitutions do not give the form of the oath, or indeed refer to an oath at all. They simply direct that the counsels of the Lodge and of Masonry shall be kept inviolate. It is not until 1670 that we find, in the Harleian MS., supposed to have been written in that year, the very words of the obligation that was to be administered. The constitutions or ordinances of that Constitution prescribe "That no person shall be accepted a Freemason or know the secrets of the said society until he hath first taken the oath of secrecy hereafter following."

The "oath of secrecy" thus prescribed is given in the following words, which will on comparison be found to be much more precise and solemn than the oath which was administered in the other guilds or companies:

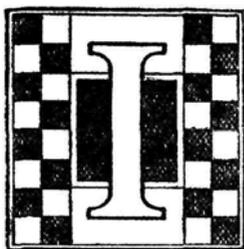

"I, A. B., do, in the presence of Almighty God and my Fellows and Brethren here present, promise and declare, that I will not at any time hereafter, by any act or circumstance whatsoever, directly or indirectly, publish, discover, reveal or make known any of the secrets, privileges, or counsels of the fraternity or fellowship of Free Masonry, which at this time, or at any other time hereafter, shall be made known unto me. So help me God and the holy contents of this book."

The last words indicate that this was a corporeal oath administered on the Gospels, as was the form always used at that period in administering oaths. As to the language, the intelligent Mason will readily perceive how closely the spirit of this old Masonic obligation has been preserved by the modern Speculative fraternity. It is another indirect mark pointing out the close connection and uninterrupted succession of the old and the new systems.

It is unnecessary to dilate further on the ordinances which are contained in these Constitutions. The object has been sufficiently attained, of proving the correctness of the hypothesis that the modern Lodges are the direct successors of these bodies whose laws and customs are so plainly exhibited in the old Masonic manuscripts.

CHAPTER XII

THE HARLEIAN MANUSCRIPT AS A GERM OF HISTORY—USAGES OF THE CRAFT IN THE SEVENTEENTH CENTURY

It has been seen in the preceding chapter how much information as to the usages of the craft in mediaeval times may be derived from the statutes and regulations contained in the manuscript Constitutions, and more especially in that most valuable and interesting one, the Harleian MS. This document differs very materially from all the others that preceded it, and suggests to us that there were important changes which about that time took place in the usages of the craft.

Of this manuscript, the date of which is supposed to be 1670, Bro. Hugan has said that it "contains the fullest information of any that we are aware of and is of great value and importance in consequence."¹

An analysis of this manuscript will sustain the statement of this indefatigable explorer of old records and to whom we are indebted for a correct transcription from the original which is deposited in the British Museum.

No analysis, so far as I know, has ever been attempted of this important manuscript, so as to deduce its true character from the internal evidence which it contains.

It has been already shown that the Masons' Company received a new charter or act of incorporation from Charles II. just about the time that the Harleian MS. appears to have been written. It has also been suggested that the granting of the new charter would probably be considered as a very opportune period for the Masons' Company to make some changes in its *Book of Constitutions* by the adoption of new regulations.

¹ "Old Charges of the British Freemasons," p. 11.

Now, I have supposed that the Harleian MS., differing so much, as it does, from all preceding manuscripts, is a copy or transcript of the *Book of Constitutions* of the Masons' Company as it was modified in the reign of Charles II.

In presenting us with the laws of the Craft which were at that day in force, it supplies us with a very accurate and authentic exposition of the usages and customs of the fraternity as they then prevailed.

A brief analysis therefore of some of the most important articles will certainly advance us very considerably in our knowledge of the progress of Freemasonry in the 17th century, about a hundred years before the Operative element of Freemasonry was absolutely extinguished by the Speculative. Hence it is that I call the Harleian MS. a germ of Masonic history.

We may profitably commence our analysis of the historical points developed in this manuscript by directing our attention to the origin and meaning of the words "Accepted Mason," which are so familiar at the present day in the title given to the Order as that of "The Free and Accepted Masons."

The 26th Article of the *Harleian Constitutions* directs that "no person shall be *accepted* a Mason, unless he shall have a lodge of five free Masons;" and the next article says that "no person shall be *accepted* a Free Mason but such as are of able body, honest parentage," etc.

The word "accepted" here used is of some importance as having been one of the titles afterward adopted by the Speculative Masons, who called themselves "Free and Accepted," in allusion to this very article. The word is first employed in the Harleian MS. In the older manuscripts we find the expression "Masons allowed," which, however, evidently means the same thing. In the two articles cited above it is very plain that an "Accepted Mason" is one who has been admitted into the fraternity by some ceremony, which is called his "acceptation," or acceptance. It is equivalent to the modern word "initiation."

But in the 28th Article we find the same word used in a double sense, of both "initiation" and "affiliation." It prescribes that "no person shall be accepted a Free Mason nor shall be admitted into any lodge or assembly until he hath brought a certificate of the time of acceptation from the lodge that accepted him unto the Mas-

ter of that Limit and Division where such lodge was kept which said Master shall enroll the same in parchment in a roll to be kept for that purpose, to give an account of all such acceptations at every General Assembly."

There is a very large and interesting amount of knowledge of the character of the Masonic organization and of its usages in the 17th century to be derived from this article, if understandingly interpreted.

No one was to be accepted a Freemason, that is, admitted into the fellowship or made free of the Guild or Company, or, as we would say in modern phrase, "affiliated," in contradistinction to a "cowan" or "rough layer," one who was not permitted to work or mingle with the Freemasons, unless he had brought to the Master of the limit or division in which a certain lodge was situated a certificate that he had been accepted (the word here signifying initiated or admitted by some ceremony into the craft) in that lodge. The Master of that division or limit must have been possessed of an authority or jurisdiction over several lodges, something like the Provincial Grand Masters in England or the District Deputy Grand Masters in the United States. This Master kept a list of the Masons thus made whose making had been certified to him and made a return of the same to the General Assembly at the annual meeting. This is much the same as is done at the present day, when the lodges make a return to the Grand Lodge at its annual communication of the number and names of the candidates that have been initiated by it during the year.

So there were two kinds of acceptation. The acceptation into the lodge, which was also called "making a Mason," and the acceptation afterward into the full fellowship of the Society or Company, which was to be done only on the production of a certificate of the time and place when the first acceptance or initiation occurred.

We find an analogous case in the modern usage. A man is first initiated in a lodge, and then he is made a member of it. The one usually follows the other, but not necessarily. A candidate may be initiated in a lodge and yet not claim or receive membership in it. Such cases sometimes occur. The candidate has been *accepted* in the old sense of *initiated*, in the lodge, but if he goes away and desires to be accepted into the full fellowship of the fraternity,

which act in modern language is called "affiliation," by uniting with another lodge, he can not be so accepted or affiliated into its fellowship unless he brings a certificate of his previous acceptance or initiation in the lodge in which he was made.

There is an apparent confusion in the double sense in which the word acceptance or acception is used, which can only be removed by this interpretation, which explains the two kinds of acceptance referred to in the same article. This will hereafter be applied to an explanation of some interesting Masonic circumstances that occurred in the life of the celebrated antiquary Elias Ashmole.

One more point, however, in this important article must be first referred to.

It is prescribed that when a Mason is to be made or accepted, it must be in a lodge of at least five Free Masons, one of whom must be a Master or Warden, of the limit or division where the said lodge shall be kept. Masters and Wardens were therefore ranks (it does not follow that they were, degrees) in whom alone was invested the prerogative of presiding at the making of Masons. It was not necessary that he should be the Master or Warden of the lodge where the initiation or acceptance was made. The lodge might, indeed, be a mere extemporary affair, consisting of five Free Masons called together for the especial purpose of accepting a new brother of the craft. But it was essential that a Free Mason, not a stranger brought from some other section of the country, but one residing or working in the vicinity, and who was not a mere Fellow, but who had reached the rank of a Master or a Warden, should be present and, of course, preside at the meeting.

Preston confirms this in a note in his *Illustrations of Masonry*, where he says:

"A sufficient number of Masons met together within a certain district, with the consent of the sheriff or chief magistrate of the place, were empowered, at this time, to make masons and practice the rites of Masonry without warrant of Constitution."¹

The consent of the sheriff or chief magistrate which Preston supposes to be necessary to the making of a Mason is not required by the Harleian or any subsequent regulations which represent the Constitutions of the Masons' Company. The Halliwell poem and the

¹ Preston, "Illustrations," Oliver's edition, p. 182, note.

Cooke MS., which closely follow it, do say that the sheriff of the county, the mayor of the city, and many knights and nobles are to be at the General Assembly. But I have endeavored to show that the Halliwell statutes belonged to a different organization of the craft.

Another expression in this 28th Harleian regulation elucidates an important point in the organization of the Masonic sodality at that time. Of the five Free-Masons who were required to be present at the acceptance of a candidate, one was to be a Master and Warden "and another of the trade of Free Masonry." Hence it follows that the other three might be non-Masons, or persons not belonging to the craft. This is the very best legal evidence that we could have that in the middle of the 17th century non-professional persons were admitted as honorary members into the fraternity. The Speculative element, as we now have it, was of course not yet introduced, but the craft did not consist exclusively of working Masons.

These explanations will enable us to understand the often-quoted passages from the *Diary of Elias Ashmole*, which without them would seem to bear contradictory meanings.

Mr. Ashmole says, under the date of October 16, 1646, at half past four in the afternoon:

"I was made a Free Mason at Warrington in Lancashire with Colonel Henry Mainwaring of Karticham in Cheshire, the names of those that then were at the lodge, Mr. Richard Penket Warden, Mr. James Collier, Mr. Richard Sankey, Henry Littler, John Ellam and Hugh Brewer."

The circumstances of the ceremony here detailed are strictly in accord with the regulations which were then in force and which were not long afterward incorporated in the Constitutions as these are preserved in the Harleian MS.

That manuscript says that at the acceptance of a Free-Mason there shall be "a Lodge of five Free Masons." The Landsdowne MS. says there should be "at least six or seven." The "new regulations" in the Harleian MS. reduced the number to five, which is the exact quorum required at the present day in Speculative Masonry for the admission of a Fellow Craft.

Of these five, one was to be a Master or Warden. And here we find Mr. Richard Penket acting as Warden. Another one of the five was to be "of the trade of Free Masonry." We know what respect was in those days paid to the distinction of ranks, so that

the titles of Esquire and Gentleman were carefully observed, the former having the magic letters "Esq." affixed and the latter the letters "Mr." prefixed to his name, while the yeoman, merchant, or tradesman was entitled to neither, but was designated only by his simple name.

"He who can live without manual labor," says an old heraldic authority,¹ "or can support himself as a gentleman without interfering in any mechanic employment, is called Mr. and may write himself Gentleman."

As Ashmole was a distinguished herald and careful in observing the rules of precedency, we may safely conclude that "Mr. James Collier" and "Mr. Richard Sankey" were gentlemen and not professional Masons, while plain "Henry Littler, John Ellam and Hugh Brewer," who are recorded without the honorable prefix, were only workmen "of the trade of Free Masonry."

So far Ashmole had only been made a Free-Mason; that is, been received as a member of the Craft. According to the regulations another step was necessary before he could be accepted into the freedom and fellowship of the Company.

"No person shall hereafter be accepted a Free Mason," says the New Articles, "until he hath brought a certificate of the time of his acceptance from the lodge that accepted him;" and further, that "every person who is now a Free Mason shall bring to the Master a note of his acception, to the end the same may be enrolled in such priority of place as the person shall deserve and to the end the whole Company and Fellows may the better know each other."

And here is the way in which Ashmole obeyed this regulation, which was then in full force.

He writes in his Diary, under the date of March 10, 1682, about five o'clock in the afternoon, as follows:

"I received a summons to appear at a lodge to be held the next day at Masons Hall in London."

On the next day, or March 11th, he writes as follows:

"Accordingly I went and about noon was admitted into the fellowship of Free-Masons by Sir William Wilson, Knight, Captain Richard Borthwick, Mr. William Wodman, Mr. William Grev Mr. Samuel Taylor and Mr. William Wise.

¹ "Laws of Honour," p. 286.

"I was the senior fellow among them (it being thirty-five years since I was admitted) there was present besides myself the fellows afternamed. Mr. Thomas Wise, Master of the Masons-company this present year; Mr. Thomas Shorthose, Mr. Thomas Shadbolt, — Waidssford, Esq. Mr. Nicholas Young, Mr. John Shorthose, Mr. William Hamon, Mr. John Thompson, and Mr. William Stanton.

"We all dined at the Half-Moon Tavern in Cheapside, at a noble dinner prepared at the charge of the new-accepted Masons."

To many who have read these two extracts from *Ashmole's Diary*, the eminent antiquary has appeared to involve himself in a contradiction by first stating that he was made a Mason at Warrington in the year 1646, and afterward that he was admitted into the fellowship of Free Masons in 1682.

But there is really no contradiction in these statements. The New Articles in the Harleian MS. afford the true explanation, which is entirely satisfactory.

In 1646, while Ashmole was on a visit to Lancashire, he was induced to become a Free Mason; that is, as a non-professional member to unite himself with the Craft. This had been frequently done before by other distinguished men, and the regulations, which are not necessarily of the date of the manuscript, had provided for the admission or initiation of persons who were not workmen or professional Masons.

A lodge for the purpose had been called at Warrington. Whether this was a permanent lodge that was there existing or whether it was only a temporary one called together and presided over by a Warden of that district is immaterial. The passage in the Diary throws no light on the question. It was, however, most probably a temporary lodge, called together by Warden Penket for the sole purpose of admitting Ashmole and Mainwaring, or making them Free Masons. The regulations authorized this act. The only restrictions were that there should be five Free Masons present, one of whom was to be a Master or Warden and another a workman of the Craft or Operative Mason. All these restrictions were duly observed in the admission of Ashmole and his companion.

But this act, though it made him a Free Mason, did not admit him to a full fellowship in the Society. To accomplish this another step was necessary.

As persons were often made in temporary or occasional lodges, which were dissolved after they had performed the act of admitting new-comers, for which sole purpose they had been organized, it was necessary that the person so admitted should present a certificate of the time when and the place where he had been admitted or accepted, to some superior officer, who is called in the regulations "the Master of that limit and division where such lodge was kept;" and who was probably the Master Mason who presided over the Craft, who lived and worked in that section of the kingdom, or perhaps also the Master of the permanent lodge, composed of all the Craft in that division which assembled at stated periods.

This permanent lodge, to which all the Craft repaired, might have been called an "Assembly." If so that would account for the frequent use of the word "Assembly" in all the old manuscripts, to which every Mason was required to repair on due notice if it was within five or ten, or, as some say, within fifty miles of him. And this surmise will also explain the meaning of the regulation which says that no one, unless he produced a certificate of his previous acceptance, could be "admitted into any lodge or assembly," where the words "Lodge" and "Assembly" would seem to indicate two different kinds of Masonic congregation, the former referring to the lodges temporarily organized for special purposes, and the latter to the regular assemblage of Masons in a permanent body upon stated occasions and for the transaction of the general business of the Craft there congregated, and to which body the certificates were to be presented of those who had been accepted or initiated in the temporary lodge.

But Ashmole did not at the time, or at any time soon after, present such a certificate to the Master of that limit in Lancashire that he had been made a Free Mason in a lodge at Warrington on October 16, 1646. If he had done so we may be sure that he would have mentioned the fact in his Diary, which is so excessively minute in its details as to frequently make a record of matters absurdly unimportant.

Accordingly, though a Free Mason by virtue of his acceptance or making at Warrington, he was not admitted to the fellowship of the Craft, he was not "free of the Company," was not entitled to an entrance into any of its lodges or assemblies, nor could he take part in any of the proceedings of the sodality. He was a regularly made Free Mason, and that was all; he was in fact very much in the

isolated position of those who are called "unaffiliated Masons" in the present day. He had received initiation but had not applied for membership.

Thirty-five years afterward Ashmole did what he had neglected to do before, and perfected his relationship to the Craft. On March 11, 1682, he attended the meeting of a lodge held in Masons' Hall, the place of meeting of the Masons' Company. The lodge was thus held under the sanction of that Company. Mr. William Wise, the Master of the Company, was present, but is not spoken of as one of the members of the lodge. The lodge consisted of Sir William Wilson and six others. As Wilson is mentioned first, we may presume that he was the Master. By these seven Ashmole and some others (who it seems paid the scot for a dinner eaten on the occasion) were "admitted into the fellowship of Free Masons."

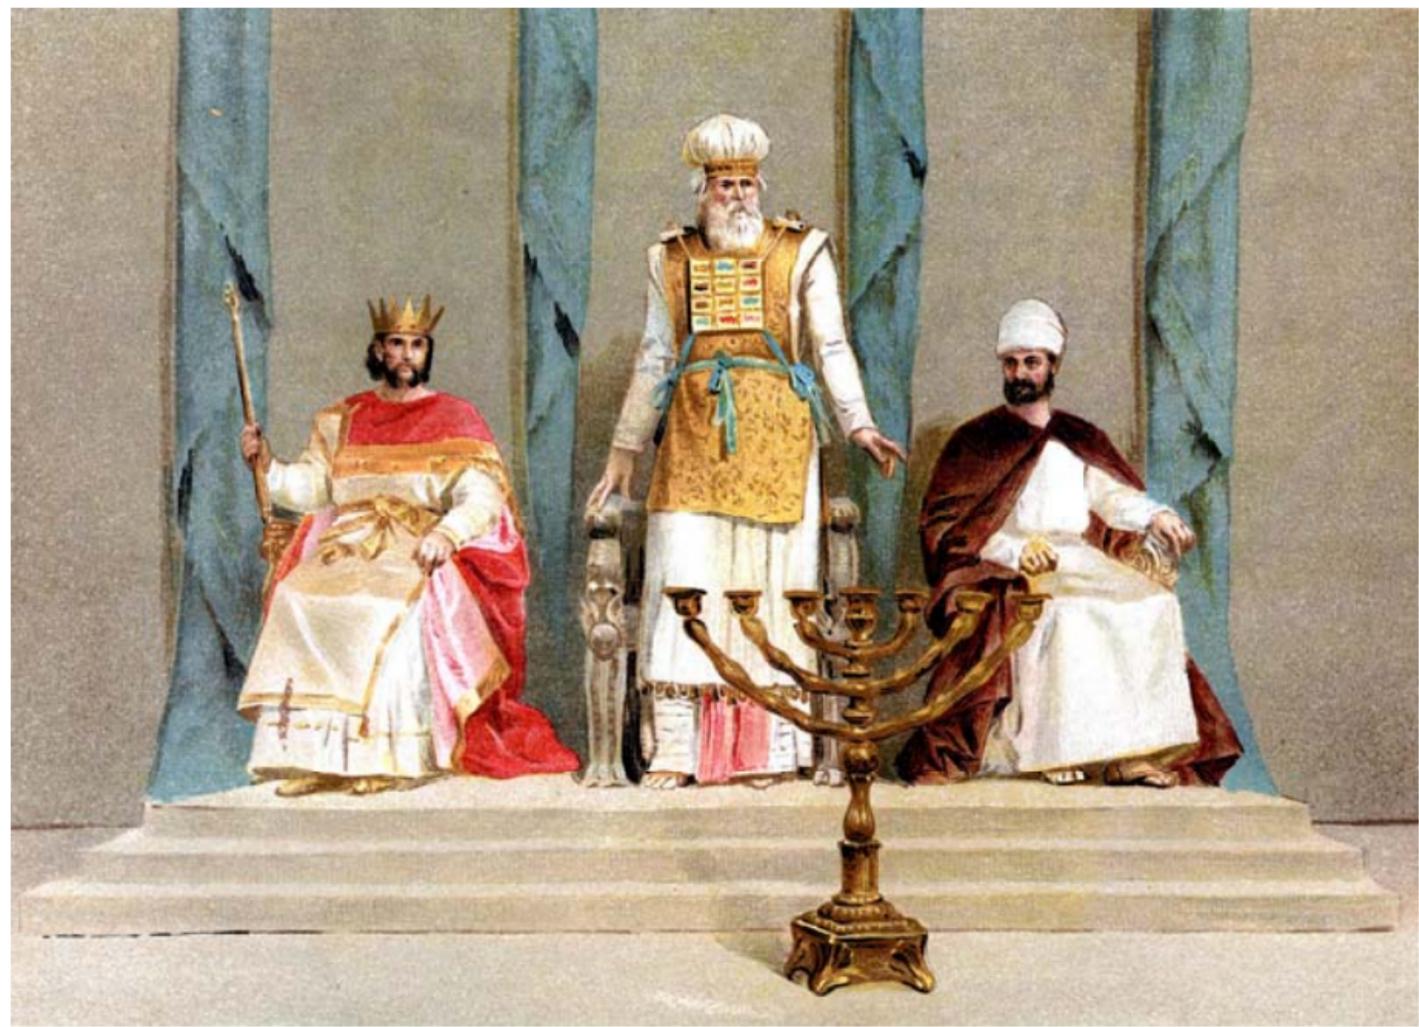

In 1646 he was made a Free Mason; in 1682 he was admitted to the fellowship of the Society. Thenceforth he became not only a Free Mason but an Accepted Mason; he was, in other words, by the ceremony performed at Masons' Hall, a "Free and Accepted Mason," and his name was enrolled in the parchment roll "kept for that purpose," that he and the company might "the better know each other."

The account of the acceptance of Elias Ashmole, recorded by himself and therefore of the most undoubted authenticity, when thus interpreted, supplies us with nearly all the details which are necessary to understand the usages of the Craft in respect to initiations and admissions in the 17th century. They will be more fully analyzed at the close of the present chapter. But it will be necessary first to refer to another authority of great importance on the same subject.

Robert Plott, who was the keeper of the Museum presented by Elias Ashmole to the University of Oxford, wrote, and in 1686 published, *The Natural History of Staffordshire*, in which work he gives an account of the Masonic customs prevailing at that time in the country. Plott was not a Free Mason. "The evidence of Dr. Plott is extremely valuable," says Oliver, "because it shows the existence of Lodges of Masons in Staffordshire and the practice of certain ceremonies of initiation in the 17th century in accordance with the regulations laid down in the manuscript Constitution whose authenticity is thus confirmed."

Dr. Plott says that they had in Staffordshire a custom "of ad-

OFFICERS OF THE CHAPTER

mitting men into the Society of Free Masons, that in the moorlands of this country seems to be of greater request than anywhere else, though I find the custom spread more or less all over the nation, for here I found persons of the most eminent quality, that did not disdain to be of this fellowship."

He then proceeds to relate and unfavorably to criticise the *Legend of the Craft*, which it is not necessary to quote. He afterward continues his account of the customs of the Masonic Society, in the following words:

"Into which Society, when they are admitted, they call a meeting (or *Lodg*, as they term it in some places), which must consist at least, of five or six of the *Ancients* of the *Order*, whom the candidates present with gloves, and so likewise to their wives, and entertain with a collation, according to the custom of the place. This ended they proceed to the *admission* of them, which chiefly consists in the communication of certain secret signs, whereby they are known to one another all over the nation, by which means they have maintainance whither ever they travel; for if any man appear, though altogether unknown, that can show any of these signs to a fellow of the society, whom they otherwise call an Accepted Mason, he is obliged, presently to come to him, from what company or place soever he be in; nay, though from the top of a steeple, what hazard or inconvenience soever he run, to know his pleasure and assist him; viz., if he want work he is bound to find him some; or if he can not do that to give him money or otherwise support him till work can be had, which is one of their articles; and it is another that they advise the Masters they work for, according to the best of their skill acquainting them with the goodness or badness of their materials; and if they be any way out in the contrivance of the buildings, modestly to rectify them in it, that Masonry be not dishonoured; and many such like that are commonly known; but some others they have (to which they are sworn after their fashion) that none know but themselves."¹

There is another document of far more importance than those which have been cited, and which gives a more complete description of the usages of the Craft in the 17th century. I refer to the old record which has been designated as the Sloane MS. No. 3329.

¹ Plott, "Natural History of Staffordshire," chap. viii., p. 316.

Of the three copies of the Constitutions which are preserved in the British Museum and known as the Sloane MS. the one numbered 3329 is by far the most valuable and interesting. A part of it was inserted by Mr. Findel in the Appendix to his *History of Freemasonry*. But the complete text was published by Bro. Hughan in the *Voice of Masonry* for October, 1872, and in the *National Freemason* for April, 1873.

There has been some doubt about the exact date of the manuscript. Hughan thinks it was written between 1640 and 1700. Messrs. Bond and Sims, of the British Museum, experts in old manuscripts, suppose that its date is "probably of the beginning of the 18th century." Bro. Woodford mentions a great authority in manuscripts, but he does not give the name, who declares it to be previous to the middle of the 17th century. Finally, Findel thinks it originated at the end of the 17th century, and that "it was found among the papers which Dr. Plott left behind him on his death, and was one of the sources whence his communications on Freemasonry were derived."

But if Plott used this manuscript in writing his article on Freemasonry, of which there is certainly very strong internal evidence, then the date of the manuscript could not have been later than 1685, for he published his book in 1686, and it was most probably written some time before.

We are safe then, I think, in assuming the middle of the 17th century as the approximate date of the Sloane MS.

It differs from all the other manuscripts in containing neither the Ordinances nor the *Legend of the Craft*. It is simply a description of the Ritual of the Society of Operative Masons as practiced at the period when it was written, namely, as is conjectured, about the middle of the 17th century.

From all these important documents—the *Harleian Constitutions*, the *Diary of Ashmole*, the narrative of Dr. Plott, and the Sloane MS.—collated with each other and confirming each other, we are enabled to form a very accurate notion of what were the usages of the Craft in the 17th century, and approximately in the 16th and 15th centuries. A careful analysis will lead to the following results:

There was an incorporated Company of Masons, just as there were incorporated companies of other trades and crafts, such as the

Mercers, the Drapers, the Carpenters, the Smiths, etc. As this Company had been originally chartered in 1410, it must have exercised its influence over the Craft from that early period, and the early manuscript Constitutions were doubtless copies of its Guild Book of Laws and Records; but it is not mentioned by name in any of the manuscripts anterior to the middle of the 17th century. There is a frequent allusion to lodges as the place where Masters and Fellows worked, and there are references to an Assembly, which, from the language used, must have been a congregation of several Masters and Fellows. But there is no express recognition of the Company in any manuscript before the Harleian. From that time forth the Masons' Company seems to have constituted the head of the Craft in a certain district. There were several of these companies in different cities, but the principal one was that at London.

However or wherever a person was admitted as a Free Mason, he could only be considered as "Accepted" when he had reported the fact to some superior authority in the district where he had been made, whereupon his name was enrolled in a parchment book or roll.

There were, besides these companies, lodges in various parts of the country. Some of these lodges, at least toward the close of the century, were permanent bodies. But many were merely extemporaneously organized for the purpose of initiating a candidate, who was afterward reported to the Master of the limit or division in which the lodge had been held.

There was some ceremony, though a very brief one, at the time of admitting a newly made brother. There were secret signs and words, and an oath of secrecy and fidelity, but there are no documents extant to enable us to determine the nature of the ceremony of initiation.

We have no evidence of the existence of any degrees of initiation. Indeed, Masonic scholars have now come very generally to the conclusion that what are called in the modern rituals the First, Second, and Third Degrees were the later invention of the Speculative Free Masons of the 18th century. But this subject will hereafter be discussed at length in a chapter exclusively devoted to its consideration.

On the whole it will be readily seen that the sodalities of the Operative Masons of the 17th and preceding centuries were the

germ which afterward was developed in the 18th century into the full fruit of Speculative Masonry. The *Harleian Constitutions* present us with the basis of the laws which still govern the institution, the Diary which details Ashmole's reception and Plott's narrative prove that many usages of the present day were in existence at that period, and from the Sloane MS. we learn that certain points of esoteric instruction which prevailed in the 17th century have been incorporated, with necessary modifications of course, into the modern rituals. By comparing the Sloane document with the rituals that were published soon after the Revival, in 1717, and these again with those of the present day, we will be able to see how the later and perfected system has been gradually developed out of the primitive one of the middle of the 17th century, and we will be justified in believing that the same system was in existence at a much earlier period.

Not only, then, is there no difficulty in tracing the connection between the lodges of Operative Masons which were existing before the year 1717 with those of the non-operative Free Masons who, in that year, established the Grand Lodge of England, but it is absolutely impossible to exclude from our minds the conviction that there has been a regular and distinct progression by which the one became merged in the other.

We have now arrived at that period in the history of English Freemasonry which brings us into direct contact with the events that immediately preceded and accompanied the organization of the Grand Lodge of England, or, as it has been also called, the Revival of Masonry, in 1717.

But before that subject can be discussed it will be necessary for us to return, in our historical inquiries, to the events connected with the transmission of Masonry in the sister kingdom of Scotland and afterward on the Continent of Europe, and more especially to the Traveling Freemasons, who came from Lombardy in the 10th century, and to the later organization of the Stonemasons of Germany, interesting and prolific subjects which will require several chapters for their treatment.

CHAPTER XIII

EARLY MASONRY IN SCOTLAND

HAT the tradition of York is to the Freemasons of England, that of Kilwinning is to the Masons of Scotland. The story which traces the birth of the Order to the celebrated Abbey of Kilwinning was for many years accepted as the authentic history of Scottish Masonry.

Thus Sir John Sinclair, in his *Statistical Account of Scotland*, states that "a number of Freemasons came from the continent to build a monastery at Kilwinning and with them an architect or Master Mason to superintend and carry on the work. This architect resided at Kilwinning, and being a *gude* and *true* Mason, intimately acquainted with all the arts and parts of Masonry, known on the continent, was chosen Master of the meetings of the brethren all over Scotland. He gave rules for the conduct of the brethren at these meetings, and decided finally in appeals from all the other meetings or lodges in Scotland."¹

This tradition has been accepted by the author of Laurie's *History*, who says that "Freemasonry was introduced into Scotland by those architects who built the Abbey of Kilwinning."² He connects those architects with the trading association of artists who were engaged in the construction of religious buildings on the Continent, under the patronage of the Pope, and who provided builders for both England and Scotland. And he suggests as an evidence that Masonry was introduced into Scotland by these foreign Workmen the fact that in a town in Scotland where there is an elegant abbey, he had "often heard that it was erected by a company of industrious men who spoke in a foreign language and lived separately from the town's people."

¹ Vol. xi., art. "Kilwinning."

² "History of Freemasonry," p. 89.

The Abbey of Kilwinning, which has been claimed as the birth-place of Masonry in Scotland, was situated in the town of the same name, and in the county of Ayr, on the southwestern coast of Scotland. It was founded by Hugh de Morville, High Constable of Scotland, in the year 1157. The abbey is now and has long been in ruins, though what now remains of it attests, says Mr. Robert Wylie, who has written a *History of the Mother Lodge, Kilwinning*, "the zeal and opulence of its founder, and furnishes indubitable evidence, fragmentary as it is, of its having been one of the most splendid examples of Gothic art in Scotland."

It is only very recently that anyone has attempted to deny the authenticity of the Legend which traces the introduction of Freemasonry into Scotland to the workmen who came over in the 12th century to construct the Abbey of Kilwinning.

Bro. D. Murray Lyon has attacked the tradition, together with some others connected with Scottish Masonry, all of which he deems destitute of historical support.

The tradition, however, like that of York among the English Masons, has not wanted its zealous supporters among the Scottish brethren, and more especially among the members of the Kilwinning, which claims to have a legitimate descent from the primitive lodge which was established in the 12th century by the foreign architect who settled in the town of Kilwinning.

It has, however, been attempted to trace the introduction of the Order into Scotland to a much earlier period, and one writer, cited by Wylie with apparent approval, says that Scotland can boast of many noble remains of the ancient Roman buildings which plainly evince that the Romans when they entered the country brought along with them some of their best designers and operative masons, who were employed in rearing those noble fabrics of which we can at this day trace the remains. And it is asserted that these Roman builders communicated to the natives and left behind them a predilection for and a knowledge of Masonry which have descended from them to the present generation.¹

It is very probable that more is here claimed than can be authenticated by history. The influences exerted upon English architecture by the Roman colleges of Masons is very patent, as has

¹ Wylie, "History of the Mother Lodge, Kilwinning," p. 47.

been already shown. The Romans had been enabled to make for centuries a home in England, had introduced into it their arts of civilization, and made it in every respect a Roman colony.

But Scotland had never been completely subjugated by the Roman arms; the incursions of the legions were altogether of a predatory nature, nor are there many evidences from Roman remains that the Roman artists had been enabled to make, or had even attempted to make, the same impression on the warlike Scots and Picts that they had been enabled to produce in the more docile and more easily civilized inhabitants of the southern part of the island.

The theory which assigns the introduction of Freemasonry into Scotland to the workmen who came over from England or from the Continent in the 12th century, and erected the religious buildings at Kilwinning, Melrose, Glasgow, and other places, is a much more plausible one. The bodies of Traveling Freemasons were at that time in existence, and we know that they were perambulating the Continent and erecting ecclesiastical edifices; we know too that at that period there were corporations or guilds of Masons in England; and it is a very fair deduction from historical reasoning, though there be no historical records to confirm it, that the churches and abbeys which were erected in Scotland in the 12th and 13th centuries must have been the work of Freemasons who came partly from England and partly from the Continent.

Bro. D. Murray Lyon, the Historian of the Lodge of Edinburgh, has said that "not the slightest vestige of authentic evidence has ever been adduced in support of the legends in regard to the time and place of the institution of the first Scotch Masonic Lodge."¹ This is, however, a merely local question affecting the claims to precedence on the roll of the Grand Lodge, and must not be mixed up with the question of the introduction of the Freemasons into Scotland as an organized society of builders. I can not consider it as quite apocryphal to assign this to the time when religious establishments were patronized by King David I., which was toward the close of the 11th and the beginning of the 12th century.

The Mother Kilwinning Lodge, at Kilwinning, the St. Mary's Chapel Lodge, at Edinburgh, and the Freeman St. John's, at Glasgow, have each preferred the claim that it is the oldest lodge in

¹ "History of the Lodge of Edinburgh," p. 2.

Scotland. Each has its proofs and each has its adherents, and the controversy has at times waxed warm among the Scottish Masons. Yet, as I have already said, it is, as a matter of general history, of but little importance.

We have seen that we are almost compelled to suppose that the institution of Masonry was introduced into Scotland by the builders who were engaged in the erection of religious houses from the 11th to the 13th centuries. We can not get over the belief that these builders formed a part of the fraternity which already existed in the Continent of Europe and in England, and who were then engaged in the same occupation of constructing cathedrals and monasteries.

Knowing from other evidence what was the usage of these Traveling Freemasons, and that wherever they were engaged in the labors of their Craft they established lodges, we are again forced to the belief that in Scotland they followed the usages they had adopted elsewhere, and erected their lodges there also.

Doubtless there is no authentic evidence that the modern lodges at Glasgow, at Kilwinning, and at Edinburgh were the legitimate and uninterrupted successors of those which were established by the Masons who were engaged in the construction of the Cathedral, the Abbey, and Holyrood; indeed it is very probable that they are not. Nor is there any historical material which will enable us to determine which of these primitive lodges was first established by the mediæval builders. The probability is, as Bro. Lyon has suggested, that the erection of the earliest Scottish lodges was a nearly simultaneous occurrence, as wherever a body of mediæval Masons were employed there also were the elements to constitute a lodge.¹

The facts, therefore, would appear to be that lodges must have existed in Scotland from the time when those edifices were being erected, and that the Freemasons who came over from the Continent to erect those edifices brought with them the Freemasonry of the Continent.

We can not indeed prove these facts by historical records of undoubted authenticity, but we can advance no reason for denying or doubting their probability.

Ascribing the first introduction of Freemasonry into Scotland

¹ "History of the Lodge of Edinburgh," p. 242.

to the continental Masons, we have some evidence that at a later period there was a considerable influence exercised by England on Scottish Masonry. This is apparent from the fact that the Constitutions used in the Kilwinning Lodge, and in others established by it in the middle of the 17th century, and known as the "Edinburgh Kilwinning MS.," is a nearly exact copy of an English manuscript, and contains a charge to be "liegemen to the King of England, without treason or other falsehood."

This manuscript, which was kept in the archives of the Kilwinning Lodge, and known, says Lyon, as "the old buck," was frequently copied, and the copies sold by the Lodge of Kilwinning to those lodges which had received charters from it.

The fact that these Constitutions require allegiance to the King of England, that the legend which refers to the introduction of Masonry into England, and its subsequent expansion, dwells on the patronage extended to the Craft by the English Kings, and finally that the narrative contains no allusion to the Kilwinning or another Scottish legend, induce Brothers Hughan and Lyon to come to the conclusion that the manuscript was brought from England into Scotland, and that its adoption by the Kilwinning Lodge, and by those which were chartered by it, proves that the Masonry of England exercised in the middle of the 17th century a very great influence over that of Scotland, an influence which, as it will be seen, was still further exerted in after times in assimilating the rituals and ceremonial usages of the two countries.

This English influence on Scotch lodges at so early a period is a fact of great importance in the history of Masonry. From it is to be presumed that there was a great intimacy and frequent communication between the Freemasons of the two countries. It is to be presumed also that there was a great similarity—indeed, in many respects, an identity—of usages in Scotland and England. Therefore we may with great safety apply what we know of the Masonry of one country to that of another, where we have no other knowledge but that which is derived from such a collation.

Now, it is a well-known fact that while the literature of English Masonry is exceedingly deficient in any authentic records of lodges which existed anterior to the Revival of 1717, the Scottish lodges have preserved original minutes or records of their proceedings as far back as the end of the 16th century.

Lyon, in his *History of the Lodge of Edinburgh*, has torn away, with an unsparing and relentless hand, the meretricious garments which the imaginations of Anderson and Brewster (Lawrie's edition) had cast around the statute of Scottish Masonic history. It will not be safe in writing such a history to lose sight of the incisive criticism of Lyon and trust to the deceptive and fallacious authority of earlier historians.

At the beginning of the 12th century, Masons had been imported into Scotland from Strasburg, in Germany, for the purpose of building Holyrood House; in the middle of the same century other Masons were engaged in erecting Kilwinning Abbey. From these epochs historians have been wont to date the origin of Scottish Masonry. We have no documents referring to that early period, but we know that King David I., who then reigned, was what Anderson would call a "great patron of Masonry," and that he nearly beggared the kingdom by the prodigality with which he invested its resources in the construction of religious edifices.

But it is not until we reach the commencement of the 15th century that we begin to find any records which seem to indicate the existence of a craft or guild like that which we know at the same time existed in England. It is not asserted here that there were no lodges or guild meetings in the 12th, 13th, and 14th centuries. Judging from the condition of things in England at that time, we may conclude that guilds or lodges of Masons were in existence also in Scotland, but we have no documentary evidence of any authentic value to sustain the supposition.

The first period in which Freemasonry in Scotland begins to assume an historic form is the beginning of the 15th century.

James I. had been confined as prisoner in England from the year 1406 to 1424. During those eighteen years of his enforced absence, the kingdom had been greatly harassed by the contentions of what were called "leagues" or "bands" among the craftsmen of the different trades, including the Masons, and which might be compared to the modern trades-unions and strikes.

When James I. returned to Scotland, in 1424, he at once began to reform the abuses which had resulted from these illegal confederacies. He suppressed the "leagues," and instituted the office of "Deacon" or "Master-man," as a method of preserving the community from the frauds of the crafts. For this purpose the "Dea-

cons" were authorized, by act of Parliament, to regulate the works of all the crafts, to establish the rate of wages, and to punish any who should transgress the law.

But these powers having been found to be in many instances oppressive to the people and an encroachment on the prerogatives of the municipal authorities, were, after a year's trial, abrogated, and a new class of officials was instituted, called "Wardens," one of whom was selected from each trade. These Wardens were not the representatives of the crafts, but had a greater affinity with the town-councils of each burgh, whose prerogatives in regulating work and wages they exercised.

Now the Masons who originally came to Scotland in the 12th century from the Continent and from England had enjoyed the privilege from the Pope of regulating their own concerns and prescribing their own wages. This privilege they must of course have communicated to their successors in Scotland, and it was there apparently exercised, up to and including the time of the institution of Deacons, under whom the trade and craft unions exercised the same prerogative.

But when the Deaconship was abolished, and Wardens established as representatives of the municipal authorities, this right of regulating their own concerns was taken from the craft.

To this there was naturally resistance, and Lyon tells us that "the Deacons continued holding meetings of their respective crafts, for the purpose doubtless of keeping alive the embers of discontent at their degraded position and organizing the means for carrying on the struggle, not only to regain independence of action in trade affairs but also to acquire a political status in the country."¹

There is nothing in the history of the reigns of the two succeeding kings, James II. and III., that connects them with the Masonic fraternity. None of the acts of the Scottish Parliament, during these two reigns, has any special reference to the Craft of Masons. James III. is said indeed to have had "a passionate attachment for magnificent buildings." Beyond this, says Lyon, "his name can not in any special degree be associated with Masons." But in truth, though documentary evidence of particular facts may be wanting, this attachment to magnificent edifices must have led the monarch

¹ "History of the Lodge of Edinburgh," p. 3.

to have bestowed his patronage upon that fraternity whose duty it was to erect them.

Brewster (Lawrie's edition) has sought to give an importance to the reign of James II., by the statement that that monarch had invested the Earl of Orkney and Caithness with the dignity of "Grand Master" of the Masons of Scotland, and subsequently made the office hereditary in his heirs and successors in the barony of Roslin.

This statement, long accepted by Masonic writers and by all the Masons of Scotland as a veritable fact, has been proved by more recent researches to be wholly unsupported by historic evidence and even to be contradicted by those authentic documents which are known as the "St. Clair Charters."

There are two Charters bearing this name, which were once the property of Mr. Alexander Deuchar, and were purchased at the sale of his library by Dr. David Laing of the Signet Library, and exchanged by him for other documents with Professor Aytoun of the University of Edinburgh, who presented them to the Grand Lodge of Scotland, in whose archives they are still preserved. The manuscripts have been carefully examined, and their authenticity is without doubt.

The date of the first of these Manuscripts is not given, but from internal and other evidence it seems presumable that it was written between the years 1600 and 1601.

It is signed by William Schaw as "Master of Work" and by several Masons of Edinburgh and various towns in Scotland.

It is unnecessary to give the text of the manuscript, as it has been printed by Lawrie, by Lyon, and by some others, but its substance may be cited as follows:

It begins by stating that the Lords of Roslin have from "age to age" been patrons and protectors of the Masons of Scotland and of their privileges, and as such have been obeyed and acknowledged. That within a few years past this position has from sloth and negligence been allowed to go out of use, whereby the Lord of Roslin has been lying out of his just rights and the Craft been destitute of a patron and protector, and other evils have arisen; wherefore it goes on to say that, not being able to wait on the tedious and expensive courses of the ordinary courts, the signers, in behalf of all the Craft and with their consent, agree that William Sinclair of

Roslin and his heirs shall obtain at the hands of the King liberty, freedom, and jurisdiction upon them and their successors, in all times to come, so that he shall be acknowledged by the Craft as their patron and judge under the King.

The second charter, which purports to be issued by the Deacons, Masters, and Freemen of the Masons and Hammermen of Scotland, is supposed by Lyon, with good reason, to have been written in the year 1628.

This document is confirmatory of the other, making the same statement of the recognition of the Sinclairs of Roslin as patrons and protectors of the Scottish Craft, but adding an additional fact, which will hereafter be referred to.

Upon this authority Brewster has said, in Lawrie's *History*, that King James II. had granted to William St. Clair, Earl of Orkney and Caithness, Baron of Roslin, the office of Grand Master, and made it hereditary to his heirs and successors in the barony of Roslin; and he adds that "the Barons of Roslyn, as hereditary Grand Masters of Scotland, held their principal annual meetings at Kilwinning."

Anderson had previously asserted that James I. had instituted the office of Grand Master, who was to be chosen by the Grand Lodge, and this, he says, "is the tradition of the old Scottish Masons and found in their records."

The language of Anderson shows that he was not acquainted with the St. Clair Charters, as they are called, because if he had seen them it is not likely that he would have omitted to take notice of the important point of hereditary occupation. But the authority of Anderson as an authentic historian is of so little value that we need not discuss the question whether any such tradition ever existed.

The statement made in Lawrie's *History* is, however, professedly based on the authority of the St. Clair Charters. This statement has been impugned by James Maidment in his *Genealogie of the Saint Clairs of Rosslyn*, by Lyon in his *History of the Lodge of Edinburgh*, and by several other writers.

As the statement made in Lawrie's work depends for its verity or its fallacy on the question whether these charters have been faithfully interpreted or not, it will be necessary in making the issue to investigate more particularly the express language which is used in these documents.

The words of the first charter, literally translated from the Scottish dialect of the original, are as follows:

"We, Deacons, Masters, and Freemen of the Masons within the realm of Scotland, with express consent and assent of William Schaw, Master of Work to our Sovereign Lord, forasmuch as from age to age it has been observed among us that the Lords of Roslin have ever been patrons and protectors of us and our privileges, likewise our predecessors have obeyed and acknowledged them as patrons and protectors, while through negligence and sloth the same has past out of use. . . . We, for ourselves and in the name of all our brethren and craftsmen, consent to the aforesaid agreement and consent that William St. Clair, now of Roslin, for himself and his heirs, shall purchase and obtain, at the hands of our Sovereign Lord, liberty, freedom, and jurisdiction upon us and our successors, in all times coming, as patrons and judges to us and all the professors of our craft within this realm, . . . so that hereafter we may acknowledge him and his heirs as our patron and judge under our Sovereign Lord, without appeal or declination from his judgment, and with power to the said William to deputize one or more judges under him, and to use such ample and large jurisdiction upon us and our successors, in town and in country, as it shall please our Sovereign Lord to grant to him and his heirs."

The second charter is but a repetition of the statements of the first, with a few additional details which make it a longer document. It approves and confirms the former "letter of jurisdiction and liberty made and subscribed by our brethren and his highness,¹ formerly Master of Work for the time to the said William St Clair of Roslin."

There is, however, one statement not to be found in the first charter, and which is of much importance. It is stated that the St. Clairs of Roslin had letters of protection and of other rights which were "granted to them by his majesty's most noble progenitors of worthy memory, which, with sundry others of the Lord of Roslin's writings, were consumed and burnt in a flame of fire within the castle of Roslin in the year . . ."

¹Mr. Lyon objects to the opinion that Schaw was an Operative Mason and thinks that he was of higher social position and merely an honorary member of the Craft. If there were no other evidence to sustain Bro. Lyon in this view, the fact that the appellation of "highness," as here applied to him, would be sufficient to prove its accuracy.

The last two words are "in an," evidently meaning "in anno," but being at the end of the line, the two last letters with the date have been apparently torn or worn off from the manuscript. We can from this only gather the fact that there was a tradition among the Scottish Masons that some one of the Kings of Scotland, previous to James VI., in whose reign the manuscript was undoubtedly written, had by letters patent granted to the Lords of Roslin the patronage and protection of the Craft in Scotland.

Now, it is very evident that Brewster had no authority from these charters to make the statement that James II. had appointed the Barons of Roslin hereditary Grand Masters of Scotland. There is not the remotest allusion in either of these documents to the use of such a title. One of William Schaw's titles was "Chief Master of Masons," but that of "Grand Master" was never recognized in Scotland until one was elected in 1731 by the Grand Lodge of Edinburgh.

But the charters do not themselves declare that the Sinclairs of Roslin had received any such appointment from the King. It is true that the second charter does refer to the fact that letters of protection had been granted by the predecessors of James VI., which letters were burnt in a fire that took place at Roslin Castle at a time the date of which has been lost.

On this subject it has very properly been asked why was the fact of the burning of these papers not stated in the first charter; how is it that there is no certain knowledge of the year when this fire took place; and how was it that while all the other charters belonging to the house of Roslyn were preserved these alone were consumed by this fatal fire?

When the last Roslin resigned in the year 1736 his hereditary rights as patron, he certainly did allude to the possibility that some King of Scotland may have granted a charter to his predecessors. But he expressly designates those predecessors as William St. Clair and his son, Sir William, the very persons who are mentioned in the two charters as deriving their rights from the Masons in the beginning of the 17th century. But there is no evidence in his letter of resignation that he was at all acquainted with any charter granted by James II. to the Earls of Orkney and Barons of Roslin.

On the whole, I think we may explain this story of the St. Clair Charters in the following way:

At the beginning of the 17th century there was possibly a tradition, unsupported, however, by any historical evidence, that the St. Clairs of Roslin had been the hereditary patrons and protectors of the Craft of Masons in Scotland.

In the year 1601, when William Schaw was the "Chief Mason" and "Master of the Work," the St. Clairs, if they had ever exercised their patronage and protection, had ceased to do so.

The Masons needing at that time such a patron, designated William St. Clair as such, and to give a greater prestige to the position, either invented a tradition that the office had been hereditary in the family of the St. Clairs or repeated one that already existed.

About thirty years afterward, the Masons of Scotland renewed and confirmed the appointment of Sir William St. Clair, the son of the one who had received the appointment in 1601. And now, in accordance with the unhappy method of treating Masonic documents which seems always to have prevailed whenever it was necessary to make a point, the writers of the second charter changed the tradition which in the first charter was to the effect that the Masons had always appointed the St. Clairs as their patrons, and asserted that the appointment had been given at an early period by one of the Scottish Kings. This was a falsification of the original tradition and must be rejected.

It was, however, accepted by Sir David Brewster and has until recently been recognized as a part of the authentic history of Scottish Masonry.

I think there can be no doubt that the St. Clairs accepted the honorable position of patrons of Scotch Masonry which had been bestowed upon them in 1601 and retained the office until it was finally vacated in 1736 by William St. Clair, who resigned all claim or pretense that he had to any hereditary right to be "patron, protector, judge or Master of the Masons in Scotland." Upon this the Grand Lodge of Scotland, which had then been duly formed, first adopted for their presiding officer, under the influence of the example of the Grand Lodge of England, the title of "Grand Master" and elected St. Clair to the office.

Looking back to the 12th century, when Kilwinning Abbey, Glasgow Cathedral, and Holyrood and other religious houses were built by Freemasons brought over from England and from the Continent, we are to suppose, for we are without documentary informa-

tion, that the Masons of that and the succeeding centuries up to the end of the 16th century must have observed the usages and customs of the English and Continental Masons.

In the reigns of James IV. and V., the statutes of Parliament show that there were continual controversies between the Masons and the public authorities, the former seeking to enlarge their privileges and the latter to restrict them. When Mary ascended the throne she found the Masons suffering under an act passed during the regency which suppressed the Deaconry, and which with previous ones that forbade their meetings in "private conventions" or framing statutes, seemed to have deprived the Masons of almost all their prerogatives.

All these laws Queen Mary abolished, and granted letters under the Great Seal, which restored the office of Deacon, confirmed the Craft in the privilege of self-government, in the observance of the customs and the exercise of the prerogatives which they had formerly enjoyed.¹

During the reign of James VI. we find a recognized connection between the Sovereign and the Craft, the office of Warden and that of Master of the Works, being made by the King's authority.

It is at this period that we begin to find records or minutes of lodges and statutes well authenticated, by which we are enabled to form a correct judgment of the condition and the customs of the Craft in Scotland at that early period.

In this respect Scotland has the advantage of England, where we find no authentic records of any lodge until the 18th century, while the first minutes of the Lodge of Edinburgh date back to the year 1598.

A very fair analysis of the early minutes of the Scottish lodges, and especially of the Lodge of Edinburgh, has been given by Bro. D. Murray Lyon in his valuable history of that Lodge. Whoever expects to write a faithful history of Freemasonry in Scotland must depend on that work as almost the only source of authentic facts. As histories of the early period the imaginative illustrations of Anderson's, and of Lawrie's edition, are almost utterly valueless.

The minutes of the Lodge of Edinburgh, or St. Mary's Chapel, extend from December 28, 1598, to November 29, 1869. They are

¹ Lyon, "History of the Lodge of Edinburgh," p. 5.

contained in six volumes, which are in an excellent state of preservation, with comparatively very few omissions. The first and second volumes, which include the space of one hundred and sixty-three years, that is, from 1598 to 1761, with a hiatus of only thirteen years, supply an ample store of authentic materials for early Scotch Masonic history.

The first volume contains a copy of what are called "The Schaw Statutes," the earliest Constitutions extant of Scotch Freemasonry. The date of this document is December 28, 1598. They are entitled "The Statutes and Ordinances to be observed by all the Master Masons within this realm; set down by William Schaw, Master of Work to his Majesty and General Warden of the said Craft with the consent of the Masters hereafter specified."¹

Of these statutes, the most important for understanding the true condition and usages of the Masonic Craft of Scotland in the 17th century are the following:

The first point intimates that the ordinances thereafter prescribed are but a continuation of those which had previously prevailed, but of these no copy is in existence.

The second point requires them "to be true to one another, and to live charitably together." This is in exact accord with the guild spirit, to be found in all the old English Constitutions.

The third enjoins obedience "to their Wardens, Deacons, and Masters in all things concerning their Craft."

The fourth directs them to be honest, faithful, and diligent, and to deal uprightly with the Masters or owners of the work in whatsoever they shall take in hand. This is evidently a transcript from the English Constitutions.

The fifth point prescribes that no one shall take in hand any work which he is not able duly to perform. This is the same as the regulation in the English Constitution, but the Schaw statutes direct the compensation that is to be made for an infraction of the rule.

The sixth provides that no Master shall take another one's work from him, after the latter has made a contract with the owner

¹ In quoting from these statutes, from the minutes of lodges or any other documents, for the convenience of the English reader, the Scottish dialect of the originals has been translated into the vernacular, but with literal exactness. The object has been to impart the meaning, and not merely to preserve the original phraseology.

of the work (who in the English Constitutions is called "the lord"), under a penalty of forty pounds.

The seventh point is that none shall finish any work begun, and not completed by another, until the latter has received his pay for what he has done.

The eighth point provides for the election by the Masters of every lodge of a Warden to take charge of the lodge, whose election is to be approved by the Warden-General.

The ninth point directs that no Master shall take more than three apprentices unless with the consent of the Wardens, Deacons, and Masters of the shrievalty (district) where the apprentice dwells.

The tenth point is that no apprentice shall be taken for less than seven years, nor shall that apprentice be made a brother and fellow of the Craft until he has served seven years more after the expiration of his term of apprenticeship, unless by the special license of the Wardens, Deacons, and Masters assembled for that purpose, nor without a sufficient trial of his worthiness, qualifications, and skill.

The eleventh point makes it unlawful for a Master to sell his apprentice to any other Master or to dispense with the years of his apprenticeship by selling them to the apprentice himself. The apprentice was to fulfil the full term of his servitude with his original Master.

By the twelfth point the Master, when he received an apprentice, was to notify the fact to the Warden of the lodge, so that his name and the day of his reception might be properly enrolled in the book of the lodge.

The thirteenth point prescribed that the names of the apprentices should be enrolled in the order of the time of their reception.

By the fourteenth point a Master or Fellow was to be received or admitted only in the presence of six Masters and two Entered Apprentices, the Warden of the lodge being one of the six; the time of the reception and the name and mark of the Master or Fellow were to be enrolled in the lodge book, together with the names of the six Masters and two apprentices who received him and the names of the "intendars" or persons chosen to give him instruction. Nor was he to be admitted without an "assay" or specimen of his work and a sufficient trial of his skill and worthiness.

By the fifteenth no Master was to do any work under the charge or command of any other craftsman.

The sixteenth strictly prohibited all work with cowans.

The seventeenth forbade an apprentice to accept any work beyond a certain amount without the license of the Masters or Warden.

By the eighteenth all disputes were to be referred for reconciliation to the Wardens or Deacons of the lodge.

The nineteenth provided for the careful erection of scaffolds and footways so as to prevent any danger or injury to the workmen.

By the twentieth apprentices who had ran away from their Masters were not to be received or employed by other Masters.

The twenty-first commended all the craftsmen to come to the meeting when duly warned of the time and place.

The twenty-second point required all Masters who were summoned to the Assembly to swear under "a great oath" not to conceal the wrongs or faults done to each other nor to the owners of the works on which they were employed.

The twenty-third and last point prescribed that all the fines and penalties inflicted for a violation of these ordinances should be collected by the Wardens, Deacons, and Masters of the lodges and distributed according to their judgment for pious uses.

Bro. Lyon very properly suggests that this code of laws was applicable only to Operative Masons. This is certainly true, but so also were all the Constitutions of the English Craft and the Ordinances of the German and French Masons. Originally Freemasonry was an exclusively operative institution. But out of it grew the present Speculative system, in all these countries. To understand, then, the growth of the one out of the other, it is necessary to examine these constitutions and the minutes of the Operative lodges, of which latter Scotland only supplies us with authentic materials.

The great resemblance between the statutes of Schaw and the early English Constitutions indicates very clearly the close connection that existed between the two bodies of craftsmen in these countries, and leaves us in no doubt that both derived their laws and their customs from a common source, namely, that body of architects and builders who sprang up out of the Roman Colleges of Artificers and in time passed over into the Traveling Freemasons of Lombardy, who disseminated their skill and the principles of their profession over all Europe and to its remotest islands.

Having thus traced the rise of Masonry in Scotland to the builders who came over in the 12th century from the Continent, and perhaps from England, to be employed in the construction of religious houses at Kilwinning, at Glasgow, at Edinburgh, and other places, and having shown the condition of the Craft, so far as the great dearth of materials would permit, between that period and the year 1598, when the Schaw Statutes were enacted, we are next to inquire into the customs and usages of the Scottish Craft in the 17th century and until the organization of the Speculative Grand Lodge of Scotland in the year 1736. In performing a similar task in reference to the Masons of England, we were restricted for our sources of information to the manuscript Constitutions which could supply us only with logical deductions and suggestions, which made our narrative more a plausible conjecture than an absolute certainty.

But in tracing the customs and usages of the Scottish Craft in the 17th century, we are enabled to take as guides the minutes of the Operative lodges which, unlike those of England, have been preserved from the early date of the last years of the 16th century, and which have been collected and published by Bro. D. Murray Lyon in his most valuable *History of the Lodge of Edinburgh*, a work to which, in the following chapter, I shall almost wholly confine myself for facts, though not always concurring in his views and deductions. The facts are incontrovertible and authentic—the deductions, whether they be his or mine, may be erroneous, and their acceptance must be left to the reader's judgment.

CHAPTER XIV

CUSTOMS OF THE SCOTTISH MASONS IN THE 17TH CENTURY

THE Masons of the 16th century in Scotland appear to have been divided into two classes, the Incorporations and the Lodges. These, although not exactly similar to the Masons' Company and the lodges of England, may be considered as in some degree analogous.

In 1475 the Mayor and Town Council of Edinburgh chartered the Incorporation of Masons and Wrights. In this body two Masons and two Wrights were selected and sworn to see that all work was properly done, to examine all new-comers into the town who were seeking employment, to make the necessary regulations for the reception and government of apprentices, to settle disputes between the craftsmen, to bury the dead, and generally to make laws for the two trades of Masons and Wrights.

Incorporations were also invested in Glasgow and other cities with the same prerogatives. Controversies repeatedly and naturally arose between these Incorporations and the Lodges with whose privileges and regulations they sought to interfere. But early in the 17th century the former ceased to exercise some of their offensive prerogatives, and especially that of receiving and admitting Fellows of the Mason's Craft. But as Lyon justly observes, the fact that Wrights were present with Masons at the passing of apprentices to the rank of Fellow, favors the opinion that the ceremony of passing was simply a testing of the candidate's fitness for employment as a journeyman.

But the Incorporations were really extraneous bodies having their origin in the municipal spirit of interference. In investigating the Masonic usages and customs of the 17th century we must look really to the lodges and to what is suggested or developed of them in the Schaw and other statutes, and in the early minutes of the lodges that have been preserved.

The assertion of Anderson, Preston, and other writers of the 18th century, as well as some of a later date, that there was from the earliest period a government of the Craft in England by a Grand Master has been proved to be wholly untenable. Something of the kind appears, however, to have prevailed in Scotland at least from the end of the 16th century.

William Schaw, in his signature subscribed to the Statutes enacted by him, and in various records going back as far as 1583, calls himself, and is called, "the King's Master of Work." This is a very common title in the Middle Ages, but by no means indicated that the possessor of it was a Mason. The *Majester Operis*, or "Master of the Work," sometimes called the *Majister Operum*, or "Master of the Works," was an officer to whom was entrusted the superintendence of the public works. Sometimes, but not necessarily, he was an architect, and hence Anderson always calls these Masters of the Works, Grand Masters, an error which has a very unfortunate effect in confusing true Masonic history. The office was a monastic one also, and in early times the monk who was made the Master of the Work superintended the Masons employed by the monastery in conducting repairs or erecting buildings.

It does not, therefore, follow that Schaw was, from being called by this title, an Operative Mason. The evidence, though circumstantial, is the other way. Indeed, the office of King's Master of the Work was an old one in Scotland, and Schaw himself, in 1583, succeeded Sir Robert Drummond in the office.

But, in 1600, as it appears from a minute of the Lodge of Edinburgh, he presided over a Masonic trial, and to do this he must have been a member of the Craft. He was, therefore, it is to be supposed, a non-professional who was admitted to honorary membership, and he is only one instance among many of the adoption into the brotherhood of persons who were not Masons.

But, in that minute, Schaw is described as "the principal Warden and Chief Master of Masons."

Now, this title of "Principal Warden" is the same as that called in the Statutes of 1599 the "Lord Warden-General." This office of Warden-General, or General Warden, as it is also called, approaches nearer to the idea of a Grand Master than anything that we can find in Anderson's *Constitutions* in respect to the English Masons.

The General Warden appears, according to the Scottish Statutes, to have been possessed of several important prerogatives. He had the power of calling the representatives of the lodges to a General Assembly; he enacted the statutes for the government of the Craft—the election of Wardens in the particular lodges was to be submitted to him for his approval—and he exercised a general supervision over all the lodges; in short, the General Warden was, in fact, though not in name, the Grand Master of the Masons in Scotland.

There is some confusion about the names of the officers of the private lodges. In some instances we find the presiding officer called the Deacon, and in others the Warden. But it has been explained that the Warden was recognized as the head of the lodge in its relations with the General Warden, while the Deacon was the chief of the Masons in their incorporate capacity and also the head of the lodge. Sometimes both offices were united in the same person, who was then called "the Deacon of the Masons and the Warden of the lodge." As a general rule, however, the Warden appears to have been the presiding officer of the lodge, the custodian of its funds, and the dispenser of its charities. That he held a precedence over the Deacon is evident from the fact that when both are spoken of in a minute or in a regulation, the Warden is named before the Deacon. It is always "the Warden and Deacon," and never "the Deacon and Warden."

Both officers were elected by the suffrages of the Master Masons of the lodge, and the election was held annually.

In every lodge there were three classes of members: Masters, Fellows, and Apprentices; but it must be remarked that these were only three ranks, and that they do not by any means indicate that there were three degrees, in the sense in which that word is now understood.

The Masters were those who undertook contracts for building and were responsible to their employers for the fidelity of the work; the Fellows were the journeymen who were employed by these Master-builders; and the apprentices were those youths who were engaged, under the Masters, in acquiring a knowledge of their Craft.

If there was a ceremonial of initiation or reception and an esoteric knowledge of certain arcana, that ceremony and that knowledge must have been common to and participated in by each of the

three classes. Whatever was the Mason's secret the Apprentice knew it as well as the Master, for one of Schaw's regulations required that at the admission or reception of a Master or Fellow, there should be present besides six Masters, two Entered Apprentices, whence it is evident that nothing could have been imparted to the newly accepted Master that the Apprentice was not already in possession of.

That the ceremony of initiation was in the 17th century a very simple one is very evident from the slight references to it in the minutes of the lodges. The Statutes of 1598 required it to be performed in the presence alike of Masters and Apprentices, which shows, as has already been said, that it was a ceremony common to both. It appears to have consisted principally of the impartation of what was called the "Mason Word," and a few secrets connected with it, which are called in one of the old minute books, "the secrets of the Mason Word." What these "secrets" were, it is now impossible to discover, but as it has been seen that the Scottish Craft customs were originally derived from the English and the Continental Freemasons it is most probable that the secrets of the Word and the ceremonies of initiation were much the same as those described in the Sloane MS., heretofore quoted as practiced by the English Masons, and those described by Findel as used by the German Masons in the 12th century.

The Squaremen were companies of Wrights and Slaters in Scotland who were very intimately connected with the Masons, and who appear to have had, in many respects, a similarity, if not an identity, of customs.

Now these Squaremen had a ceremony of initiation, a word which was called the "Squaremen's word" and secret methods of recognition. In the ceremony of initiation, which was called the "brithering,"¹ the candidate was blindfolded and prepared in other ways; an oath of secrecy was administered, and after the performances, which were in a guarded chamber, were finished, a banquet was given, the expenses of which were paid by the fee of initiation.

The banquet was in fact so important a part of the ceremony of initiation among the Masons that special provision for it was made by Schaw, the Warden General, in the Statutes of 1598. Appren-

¹Jamieson defines the word to brither thus: "To unite into a society or Corporation, sometimes by a very ludicrous process." — "Dictionary of the Scottish Language" in voc.

tices were to pay on their admission six pounds to the "common banquet," and Fellow Crafts ten pounds.

The Fellow Craft was also required to provide the lodge with ten shillings' worth of gloves. Nothing more conclusively proves the connection of the Scottish with the Continental Masons than this reference in the Statutes of the former to the article of gloves to be provided for the lodge. The use of gloves as a portion of the dress of an Operative Mason, is shown in early records to have been very common from early times on the Continent. M. Didron gives, in the *Annales Archéologiques*, several examples from old documents of the presentation to Masons and Stonecutters of gloves. Thus in 1381 the Chatelan of Vallaines bought a considerable quantity of gloves to be given to the workmen, and the reason assigned for the gift is that they might "Shield their hands from the stone and lime." In 1383 three dozen gloves were distributed to the Masons when they began the buildings at the Chartreuse of Dijon. At Amiens twenty-two pairs of gloves were given to the Masons.

The use of gloves seems to have been, among the different crafts, peculiar to the Masons, and their use is well explained as being intended for protection against the corrosive nature of the mortar which they were compelled to handle.

When Operative was superseded by Speculative Masonry the use of this article of dress was not abandoned, and in the Continental lodges to this day, the candidate is required to present two pair of gloves to the lodge on the night of his initiation. But the explanation now made of their use is, of course, altogether symbolical.

Another important ceremony connected with advancement to a higher rank in the fraternity was the production of the *Essay* or Trial piece.

It was a very common custom among the early continental guilds to require of every apprentice to any trade before he could be admitted to his freedom and the prerogatives of a journeyman, that he should present to the guild into which he sought membership, a piece of finished work as a specimen and a proof of his skill in the art in which he had been instructed.

This custom was adopted among the Scottish Masons, and when an apprentice had served his time of probation and was desirous of being advanced to the rank of a fellow or journeyman, he was re-

quired by the statutes to present an *Essay* or piece of work to prove his skill and competent knowledge of the trade.

At first the privilege of inspecting and judging the character of this trial piece was intrusted to the lodge, but afterward it seems to have been taken from them and given to the Incorporations, who, however, resigned it early in the 17th century. When an Apprentice wished to become a Fellow, he applied to his lodge, which, in Edinburgh, referred him to the Incorporation of Masons and Wrights of St. Mary's Chapel. By that body the piece of work to be done was prescribed; *Essay* masters were appointed to attend the candidate and see that he did the work himself, and when it was done, it was submitted to the brethren, who by an open vote admitted or rejected the piece of work.

Lyon very correctly finds a parallel to these *Essay* pieces of the Scottish Operative Masons, in the examinations for advancement from a lower to a higher degree, in the Speculative Lodges, but he is wrong in supposing that these tests for advancement were, in the "inflated language of the Masonic diplomas of the last century characterized as the 'wonderful trials' which the neophyte had had the 'fortitude to sustain' before attaining to the sublime degree of Master Mason."

The "wonderful trials" thus referred to were not the examinations to which the neophyte had been subjected to test his proficiency in the preceding degrees, but were the actual ceremonies of initiation through which he had passed, and considering their severity in the continental lodges, it is hardly an "inflation of language," to speak of some fortitude being needed to sustain them.

Annually both the Masters and the Fellows were required to renew their oath of fidelity and obedience to the brotherhood, and especially to take the obligation that they would not work with cowans.

It was also provided by the statutes that yearly the Fellows and Apprentices should submit to an examination which should test their memory and knowledge of the principles of the art.

Now as it would not have been fair to expect an Apprentice or Fellow to remember what he had never been taught, this regulation led to the introduction of a particular class of persons in the lodges who were called "intendars" or instructors, whose duty it was to instruct the newly admitted persons in the principles of the art.

This custom, according to Lyon, still prevails in some of the Scottish lodges. In the United States, it is a very general usage at the present day to provide an Apprentice as soon as he has been initiated and a Fellow Craft when he has passed, with an instructor whose duty it is to drill him accurately in the lecture of the degree into which he has just been admitted, so that when he applies for advancement he may be enabled to answer the questions that will be asked, and thus prove that he has made "due proficiency."

The transition of Operative into Speculative Masonry which took place soon after the beginning of the 18th century, is the most important portion of the history of the Institution. The gradual approaches to that condition in which the Operative element was wholly superseded by the Speculative, must therefore be regarded with great interest.

These approaches are marked by the introduction of persons who were not professional Masons into the Operative lodges. Occasion has been had heretofore to speak of the reception by a lodge of Operative Masons at Warrington in England, of two gentlemen who certainly were not Operative Masons, namely, Colonel Mainwaring and Elias Ashmole. This event occurred in the year 1646, and it is the earliest record in England of the acceptance of a non-professional member by a lodge of Operative Masons.

It does not, however, follow because this reception is the first recorded that it was therefore the first that took place. On the contrary it is most probable that the custom of receiving non-operative members was a very old one. It had, as we have seen, been practiced by the Roman Colleges of Artificers, and was by them propagated into the early Craft and Trade Guilds, and eventually imitated by the more modern Operative lodges. The practice still prevails in the London Livery Companies, which we know are the successors of the Trade Guilds of the Middle Ages.

In Scotland the custom of admitting non-operatives into the lodges has a much older record than that of England just referred to.

A minute of the Lodge of Edinburgh of the date of June 8th, in the year 1600, a *facsimile* of which is given by Lyon, records the presence at the meeting of the lodge of William Boswell, Laird of Auchinlech. The meeting was called for the purpose of considering a penalty that had been imposed upon the Warden. The Laird

of Auchinlech took a part in the deliberations, acquiesced in the decision at which the lodge arrived, and signed his name and affixed his mark to the minutes just as the Operative Masons did.

There are abundance of other instances of the admission of noblemen and gentlemen as honorary members. The case already cited of Boswell proves conclusively that the practice existed before the close of the 16th century. If we had the records we might, I think, find many cases still earlier.

In the admission of these "gentlemen masons," as they were sometimes called, the ceremonies of initiation, whatever they were, appeal' to have been the same as those practiced in the reception of operative members. As in the present day, and in Speculative Masonry, rank or condition secures no exemption.

Several instances are recorded during the 17th century of brethren who were not operative Masons being elected to preside over lodges. Thus Elphinston, who was tutor of Airth and collector of the King's Customs, was in 1670 one of the Masters or Past Masters of the Lodge of Aberdeen. The Earl of Cassilis was, in 1672, chosen as Deacon or head of the Lodge of Kilwinning. He had been preceded in the same office by Sir Alexander Cunningham, in 1671, and by the Earl of Eglinton in 1670. In 1678 Lord William Cochrane, the son of the Earl of Dundonald, was elected Warden of the same lodge.

All these appointments were merely honorary, and intended, it is to be presumed, to secure the patronage and influence of the noblemen or men of wealth and rank who were thus honored. They were not expected to perform any of the laborious duties of the office, for which task it is most probable that they were unfit. This, as Bro. Lyon observes, "may be inferred from the fact that when a nobleman or a laird was chosen to fill any of the offices named, deputies were elected from the operative members of the Kilwinning Lodge."¹

The relation of females to Freemasonry in Scotland during the 17th century is worthy of attention.

It has already been seen that in one of the English Constitutions, when referring to the Charges, it is written that "one of the Elders taking the Booke and that he or shee that is to be made

¹ "History of the Lodge of Edinburgh," p. 52.

a Mason shall lay their hands thereon and the charge shall be given."

From this passage some persons have drawn the apparently natural inference that females were admitted. Bro. Hughs, in commenting on it, thinks that the manuscript being a copy from a much older one, the word "shee" was carelessly retained, and that it is only an evidence that females were admitted in the early Guilds, an historical fact that can not be denied. But he is not prepared to advocate the opinion that women were admitted into the Mysteries of Masonry. And he admits that the custom of the Guilds to admit women was gradually discontinued.

As the passage quoted is found only in the York MS. of 1693, it is more reasonable to suppose that the word "shee" was a clerical error for "they." Hence we have no satisfactory evidence that women were connected with the Masonic lodges in England.

But Bro. Lyon contends that the obligation of the apprentice to protect the interests of his "dame," which is mentioned in the same manuscript, would indicate that it was lawful at that time in England for females, as employers, to execute the work of Masons.

This statement derives probability from the fact that at that time, in Scotland, the widows and daughters of freemen Masons were, under certain restrictions, permitted to exercise the privilege of burghesses in executing Mason's work.

Lyon cites a minute of the Ayr Squaremen Incorporation of the date of 1628, which enacts that every freeman's daughter shall pay for her freedom the sum of eight pounds. But it is clear that if a fine was imposed for the freedom, there must have been a privilege accompanying it, which could have been nothing other than the right to do a freeman's work.

The Lodge of Edinburgh, in 1683, recognized this privilege and qualified it by certain restrictions. It was then enacted that a widow should not undertake work or employ journeymen herself, but might have the benefit of the work under the favor of some freeman "by whose advice and concurrence the work shall be undertaken and the journeymen agreed with."

It is apparent from these two minutes that, from 1628 to 1683 women, the widows or daughters of masons, were in the habit of employing journeymen to do work given to them by the patrons of their husbands or fathers.

But this custom, growing into an evil, in time the females acting independently and assuming the position and exercising the prerogatives of Master Masons, the Lodge of Edinburgh found it necessary at length to correct the abuse and to restrict the privilege by compelling the females to undertake the work and employ the journeymen under the direction of a Master Mason, who, acting for the widow, discharged the duties without receiving compensation (which was strictly prohibited) and gave her the profits.

Another usage of the Scottish Masons in the 17th century was that of opening the lodge with prayer. There is no record of the existence of such a usage in England, although it is highly probable that the same practice prevailed in both countries, since Freemasonry being a later institution in Scotland, we have seen that it derived many of its customs from the sister kingdom.

The use of prayer as an introductory ceremony has always been practiced in the English speculative lodges, and combining this with the fact now known that it was observed by the Scottish operatives, we have an additional reason for believing that it was a usage among the English operative masons of the 17th and earlier centuries.

Bro. Lyon says that in opening with prayer, the Lodge of Edinburgh "followed an example which had been set in the ancient Constitutions of the English Masons which open and close with prayer." Here our generally accurate historian appears to have fallen into an error in confounding the form of composition adopted in writing a manuscript with that of opening a lodge, two things evidently very distinct.

It is of course admitted that all of the old English Constitutions commence with a religious invocation, and that they end either with a prayer for help or an imprecatory formula like the condition of an oath to keep the statutes.

But in a careful examination of all these Constitutions from the Halliwell MS. to the Papworth MS., that is from the first to the last, I have failed to find any regulation or article which prescribes that the business of a lodge shall be preceded by prayer. The only regulation that has a religious bearing is the one that prescribes a reverence for God and Holy Church and the avoidance of heresy or error.

That it was the practice of the early English operative lodges

to open and close with prayer, is an opinion founded wholly on conjecture, but for the reasons already assigned, the conjecture appears to be a plausible one.

But the use of prayer in the Scottish lodges of the 17th century is not conjectural, but is proved by actual records, and Bro. Lyon, in his invaluable work, to which I have been almost wholly indebted for the facts in the present and the preceding chapter, supplies us with two forms of prayers, one "to be said at the convening," and the other "to be said before dismissing." Both are extracted from the minute-books of Mary's Chapel Incorporation for the year 1699, and it will be interesting to compare them with the oldest English formula, namely, that given by Preston.

The first of these, or the prayer at the opening of the lodge, is in the following words:

"O Lord, we most humbly beseech thee to be present with us in mercy, and to bless our meeting and hail (whole) exercise which wee now have in hand. O Lord, enlighten our understandings and direct our hearts and myndes, so with thy good Spirit, that wee may frame all our purposes and conclusions to the glory of thy name and the welfare of our Brethren; and therefore O Lord, let no partial respect, neither of ffeed (enmity) nor favour, draw us out of the right way. But grant that we may ever so frame all our purposes and conclusions to the glory of thy name and the welfare of our Brethren. Grant these things, O Lord, unto us, and what else thou sees more necessarie for us, and that only for the love of thy dear Son Jesus Christ, our alone Lord and Saviour; To whom, with thee, O Father, and the blessed Spirit of Grace, wee render all praise, honor and glory, for ever and ever, Amen."

The second prayer, or that used at the dismissal or closing of the lodge, is as follows:

"O Lord, wee most humbly acknowledge thy goodnesse in meeting with us together at this tyme, to confer upon a present condition of this world. O Lord, make us also study heaven and heavenly myndednesse, that we may get our souls for a prey. And O Lord, be with us and accompany us the rest of this day, now and forever, Amen."

The importance of this record of prayers at opening and closing in the Scottish lodges, is that it adds great force to the conjecture that a similar custom prevailed in the English lodges at the same

***PHOTOGRAVURE REPRODUCTION OF ONLY ILLUSTRATION IN
ORIGINAL "BOOK OF CONSTITUTIONS," LONDON, 1723***

Supposed to be the oldest illustration in Speculative Freemasonry

period. The statement made by the biographer of Wrenn and quoted by Findel, that the mediæval Masons of England commenced their labor each day at sunrise by a prayer, the Master taking his station in the East and the Brethren forming in a half circle around him, is a mere tradition. There is the want of a contemporary record. But the fact that there is such a record, absolutely authentic in the minutes of a Scottish lodge of the period, throws necessarily an air of great probability upon the tradition.

That the record of the Scottish lodge is a minute made in the last year but one of the 17th century does not necessarily lead to the inference that the custom had just then begun. The record is more likely, when there is no evidence to the contrary, to have been that of a custom long previously in existence than of one that has just then been adopted.

So we may fairly conclude that it was the usage of the Scottish lodges of the 17th century to open and close their meetings with prayer, a usage that we have reason to infer was also practiced by the English lodges of the same period.

The last of the Scottish Masonic customs to which it is necessary to refer is that of the use of Marks, instead of, or sometimes as supplemented to, the written signature.

This is an interesting subject and claims a very careful and thorough consideration.

The presence of certain figures chiselled on the stones of a building has been remarked by travelers as occurring in almost all countries where architecture had made any progress and at very early epochs. It has been remarked by Mr. Ainsworth, an oriental traveler, that he found among some ruins in Mesopotamia that "every stone, not only in the chief building but in the walls and bastions and other public monuments, when not defaced by time, is marked with a character which is for the most part either a Chaldean letter or numeral."

On the floor of a tomb at Agra, in India, it was found that every stone was inscribed with a peculiar mark chiseled upon it by the workman. Copies of over sixty of these marks were given in 1865 by a writer in the London *Freemasons Quarterly Review*.

In an interesting work on Architecture by Mr. George God-

win,¹ the author, referring to the Freemasons of the Middle Ages, makes the following remarks:

"Several years ago my attention was led to the fact that many of our ancient buildings exhibited on the face of the walls, both inside and outside, marks of a peculiar character on the face of the stones which were evidently the work of the original builders; and it occurred to me that if examined and compared they might serve to throw light upon these bands of operatives. I made a large collection of them in England, France, Belgium and Germany, some of which were published in the *Archæologia*. These are simply the marks made by the Masons to identify their work; but it is curious to find them exactly the same in different countries and descending from early times to the present day; for in parts of Germany and Scotland tables of marks are still preserved in the lodges, and one is given to the (practical) mason on taking up his freedom. He cuts it, however, on the bed of the stone now instead of on its face. The marks are usually two or three inches long."

These marks were, it is evident, prescribed by the Masters or Superintendents of the buildings in process of construction to be used by the workmen, so that each one's work might be identified when censure or approval was to be awarded. It was a measure of precaution, and the employment of marks is no evidence, unless the mark itself is of a purely Masonic character, that the workmen who used them were Freemasons.

At first, it seems from the observations of Mr. Ainsworth, they were merely letters or numbers. Afterward those found at Agra were principally astronomical or mathematical. But when used by organized bands of Freemasons we find among these marks such symbols as the hour-glass, the pentalpha, and the square and compasses. When the Freemasons followed the precautionary system of the ordinary stonecutters and adopted the use of marks, they gave, most generally, a symbolic character to them, though sometimes they made use of monograms of their names.

M. Didron, who discovered these marks at Spire, Worms, Strasburg, Rheims, Basle, and several other places, and who made a report of his investigations to the Historical Committee of Arts and

¹"History in Ruins; a Handbook of Architecture for the Unlearned." By George Godwin, F.R.S., London, 1858.

Sciences of Paris, believed that he could discover in them reference to distinct schools or lodges of Masons. He divides them into two classes, those of the overseers and those of the men who worked the stones. The marks of the first class consist of monogrammatic characters, while those of the second are of the nature of symbols, such as shoes, trowels, and mallets.

It is possible that something like this distinction is to be found in the old Scottish marks. Of the 91 marks, copies of which are given in *facsimile* by Bro. Lyon as taken from the minute-book of the Lodge of Edinburgh, 16 are evidently monograms, such as GI, ME, AL, VH, NI, etc., while the remaining 75 are symbols, principally the cross in various forms, the triangle, the hour-glass, represented by two triangles joined at their apices, the pentalpha, etc. In one instance the monogram and the symbol are combined, where David Salmon adopts as his mark a fish or salmon, with the head in the form of the Delta or Greek letter equivalent to D.

There was undoubtedly a distinction of monogrammatic and symbolic marks, but whether Didron's idea that they belonged to two different classes of workmen is correct or not, it is impossible positively to ascertain. Bro. Lyon, however, affirms that "in regard to the arrangement of Marks into distinctive classes, one for Apprentices, one for Fellow Crafts, and a third for Foremen—the practice of the Lodge of Edinburgh, or that of Kilwinning, as far as can be learned from their records, was never in harmony with the teachings of tradition on that point."

It has been supposed the degree now called the "Mark Master's Degree" was originally manufactured by some ritual mongers toward the close of the last century and attached as a supernumerary degree to the Ancient and Accepted or Scottish Rite. I have in my possession the original charter granted in 1802 by the Grand Council of Princes of Jerusalem, of Charleston, S. C, to American Eagle Mark Lodge No. 1.¹ When Thomas Smith Webb was establishing his new system he incorporated the Mark degree in his ritual and made it the fourth degree of the American Rite, as it is practiced in the United States of America. It has been supposed that Webb derived his degree from the Ancient and Accepted Rite,

¹It was published in 1851 by the author in the "Southern and Western Masonic Miscellany," vol. ii., p. 300.

and it is not improbable that he did so. But more recently it has been discovered that the degree of Mark Mason and that of Mark Master Mason was given in Scotland by some of the Craft lodges as early as 1778. An excerpt made by that indefatigable Archaeologist, Bro. W. J. Hughan, from the minutes of the Lodge Operative Banff under date of January 7, 1778, shows that the degree of Mark Mason was conferred on Fellow Crafts, and that of Mark Master Mason on Master Masons.

I think, therefore, that we may fairly attribute the origin of the degree to the Masons of Scotland. The ritual has of course grown, as all rituals do, by gradual accretions to its present extent. But it is hardly necessary to say that the allegory and the tradition of the origin of the degree at the Temple of King Solomon is a mere symbolic myth, which is wholly unsupported by historical authority.

The statutes enacted by William Schaw, in 1598, for the government of the Masons of Scotland, direct that on the reception and admission of every Fellow Craft his name and mark shall be inserted in the book or register of the lodge.

The subsequent lodge minutes show that giving or taking a mark was accompanied by a fee, which was paid by the Fellow for this privilege.

The minutes also show that Apprentices were also permitted to select and use a mark.

The position and the prerogatives of Apprentices in the Scottish lodges is worthy of notice, especially as throwing some light on their condition in the English lodges, of which so little is said in the old Constitutions.

The presence of Apprentices at the admission of Fellow Crafts, was provided for in the Statutes of Schaw, as has already been seen.

Another prerogative granted to the Apprentices was that of giving or withholding their assent to any proposed accession of their ranks in the lodge.

They thus appear to have been so far recognized as active members. But Lyon says that this concession does not appear to have been granted to all Apprentices, but only to such as being "bound for the freedom" afterward became "Mason burgesses" and members of the Incorporation—Apprentices whose aim was that of becoming qualified for employment as journeymen.

If this view of Lyon is correct it would show an aristocratic distinction of rank, which was certainly unknown to the English Masons.

Apprentices were sometimes permitted to undertake work, of no very great value, on their own account, but with the consent of their Masters; a privilege that does not appear to have been conceded by the English Statutes.

The "passing" of an Apprentice to the rank of a Fellow Craft, although not a ceremony which added anything to the store of his Masonic knowledge, was still necessary to the extension of the influence and the increase of the revenues of the lodge. Apparently toward the end of the 17th century, many Apprentices were disinclined, at the expiration of their time of service, to undergo the trouble and expense of passing, but were disposed to work as unpassed journeymen. So at the beginning of the 18th century it was made imperative on Apprentices soon after their time of apprenticeship was out to "make themselves Fellow Crafts."

Fellow Crafts, or journeymen, were permitted to have Apprentices of their own, and it was provided by law that a Master might employ such fellows and yet not also employ their Apprentices, or he might employ the Apprentice and not the Fellow to whom he was bound. This seems to have been a peculiarity of Scottish Masonry in the 17th century. No similar provision is found in the English Constitutions.

Apprentices were prohibited from marrying, a very necessary provision, considering their relation to their Master's houses, which it may well be supposed existed in every other country.

In all of these usages of the Scottish Masons in the 17th century, we see the characteristics of an operative system. But this system was admitting the gradual encroachment of the Speculative element exhibited in the admission into the operative lodges of non-professional members.

The progress of this transition from an Operative to a Speculative character is better marked or rather better recorded in the Scottish than in the English history of Freemasonry.

In the latter we are aroused with suddenness from the contemplation of the operative system as detailed in the manuscript Constitutions extending into the very beginning of the 18th century, to the unexpected organization, without previous notice, of a purely

Speculative Grand Lodge a very few years after the date of the last written Constitution, which makes no reference to such an institution.

But the Grand Lodge of Scotland was not organized until nineteen years after that of the sister kingdom. The approaches to the change were gradual and well marked, and the struggle which terminated in the victory of Speculative or modern Freemasonry has been carefully recorded.

But the narrative of the events which led to the establishment in the year 1736 of the Grand Lodge of Scotland will form the interesting materials for a distinct chapter.

CHAPTER XV

THE FRENCH GUILDS OF THE MIDDLE AGES

N account has already been given in this work of the character of the English Craft guilds or corporations of workmen. I have not been able to concur in the views of Mr. Thorpe, nor in the qualified opinion of Brentano, that we are to look for the origin of these guilds, not in the Roman Colleges, but in the Scandi-

navian confraternities.

In Gaul, and subsequently, with greater development, in France, we find the existence of similar guilds or corporations of workmen, and here we are able to trace them more directly to the Roman Colleges of Artificers, as their models, because, after the fall of the Empire and the invasion of the barbarians, the old inhabitants were not exterminated by the invaders. On the contrary, the Franks were well disposed to the Roman culture and civilization, accepted many of the Roman laws and customs, imitated the remaining monuments of Roman taste and skill, and finally adopted, in the place of their own rough Teutonic dialect, a modified form of the Latin language.

The Craft guilds or corporations of workmen which were in existence in Gaul at an early period after the decay of the Roman Empire, continued to exist with spasmodic interruptions until the 12th and 13th centuries, when they were fully developed in the *Corporations des Métiers*.

The writers of the exhaustive article on this subject in Lacroix's massive work on the *Middle Ages and the Renaissance*, have advanced the theory that the guilds came into Gaul with the conquerors, and were therefore of Scandinavian or Teutonic origin, but in their subsequent investigations they appear tacitly to admit the fact that there was a very close connection between them and the Roman Colleges.

M. Aug. Thierry is of the opinion that the corporations, like the municipal communes, found their origin in the principles that governed the Roman Colleges. The guild, he says, was the moving power; the Roman Colleges the material on which it acted and out of which it was generated, and he thinks it would be interesting to examine how this motive principle as a new element has been applied to the ancient element of municipal organization which we historically know to have been of Roman origin and in what proportion it is combined with them.

In other words, he would seek to trace the connection between the Guilds and the Roman Colleges and to determine the influence of one upon the other.

Now this is the very investigation in which I propose to be engaged in the present chapter, as I have already pursued in the previous discussion of the early English guilds.

The theory that I have hitherto maintained, and which I have seen no reasonable cause to repudiate, is that the Guilds were the successors, as it were, by inheritance of the Roman Colleges.

Therefore, though the subject of these institutions has already been very fully treated, it will be expedient to introduce the history of the early guilds of Gaul and of their progress until they culminate in the 12th century in the *Corporations des Métiers*, by a brief recapitulation of what has been before said at length on the subject of the Colleges of Artificers of ancient Rome.

The corporations of artisans, which received the name of *Collegia Artificum* or Colleges of Artificers, are supposed to have been instituted by Numa, who first divided the artisans of Rome into nine colleges, gave them regulations for their government, and prescribed peculiar rites and customs to be observed by them. They met in their course from the Kingdom to the Empire with many vicissitudes. They were abolished by Tullus Hostilius, re-established by Servius, again interdicted and anew instituted and enlarged in their faculties by the decemvirs. Under the republic they were a constant source of inquietude and danger; their turbulent members, misled by demagogues, repeatedly threatened the security of the state. They were, during the latter years of the republic, often dissolved and as often re-established. Finally, Caligula definitively re-constituted them and invested them with all their ancient prerogatives. Trajan and his successors showed the colleges but little favor; they were, how-

ever, tolerated because the artisans, deprived of consideration in the city, were much better received in the provinces, and could be retained at the Capital only by securing to them their privileges. At this epoch they had become very numerous both at Rome and in its provinces. A contemporary of Alexander Severus names thirty-two colleges; Constantine designates thirty more, and the inscriptions preserved by Heineccius, their most reliable historian, enumerates many more.

The colleges required for their legal existence the authority of the law—in modern phrase it was necessary for them to be incorporated. Those which were not were styled *illicit* and their existence was prohibited.

Into each college, the artisans of only a particular profession or handicraft were admitted; slaves even might become members with the consent of their masters; and at length, persons of distinction who were not of the profession practiced by the college were received as patrons or honorary members, and these became the protectors of the college.

Some of the trades, as for instance that of the bakers, were hereditary, and the practice of the trade descended from father to son.

No artist or craftsman was permitted to belong to more than one college.

Each college had the right to enact its own regulations for its internal government; for this purpose, and for the discussion of their common interests, the members frequently assembled, they elected their officers, and imposed a tax for the support of the common chest and decided these and all other questions by a majority of suffrages.

Each college had its patron deity and exercised peculiar religious rites of sacrifice and commemorative feasts, which sometimes degenerated into Bacchanalian banquets.

Such is a brief outline of the Craft guilds, as they may justly be styled, which prevailed in Rome at the time of the dissolution of the Empire, and which, for the reason already assigned, flourished with great popularity in all the provinces from southern Gaul to the northern limits of England, the evidence of which is extant in the numerous inscriptions which have been preserved commemorative of their residence and their labors in every part of Europe.

The writers of the article on the Corporations of Craftsmen, in

the work of Lacroix, assert that under the conquering Germans, from the moment that Europe emerged from the government of Rome, without ever completely escaping from the influence of its laws, the confraternities of workmen never for an instant ceased to exist. The rare vestiges that we possess of them do not permit us to believe in their prosperous condition, but they attest at least their persistence.¹

These fraternities of workmen were the Provincial colleges which the invaders found when they entered the countries whence they had expelled the former Roman masters. But the Teutonic tribes, whose invasion was for the purpose of a permanent settlement, and not like that of the Huns, merely for temporary occupation and devastation, were not, as has been well observed, alien in mind and spirit from the Romans whom they had conquered. They had, to some extent, become familiar with the civilization which in the trial of strength they had overcome. Some of them had been soldiers in the imperial service or at the court, and many of them had listened to the teachings of Christian missionaries, and, though in an imperfect way, adopted Christianity as their religion.²

When, therefore, says Mr. Church, they founded their new kingdom in Gaul, in Spain, and in Italy, the things about them were not absolutely new to them. The influences of the Christian religion, which they imperfectly professed, of the Roman laws, which they did not altogether abolish, and of the Latin language, which they began insensibly to adopt, were exerted in producing a tolerance for the Roman corporations of workmen, as well as for many other Roman customs, and a facility for adopting the same system of organizing workmen, which led in time to the establishment of the guilds.

Of the regular progress of these guilds in the earlier centuries, as if they were a mere continuation of the corporations of the Roman colleges, we have sufficient, if not abundant, records.

Lucius Ampelius, a Latin writer of the 5th century, mentions,

¹ The article in Lacroix's "Le Moyen Age et la Renaissance," which treats of the "Corporations de Métiers," was written by MM. Monteil and Rabutaux. To their researches I have been indebted for much that is contained in this chapter; but for the sake of brevity and convenience I shall cite authority under the general reference to Lacroix.

² Church, "The Beginning of the Middle Ages," p. 46.

in his *Liber Memorialis*, a consul or chief of the locksmiths, whence we may infer an organized body of those craftsmen. Under the Merovingian kings, or the first dynasty of France, we meet with a corporation of goldsmiths. The bakers were probably organized under Charlemagne, as he took measures for their regulation, and in 630 they are distinctly spoken of as a corporation in the ordinances of Dagobert.

In Lombardy, which after its conquest by Charlemagne was in close relations with France, there were many colleges or corporations of artisans. We find in Ravenna, in 943, a college of fishermen, and ten years afterward a chief of the corporation of merchants; in 1001 a chief of the corporation of butchers. In 1061 Philip I. granted certain privileges to the Master chandlers.

The "ancient customs" of the butchers are mentioned in the time of Louis VII., in 1162; the same prince, in 1160, granted to the wife and heirs of one Yves Laccohre the faculty of practicing five trades, namely, those of the glovers, the purse-makers, the belt-makers, the cobblers, and the shoemakers.¹

Under the subsequent reign of Philip II. similar grants or concessions are more numerous.

This monarch, whose military exploits had won for him the title of "Conqueror" and "Augustus," is said to have approved the statutes of several corporations; in 1182 he confirmed those of the butchers, and granted them several privileges; in the next year the skimmers and the drapers were also the objects of his favor.²

In all Europe, say the writers in Lacroix's work, toward the 12th century, Italy gave the first impulse to that restoration to splendor of the corporations which for some centuries had been diminishing in importance. The confraternities of artisans in the north of France also constituted themselves into corporations, whence they spread into the cities across the Rhine. In Germany the guild had for a long time preserved its primitive form, and therefore the German and the French corporations are not to be confounded, though they had a common origin.

The most important event that marked the reign of Louis VI. in the 12th century was the affranchisement of the inhabitants of

¹ "Et Boileau, *Livre des Métiers*." Introduction by M. Depping.

² Lacroix, "*Le Moyen Age et la Renaissance*."

the cities,¹ and the establishment of the *Communes*, or independent municipal governments. One of the results of this movement was the revived organization of the Parisian Hanse. This, which Lacroix calls the oldest and most considerable of the French corporations, was a company of the recently enfranchised citizens of Paris under the name of the *Merchandise de l'eau*. It was a corporation to which was assigned the control of river navigation. A corporation similar in character had existed during the Roman domination, but in the lapse of time and under changes of government had become extinct. To this ancient corporation, however, it is probable that the new one owed its origin. The Parisian Hanse was always treated with great favor by the Kings. Louis VII. confirmed their privileges, and Philip II. increased them. At length it obtained the privilege of the navigation of the Seine and Yonde between Mantes and Auvern. Foreign merchants could not pass these limits and bring goods into Paris unless they had affiliated with the Hanse, and associated in their mercantile gains a citizen who served as their guaranty. It presided over the disembarkation of all goods brought into Paris, and controlled all buying and selling. After a short time similar corporations were established in all the cities bordering on the sea or on rivers.

Previous to the second part of the 13th century several corporations of artists or Craft guilds had been authorized by different monarchs, but it is only in the reign of St. Louis, from 1226 to 1270, that we are to date the first general measures taken for the establishment of the communities in France, and of the corporations on a legal basis. Up to that time the Prevostship of Paris had been a venal office, which was sold to the highest bidder. Louis resolved to reform this abuse, and appointed Stephen Boileau to the office of Prevost of Paris.

Of Etienne, or Stephen Boileau,² French writers have not been niggardly in their encomiums. He was undoubtedly a magistrate worthy of the greatest praise. To him Paris is indebted for its police. He moderated and fixed the taxes and imposts which, under previous Prevosts, had been levied arbitrarily on trade and

¹ It was not until the 14th century that the stain of serfdom was removed from the peasants.

² The name has been indifferently spelled, Boileau, Boyleau, Boleau, or Boylesve. I have adhered to the most usual orthography.

commerce. But his most important act in relation to our present subject was the distribution of the merchants and artisans into distinct communities or corporations under the name of confraternities, with specific statutes for their government.

He collected from old records and other ancient sources the customs and usages of the various crafts, most of which had never been written; collated them, and most probably improved them in many parts, preserved them as monuments in the archives of the Chatelet, which was the Guildhall of Paris, and thus composed his invaluable work entitled *Livre des Métiers*, or the "Book of the Crafts."¹

In his introduction to this work, M. Depping says that "it has the advantage of being for the most part the work of the corporations themselves, and not a series of regulations drawn up by the authority of the State."

The systems of corporations now began to enter into the regular framework of the social organization. Royal confirmations of charters, which had been rare during the 12th century, were multiplied in the 13th, and became a universal usage in the 14th century.²

As an evidence of the growth of these fraternities in cities neighboring to France, it may be noted that in the year 1228 Bologna had twenty-one corporations of crafts; in 1321 Parma had eighteen, and in 1376 Turin had twenty-six.

The *Livre des Métiers* of Boileau contains the statutes or regulations of one hundred different corporations, and these were not all that were then existing in Paris. Some, for various reasons, had neglected or declined to have themselves inscribed at the Chatelet.

In succeeding reigns the corporations were greatly multiplied. Under the administration of the Chancellor Tellier, in the reigns of Louis XIII. and Louis XIV., Sauvai records in his *Histoire des Antiquités de la Ville de Paris*, that he had counted 1,531 corporations in that city.

Some of these Parisian corporations possessed distinguished privileges. Such were the guild or corporation of Drapers, who held a pre-eminence over all others, the Grocers, the Mercers, the Skinners, the Hosiery, and the Goldsmiths.

¹ This work, long in manuscript, was first printed and published in 1837 in one volume quarto at Paris by M. Depping, who has enriched it with a learned Introduction.

² Lacroix, "Le Moyen Age et la Renaissance."

Some of the corporations were held directly under the royal authority and some under certain high officers of the court.

In the first centuries after the dissolution of the Roman Empire the Roman law as to illicit or unauthorized corporations seems to have become obsolete or to have been wholly disregarded, and the corporations were constituted and organized at the will of their organizers. But subsequently, and more especially after the 12th century, the approval of their regulations by the King or other person, in whose jurisdiction they were, was required to impart to them a legal condition.

These corporations had their peculiar privileges conceded to them by the royal or other competent authority, and their statutes and regulations enacted, for the most part, by themselves. They were distinguished from each other by their coats of arms, which they displayed in their processions and on other public occasions.

Each of the corporations held its General Assembly, to which the members frequently came from a great distance. Absentees were often fined.

The number of craftsmen who attended was frequently great. For instance, in 1361, the General Assembly of the Drapers of Rouen was composed of more than a thousand persons.¹

These Assemblies were generally convened by the officers of the King, who assisted at them either in person or by their delegates; but sometimes they were called together by the artisans without royal authority.

To render the attendance on them more convenient, artisans of the same profession usually inhabited the same quarter of the city, and even the same street. Sometimes this common residence was made obligatory, as in the case of the booksellers of Paris, who were compelled to dwell beyond the bridges on the right bank of the Seine.

The writers in Lacroix assert that these communities or corporations were in possession of all the privileges that formerly attached to the Roman Colleges. They could possess property, sustain actions at law through a procurator, and accept legacies. They had a common chest, exacted dues of their members, and exercised

¹ Lacroix, ut supra.

a police jurisdiction over them, and, to some extent, a criminal one. They struggled to preserve and to augment their privileges, and took part in all the conflicts of those turbulent times and in the quarrels, which were by no means few, between the Masters and the workmen. Some of them even exercised a jurisdiction over artisans who were not members of the corporation.

In most of the corporations the officers were elected by the community, though in some cases they were appointed by the King or other extraneous authority.

The members of the corporation were divided into three classes: Apprentices, Companions, and Masters. The writers in Lacroix speak of these classes as degrees, but evidently without attaching to the word the meaning conveyed in the modern Masonic use of it. They were simply ranks, or classes, the lower subordinate to the higher.

The duration of apprenticeship was from two to eight years, and in most of the trades the Companion had to undergo a considerable probation before he could become a Master. The Companion was usually called a *varlet gagnant*; that is, a man who earns wages equivalent to the English *journeyman*, or, as he was called in the old Masonic charges, a *Fellow*.

When the Apprentice, having completed his apprenticeship, or the Companion was desirous of being promoted to the rank of Master, he assumed the title of Aspirant.¹ He was subjected to frequent rigid examinations, and was required to prove his fitness for advancement by executing some of the principal products of the trade or craft which he professed. This was called his *chef-d'œuvre*, and in its execution he was surrounded by minute formalities. He was closely confined in an edifice or apartment specially prepared for the occasion; he was deprived of all communication with his relations or friends, and worked under the eyes of officers of the corporation. His task lasted sometimes for several months. It was not always confined to the direct products of the trade, but sometimes extended to the fabrication of the tools used in his craft.

The aspirant having successfully submitted to the examinations and trials imposed upon him, and having renewed his oath of fidelity to the King, an oath which he must have previously taken as an Ap-

¹ Lacroix, ut supra.

prentice, was required afterward to pay a tax, which was sometimes heavy, and which was divided between the King or Lord and the corporation. This tax was, however, remitted or greatly reduced in the case of the son of a Master of the Craft. From this usage has been, undoubtedly, derived the custom which still prevails in the Speculative Masonry of some countries, and which was once universal, of initiating a *louveteau*, or the son of a Mason, at an earlier age than that prescribed for other candidates.

The statutes of every corporation exercised great vigilance over the private life and morals of the members.

Bastards could not be accepted as Apprentices. To be admitted to the Mastership it was necessary that the Aspirant should enjoy a stainless reputation. To use the modern Masonic phrase, he must be "under the tongue of good report."

If an artisan associated with heretics or excommunicated persons, or eat or drank with them, he was subject to punishment.

The statutes cultivated good feelings and affectionate relations between the members.

The merchant or craftsman could not strive to entice a customer to enter his shop when he was approaching that of his neighbor.

Improper language to each other subjected the offender to a fine.

In reference to religion, each corporation constituted a religious confraternity, which was placed under the patronage of some saint, who was deemed the special protector of the profession. Thus St. Crispin was the patron saint of the Shoemakers, and St. Eloy of the Smiths.

Every corporation possessed a chapel in some church of the quarter, and often maintained a chaplain.

The corporations had religious exercises on stated occasions for the spiritual and temporal prosperity of the community; they rendered funeral honors to the dead, and took care of the widows and orphans of deceased members; they distributed alms and sent to the hospitals the contributions which had been collected at their banquets.

The brethren received a strange workman in their trade when entering a city, welcomed him, provided for his first wants, sought work for him, and if that failed the eldest Companion yielded his place to him.

But this character in time degenerated, the banquets became

debauches, conflicts took place between the workmen, and coalitions were formed against the industrial classes.

The law then interfered, and these confraternities or guilds were forbidden, but without much success.

It will be very evident to the reader that the details here given of the rise and progress, the form and organization of the mediaeval corporations or guilds do not refer to the Masons exclusively, but to the circle of the handicrafts of which the Masons constituted only one, but an important, portion. Before the middle of the 12th, or the beginning of the 13th, century, the corporations of Freemasons were not distinguished from the other crafts by any peculiar organization. They had undoubtedly derived a prominence over the other guilds in consequence of their connection with the construction of Cathedrals and other great public buildings; but "at that time," says Mr. Fergusson,¹ "all trades and professions were organized in the same manner, and the guild of Masons differed in no essential particulars from those of the Shoemakers or Hatters, the Tailors or Vintners—all had their Masters and Past Masters, their Wardens and other Officers, and were recruited from a body of Apprentices, who were forced to undergo years of probationary servitude before they were admitted to practice their arts."

Mr. Fergusson draws incorrectly a deduction that the Freemasons were an insignificant body, and hence in his book, he pays no attention to them outside of Germany. He even underrates their constructive capacity, and thinks that the designs of the Cathedrals and other religious edifices were made by Bishops, who, taking as a model some former building, verbally corrected its mistakes and suggested his improvements to his builder. But history has shown that in France, as well as elsewhere, there were at an early period laymen who were distinguished architects.

The only legitimate inference that can be deduced from the fact that all the other handicrafts were organized on the same plan as the Masons, is that the guild spirit universally prevailed, and that there was a common origin for it, which most writers have correctly referred to the Roman Colleges, which were the most ancient guilds with which we are acquainted.

¹ "History of Architecture in all Countries from the Earliest Times to the Present Day." By James Fergusson, F.R.S., etc., London, 1867, vol. i., p. 477.

Having thus far treated of the guilds in general, or the corporations of all the trades, it is now proper to direct our attention exclusively to the Masonic Guilds as they present themselves to us in France during the Middle Ages.

Larousse, who has compiled the best and most exhaustive encyclopaedic dictionary in the French language, makes a distinction between the associations of Masons and those of the Freemasons in France, a distinction which has existed in other countries, but with more especial peculiarities in France. Like all the other crafts, they were divided into three ranks or degrees of Apprentice, Journeyman, and Master. But I fail to find any evidence that there was a separate initiation or an esoteric knowledge peculiar to each rank which would constitute it a degree in the modern and technical sense of that word.

Larousse mixes the history of the French with that of the German Freemasons, but makes the Operative Masonic Guilds spring out of a jealousy or rivalry on the part of the Operative with the better-cultured architects.

He says that while the nomadic constructors of cathedrals and castles, that is to say, the Traveling Freemasons, who, springing out of Lombardy, were organized at Strasburg, at Cologne, and probably at York, formed a kind of aristocracy of the Craft, other Masons, attached to the soil and living, therefore, always in one place, formed independent and distinct corporations in the 15th century. I think, however, that such organizations may be found at an earlier period.

These Masons did not, like the German and English Freemasons, claim to be the disciples of St. John the Baptist, but placed themselves under the patronage of St. Blaise.

St. Blaise was a bishop and martyr who suffered in the 3d century, during the persecution of Diocletian. His legend says that he was tortured by having his flesh torn with iron combs, such as are used in carding wool. Hence he has been adopted by the wool-staplers as their patron. But it is inexplicable why he should have been selected by the Masons of France as their protecting saint, since there is nothing in the legend of his life that connects him with architecture or building.

The Guild or Corporation of Masons comprised Masons proper; that is, Builders, Stonecutters, Plaisterers, and Mortar Mixers. This

we learn from the Regulations for the Arts and Trades of Paris, drawn up by Stephen Boileau and contained in the 48th chapter of his *Livre des Métiers*.

It will be interesting to compare these regulations of the French Masons, drawn up or copied as is said by Boileau from the older ones enacted by St. Eloy, with the statutes or constitutions of the English Masons contained in their Old Records. I have therefore inserted below a literal translation of them from the *Livre des Métiers*.

REGULATIONS OF THE MASONS, STONECUTTERS, PLAISTERERS, AND
MORTAR MIXERS.

1. Whosoever desires may be a Master at Paris provided that he knows the trade and works according to the usages and customs of the craft.

2. No one can have more than one Apprentice and he can not take him for less than six years of service, but he may take him for a longer period and for money (a fee) if he has it. And if he takes him for a less period than six years he is subject to a fine of twenty sous of Paris, to be paid to the Chapel of St. Blaise, except only that he should be his son born in lawful wedlock.

3. A Mason may take another Apprentice, as soon as the other has accomplished five years of his service, for the same period that the other had been taken.

4. The present King on whom may God bestow a happy life has given the Mastership of the Masons to Master William de Saint Pater, during his pleasure. The said Master William swore at Paris in the lodges of the Pales before said, that he would to the best of his power, well and loyally protect the Craft, the poor as well as the rich, the weak as well as the strong as long as it was the king's pleasure that he should protect the Craft aforesaid and then Master William took the form of oath before said, before the Prevost of Paris in the Châtelet (or town hall).

5. The Mortar Masters and the Plaisterers have the same condition and standing, in all things as the Masons.

6. The Master who presides over the Craft of Masons, of Mortar Mixers and of Plaisterers, of Paris, by the King's order may have two Apprentices, but only on the conditions before said, and if he

should have more, he will be assessed in the manner above provided for.

7. The Masons, the Mortar Mixers and the Plaisterers may have as many assistants and servants as they please so long as they do not in any point teach them the mystery of the trade.

8. Every Mason, every Mortar Mixer and every Plaisterer must swear on the gospels that he will maintain and do well and loyally to the Craft, each in his place and that if he knows that any one is doing wrong and not acting according to the usages and Craft aforesaid he will every time make it known, under his oath, to the Master.

9. The Master whose Apprentice has completed his time of service, must go before the Master of the Craft and declare that his Apprentice has finished his time well and faithfully; and the Master who presides over the Craft must make the Apprentice swear on the gospels that he will conform well and truly to the usages and customs of the Craft.

10. No one should work at the aforesaid trade on days when flesh may be eaten after nones have been sounded at Notre Dame (*i.e.*, 3 o'clock in the afternoon) and on Saturday in Lent after Vespers have been chanted at Notre Dame unless it be on an arch, or to close a stair way or door opening on the street. And if any one should work after the aforesaid hours except in the above mentioned works of necessity he shall pay a fine of four deniers to the Master who presides over the Craft and the Master may take his tools for the fine.

11. The Mortar Mixers and the Plaisterers are under the jurisdiction of the Master aforesaid appointed by the king to preside over the Craft.

12. If a Plaisterer should send any man plaister to be used in a work, the Mason who is working for him to whom the plaister is sent, should by his oath, take care that the measure of the plaister is good and lawful; and if he suspects the measure he should measure the plaister or cause it to be measured in his presence. And if he finds that the measure is not good, the plaisterer must pay a fine of 5 sous; that is to say, 2 sous to the Chapel of St. Blaise, 2 sous to the Master who presides over the Craft and 11 (12?) deniers to him who has measured the plaister. And he to whom the plaister was delivered shall rebate from each sack that he

shall receive in that work, as much as should have been in that which was measured in the beginning. But where there is only one sack, it shall not be measured.

13. No one can become a Plaisterer at Paris unless he pays 5 *sous* to the Master who, by the King's order presides over the Craft; and when he has paid the 5 *sous* he must swear on the gospels that he will mix nothing but plaister with his plaister, and that he will deliver good and true measure.

14. If the Plaisterer puts anything which he ought not, in his plaister he shall be fined 5 *sous*, to be paid to the Master every time that he is detected. And if the Plaisterer makes it a practice to do this, and will not submit to fine or punishment, the Master may exclude him from the Craft, and if he will not leave the Craft at the Master's order, the Master must make it known to the Prevost of Paris, and the Prevost must compel the Plaisterer to quit the Craft aforesaid.

15. The Mortar Mixer must swear before the Master and before other syndics of the Craft, that he will make Mortar only out of good limestone, and if he makes it of any other kind of stone or if the mortar is made of limestone but of inferior quality he should be reprimanded and should pay a fine of 4 *deniers* to the Master of the Craft.

16. A Mortar Mixer can not take an Apprentice for a less time of service than six years and a fee of 100 *sous* for teaching.

17. The Master of the Craft has petty jurisdiction and the infliction of fines over the Masons, Plaisterers, and Mortar Mixers, their assistants and apprentices, as it will be the King's pleasure, as well as over those who intrude into their trades and over the infliction of corporal punishment without drawing blood and over the right of clamor or immediate arrest and trial if it did not affect property.

18. If any one of the Craft departs before the Master of the Craft, if he is in contempt he must pay a fine of 4 *deniers* to the Master; and if he returns and asks admission he should give a pledge; and if he does not pay before night, there is a fine of 4 *deniers* to the Master; and if he refuses and acts wrongly, there is a fine of 4 *deniers* to the Master.

19. The Master who presides over the Craft, can inflict only a fine for a quarrel; and if he who has been fined is so hot and foolish

that he will not obey the commands of the Master nor pay the fine, the Master may exclude him from the Craft.

20. If any one who has been excluded from the Craft by the Master, works at the trade after his exclusion, the Master may take away his tools and retain them until he pays a fine; and if he offers resistance, the Master must make it known to the Prevost of Paris who must overcome the resistance.

21. The Masons and the Plaisterers are liable to do watch, to pay taxes, and are subject to all the duties which the other citizens of Paris owe to the King.

22. The Mortar Mixers are exempt from watching, and also the stonemasons as the syndics have heard said from father to son from the time of Charles Martel.

23. The Master, who by the King's order presides over the Craft, is exempt from watching in consequence of that he does in presiding over the Craft.

24. He who is over sixty years old, or whose wife is dead, ought not to serve on the watch; but he ought to make it known to the King's Keeper of the Watch.

From these Regulations we learn that there was an officer who presided over the Craft in general, and who in many respects resembled the Chief Warden or Master of the Work of the Scottish Masons and the similar officer among the English, upon whom Anderson has gratuitously bestowed the title of Grand Master. He was appointed by the King, and in the Regulations is sometimes called "the Master who protects the Craft" (*le mestre qui garde le mestier*), and sometimes "the Master of the Craft" (*le mestre du mestier*).

At a later period he was styled "Master and General of the Works and Buildings of the King in the Art of Masonry," and still later "Master General of the Buildings, Bridges, and Roads of the King."

It is worthy of notice that one of these Regulations refers to a privilege as having been enjoyed by the Craft according to an uninterrupted tradition from the time of Charles Martel. This reference to the great Mayor of the Palace as being connected with Masonry, in a French document of the 13th century, and which is believed to have a much earlier origin, would authorize the hypothesis that the story of the connection of Charles Martel with Masonry

which is attributed to him in the English legend was derived by the English Masons from those French builders who both history and tradition concur in saying brought their art into England at a very early period.

The confounding of the name of Charles Martel the Warrior with that of his grandson Charlemagne, the Civilizer—if confusion there was, as is strongly to be suspected—must be attributed to the French and not to the English Masons.

The statutes of the Community, Corporation, or Guild of Masons were confirmed by Charles IX. and Henry IV. in the 16th, and by Louis XIII. and Louis XIV. in the 17th century. A great many letters-patent and decrees of the King's council are in existence, which define the jurisdictional powers of the Masters-General of the Buildings, and which contain regulations that release the Masons from all judicial summonses and from all judgments pronounced against them in other jurisdictions, remitting them to the Masters-General of the Buildings as their natural judges.

Some of these letters-patent related to the police of the Craft. Thus those of 1574 prescribed that Apprentices should be received by the Warden (*Maitre Garde*), and regulated the fee which should be paid under various circumstances. By an edict of October, 1574, sworn Master Masons were appointed as assistants to the Warden, who were to visit and inspect the works in Paris and the suburbs. These were at first twenty in number, but they were subsequently increased to sixty.

The Master-General of the Buildings had two jurisdictions, one which had existed for several centuries, and the other, which was established in the year 1645. The seat of the former was at Paris, in the Chatelet; that of the latter at Versailles.

Three architects, says Lacroix, who bore the title of "King's Counsellors, Architects, and Masters-General of the Buildings," exercised their jurisdiction year by year. They decided all disputes between the employers and the workmen and between the workmen themselves. Their courts were held on Mondays and Fridays, and there was an appeal from their judgment to the parliament.

In 1789 the Revolution in proclaiming freedom of labor abolished all corporative regulations and exempted the workmen from any sort of restraint, while at the same time they were deprived of all special privileges.

The Operative Masons of France, at the present day, constitute a large Confraternity, who have a kind of organization, but very singularly they are the only body of workmen who do not practice the system of *compagnage* or fellowship adopted by the other trades.

They have, however, their legends, and pretend that they are the successors of the Tyrians, who wrought at the building of the Temple in Jerusalem, calling themselves, therefore, the children of Solomon.

But they have no corporate existence and must be considered as working only on an independent and voluntary principle. There is, apparently, no similitude between them and the *Compagnons de la tour*, or brotherhoods of the other handicrafts in France. According to Larousse, they do not possess nor practice the *topage*, challenge, or formula of salutation by which the members of any one of these brotherhoods are enabled to recognize each other when meeting in a strange place.

From the sketch of the progress of architecture as a science and its practical development in the art of building in Gaul and in France, as presented in this chapter, we learn that the origin of the French Freemasons can not be traced as precisely as we do that of the German and British.

Rebold¹ says, very correctly, that the Masonic corporations never presented in France the peculiar character that they had in England and Scotland, and that hence their influence on the progress of civilization was much less than in those countries.

He further affirms that the custom adopted by the architectural corporations, of affiliating men of learning and condition as patrons or honorary members, appears to have resulted in France, as it had in other countries, namely, in the formation, outside of the corporations, of lodges for the propagation of the humanitarian doctrines of the institution; and he adds that when the Masonic corporations were dissolved in France at the beginning of the 16th century, lodges of this nature appear then to have existed.

All this is, however, mere assumption—an hypothesis and not an historical fact. Rebold himself admits that there is no longer any trace to be found of these Speculative Lodges.²

¹ "Histoire des Trois Grandes Loges," p. 31.

² Nous n'en trouvons plus aucune trace. Rebold, ut supra

In fact, there never was in France that gradual development of Speculative out of Operative Masonry which took place in England and in Scotland.

The Speculative Masonry of France came to it, not out of any change in or any action of the Masonic guilds or corporations, by which they abandoned their Operative and assumed a Speculative character. The Speculative lodges, the lodges of Free and accepted Masons, which we find springing up in Paris about that epoch, were due to a direct importation from London and under the authority of the Speculative Grand Lodge of England.

The history of the rise and progress of Speculative Masonry in France comprises, therefore, a distinct topic, to be treated in a future chapter.

But we must first discuss the condition of Masonry in other countries and at other epochs.

CHAPTER XVI

THE TRAVELING FREEMASONS OF LOMBARDY OR THE MASTERS OF COMO

IN the effort to trace the gradual growth of the modern system of Speculative Masonry out of the ancient organization of Operative Masons, we are arrested by an important era when the Guilds of architects and builders, issued about the 10th century from the north of Italy and under the name of "Traveling Freemasons," perambulated Europe, and with the patronage of the churches extended the principles of their art into every country from Germany to Scotland.

Before we can properly appreciate the events connected with the origin of this body of organized Masons as the undoubted link which connects the artificers of the Roman Colleges with the Masonic Guilds which sprang up in Gaul, in Germany, and in Britain, we must take a brief view of the condition of the Roman Empire in respect to the cultivation of the arts at the time of its declension and after the seat of government had been removed from Rome to Byzantium.

Mr. Thomas Hope has devoted some thirty pages of his *Historical Essay on Architecture* to an investigation of the circumstances which toward the end of the 10th century affected architecture, generally and extensively, throughout Europe. To this admirable inquiry I shall be indebted for many of the details and leading ideas which will constitute the present chapter.

In this work, Mr. Hope remarks that the architecture of Christian Greece and Rome, that is to say, the Byzantine and the Roman styles, exhibited, while it was confined within the limits bounded by the Alps, more local diversities than after it had crossed the mountain-ranges and advanced successively through France and Germany to the farthest inhabited regions of northern Europe.¹

¹ Hope, "Historical Essay on Architecture," p. 220.

But as this advancement from the plains of Italy into more northern regions was accompanied by a style of architecture the adoption of which was at once the cause and the effect of that united action which distinguished the Freemasons of the Middle Ages, it will be necessary to give a brief glance at the condition of architecture in the times which preceded the exodus of artists from Italy.

It must be remembered that it is impossible to trace with any prospect of certainty, the progress of events which finally led to the institution of Speculative Masonry, unless we direct our attention to the early history of Operative Masonry.

Though Speculative and Operative Masonry never were and never can be identical—a mistake into which early Masonic historians like Dr. Anderson have fallen—yet it must be always remembered that the former sprung by a process of mental elaboration out of the latter. Operative Masonry is the foundation and Speculative Masonry the superstructure which has been erected on it.

This is the theory which is advanced in the present work, in contradistinction to that untenable one which traces a connection of the modern society with any of the religious institutions of antiquity.

If then the old Masonry of the mediaeval builders, which was essentially operative in its character, is the foundation on which the Freemasonry of the modern philosophers, which is essentially speculative in its character, is built, we can not pretend to write a history of the superincumbent building and at the same time totally ignore the underlying foundation.

It is necessary, therefore, to glance at the history of architecture and at its condition before and after the 10th century, if we would understand how Freemasonry in the beginning of the 18th century was transmuted from an Operative to a Speculative system, from an art of building to a science of philosophy.

It has been noted as an evidence of the union of principles which began to distinguish the architects of and after the 10th century, who called themselves Freemasons, that in the time of Caesar a habitation in Helvetia differed more from a dwelling in the northern part of Italy, though the regions were adjacent, than the church reared in England or Sweden did from one erected in Sicily or Palestine, remote as the countries were from each other.¹

¹ Hope, "Historical Essay on Architecture," p. 220.

Now let it be remembered that this unity of design was introduced by the Traveling Freemasons; that these derived a knowledge of the great principles of the art of building from the artificers sent by the Roman Colleges, in company with the Legions of the Roman army, into all the conquered provinces and who there established colonies; that those Traveling Freemasons communicated their knowledge to the Stonemasons of Germany, France, England, Scotland, and other countries which they visited in pursuit of employment and in the practice of their craft; and finally that those stonemasons having from time to time, for purposes of their own aggrandizement, admitted non-professional, that is to say non-masonic members into their ranks, the latter eventually overcame the former in numbers and in influence and transmuted the Operative into a Speculative institution.

Remembering these points, which give the true theory of the origin of modern Freemasonry, as it were, in a nutshell,¹ it will be at once seen how necessary it is that the Masonic student should be thoroughly acquainted with the history of these mediaeval Masons, and with the character of the architecture which they invented, with the nature of the organization which they established, and with the method of building which they practiced.

To attain a comprehensive view of this subject, it is necessary that we should, in the first place, advert to the history of the kingdom of Lombardy, which is admitted to have been the cradle of mediaeval architecture.

At the close of the 5th century, the Ostrogoths, instigated and supported by the jealousy of the Byzantine Emperor, had invaded Italy under the celebrated Theodoric. Odoacer, who then ruled over the Roman Empire of the East, having been treacherously slain, Theodoric was proclaimed King of Italy by the Goths. He reigned for thirty-three years, during the greater part of which long period he was distinguished for his religious toleration, his administration of justice, and the patronage of the arts.

In a passage written by Magnus Aurelius Cassiodorus, who was the Chancellor of Theodoric, the Minister describes, in a glowing panegyric, the exalted condition of architecture during the reign of that monarch. Tiraboschi, who cites the passage in his *History of*

¹ Translation by W. H. Leeds, London, 1836, p. 17.

the Sciences in Italy, attributes this flourishing state of the art to the influence of the Goths. But Moller, in his *Memorials of German Gothic Architecture*, dissents from this view, especially as the Gothic domination in Italy lasted scarcely more than half a century, and contends that were it even demonstrable that architecture had been at that time such as Cassiodorus describes it, the fact is to be ascribed rather to the Byzantine Romans, among whom he thinks that we must search for all that, at that era, was preserved of the city and the sciences.

The Goths were finally driven out of Italy in the reign of Justinian, and by the armies of the renowned Belisarius. This event occurred about the middle of the 6th century.

They were succeeded by another tribe of semi-barbarians, who, though they did not, as the Ostrogoths had done, assume the domination of the whole of the Italian peninsular, yet exerted an influence on the state of mediaeval architecture that produced results of most interesting character.

The Longobardi, a word which by a generally accepted etymology signifies the Longbeards, a title which they obtained from their manner of wearing that appendage to the face, were a Scandinavian tribe who, coming down from their almost arctic home, first settled on the eastern banks of the Elbe, but gradually extended their migrations southwardly until in the year 568 they invaded Italy, and founded in its northeastern part the kingdom which to this day bears the name of Lombardy.

The kingdom of Lombardy existed in a condition of prosperity for two hundred years, but was finally obliterated toward the end of the 8th century, in 774, from the roll of independent monarchies by the victorious arms of Charlemagne.

During that period it had been governed by one-and-twenty kings, several of whom displayed great talents and who left their monuments in the wisdom and prudence of the laws which they gave to the kingdom.¹

In their first invasion under Alboin, their King, the Longo-

¹ Sismondi, "Histoire des Republiques Italiennes du Moyen Age," tome i., p. 14, Charles Butler says that no ancient code of law is more famous than the "Law of the Lombards;" none discovers more evident traces of the feudal policy. It survived the destruction of that empire by Charlemagne, and is said to be in force even now in some cities of Italy. "Horæ Judicis Subsecivæ," p. 85.

bards, or, as they were more briefly called, the Lombards, who were a fierce and warlike people, were pagans, and inflicted many persecutions on the Roman Christians. But their manners became gradually more mild, and in the year 587, Anthairs, their third monarch, embraced Christianity according to the faith of the Arians. His successor afterward adopted the orthodox or Catholic creed.

It was in the 6th century that the germs of the interference of the Church with the arts and sciences, and the control of architecture, were first planted. During the repeated incursions of barbarians, the gradual decline and ultimate fall of the power of the Roman Empire, and the continual recurrence of wars, the arts and sciences would have been totally extinguished had they not found a place of refuge among the priests, the bishops, and the monastic orders.

Whatever there was remaining of the old culture was preserved from perishing in the monasteries, the churches, and the dwellings of the ecclesiastics. Schools were erected in the cathedral churches in which youths were instructed by the bishop or someone appointed by him, in the knowledge of the seven liberal arts and sciences. In the monasteries the monks and nuns devoted as a part of their discipline a certain portion of their time to reading the works of the ancient doctors, or in copying and dispersing manuscripts of classical as well as Christian writers.

To these establishments, says Mosheim, are we indebted for the preservation and possession of all the ancient authors who thus escaped the fury of barbaric ignorance.

Architecture, which because its principles were generally and almost exclusively applied to the construction of churches and other religious edifices had become almost a sacred art, was at first and for a long time under the entire control of the clergy. The laity were either an ignorant peasantry or soldiers trained to war; the ecclesiastics alone exercised the arts, and especially architecture. Missionaries sent to teach the Christian faith carried with them into the fields of their labor, builders whom they directed in the construction of the new churches which they made their converts erect.¹

Ecclesiastical writers have remarked upon the incredible number of churches which, under the influence of religious enthusiasm, were

¹ "Historical Essay on Architecture," p. 213.

erected all over Europe, but more especially in Gaul and Italy at so early a period as the 6th century.

Lombardy is, as Mr. Hope has remarked, "the country in which associations of Freemasons were first formed, and which from its more recent civilization afforded few ancient temples whence materials might be supplied, was the first after the decline of the Roman Empire to endow architecture with a complete and connected system of forms, which soon prevailed wherever the Latin Church spread its influence from the shores of the Baltic to those of the Mediterranean."¹

Moller, a learned German writer on architecture,² asserts that the Lombards were in the habit of building much, and appear to have quickly attained a higher degree of civilization than the Goths, to whom they succeeded. As a proof of their skill and architectural culture we may refer to D'Agincourt's *History of Art by its Monuments*,³ where is exhibited a plate of the church of St. Julia near Bergamo, that of St. Michael at Pavia, and that of the round church of St. Momus, all of which he ascribes to the Lombards. Hope also enumerates among the churches erected in what he calls the Lombard style the Basilica of St. Eustorgio, which was built in the 7th or 8th century.

But, as in the case of the Goths, Moller ascribes whatever there was of excellence in Lombard architecture not to the Lombards themselves, who were originally a rude, invading people who adopted the civilized manners of the people whom they conquered as well as their architecture, but to the Byzantine Romans.

Other writers on this subject do not concur with Moller in this view.⁴ It is not denied that there was a constant influx of Grecian artists from Byzantium into Lombardy, who unquestionably must have influenced the condition of the arts by their superior skill; it can not be doubted that at the time of the extinction of their kingdom they had attained a very considerable share of civilization, and had made much progress in the art of building. This is evident from the few monuments that still remain as well as from the fact

¹ "Historical Essay on Architecture," p. 250.

⁴ See Sismondi, "Histoire des Repub. Italy," ch. i.

that Charlemagne made but little change in their government when he established his Lombard Empire by their conquest.

Nicholson speaks of these Lombards in terms of commendation. He says that "Italy does not seem to have suffered much but rather the reverse from their government, and during their possession the arts flourished and were cultivated with greater success than during the periods either immediately preceding or following. It is certain that they gave a great impetus to building, for during the two hundred years of their sway the northern and central portions of Italy had become studded with churches and baptisteries."¹

We may therefore very safely say that the ancient architecture of the Romans derived from their Colleges of Artificers was imitated by the Lombards and with its inevitable improvements brought to them from Byzantium by Grecian architects was subsequently extended over Europe.

But it was only after the conquest of Lombardy by Charlemagne that that province began to assume that high place in architecture which was won for it by the labors of the builders who disseminated over all Europe the principles of the new style which they had invented.

This style, which was designated as the Lombard from the place of its origin, differed both from the Roman and the Byzantine, though it adapted and appropriated portions of both.

Notwithstanding that the rule over Lombardy by Charlemagne, a monarch whose genius in acquiring empires was equalled by his prudence in preserving them, must have tended to advance the civilization of the inhabitants, the long succession of a race of degenerate descendants had a retarding effect, and it was not until two centuries after his death that the architects of Lombardy established that reputation as builders which has so closely connected their labors with the history of Freemasonry in the Middle Ages.

It has been already seen, when this subject was treated in a previous part of this work, that the Roman Colleges of Artificers continued to exist in all their vigor until the complete fall of the Empire. The invasion of the hordes of barbarians which led to that result had diminished their number and impaired their organization, so long as paganism was the religion of the State. But when the

¹ "Dictionary of Architecture" in voce Lombardii Architecture.

THOMAS SMITH WEBB

people were converted to Christianity, the Colleges, under the new name of Corporations, began to flourish again. The bishops and priests, who were admitted into them as patrons and honorary members, soon assumed the control of them and occupied the architects and builders in the construction of churches, cathedrals, monasteries, and other religious edifices.

What Whittington¹ has said of Gaul, may with equal propriety be applied to the other portions of Europe. The people were degraded, the barons only semi-civilized, commerce had not yet elevated the lower classes, and the arts had made but little progress among the higher classes. It was therefore chiefly through the clergy that the art of building was revived, which under these barbaric influences had previously led to its decay.

All the writers who have made this subject a study agree in the statement of the great influence of the clergy in the practice and propagation of mediæval architecture. Fergusson goes so far as to say that in the 13th century the Masons, though skilled in hewing and setting stones and acquainted with all the inventions and improvements in their art, never exercised their calling, except under the guidance of some superior person, who was a bishop, an abbot, or an accomplished layman.²

This too broad assertion is, however, hardly reconcilable with the fact that in France alone in the 13th century, to say nothing of England, Italy, or Germany, there were many architects who, though neither bishops nor abbots, both designed and built great works. Such, for instance, as Hugues Libergier, the builder of the Cathedral of Rheims, Robert de Lusarches, the builder of the Cathedral of Amiens, and Eudes de Montreuil who, says Whittington, was "an artist equally remarkable for his scientific knowledge and the boldness of his conceptions. He accompanied St. Louis in his expeditions to the Holy Land, where he fortified the city and port of Joppa, and on his return to France, was employed by the King in the constructing of several religious buildings."¹

The important place occupied by the Church in the revival of architecture can not, however, be too highly estimated. Though it

¹ "An Historical Survey of the Ecclesiastical Antiquities of France." London, 1811, p. 19.

² "History of Architecture in all Countries," etc., vol. i., p. 479.

³ "Historical Survey," p. 68.

would be an error to suppose that there were no laymen who were architects, it must be confessed that the most eminent ecclesiastics made architecture a study, and that in the construction of religious houses, the bishops or abbots designed the plans and the monks executed them. And even if the architect and the Masons were laymen, the house was almost always built under the superintendence and direction of some ecclesiastic of high rank.

The view taken of this subject is the one that is historically the most tenable. Whittington's language is worthy of quotation.

"In those ages of barbarism, when the lay portion of the community was fully employed in warfare and devastation, when churches and convents were the only retreats of peace and security, they also became the chief foci of productive industry. Convents have long been celebrated as the chief asylums of letters in those ages. They also deserve to be remembered as the sole conservators of art; not only painting, sculpture, enameling, engraving, and portraiture, but even architecture was chiefly exercised in them; and the more as the edifices which showed any elegance of skill were only required for sacred purposes. In every region where a religious order wanted a new church or convent, it was an ordinary thing for the superior, the prior, the abbot, nay, the bishop, to give the design and for the monks to fulfill, under his direction, every department of the execution from the meanest to the highest."¹ It is important that the reader should be thoroughly impressed with the position and the services of the clergy in the architecture of the Middle Ages, because it accounts for the character of the institution of Stonemasons, who succeeded the ecclesiastical artists, and who though released from the direct service of the Church still remained under its influence. This is well shown in the symbols used by them in the decoration of the buildings which they erected, most of which belong to Christian iconography, in the charters and constitutions by which they were governed, which inculcate religious faith and respect for the Church, and finally in the transmission of a religious character to the Speculative Masons who succeeded them, and of whose institution it has been said that if Freemasonry be not an universal religion, it forms an auxiliary to every system of faith.

The only difference between the Freemasonry of to-day and that

¹ "Historical Essay," p. 222.

of the 10th or the 11th century, in respect to the question of religion is that the former is cosmopolitan and universal in its creed, whose only unalterable points are the existence of God and the immortality of the soul, while the latter was strictly Christian according to the orthodox, catholic form in its belief and practice.

But notwithstanding the change from intolerance to liberality of sentiment which the progress of the age has introduced, it must never be forgotten that whatever there is of a religious or sacred character in the constitution or the ritual of the Freemasonry of today must be traced to the influences of the Church over the Operative Masons of the Middle Ages.

But it is necessary to resume the thread of our history. At the beginning of the 9th century Lombardy was the active center of civilization in Europe. It had prospered under the free institutions of its kings for two centuries, and on the extirpation of the royal line, the people shared in the benefits of the wise policy and prudent government of their conqueror, Charlemagne.

The workmen of Lombardy still maintained the relics of those ancient Sodalities, which had carried under the Roman domination the principles and practices of the Colleges of Artificers into the conquered provinces of the Empire.

The policy of the kings had led them to give various craftsmen the exclusive privilege of exercising their own trades, and under the form of guilds or corporations to establish bodies, which were governed by peculiar laws, and which were sought to be perpetuated by the introduction into them of youths who were to be instructed by the Masters, so that having served a due probation as apprentices, they might become associates and workers in the guild or corporation.

It was in this way that at that time all trades and professions were organized. In so far as respects the union in a corporation endowed with peculiar privileges, the Masons did not differ essentially from the shoemakers, the hatters, or the tailors. Each had its Masters, its Wardens or equivalent officers, and each was governed by its own laws and was recruited from a body of apprentices.¹

There was, however, one very important difference between the Masons and the other crafts which was productive of singular results.

¹ Fergusson, "History of Architecture," vol. i., p. 477.

This difference arose from the nature of the work which was to be done, and which affected the relations of the craftsmen to each other.

The trade of the tailor or the shoemaker was local. The custom was derived from the place in which he lived. The members of the corporation or guild all knew each other, they lived in the same town or city—and their apprentices, having accomplished their time of service and gone forth to see the world, almost always returned home and settled among their relatives and their friends.

Hence the work done by these trades was work that came to them. It was brought to them by the neighbors who lived around them. Every shoemaker in a city knew every other shoemaker in the same place; every tailor was familiar with the face, the life, and the character of every other tailor. While such intimacy existed there was no necessity for the establishment of any peculiar guards against impostors, for the trade was seldom troubled with the presence of strangers.

But it was not so with the Masons. Theirs was not a local craft. Work did not come to them, but they had to go to the work. Whenever a building was to be erected which required a force of workmen beyond the number who resided usually near the place, Masons had to be sent for from the adjacent towns and districts, and sometimes from even much greater distances.

There was therefore a great necessity for caution in the admission of these "strangers among the workmen" lest some should intrude who were not legally entitled to employment by having acquired a knowledge of the craft in the regular way; that is, by having passed through the probation of an apprenticeship to some lawful Master.

Hence arose the necessity of adopting secret modes of recognition, by which a stranger might be known on his first appearance as a member of the Craft, as a true craftsman, or be at once detected as an impostor.

Mr. Fergusson has adopted this view of the origin of signs and passwords among the Masons. As a scholar of much research, but who, not being a member of the modern confraternity, derives his opinions and deductions from history unconnected with any guild traditions, his remarks are interesting. He says:

"At a time when writing was almost wholly unknown among

the laity, and not one Mason in a thousand could either read or write, it is evidently essential that some expedient should be hit upon by which a Mason traveling to his work might claim assistance and hospitality of his brother Masons on the road, by means of which he might take his rank at once on reaching the lodge without going through tedious examinations or giving practical proofs of his skill. For this purpose a set of secret signs was invented which enabled all Masons to recognize one another as such, and by which also each man could make known his grade to those of similar rank without further trouble than a manual sign, or the utterance of some recognized password. Other trades had something of the same sort, but it never was necessary for them to carry it either to the same extent nor to practice it so often as Masons, they being, for the most part, resident in the same place and knowing each other personally."¹

Freemasonry was therefore in the following condition at the beginning of the nth century, so far as respects the Kingdom of Lombardy, to which the honor has been universally assigned of being the center from which the Masonic corporations spread abroad into the rest of Europe.

Lombardy being, as has already been shown, the active center whence the arts and sciences were radiated into other countries, architecture, as one of the most useful of the arts and one of an almost sacred character from its use in the construction of religious edifices, took a prominent place among the crafts that were cultivated in that country. Schools of architecture and corporations of architects principally ecclesiastics, were formed. These, passing into other countries and disseminating the principles of their science which they had acquired in the schools at home, have been hence known in history by the title of the "Traveling Freemasons of the Middle Ages."

Among these schools one of the most distinguished was that of Como.

The ancient city of Comum, lying at the southern extremity of the *Lacus Larius*, now called the Lake of Como, was, even under the Empire, a place of some distinction, as it had obtained from Caesar the full franchises of a Roman community. It was probably the birthplace of the elder and the younger Pliny, and was certainly

¹ "History of Architecture," vol. i., p. 478.

the favorite residence of the latter, who writes of it in one of his letters to Canidius Rufus in words of endearing fondness, calling it his darling. "What," he says, "is doing at Como, our darling?"¹ Pliny established there a school of learning, and at an early period it was noted for its foundries of iron. It retained its prosperity until the fall of the Empire, and continued in a flourishing condition under the Goths and under the Lombards. It retained its importance during the Middle Ages and is still populous and nourishing.

The architectural school of Como was of such repute in the 10th century that, according to Muratori, the historian of Italy, the name of *Magistri Comacini*, or Masters from Como, came to be the generic name for all these associations of architects.

The influx of Grecian artists from Byzantium into Italy at that time was, most probably, one of the means by which the Lombardic architects were enabled to improve their system of building. It was from the Greek Empire of Byzantium that the light of the arts and sciences, and of literature, proceeded, which poured its intellectual rays into the darkness of western Europe. At that time the word Greek, or Grecian, was synonymous with all intellectual culture.

We find a curious illustration of this in the *Legend of the Craft*, where Charles Martel, evidently a mistake for Charlemagne, is said to have been indebted for the improvements in architecture or Masonry in his Kingdom to the visit of Naimus Grecus. I have shown, in the first part of this work, that this expression simply means "a certain Greek." The legend thus recognized the fact that Europe was instructed in architecture by the Greeks of Byzantium, who visited Italy and Gaul.

The labors of these Masons could not long be confined within the narrow limits of Lombardy. Opulent as it was and populous, it could not fail to be fitted with churches and religious edifices, so that in time the need and the means of building more must have become exhausted.

There being no further demand for their services at home, they looked beyond the Alps, which formed their northern boundary, for new fields in which to exercise their skill and to avail themselves of the exclusive privileges which they are said to have possessed.

¹ Quid agit Comum, tuæ meæ que deliciæ? Pliny, "Epistles," lib. i., cap. 3.

A certain number, says Mr. Hope, united and formed themselves into a single greater association or fraternity which proposed to seek for occupation beyond its native land, and in any ruder, foreign region, however remote, where new religious edifices and skillful artists to erect them were wanted, to offer their services and bend their steps to undertake the work.¹

The connection of these Freemasons with the Church forms an interesting and important part of their history.

Governor Pownall, in an article on this subject in the *Archæologia*, was one of the first to make the statement that the origin of Freemasonry as an organized institution is to be traced to the builders who issued from Italy about the 12th century and traveled all over Europe, disseminating the principles of their art and erecting religious buildings under the patronage of the Pope. On this subject he writes as follows: "The churches throughout all the northern parts of Europe being in a ruinous state, the Pope created several corporations of Roman or Italian architects and artists, with corporate powers and exclusive privileges, particularly with a power of setting by themselves the prices of their own work and labor, independent of the municipal laws of the country wherein they worked, according as Hiram had done by the corporations of architects and mechanics which he sent to Solomon. The Pope not only thus formed them into such a corporation, but is said to have sent them (as exclusively appropriated) to repair and rebuild these churches and other religious edifices. This body had a power of taking apprentices, and of admitting or *accepting* into their corporation approved *Masons*. It will be found that, claiming to hold primarily and exclusively under the Pope, they assumed a right, as Freemasons, of being exempt from the regulations of the statutes of laborers, laws in England which made regulations for the price of labor; secondly, in order to regulate these matters amongst themselves as well as all matters respecting their corporation, they held general chapters and other congregations. Doing this they constantly refused obedience or to conform themselves to these statutes, which regulated the price of the labor of all other laborers and mechanics, although they were specifically mentioned therein."²

Dr. Henry, the historian, in speaking of them in his *History of*

¹ "Historical Essay," pp. 230, 231.

² "Archæologia," p. 117.

Great Britain, says that "the Popes, for very obvious reasons, favored the erection of churches and convents, and granted many indulgences by their bulls to the society of Masons in order to increase their numbers. These indulgences produced their full effect in those superstitious times, and that society became very numerous and raised a prodigious multitude of magnificent churches, about this time, in several countries."¹

Sir Christopher Wren makes the same statement, and I quote at length the passage contained in the *Parentalia* (which is one of the rarest of modern English books), because it not only repeats the statement of Papal encouragement, but gives a very detailed account of the mode of traveling adopted by these wandering Masons and their usages in constructing buildings. His words are:

"We are told by one who was well acquainted with their history and constitutions that the Italians, with some Greek refugees, and with them Frenchmen, Germans, and Flemings, joined into a fraternity of architects, procuring Papal bulls for their encouragement and their particular privileges; they styled themselves Freemasons, and ranged from one nation to another as they found churches to be built; for very many, in those days, were every day building through piety or emulation; their government was regular; and where they fixed near the building in hand, they made a camp of huts. A surveyor governed in chief; every tenth man was called a Warden, and overlooked each nine. The gentlemen in the neighborhood, either out of charity or commutation of penance, gave the materials and carriage. Those who have seen the accounts in records of the charge of the fabrics of some of our cathedrals near four hundred years old, can not but have a great esteem for their economy and admire how soon they erected such lofty structures."²

Hope is still more explicit in referring to the Papal patronage which is said to have been bestowed upon these Traveling Freemasons. He says that when they were no longer restricted in the exercise of their profession to Lombardy, but had begun to travel into the most distant countries, wherever their services as builders might be required, it was found necessary to establish a monopoly in the construction of religious edifices by which all craftsmen, even

¹ "History of Great Britain," vol. viii., p. 275.

² "Parentalia," p. 306.

the natives of the country where they went as strangers were, if not members of their body, to be excluded from employment.

Now this exclusive privilege was one which no temporal potentate could give to have effect beyond his own dominions. In all those countries which recognized the Pope as the head of the Church—that is to say in all the countries of Europe—the authority of a Papal bull was the only power by which this monopoly could be universally secured.

The Masons, says Mr. Hope, could be regarded only as different troops of laborers working in the cause of the Pope, extending his estates by the erection of new churches; and he thinks that they thus obtained the requisite powers soon after Charlemagne had put an end to the rule of the Lombards in Italy, and had annexed that Kingdom to his own Empire.

"The Masons were," he says, "fraught with Papal bulls or diplomas not only confirming the corporate powers given to them by their own native sovereign, on their own native soil, but granting to them, in every other foreign country which they might visit for purposes connected with their association, where the Latin creed was avowed, and the supremacy of the spiritual head acknowledged, the right of holding directly and solely under the Pope, alone, entire exemption from all local laws and statutes, edicts of the sovereign or municipal regulations, whether with regard to the force of labor or any other binding upon the native subjects; they acquired the power, not only themselves to fix the price of their labor, but to regulate whatever else might appertain to their own internal government, exclusively in their own general chapters; prohibiting all native artists, not admitted into their society, from entering with it into any sort of competition, and all native sovereigns from supporting their subjects in such rebellion against the Church, and commanding all such temporal subjects to respect these credentials and to obey these mandates under pain of excommunication."¹

This statement in reference to the granting of bulls or charters of privilege to the Traveling Freemasons is given by Mr. Hope, probably on the authority of Governor Pownall.

In February, 1788, a letter from Governor Pownall was read before the Society of Antiquaries of London, and subsequently pub-

¹ "Historical Essay on Architecture," p. 232.

lished in the ninth volume of the *Archæologia*,¹ under the title of "Observations on the Origin and Progress of Gothic Architecture, and on the Corporation of Free Masons supposed to be the Establishes of it as a Regular Order."

Governor Pownall commences his letter by the assertion of his belief that the College or Corporation of Freemasons were the formers of Gothic architecture into a regular and scientific order by applying the models and proportions of timber frame-work to building in stone. Without stopping to discuss the question of the correctness of this theory of the origin of the Gothic style, which must be a subject of future consideration, I proceed to analyze those parts of the letter which refer to the patronage of the Freemasons by the Papal See.

According to Governor Pownall, the churches throughout all the northern parts of Europe being in a ruinous state, the Pope erected several corporations of Roman or Italian architects and artists with corporate powers and exclusive privileges,² particularly with a power of setting by themselves the prices of their own work and labor, independent of the municipal laws of the country wherein they worked. The Pope not only thus formed them into such a corporation, but is said to have sent them with exclusive powers to repair and rebuild the churches and other religious edifices which in different countries had fallen into decay, but also to build new ones when required. In England, into which these builders had penetrated at an early period, they were styled "Free and Accepted Masons."

In respect to the historical authority for the existence of this Papal bull, charter, or diploma, which is said to have been issued about the close of the 12th or the beginning of the 13th century, Pownall says that being convinced from "incontrovertible record" that the Corporation of Architects and Masons had been thus instituted, he was very solicitous to have inquiry and search made among the archives at Rome, whether it was not possible to find there some record of the transaction.

Application was accordingly made to the librarian of the Vati-

¹ "Archæologia," vol. ix., pp. 110-126.

² Although it was never competent for the Pope to create a corporation in England, yet according to Mr. Ayliffe, on the Continent that power was conceded to him and shared by him with the prince or temporal sovereign. "Treatise on the Civil Law," p. 210.

can, and the Pope himself is said to have ordered minute search to be made. But the report was that "not the least traces of any such record" could be found. Governor Pownall, notwithstanding this failure, thought that some record or copy of the charter must be buried somewhere at Rome amidst forgotten and unknown bundles and rolls—a circumstance which he says had frequently occurred in relation to important English records.

Unfortunately for the positive settlement of the historic question, it by no means follows because the Roman Catholic librarian of the Vatican could not or would not find a bull or diploma which in the 12th century had granted special indulgences to an association which the Popes in the 18th century had denounced and excommunicated, that no such bull is in existence. The policy of the Papal Church overrules, without compunction, all principles of historic accuracy and by its undeviating course, whenever the end seemed to justify the means, forged or suppressed documents are of no uncommon occurrence.

This question still divides Masonic writers. Krause, for instance, on the supposed authority of a statement of Elias Ashmole, communicated by Dr. Knipe to the compiler of his Life, admits the fact of a Papal charter, while Stieglitz, accepting the unsuccessful application of Pownall to the Vatican librarian, contends for the absurdity of any such claim.

The preponderance of historical authority is, however, in favor of the statement. There is certainly abundant evidence of the subordination of these Masons to ecclesiastical authority. And it is not unreasonable to suppose that the entire supervision of church buildings exercised by bishops and abbots, who, as Fergusson says, made the designs while the Masons only followed the plans laid down for them, must have been supported by the express authority of the head of the Church.

The Traveling Freemasons were at an early period simply the servants of the Church.

Another fact worthy of attention is that the relationship of trade and the frequency of intercourse for other reasons between the different cities of Lombardy and Constantinople brought to Italy many Greeks, some of whom came seeking for employment and others were driven from their homes by political or religious persecutions. Among these emigrants were many artists who

united with the Masonic Corporations of Lombardy, and infused into them a large portion of their Byzantine art.

These Freemasons, thus armed with the authority of the Pontiff, having been well organized at home, were ready to set forth, like missionaries at the call of the Church, to build cathedrals, churches, and monasteries as they might be needed by the extension of the Christian religion. From the 10th to the 12th century, and in some places even earlier, we find them perambulating Europe and spreading the knowledge of the art in Germany, in France, in England, Scotland, and elsewhere.

The remarks of Mr. Hope on the professional wanderings of these Craftsmen of the Middle Ages, though they have the air of romance, are really well supported by historical authority.

"Often obliged," says that pleasing writer, "from regions the most distant, singly to seek the common place of rendezvous, and departure of the troop, or singly to follow its earlier detachments to places of employment equally distant, and that at an era when travelers met on the road every obstruction and no convenience, when no inns existed at which to purchase hospitality, but lords dwelt everywhere, who only prohibited their tenants from waylaying the traveler, because they considered this, like killing game, one of their own exclusive privileges; the members of these communities contrived to render their journeys more easy and safe by engaging with each other, and perhaps even in many places, with individuals not directly participating in their profession, in compacts of mutual assistance, hospitality, and good services, most valuable to men so circumstanced. They endeavored to compensate for the perils which attended their expeditions, by institutions for their needy or disabled brothers; but lest such as belonged not to their communities should benefit surreptitiously by these arrangements for its advantage, they framed signs of mutual recognition as carefully concealed from the knowledge of the uninitiated as the mysteries of their art themselves. Thus supplied with whatever could facilitate such distant journeys and labors as they contemplated, the members of these Corporations were ready to obey any summons with the utmost alacrity, and they soon received the encouragement they anticipated. The militia of the Church of Rome, which diffused itself all over Europe in the shape of missionaries, to instruct nations and to establish their allegiance to the Pope, took care not only to

make them feel the want of churches and monasteries, but likewise to learn the manner in which the want might be supplied. Indeed they themselves generally undertook the supply; and it may be asserted that a new apostle of the Gospel no sooner arrived in the remotest corner of Europe, either to convert the inhabitants to Christianity or to introduce among them a new religious order, than speedily followed a tribe of itinerant Freemasons to back him and to provide the inhabitants with the necessary places of worship or reception.

"Thus ushered in, by their interior arrangements assured of assistance and safety on the road; and by the bulls of the Pope and the support of his ministers abroad assured of every species of immunity and preference at the place of their destination; bodies of Freemasons dispersed themselves in every direction, every day began to advance farther and to proceed from country to country to the utmost verge of the faithful, in order to answer the unceasing demand for them or to seek more distant custom."¹

One fact peculiarly worthy of remark is that throughout all Europe, from its southern to its northern, from its western to its eastern limit—wherever the Christian religion had penetrated and churches had been erected—a surprising uniformity existed in the style of all edifices wheresoever built at the same period. No better evidence than this could be furnished of the existence of an association whose members, wherever they might be scattered, must have been controlled by the same rules of art.

Sidney Smith, Esq., in a paper in the *Archæologia*, alludes to this fact in the following language, in which he speaks of this association as having been established in the early part of the 13th century by a Papal bull:

"Thus associated and exclusively devoted to the practice of Masonry, it is easy to infer that a rapid improvement, both in the style and execution of their work, would result. Forming a connected and corresponding society, and roving over the different countries of Europe, wherever the munificent piety of those ages promised employment to their skill, it is probable, and even a necessary consequence, that improvements by whomsoever introduced would quickly become common to all; and to this cause we may re-

¹ "Historical Essay on Architecture," p. 235.

fer the simultaneous progress of one style throughout Europe which forms so singular a phenomenon in the history of architecture."¹

Mr. Hope is subsequently still more elaborate in his remarks on this subject.

"The architects," he says, "of all the sacred edifices of the Latin Church, wherever such arose—north, south, east, or west—thus derived their science from the same central school; obeyed, in their designs, the same hierarchy; were directed in their construction by the same principles of propriety and taste; kept up with each other, in the most distant parts to which they might be sent, the most constant correspondence; and rendered every minute improvement the property of the whole body and a new conquest of the art. . . . The result of this unanimity was, that at each successive period of the Masonic dynasty, on whatever point a new church or new monastery might be erected, it resembled all those raised at the same period in every other place, however distant from it, as if both had been built in the same place, by the same artist. . . . For instance, we find at particular epochs, churches as far distant from each other as the north of Scotland and the south of Italy more minutely similar than those erected within the single precincts of Rome or Ravenna."²

Paley also speaks of this uniformity of style which prevailed everywhere throughout all countries as one of the most remarkable facts connected with the history of mediæval architecture. And he cites the remark of Willis in his *Architecture of the Middle Ages*, that whereas in our own age it is the practice to imitate every style of architecture that can be found in all the countries of the earth, it appears that in any given period and place our forefathers admitted but of one style, which was used to the complete exclusion of every other during its prevalence.

Paley very correctly accounts for this by the fact that Freemasonry was in the Middle Ages "a craft in the hands of a corporate ecclesiastical confraternity the members of which seem to have been bound down to certain rules."³

After what has already been said in this work, it is very evident that this "craft in the hands of a corporate ecclesiastical confrater-

¹ "Archæologia," vol. xxi., p. 521.

² "Historical Essay on Architecture," pp. 238, 239.

³ Paley, "Manual of Gothic Architecture," p. 206.

nity" must make a very important link in the great chain which connects the history of Freemasonry in one continued series from the first development of the art in a corporate form in the Colleges of Numa, until that transition period when the Operative was merged in the Speculative element.

Mr. Hope, who devoted much labor to an investigation of the influences which toward the end of the 10th century affected architecture generally and diffusively throughout Europe, wrote an exhaustive chapter on this subject in his *Historical Essay*, whence copious citations have been made in the present work. It will be sufficient in making a summary of what has been already presented to the reader, to say of these influences he considered the most important to be the establishment of a school of architecture in Lombardy and the organization of Guilds of Builders who, under the name of "Freemasons," perambulated the whole continent, passing over to England and Scotland, and taught the art of building under the inspiration of the same principles of architecture, directed by the same ideas of taste, and governed by the same guild spirit of fraternity.

Subsequently to the appearance of this work of Mr. Hope, Lord Lindsay entered the same field of investigation and presented the public with the result of his inquiries in a work entitled *Sketches of the History of Christian Art*, from whose pages much interesting information may be gleaned in respect to the condition of mediaeval Freemasonry and architecture.

These mediaeval Freemasons at first adopted the principles of Byzantine art in their construction of churches and afterward invented that new system known as the Gothic style of architecture. Before the organization of the Lombard school the architecture of Europe was that which had been derived from the builders of Rome, and all the churches constructed in Italy, in Gaul, and even as far as Britain, were built upon the model of the Roman basilica, an edifice which in pagan Rome served as a court of law and an exchange, or a place of public meeting for merchants and men of business.

As after the conversion of the Empire to the new religion, many of these edifices were converted into Christian places of worship, the word was used in the low Latin of the period to designate a cathedral or metropolitan church, and the style was readily adopted and followed in the construction of new churches.

The style of architecture which prevailed in Byzantium or Constantinople was very different from the Roman. The principal differences were the four naves as parts of a cross of equal limbs, and especially the surmounting dome or cupola, which was, generally, octagonal in shape.

This style the Lombard Freemasons adopted in part, modifying it with the Roman style, and finally developing the Gothic as a new system peculiarly their own. The history of this style, its progress in different countries, and the gradual changes it underwent, is therefore intimately connected with Freemasonry.

The question naturally arises why these Lombard Masons, who had derived their first lessons from the descendants of the old builders of the Roman Colleges of Artificers and who were surrounded by the examples of Roman art, should have so materially modified their system as to have given to it a much greater resemblance to the Byzantine than to the Roman style.

The answer to this question will be found not only in the fact that between the shores of northern and eastern Italy there was a very frequent, continuous intercourse with Byzantium, but also in the additional fact that the religious architects of Lombardy were very thoroughly imbued with the principles of the science of symbolism, and that they found these principles far better developed in the Byzantine than in the Roman style. "The basilica," says Lord Lindsay, "is far less suggestive, far less symbolical than the Byzantine edifice, and hence the sympathy always manifested for Byzantium by the Lombard architects."¹

How the Freemasons of Lombardy became imbued with the science of symbolism and made it a prominent part of their art of building, are questions of very great interest, because they refer to the only bond which connects the Speculative Masons of the present day with the old Operative Masons of the Middle Ages. This important topic will be hereafter discussed in a separate chapter when I come to the consideration of that period of time in the history of Freemasonry which is marked by the transition of the Operative into the Speculative institution.

All that is necessary to be said here is that this symbolic style of architecture, beginning in Lombardy somewhere between the 7th

¹ "Sketches of Christian Art."

and the 10th centuries, diffused itself gradually at first, but rapidly afterward over the whole of Europe.

For this diffusion of a peculiar religious architecture Lord Lindsay assigns the following reason as germane to the subject of the present chapter:

"What chiefly contributed to its diffusion over Europe was the exclusive monopoly in Christian architecture, conceded by the Popes toward the close of the 8th century, to the Masons of Como, then and for ages afterward, when the title *Magistri Comacini* had long been absorbed in that of *Free and Accepted Masons*, associated as a craft or brotherhood in art and friendship. A distinct and powerful body, composed, eventually, of all nations, concentrating the talent of each successive generation with all the advantages of accumulated experience and constant mutual communication—imbued, moreover, in that age of faith, with the deepest Christian reverence, and retaining these advantages unchallenged till their proscription in the 15th and 16th centuries—we cannot wonder that the Freemasons should have carried their art to a pitch of perfection which, now that their secrets are lost, it may be considered hopeless to attempt to rival."¹

The result of all these observations has been, I think, to strengthen and substantiate the theory which, all through this work, has been maintained, of the origin of Freemasonry as a Speculative institution founded on an Operative art. In every country where it has been founded we are enabled to trace its first beginning as a craft organized into a Guild, Corporation, or Confraternity, to the Roman Colleges of Artificers—the *Collegia Fabrorum*—which were originally established, or are said to have been established, by Numa.

Thus we find the architects who came out of these Colleges following the Roman legions in their marches to conquest, settling to work in the colonies, municipalities, and free cities which were established by the Roman government in the colonies of Gaul and Britain, and perpetuating the Roman taste and the Roman method of work.

So have we traced the progress of these Masons of Rome in the different colonies where they settled and continued their labors after the Empire had fallen.

¹ "Sketches of Christian Art," vol. ii., p. 14.

And now we see the links of the historical chain more distinctly visible in the rise and progress of these Masons of Lombardy. Originally, undoubtedly Roman Colleges must have had their seats in the northern part of Italy, that highly favored province which, more than any other, had received its civilization and its art cultivation from the imperial city. Then, when the glory of Rome had departed, the Lombard kings preserved the Roman architecture, and after their conversion to Christianity, practiced it under the auspices of the Church.

Then came, toward the 10th century, those Corporations of Freemasons, who, imitating in their form of government the example which had been set by the Colleges, presented themselves as a Confraternity of workmen who, first having filled their own country with specimens of their skill, at length leaving Como and other cities of Lombardy, crossed the Alps and proceeded to communicate to other countries the knowledge of that art and the mode of practicing it, which they had acquired at home.

One of the first countries into which these Traveling Freemasons penetrated—perhaps the very first—was Germany. There we find, in the 12th century, the *Steinmetzen*, or the Stonemasons, who appear to have been almost a direct continuation of the Comacine Masters, or Traveling Freemasons of Lombardy.

These German Stonemasons have played too important a part in the history of Masonry to permit them to be passed over without an extended survey of all that is connected with their rise and progress, and with their wonderful achievements in mediaeval Masonry or Architecture.

The Stonemasons of Germany will then be the topic discussed in the following chapter.

CHAPTER XVII

THE STONEMASONS OF GERMANY

E must not look in the early history of the Germanic tribes for that gradual and uninterrupted growth of architecture and its cultivation as coming down to them in a direct line from the Roman Colleges. First heard of in the time of Cæsar, the barbarians who occupied the vast region comprised within the Rhine, the Danube, the Carpathian Mountains, and the Baltic Sea, were described by Tacitus as an illiterate and warlike people, whose religion was a gross superstition, who had no knowledge of the arts or of architecture.

The Roman Colleges, which had sent their branches with the legions into Spain and Gaul and Britain, were never planted in Germany. While those provinces were enjoying the advantages of Roman culture and civilization, Germany, overspread with forests and morasses, was inhabited by warlike tribes of barbarians, to whom the arts of peace were unknown.

As late as the end of the 3d century, Germany was an unconquered province, and the Roman emperors were engaged not in colonizing the wild region north of the Danube and east of the Rhine, but rather in striving to avert the southern progress of the barbarous tribes of the Allemanni from the invasion and occupation of Italy.

The Romans built, it is true, several towns of some note on the banks of the Rhine, but in the vast interior region which extended from that river to the shores of the Baltic Sea, there was hardly a single city previous to the 9th century.¹ To the history of architecture or of its connection with the Roman Empire, as in the case of the other provinces, there is no early German contribution.

¹ Robertson, "History of Charles V.," vol. i., p. 217.

It was in the beginning of the 5th century that the Franks, a confederation of German tribes, began to take a place in the history of Europe. We need not dwell on the progress of their conquests. Sufficient to say, that having invaded the province of Gaul, they settled in it permanently and established the kingdom of the Franks which, in the course of time, became that of France.

The Franks were, of all the Teutonic tribes, the most intelligent, and though the most warlike, were the least ferocious. Hence in invading and in settling a Roman province, they readily adapted themselves, in great measure, to Roman habits and customs, and were very willing to accept and to practice the civilization of the more cultivated inhabitants of the country which they had invaded and had made their home.

The result was that from the time of Clovis, the first of the Merovingian race of kings who reigned at the end of the 5th and beginning of the 6th century, and who has been deemed the founder of the Frankic kingdom, the Franks imparted to the Germans the civilization they had attained by their conquest of a civilized people. Hence the introduction of architecture, and any Operative Masonry, beyond the building of mere dwellings, into Germany is to be attributed principally to the Franks.

We find very few monuments of the work of Roman builders in Germany, and therefore we can trace the progress of architecture, not by any regular descent from the Roman Colleges of Artificers, but only through the indirect operation of Frankic artists.

Indeed, according to Moller,¹ the authentic history of German architecture begins with the reign of Charlemagne, but the only monuments remaining of that period are the Cathedral of Aix-la-Chapelle and the portico of the Convent of Lorsch near the city of Worms.

Rebold² says that architecture flourished greatly under Charlemagne, who introduced into Gaul architects and stonecutters from Lombardy. Rebold does not always found his assertions on well-authenticated facts, but in this case he has the concurrent support of other historians, more scrupulously correct in their statements.

The efforts of Charlemagne, who was a legislator as well as a

¹ George Moller, "Denkmaler der Deutschen Beuenkunst," 4to. Darmstadt, 1821, cap. iii., s. 6.

² "Histoire Générale de la Franc Maçonnerie," p. 104.

warrior, to promote the civilization of the Germanic nations which he governed, led him,¹ after the subjugation of Lombardy, to draw materials from that comparatively cultured kingdom to advance his projects, and to introduce among his Teutonic subjects some taste for architecture, in which the Lombards at that time excelled the rest of the world.

Moller shows very plainly the evidence of this transmission of architecture into Germany from the south—that is, from Italy.

He tells us that in the beginning of the practice of architecture in Germany there were two styles of building which materially differed from each other. The earliest was a foreign style, evidently imported from the south—that is to say, from Italy or Lombardy—and a more modern one, which Moller says was invented by the Germans themselves. This was a modification of the first, and was intended to accommodate the building to the nature of a northern climate. It is in this style that we find the grandest monuments of architecture which Germany possesses.²

The leading form of the churches built during the 10th and 11th centuries was the same, says Moller, as that of the churches built at the same period in England, France, and Italy.

Here are two propositions, each of great importance in a train of reasoning for the purpose of tracing the history of early German Freemasonry through the progress of its groundwork, architecture.

First we have a confirmation of what has already been said, that the first architecture and, of course, the first Masonry of Germany were derived from Lombardy.

It is true that Moller (whose authority on the history of German architecture is not to be despised) thinks it erroneous to ascribe to the Lombards any material influence upon the architecture of the west and north of Europe. But almost in the same breath he admits that in the beginning German architecture was introduced from Italy, and confesses, also, that the Lombards were in the habit of building a great deal, and appear to have quickly attained a higher degree of civilization than the Goths.³

Accepting these admissions as strictly and historically correct, I

¹ See Sismondi, "Republiques Italiennes," tom. i., p. 20.

² Moller, "Denkmaler," ut supra.

³ "Denkmaler," cap. ii., s. v.

am prepared to accept the theory of Mr. Hope, that the Lombards, the *Magistri Comacini*, the Traveling Freemasons from the school of Corao, in the 10th century, introduced their system of architecture into Germany at that early period of time.

Secondly, in the statement that the style of building then practiced in Germany was the same as that used in England, France and Italy, we have a further confirmation of the theory so ably developed by Mr. Hope, that the Traveling Freemasons who perambulated Europe, and under ecclesiastical supervision erected cathedrals and monasteries, were a secret organization, distinguished by an identity of principles in the construction of edifices in all countries from the south of Italy to the north of Scotland.

While dwelling on this period we must not neglect to advert to the influence of religion, which seems to have played a very important part in the propagation of the science of architecture, a part which it is well worth considering.

Christianity was introduced into Germany, and the gradual civilization of the people proceeded with a few exceptions from the south and west parts of the country—that is, from those parts which were contiguous to Italy and Gaul.

It is there where the clergy, as the ministers and missionaries of the new religion exercised the greatest influence and were engaged in directing the construction of churches and convents, that we must look for the first appearance of architecture.

Architecture, whose boldest conceptions are exhibited in the construction of houses for worship, is very closely connected with religion. Hence, after the diffusion of Christianity, it became a necessary art, and we may trace its growth as concurrent with that of the new faith in Germany. Therefore, it is that we find so learned a writer as Moller ascribing the origin of the German building art in Germany to the time of Charles the Great, and to those countries bordering on the Rhine and in the south, where Roman culture and religion had been first introduced.¹

With these preliminary remarks, which were necessary to show what was, in the early period of German history, the condition of architecture, of which the principles were almost always practically enforced in the form of organized Operative Masonry, we may pro-

¹ "Denkmalcr," cap. iii., s. vi.

ceed to investigate its gradual development until we reach the era of the organized Stonecutters' Guild.

It is not until the 10th century that we find the Operative Masons of Germany assuming anything like an organized condition. It was in the reign of Otho the Great (crowned at Aix-la-Chapelle in 936), who has been called the Civilizer of Germany, that Roman culture began to be introduced into that country. The Germans, possessing no native or original architecture, readily, when the way was opened to them by the increase of intercourse, copied the monuments of Roman civilization.

In Germany, as in Gaul and in Britain, the arts were at first cultivated by the ecclesiastics, and the monasteries were their workshops. Especially may this be said of architecture, and still more especially of ecclesiastical architecture or the construction of religious edifices.

Sulpice Boisserée, who has furnished a most exhaustive treatise in his *Histoire et Description de la Cathedrale de Cologne*, gives so lucid a view of the motives which led these old Stonecutters to unite in a fraternity and to connect themselves closely with the clergy, that I am tempted to translate it, though it be at the expense of some repetition of what has already been said in other parts of this work. But we can not too often call the attention of the student and the disciple of Speculative Masonry to the remote origin from which the ponderous institution of the present day has sprung.

In those early days, when Masonry was beginning to take its place in Germany, whoever wished, says Boisserée, to assume the profession of an architect must begin by learning to cut stone. When he had become a Master in that art, there grew up between himself and his former companions a sort of fraternity which was wisely maintained by the customs and statutes of the Order, and which was especially observed among those who devoted themselves to the building of houses of worship. As they were persuaded that this work of erecting houses of God was a very noble and a very pious occupation, and as even the secular labor of constructing, for this purpose, monuments of solidity, elegance, and perfection required men formed by experience and united by sentiments of honor and fidelity, they, by their union, established a confraternity or private community, which was distinguished from the common

body of craftsmen by being exclusively devoted to ecclesiastical architecture and the building of churches. This fraternity preserved, in all their purity, the rules and practices of the art which they transmitted as a secret to the depository of succeeding generations.

This fraternity had an organization similar to that of the Hanseatic league. The Masters and workmen employed on edifices of less size or importance were subordinate to the architects of the principal fabrics, and the fraternity was, in the course of time, divided into districts which extended over all Germany. But this large development belongs to a later period, that of the 12th and 13th centuries, when the Stonemasons adopted that distinct organization as a Guild, which was first exhibited, or, at least, of which we have the first authentic records, in the labors of the workmen who produced those wonders of architecture, the cathedrals of Cologne and Strasburg.

This subject will be treated in the succeeding chapter. At present we must restrict our investigations to the architects and Masons of the earlier period.

The building of churches was, therefore, of course, under the care of ecclesiastics. The monasteries, says Findel, were the nurseries of science and civilization, the center of all energy and zeal in art, and the fosterers of architecture.¹ Fergusson thinks that in the Middle Ages, in the construction of religious edifices, the designs were made by bishops, who, taking as a model some former building, verbally corrected its mistakes and suggested his improvements to the builder.² He thus impliedly admits the existence of two classes, the clergy and the laity, both of which were engaged in the pursuit of architecture, and of which classes the former greatly predominated in the infancy of the art.

Fergusson, who is not always right in his conclusions, here at least, is correct. It will be found, as we pursue our history, that architecture as a science and Operative Masonry as an art began under ecclesiastical auspices and were confined to monks and monasteries. Michelet, in his *Histoire de la France*, speaking of the wonderful architecture of the Middle Ages and of the science of

¹ "History of Freemasonry," Lyon's Translation, p. 51.

² "History of Architecture in all Countries," etc., p. 80.

mystical numbers which occurs in all the churches of that period, which he considers as the secret of the mediaeval Masons, attributes this mystical knowledge to the Church.

"To whom," says he, "belonged this science of numbers, this divine mathematics? To no mortal men but to the Church of God. Under the shadow of the Church, in chapters and in monasteries, the secret was transmitted, together with instruction in the mysteries of Christianity. The Church alone could accomplish these miracles of architecture."

But in time, and indeed at an early period after the renaissance of architecture in the 10th and 11th centuries, the practice and eventually the control of architecture passed away from the ecclesiastics as an exclusive possession and began to be shared by the laymen.

There were then, in the history of mediaeval architecture in Germany (as well as in other countries), three distinct epochs or periods.

First, when the science of architecture and the art of building were wholly in the hands of the clergy; second, when they were shared by the clergy and the laity; and third, when the science and the art passed away entirely from the clergy into the hands of the laity.

It was in the third period that bishops ceased to be "Masters of the Work" (*Magister Operis*) and the position was assumed by wholly professional lay artists.

The second period may be styled, if we borrow an expression from geology, the "transition period" of mediaeval architecture.

In Germany this transition time is marked by the organization of the *Steinmetzen*, and the establishment of the workshops known as the *Bauhütten*.

The *Steinmetzen*¹ (literally the Stonecutters) of Germany were builders or architects or both, who in the Middle Ages, dating from the 9th century at least, associated themselves together in fraternities and were engaged, sometimes alone and sometimes in connec-

¹ Dr. Krause (drei älteste Kunst, iv., 362) thinks that the last syllable in *Steinmetz* comes from *masa*, *mets*, or *mess*, signifying a measure, and conveyed the idea that the chief object of a laborer in stone was to form his stone according to a just measure of proportion. Hence a *Steinmetz* would signify, literally, a stone-measurer. But I prefer to adopt the generally accepted etymology and derive the word from the obsolete verb, *metzen*, to cut. The *Steinmetzen* were the Stonecutters.

tion with a monastery or under a bishop or other prelate of the Church, in the construction, principally, of religious edifices.¹

Fallon, in *Mysterien der Freimaurer*, cites various customs practiced by the *Steinmetzen* which would seem to indicate that there was a close connection between them and the modern Speculative Freemasons, who sprung up in the 18th century.

The most important of these customs may be enumerated as follows:

1. The German *Steinmetzen* divided their members into three classes, *Meister*, *Gesellen*, and *Lehrlinge*, answering to the Masters, Fellows, and Apprentices of the English Masons. But there is no evidence that these were degrees in the modern sense of that word. As has already been shown in England and Scotland, they were ranks, promotion into which depended on length of service and skill in labor.

2. The existence of some esoteric knowledge, some peculiar ceremonies, and some form of initiation in consequence of which strangers were excluded from the association.

3. The adoption of secret modes of recognition, by means of signs, tokens, and words, by which a strange member could make himself known.

4. Their establishment as a confraternity or brotherhood, in which each member was bound by solemn obligations to afford relief to his poorer brethren.

5. Laws and usages were adopted which resembled in many respects those of the modern Speculative Masons. Some of these were the natural result of their organization as a brotherhood, but others, such as their usages at banquets, the prerogatives of a Master's son over other persons, and some others, were peculiar, and were adopted by the Freemasons of the 16th century, and have been perpetuated in the modern Lodges.

The increase in the number of churches and other religious edifices naturally caused a proportionate increase in the number of workmen. The monks, not being able to supply the requisite num-

¹As in narrating the early history of Masonry in Scotland I was compelled to depend on the laborious researches of Bro. Lyon, so, in treating of mediæval Masonry in Germany, I have not hesitated to draw liberally from the invaluable pages of Bro. Findel's "Geschichte der Freimaurer," using, for convenience, the able translation of Bro. Lyon. But I have not omitted to consult also the works of Krause, Kloss, Steiglitz, and many other writers, both Masonic and profane.

ber, the laity were admitted to a participation in architectural and masonic labors. Still they were for a long time kept in strict dependence on their ecclesiastical superiors.

Hence the lay craftsmen lived in close connection with the monasteries and assisted the monks in their labors as builders, forming, for this purpose, associations among themselves and living in huts near the monastery or other building which they were erecting. To this usage Findel, with much reason, attributes the rise of the "*Bauhütten*."¹

Hütte is defined as meaning a hut, cottage, or tent. *Bauhütte*, which is literally a building-hut, was the booth made of boards erected near the edifice which was being built, and where the *Steinmetzen*, or Stonecutters, kept their tools, carried on their work, assembled to discuss matters of business, and probably ate and slept.²

It will be remembered that Sir Christopher Wren, in the *Parentalia*, describes a similar custom among the English Masons of erecting temporary places of habitation near the buildings which they were erecting.

These they call "Lodges," a word which has about the same signification in English that the word *Hütten* has in German.

The *Bauhütten* were therefore the Lodges of the German *Steinmetzen* in the Middle Ages. The word continued to convey this meaning until the 18th century, the English expression Lodge modified into Loge was substituted for it, by the Speculative Masons who received their charters from the Grand Lodge of England.

Findel says that the real founder of the *Bauhütten* was Wilhelm, Count Palatine of Scheuren and Abbot of the Monastery of Hirschau. For the purpose of enlarging the monastery he had brought workmen together from many places. He had incorporated them with the monastery as lay brethren. He instructed them in art, regulated their social life by special laws, and inculcated the doctrine that brotherly concord should prevail because it was only by working together and by a loving union of their strength that they could expect to accomplish the great works in which they were engaged.³

The *Bauhütten* or Lodges flourished for a long time, principally under the patronage of the Benedictine order of monks. But at length the transition period of which I have already spoken began

¹ Findel, "History," p. 52. ² Ibid., ut supra, p. 54. ³ Ibid., ut supra, p. 54.

to pass away and the third to arrive, and the Master Builders who had received their architectural knowledge from the monks separated themselves from them and established independent Lodges. As early as the 13th century there were many Lodges which had no connection with the monasteries, but were bound together in a general association that included all the Stonecutters of Germany.

Until the 12th century our knowledge of the Masonic associations, other than the schools of architecture which were established in the bosom of the monasteries, is unsupported by any documentary evidence. Indeed, the first written Constitution of the German Freemasons which has reached the present day is that of Strasburg, in the year 1459, which purports, however, to be a revision of the Regulations of the Stonecutters founded at that city in 1275. Of the latter there is no copy extant.

But as Winzer, who wrote on the *German Brotherhoods of the Middle Ages*,¹ has remarked, such regulations may have existed long before they had written constitutions, the necessity of which could have been felt only when the craftsmen had obtained a formed recognition, and when their laws were committed to writing to give them, as it were, a superior sanction.

Though this is but an hypothesis, it is not without the support of great probability. In the 11th century the Traveling Freemasons from the celebrated school of Lombardy had entered Germany and begun to propagate the principles and the practice of their art.²

Of this fact we find abundant evidence in the construction during that century of numerous cathedrals in Germany. Such were those of Bamberg, finished in 1019; of Worms, in 1020; of Spire, in 1061; of Constance, of Bonn, in 1100; and a great many others.³

Until we approach the period when the Lombard architects diffused the principles of their art in Germany, under the peculiar form of an association of Freemasons, which was not until about the 11th or 12th century, the history of Masonry in Germany is really only that of the Operative art in its simplest form, and deriving what

¹ Cited by Findel, "History," p. 57.

³ Mr. Hope especially cites the cathedrals of Spire and Worms as specimens of the Lombard style of architecture.

little there was of it in common with the Masonry of other countries, principally from France.

To the Franks coming from Germany and invading Gaul was France indebted for its political character. To the same Franks, returning in the time of Charlemagne and his successors, to communicate a portion of the culture and civilization that they had acquired from mingling with the native inhabitants of the conquered Roman province, was Germany indebted for all the architectural and Masonic character that it had, until the peaceful invasion of the Lombard Freemasons in the 11th century.

From that time the Freemasonry of Germany began to assume a new modification as a Guild or Corporation of associated workmen, like those which we have already seen existing in Britain and Gaul.

To the German Freemasonry of that period we must therefore now direct our attention.

CHAPTER XVIII

THE CATHEDRAL OF STRASBURG AND THE STONEMASONS OF GERMANY

HE Abbe Philip Andrew Grandidier was a learned historian and canon of the great choir of the Cathedral of Strasburg. He was the author of several historical works on Alsatia and Strasburg, where he was born in 1752. Among them were *Historical and Typographical Essays on the Cathedral Church of Strasburg*.¹

It is evident that he had paid much attention to the antiquities of his native city, and although not a Mason, his learning, his impartiality, and his abundant opportunities of acquiring information, gave no little authority to the views that he may have expressed on the antiquities of German Masonry.

In the year 1778 he wrote a letter to Madame d'Ormoy, which first appeared in the following year in the *Journal de Nancy* and which, copied ten years afterward in the Marquis de Luchet's *Essai sur la Secte des Illuminé's*, has since been repeated in French, German, and English, in dozens of Masonic books and magazines.

This letter he afterward enlarged and made it the frame of a narrative which he embodied in his *Historical Essays*, published four years afterward. In this work he has advanced a theory on the origin of Freemasonry which, notwithstanding Dr. Krause's disparaging criticism,² has been accepted as true by most of the recent Masonic historians.

As the statement of the Abbe Grandidier is very interesting, it is here presented to the reader as a groundwork of what will be said, with some modifications, on the same subject in the present

¹ "Essais Historiques et Typographiques sur l'Église Cathedral de Strasburg," Strasburg, 1782.

² "Kunsturkunden der Freimaurersbrüdersheft," iv., p. 251.

chapter. And I shall interpolate some portions of the letter which are not embraced in the essay.

The Abbe begins by saying that, "opposite to the church and the episcopal palace is a building appendant to the Cathedral and the Chapel of St. Catherine which serves as the *Maurerhof*, or workshop, of the Masons and Stonecutters of the Cathedral. This workshop is the origin of an ancient fraternity of Freemasons of Germany."¹

The Cathedral Church of Strasburg, and especially its tower, which was begun in 1277 by the architect Erwin of Steinbach, is one of the masterpieces of Gothic architecture. The edifice as a whole and in its details is a perfect work and worthy of all admiration, since it has not its equal in the world. Its foundation was built with such solidity that, notwithstanding the apparent fragility of its open-work, it has to the present day resisted storms and earthquakes.² The tower of the Cathedral was finished in 1439. This prodigious work spread far and wide the reputation of the Masons of Strasburg.

The Duke of Milan, in the year 1479, wrote a letter to the magistrates of Strasburg in which he asked for a person capable of directing the construction of a superb church which he wished to build in his own capital.³ Vienna, Cologne, Zurich, Friburg, and Landshutt constructed towers in imitation of that of Strasburg, but they did not equal it in height, in beauty, or in delicacy. The Masons of those different fabrics and their pupils spread over the whole of Germany, and their name soon became famous.

As an evidence of their renown he quotes Jacobus Wimphelingius, who flourished at about the end of the 15th century, as saying that the Germans are most excellent architects and that Æneas Sil-

¹ "Essais Historiques et Typographiques," p. 413.

² Lettre à Madame d'Ormoï.

³ From the Letter. Grandidier says, "I possess a copy of this letter in Italian." It is a pity that the writers of the 18th century, when referring to facts connected with Masonic history, have so often made their accuracy doubtful and their authority suspicious by careless anachronisms or improbable statements. In 1479, the Duke of Milan was a boy of fifteen, the son of the licentious tyrant Galeaz, who had been assassinated in 1476. The Duchy was administered by the Bonne of Savoy, the widow of Galeaz, as regent, during the minority of her son. Nor was Milan, torn at that time by intestine contests end the revolution of the Genoese, in a condition to indulge in the luxury of architecture.

vius (who was Pope of Rome from 1458 to 1464) declared that in architecture they excelled all other nations.

That they might distinguish themselves from the common herd of the Masonic craft, they formed associations to which they gave the German name of *Hütten*, signifying lodges. All of these lodges agreed to recognize the superiority of that of Strasburg, which was called *Hauptstätte* or Metropolitan or Grand Lodge.

Afterward the project was conceived of forming, out of these different associations, a single society for the whole of Germany; but it was not thoroughly developed until thirteen years after the complete construction of the tower of Strasburg.

Jodoque, or Jos Dotzinger, of Worms, who succeeded John Hültz in 1449 as architect of the Cathedral, formed, in 1452, a single body of all the Master Masons who were dispersed over Germany. He gave them a particular word and sign by which they could recognize those who were of their fraternity.

The different Masters of the particular lodges met at Ratisbon on April 25, 1459, and there drew up their first statutes. The act of confraternity digested in this Assembly constituted Jos Dotzinger and each of his successors, by virtue of the office of architect of the Cathedral of Strasburg, as sole and perpetual Grand Masters of the General Fraternity of Freemasons of Germany.

The second and third General Assemblies of the lodges were held at Spire on April 9, 1464, and April 23, 1469. The Constitutions of the fraternity were confirmed, and it was enacted that a Provincial Chapter should be annually held in each district. John Hammerer, who lived in 1486, and James of Landshutt, who died in 1495, succeeded Jos Dotzinger in the place of Architect of the Cathedral of Strasburg and in that of Grand Master of the Masons of Germany. Conrad Wagt, who succeeded them, obtained from the Emperor Maximilian I. the confirmation of their institution and of the statutes of the lodges. The diploma of this Prince is dated at Strasburg, October 3, 1498. Charles V. and Ferdinand I., and their successors, renewed these privileges on different occasions.

This Fraternity, composed of Masters, Companions, and Apprentices (in German, *Meister*, *Gesellen*, and *Diener*), formed a particular jurisdiction independent of the body of other Masons.

The Society of Strasburg embraced all those of Germany. It held its tribunal in the lodge, or, as it is now called, the *Maurerhof*,

GOOSE AND GRID IRON TAVERN, LONDON, 1717

The Grand Lodge of England was organized in this Building

and judged without appeal all causes brought before it, according to the rules and statutes of the Fraternity.

The inhabitants of Strasburg resorted to it in all litigated cases relating to building. In 1461 the Magistracy entrusted to it the entire cognizance of such cases, and in the same year prescribed the forms and the laws which it should observe, and this privilege was renewed in 1490. The judgments which it gave received the name of *Hüttenbrief* or lodge-letters. The archives of the city are full of such documents, and there are few old families in Strasburg which have not preserved some of them among their papers. But its jurisdiction has been much diminished, especially since 1620, at which time the Magistracy took from the Lodge of Strasburg the inspection of buildings which had so long been entrusted to it. The necessity for this suppression arose from the abuse of its authority by the lodge.

The statutes or constitutions of the Freemasons of Germany, at first limited to the number of thirteen, were afterward extended to seventy-eight regulations. These were renewed and put in better order by the General Assembly of the Grand Lodge, held on August 24, 1563, at Basle, and on the 29th of the following September, at Strasburg, seventy-two Masters and thirty Companions were present at this Assembly, which was presided over by Mark Schau, the architect of the Cathedral. Twenty-two lodges directly depended on the Grand Lodge of Strasburg. The lodges of the Masons of Swabia, of Hesse, of Bavaria, of Franconia, of Westphalia, of Saxe, of Misnia, of Thuringia, and of the countries situated along the river Moselle, as far as the frontiers of Italy, acknowledged the authority of the same Grand Lodge.

At the beginning of the 18th century the Master Masons of the fabric of Strasburg imposed a fine on the lodges of Dresden and Nuremberg, and the fine was paid. It was only by an edict of the imperial diet of Ratisbon that the correspondence of the Grand Lodge of Strasburg with the lodges of Germany was interdicted.¹

The Grand Lodge of St. Stephen of Vienna, which founded the lodges of Austria, of Hungary, of Styria, and of all the countries

¹This was because Alsace, of which Strasburg was the capital, had ceased to be a part of the German Empire and been annexed to France. This was the first precedent of the doctrine now held by American Masonic jurists, that Masonic and political territorial jurisdiction must be coterminous.

adjacent to the Danube, the Grand Lodge of Cologne, which had under its dependence the places on the west bank of the Rhine, that of Zurich, whose jurisdiction extended over the lodges of Berne, of Lucerne, of Shaffhausen, of St. Gal, and of the cantons of Switzerland, all these referred in all grave and doubtful cases to the Mother Lodge of Strasburg,

The members of this Society held no communication with the other Masons, who knew only the use of mortar and the trowel. The erection of buildings and the cutting of stone constituted their principal labor. So they regarded their art as far superior to that of the other Masons. The square, the level, and the compasses became their attributes and their characteristic marks.

As they were resolved to form a body distinct from the herd of workmen, they invented for their own use rallying words and grips for mutual recognition. These they called *das Wortzeichen*, or the "word sign," *der Gruss*, or the "salute," and the *Handschenk*, or "grip." The Apprentices, Companions, and Masters were received with certain ceremonies which were performed in secret.¹ The Apprentice when he was advanced to the degree took an oath never to divulge by mouth or by writing the secret words of the salute. The Masters as well as the Companions were forbidden to divulge to strangers the constitutional statutes of Masonry. It was the duty of every Master of a lodge carefully to preserve the book of the society, so that no one should transcribe any of the regulations. He had the right to judge and punish the Masters, Companions, and Apprentices who belonged to the lodge.

The Apprentice who desired to become a Companion had to be proposed by a Master, who, as his sponsor, bore witness of his life and manners. A Companion was subject to the Master for the time fixed by the statutes, which was from five to seven years. Then he might be admitted as a Master.

Those who did not fulfil their religious duties, who led a life of libertinism, or who were scarcely Christians, or who were known to be unfaithful to their wives, were not received into the society, or were expelled from it, and all Masters and Companions were forbidden to hold intercourse with them.

¹In the letter the Abbe says that they took for their motto "liberty," which they sometimes abused by refusing the legitimate authority of the Magistrates.

No Companion could depart from the lodge or speak while in it without permission of the Master.

Every lodge possessed a chest in which the money given by Masters and Companions at their reception was deposited. This money was used for the relief of poor or sick brethren.

The Abbe Grandidier thinks that in these traits we may recognize the Freemasons of modern times. In fact, he says that the analogy is plain, and the allegory exact. There is the same name of lodges for their places of meeting; the same order in their distribution; the same division into Masters, Companions, and Apprentices; both are presided over by a Grand Master; both have particular signs, secret laws, and statutes against profanes—in fine they may say to each other, "my brethren and my companions know me for a Mason."

For so much are we indebted to the letter and to the Essay of the Abbe Grandidier. The Abbe has been supposed to be the first writer who has adverted to the history of the Strasburg Masons as a fraternity. But this is not the fact. Nearly thirty years before the publication in the *Journal de Nancy* of his letter to Madame d'Ormois, attention had been called to this subject by John Daniel Schoepflin, whose work, entitled *Alsatia Illustrated*, first appeared at Colmer in the year 1751. Schoepflin, who died in 1771, had been for fifty years professor of history in the Protestant University of Strasburg. In the work referred to he gives an account of the Masons of Strasburg, to which Grandidier must have been indebted for much that he has written on the same subject.

From the *Alsatia Illustrated* of Schoepflin, the following fragment is translated, that the reader may compare the two accounts.

"Before dismissing the subject of the government and judicial institutions of the city, some notice must be taken of the singular institution of the Masons of Strasburg, who formerly held not the lowest place in the city, and at this day of all the Masons of Germany occupy the highest. The construction of the magnificent cathedral, and especially of its tower, greatly extended the fame of the Masons of the city and excited an emulation among the other German craftsmen. Vienna and Cologne erected towers after the model of that of Strasburg, and the associations of workmen and the workshops of those cities were pre-eminent. To these Zurich was added, with which Cologne not long after was joined.

"On these principal workshops called *Tabernacles*¹ (lodges) depended from olden time all the rest of the cities of Germany.

"In former times there was a long deliberation at Strasburg, Spire, and other cities on the subject of constituting a common society of all the Stonemasons.

"Finally at Ratisbon, on St. Mark's day (25th of April), 1459, was instituted that great society under the name of a Fraternity, of which the Master of the work of the Cathedral of Strasburg was constituted the perpetual presiding officer.

"This institution having been for a long time neglected the Emperor Maximilian I. confirmed it at Strasburg by a solemn charter in the year 1498. This charter was renewed by Charles V., Ferdinand I. and by others.

"In the lodge tribunal the Masters and their Companions sat and judged causes and pronounced sentences according to the statutes without appeal.

"The authority of this tribunal was acknowledged by the Masons of Saxony, Thuringia, Westphalia, Hesse, Franconia, Bavaria, Swabia and all the region of the Moselle.

"The lodge at Vienna, from which those of Styria and Hungary are derived, and of Zurich, under which are those of Switzerland, in all grave and doubtful cases resort to the lodge at Strasburg as to a mother.

"All the members of the sodality have in common a secret watchword. We know that the society of Stonemasons spread throughout Europe has this form and origin. There is the same division of the Order into lodges, Masters of lodges, Companions and Apprentices; there are the same laws and secret words. A Grand Master presides over all.

"The Stonecutters² have an aversion to the common tribe of Masons who are enrolled with them, because they think not unjustly

¹ In classical Latinity the word "tabernaculum" denotes, according to Festus, a tent made like a booth or hut with planks with a boarded roof and covered with skins or canvas. The mediæval writers on Masonry have accepted it as the appellation of the "Hutte," which afterward became the "Loge" in German and the "Lodge" in English. The word is thus used in the Charter of Cologne, which may be taken or not, as the reader pleases, for an evidence of the genuineness of that much disputed document.

² Schoepflin makes in this passage a distinction which is worthy of notice, between the "lapidaria," or stonemason and the "cæmentarius," or worker in rough stones, such as are used in building walls. The mediæval Germans preserved this distinction, when

that their art of stonecutting is far above the Craft of the Operative Masons.

"The citizens of Strasburg often submitted questions concerning building to the judgment of the lodge, wherefore the Magistracy in the year 1461, committed to it the power of deciding on building matters, and prescribed for this purpose certain laws and regulations. To these officers was added a Scribe skilled in the laws. But as in the course of time this power of adjudication began to be abused, it was taken away in 1620 and committed to a smaller court."¹

The reader may now compare these two accounts, that of Grandidier with that of Schoepflin. The former was written in the letter in 1778, and in the Essays in 1782. The latter was published in 1751.

Now it is very evident that Grandidier has borrowed almost his very language from Schoepflin, if they did not both borrow from Father Laguille, as I have suggested in a note.²

Both were men of learning—both were natives and residents of Strasburg—and both had devoted their minds to the study of the antiquities of that city and of the province of Alsatia. We may, therefore, accept what they have said on the subject of the Masons of Strasburg and their connection with the Cathedral as historically authentic facts. But we shall find that they are further confirmed by other documents, which are in existence, and to which both of these writers have referred.

Grandidier has, however, fallen into one error which Schoepflin had escaped, and which is to be attributed in all probability to the fact of his being a profane and not therefore conversant with the peculiar differences between Operative and Speculative Masonry. He says that while the usages of the two bodies of Masons, with whose existence at Strasburg he was acquainted, show a palpable

they called the higher class of Freemasons, "Steinmetzen" or Stonecutters and the lower class, who were not free of the Guild, "Maurer," or wall-builders. The reader will remember the degrading use of the term "rough-masons," constantly used in the old Constitutions of England.

¹ "Alsatia Illustrated," tome i., p. 338.

² It is possible that both have borrowed from the Jesuit Laguille, who published, in 1725, at Strasburg, in two volumes, 8vo, a "Histoire d'Alsace, ancienne et moderne." I can not decide the point because I have not been able to get access to a copy of Laguille's work.

analogy between the Stonemasons of Strasburg whose association he supposes to have been founded in 1459 and the more modern Order that came over from England near the middle of the 18th century, he yet appears to be wholly ignorant of the historical connection that can easily be traced between them. While he gives a greater antiquity to the old association of Strasburg Operative Masons than to the recent one of Speculative Masons, he does not comprehend the fact that the latter was merely a modification of the mediaeval system of the Traveling Freemasons from whom both associations were descended.

It is this error that he who would write a true history of the rise and progress of the German Steinmetzen must carefully avoid.

There have been evidently three distinct periods in the history of Freemasonry in Germany.

The first period beginning with the introduction of architecture into Germany, from Gaul, and from Italy, extends to the 12th century. In this period we have no documentary evidence of the organization of a fraternity. We know, however, from their works, that there were during that time architects and builders of great skill, and we have every right to suppose that the feudal system had the same effect upon the Masons, as it had upon other crafts in giving rise to the formation of protective guilds.

The effect of the feudal system in the Middle Ages was to concentrate power in the hands of the nobles, and to deprive the people of their just rights. The natural result of all oppression is to awaken the oppressed to a sense of the wrong endured long before the oppressor is aware of the injustice he inflicts.

The people therefore combined together by the bond of a common oppression to secure by their combination the undoubted rights which should never have been denied them. Thus it was that "the butchers, the bakers, the brewers of the town met secretly together and swore to one another, on the gospels, to defend their meat, their bread, and their beer."

Doubtless the Masons followed the example of the butchers, the brewers, and the bakers, and although, as Findel very justly remarks, we have no written constitutions to prove the existence of such associations, we can hardly doubt the fact. Those who were free born, of good manners, and skilled in their craft, it is reasonable to suppose, united themselves into associations whose members were

governed by a common obligation and constituted a common brotherhood.

The history of this period in German Freemasonry has already been discussed in the preceding chapter.

The second period begins with the organization of the corporations of Freemasons at the building of the Cathedrals of Cologne and Strasburg. Some writers think at an earlier period.

The third period commences with the introduction of Speculative Freemasonry into Germany in the 18th century under the auspices of the Grand Lodge of England, at London.

The second period alone occupies our attention in the present chapter.

It has been very generally believed that this second period—the period marked by a well-defined organization of the craft—dates its origin from the time when that style of architecture, denominated the Gothic, began to flourish.

In this style the high pitched gable and the pointed arch took the place of the low, flat gable and the semicircular arch, which had hitherto prevailed.

Of this style of architecture much has been written by the ablest professional pens, and much as to its history and its character has been left undetermined. When was it first known, and when did it cease to exist? Who was its inventor? And in what distinct and salient points does it differ specifically from other styles? All these are questions to which no qualified school of architects has yet been able to respond with satisfaction either to the querist or to the respondent.

One thing, however, we do know with very great certainty. And this is that it was the style universally practiced by the Freemasons of the Middle Ages in all countries of Europe, having been introduced about the end of the 12th and the beginning of the 13th century.

We have also the tradition, which is not altogether a tradition, that these Freemasons, wandering from country to country, and planting everywhere the almost divine principles of their symbolic art, were really the inventors of Gothic architecture.

But be that as it may, the memorials of these arts, in the massive buildings which they erected, have so mixed up the history of Gothic Architecture with that of Freemasonry in the Middle Ages, that it

is impossible, in any treatise on the latter subject, to leave the former unnoticed.

"The spirit of the Middle Ages," says Frederic Schlegel, in his *History of Ancient and Modern Literature*, "more especially as it developed itself in Germany, is in nothing so impressively manifested as in that style of architecture which is called the Gothic. . . . The real inventors of this style are unknown to us; yet we may be assured that it did not originally emanate from one single master-mind, or else his name would certainly have been transmitted to us. The Master artificers who produced those astonishing works appear rather to have formed a particular society or corporation, which sent out its members through different countries. Let them, however, have been who they may, they did more than merely rear stone on stone, for in doing so they arrived at expressing bold and mighty thoughts."

Mr. Paley expresses the same exalted opinion when he says that mediæval architecture, by which he means the Gothic, "was not a mere result of piling together stone and timber by mechanical cunning and ingenious device. It was the visible embodying of the highest feelings of adoration and worship and holy abstraction; the expression of a sense which must have a language of its own, and which could have utterance in no worthier or more significant way."¹

This symbolic style, in which the Stonecutter became not only the builder of churches, but the preacher to their congregations, and in which there were literally "sermons in stones," was gradually developed by the skill of the Freemasons, and lasted from about the middle of the 12th to the middle of the 16th century.

These are Paley's dates, but Dr. Moller² gives the style a more diffused extent and an earlier origin, though he confines the true Gothic within the limits of four centuries prescribed to it by Paley.

He says that the various styles of architecture which appeared in Europe after the decay of Roman architecture, and continued till the 16th century, when they were superseded by the modern Græco-Roman art, were all for a long time comprised under the general name of Gothic architecture. This epithet was afterward

¹ "Manual of Gothic Architecture," chap. i., p. 5.

² "Denkmaler der Deutschen Baukund," cap. i., p. 9.

applied to the pointed arch style which predominated in the 13th century.¹

I have said that the invention of this style, so expressive in all its manipulations of a profound thought, has been attributed to the mediaeval fraternity of Freemasons. And if this hypothesis be correct, of which there can scarcely be a doubt, then that invention was most probably made, or at least perfected, after the Masons had released themselves from ecclesiastical control, and withdrawing from the monks and the monasteries had become an independent Order of laymen.

"If we consider," says Boisserée, "the impetus given in the 13th century by the wealth and the liberty of the cities to commerce, to industry, and to the arts, we will readily comprehend that it is in the class of citizens, and not in that of the clergy, that we are to look for the inventors of that admirable architecture which was consecrated to divine worship. Notwithstanding all the great and useful things that the clergy have done for literature and science, they have been deficient in that liberty which comes from an active life in the world, and which is a necessary element in the elevation of the arts, as well as of poetry."²

This new style, the invention of the Freemasons after their separation from ecclesiastical control, prevailed at the same time in all the countries of Europe. In Germany the two most celebrated instances are the Cathedrals of Cologne and Strasburg.

Each of these cities has been claimed by different authors as the birthplace of German Freemasonry in its guild or corporate form.

What has been said by Schoepflin and Grandidier in reference to the pretensions of Strasburg to be the center whence Freemasonry sprung in the 13th century, has been heretofore shown.

Of Cologne the pretensions are equally as strong, although not so demonstratively expressed, nor has it furnished any documents, as Strasburg has done, of its claims to be the Masonic center of Germany. The document known as the "Charter of Cologne," if it had really emanated from the lodge of that city, would undoubtedly have been of great value as testimony in favor of the theory

¹ "Später wurde dieser Name nur auf den im 13. Jahrhundert herrschend werdenden Spitzbogen style angewendet."

² "Histoire et description de la Cathedral de Cologne," par Sulpice Boisserée, Munich, 1843, p. 14.

that makes Cologne the seat of German Freemasonry. But, unfortunately, there is now no doubt, among Masonic archaeologists, that that document is spurious.

Boisserée, whose work on the Cologne Cathedral exhibits much research, seeks to remove the difficulty arising from the rivalry of Cologne and Strasburg by proposing a compromise.

He says that as the city of Cologne gave the first example of a fraternity of Masons, the Architect of the Cathedral was considered as the chief of all the Masters and Workmen of Lower Germany, just as the Architect of the Cathedral of Strasburg, which was commenced nineteen years after that of Cologne, was made the Chief of all the Masters and Workmen employed in constructions of the same kind in the countries situated between the Danube and the Moselle. Thus, he says, the lodge of Stonecutters employed at the Cathedral of Cologne, was the seat of the Grand Mastership of Lower Germany, and that of the Cathedral of Strasburg was the seat of the Grand Mastership of Upper Germany.

Afterward there was established, he says, a central Mastership for all Germany, and Strasburg, where the works were continued for a long time, disputed, this pre-eminent position with Cologne as Lubeck did for the Hanseatic league.

It would seem then, that, according to Boisserée, there were at first two Grand Lodges, one at Cologne and one at Strasburg, between which the jurisdiction over Germany was divided; that afterward there was but a single central head for all Germany, which was claimed by both Cologne and Strasburg.

But Boisserée produces no authority to substantiate this statement, and we shall therefore have to be satisfied with looking to Strasburg only as the seat of the first known and recognized head of mediæval Freemasonry in Germany.

But Cologne must not be passed over in silence. Whatever may have been the authority that its lodge exercised as a Masonic tribunal, it must at least be acknowledged that in its Cathedral, the purely symbolic principles of Gothic architecture, as the peculiar style of the mediæval Masons were developed in a profounder significance than in any other building of the time.

It may be permitted to suspend for a time our researches into the progress of mediæval Freemasonry and devote, as an episode, a brief chapter to this wonderful Cathedral.

CHAPTER XIX

THE CATHEDRAL OF COLOGNE AND THE STONEMASONS OF GERMANY

Y the general consent of architectural writers, the Cathedral of Cologne has been admitted to be one of the most beautiful religious edifices in the world. It is considered to be a perfect type of the old Germanic or Gothic style of architecture, and it has been deemed a central point around which have gathered the most important historical and artistic researches on the subject of the architecture of the Middle Ages.

So high did it stand in contemporary estimation, and so much were its builders valued for the skill which they had displayed in its construction, that, as Boisserée tells, the Master Masons of Cologne were often sent for to superintend the building of many other churches. Thus the continuation of the steeple of the Cathedral of Strasburg was intrusted to John Hültz, of Cologne. Another John of Cologne, in 1369, built the two churches of Campen, on the shores of the Zuyder Zee; and he adopted as his plan that of the Cologne Cathedral. The Cathedrals of Prague and of Metz were built on the same plan. In 1442 the Bishop of Burgos imported into Spain two stonecutters of Cologne to complete the towers of his cathedral.

To this prominent position of the cathedral and of its builders in the history of mediæval architecture must we assign the equally prominent position which has been assumed for it in the traditions of modern Freemasonry. The fabrication of that very popular, but altogether supposititious document, known as the "Charter of Cologne," is to be attributed to the fact that at the date assigned to it the Masons of Cologne were considered as the chiefs of the craft, and there was some apparent plausibility in assigning to them the duty of convening a Grand Lodge, whose representatives were brought from every part of Europe.

The present Cathedral is the successor of two others. The first is said to have been founded by St. Maternus, who was Bishop of Cologne in the 4th century. That edifice, if the account of it is not altogether traditional, and perhaps mythical, must have been constructed in the Roman method and by Roman artisans, for the city did not come under the control of the Franks until the 5th century.

The second Cathedral, the history of which is also very imperfect, is said to have been consecrated in the year 873. Of its having been burnt in 1248 there is no doubt. This edifice does not seem to have met the growing needs or the increasing pride and wealth of the church, for before its destruction by fire, Archbishop Conrad is said to have had plans prepared for the construction of a new one, which should surpass all existing churches in magnificence. And Archbishop Engelbert had designed to do the same thing twenty-five years before, but was prevented from carrying out his plan by his assassination in 1225.

The second Cathedral was burnt in the year 1248, and the new one was begun the same year. Larousse and some other writers state that the work was commenced in 1249. But Boisserée, upon whose authority one may securely rely, says that the foundation-stone of the new edifice was laid on the eve of the feast of the Assumption, August 14, 1248, by Archbishop Conrad, in the presence of the Emperor, Frederick II., and a concourse of nobility and ecclesiastics of every grade.

The solemn ceremonies which accompanied this event have been described at length by the historian of the Cathedral, Sulpice Boisserée.

The foundation-stone was deposited in the spot which was destined for the high altar, and where was temporarily erected a wooden cross.

After the preparatory prayers and canticles the Archbishop proceeded, with the assistance of the architect and by means of a chisel and mallet, to engrave the figure of a cross on the four angles of the stone. In the interior of the stone, in an excavation made for the purpose, was deposited an account of the ceremony, some images of saints made in consecrated wax, some coins, and other objects which bore relation more or less to the epoch of time in which the stone was laid.

Afterward the Archbishop blessed the stone, sprinkled it with holy water, and then delivered it to the workmen, who lowered it into the pit which had been prepared for it.

The Archbishop then descended, accompanied by several attendants, and after spreading some mortar with a trowel over the face of the stone, gave it a blow with a hammer and placed a second stone upon the first. The Emperor, the Pope's legate, and several princes and nobles imitated the Archbishop, and the trowel and hammer passed from hand to hand until it came to the architect, while the choir chanted the 87th Psalm, beginning "His foundation is in the holy mountains."¹

The work was continued until 1509. During that period, the labors were often suspended in consequence of the sanguinary contests which took place in the 13th and 14th centuries between the city and the archbishops. Hence at the beginning of the 16th century, only the choir and the surrounding chapels had been finished. In succeeding wars the building suffered much, and would at length have been pulled down had it not been for the active exertions of a Fleming, Gerhard de Saint Trond, who caused subscriptions to be made and the work was resumed.

The historical question, who was the architect that drew the plans and first presided over their execution has never been satisfactorily settled; while the fame of Erwin Von Steinback has been preserved as the architect of the rival Cathedral of Strasburg, the name of the surpassing artist who was the architect of that of Cologne has been, apparently, irrecoverably lost.

There is a legend in connection with this which if of no value historically, is of some interest as a romance.

The Archbishop had called upon the architects of Germany for plans for the construction of the Cathedral. Many were submitted, but none were satisfactory to the prelate, who rejected them all.

Among the rejected applicants was a young architect, who was so despondent at his want of success, that one day he repaired to the

¹ "Histoire et Description de la Cathedral de Cologne," p. 7.

I have inserted this description to show how the spirit of symbolism was preserved in all things connected with the architecture of those mediæval Masons, a heritage which they have bequeathed to their successors, the Speculative Freemasons. In the modern ritual for the laying of foundation-stones, it will be seen that some of the leading points have a very close resemblance to this Cologne ceremony.

banks of the Rhine and there meditated suicide. But before casting himself into the river, he tried, but in vain, to draw a new plan.

Suddenly the devil appeared before him as a venerable old gentleman, in black, and offered him a plan which he promised him should be accepted, but would not give it to the architect except in exchange for his soul.

The youth daring neither to accept nor to refuse the offer, asked for a day's consideration. To this Satan assented, and they agreed to meet again at the same place on the afternoon of the next day.

In the interval the young architect consulted the Archbishop and the canons of the Chapter, and by their advice he repaired to the rendezvous at the appointed time.

The devil again showed the plan and renewed his offer of an exchange—the parchment with the plan inscribed, for the soul of an architect. The youth snatched the plan out of the devil's hand and placed it in his bosom beneath a relic of St. Ursula.

The devil, enraged, exclaimed: "This is a trick of the rascally priests; but mark me, the Cathedral, the plan of which you have stolen from me, shall never be finished, and your own name shall forever remain unknown."

In the struggle to get possession of the plan, the devil's claws had torn off a corner of the parchment, and thus mutilated the plan.

The young artist having attempted to invent something which should appropriately fill the missing part, and always, after many trials, failing to succeed, at length died of chagrin. His name has passed into oblivion, and the Cathedral, for six hundred years, remained unfinished.

The story of the unknown architect of Cologne and his unhappy fate, told in different ways, has always been a favorite myth with the German poets. Thus Frederick Rückert:

"Der Meister, der's entwarf
Baut es nicht aus, und starb;
Niemand mocht' sich getraun,
Seitdem ihn aufzubau'n,
Den hohen Dom zu Koln."

The Master who designed the plan did not finish it but died; no one since has dared to build it up; the lofty Cathedral of Cologne.

There are but two names that have been proffered as claim-

ants for the honor of being the architect of the Cathedral of Cologne—at least there are only two names whose apparent merits are such as to have secured any sort of consideration. These are the celebrated philosopher, Albertus Magnus, or Albert the Great, and a distinguished Mason known as Maître Gerard.

Let us first dispose of the claims of the philosopher.

Albertus Magnus was born of an illustrious family at Laevingen in Swabia in the year 1193. At the age of sixteen he entered the Dominican Order, of which afterward he became the Provincial. Pope Alexander VI. appointed him Bishop of Ratisbon; but Albertus, having held the office for only three years, renounced the miter to reassume the cowl and retired to the convent of his Order in Cologne, and employed himself in giving public instructions in philosophy. He died in the year 1280 at the ripe age of eighty-seven.

Albertus's knowledge of the principles of natural science were so far in advance of the times in which he lived, and many of his experiments were of so extraordinary a nature that he obtained, in a credulous and ignorant age, the reputation of being a magician, and many wonderful stories were related of his power in the occult art.

Thus, for example, it was said that he had occupied thirty years in making an entire man of brass, which would answer all sorts of questions and would even perform domestic services. Another legend relates that on a certain occasion he invited William, Earl of Holland and King of the Romans, who was passing through Cologne, to a banquet in the open air. It was in the depth of winter, and the whole face of the earth was covered with snow. The king, however, was no sooner seated at table, than the snow disappeared, the temperature of the air rose to that of summer and the sun burst forth with dazzling splendor. The ground became covered with rich verdure, the trees were suddenly clothed with foliage, with flowers and with fruits; vines presented clusters of luscious grapes to the company. The table was loaded with dishes of exquisite food which was served by a train of gracefully dressed pages, who came, no one knew whence. But as soon as the feast was over, everything disappeared; all became wintry as before; the snow lay upon the ground, and the guests, chilled by the sudden change, gathered up the cloaks and mantles which they had

previously thrown aside, and hurried to the fires in the apartments.

Such an extravagant legend shows what was the reputation of Albertus among his contemporaries, who did not hesitate to ascribe to him the possession of an almost illimitable amount of learning.

It is not surprising therefore that to him in the uncertainty of who was the real architect, should have been ascribed the honor of devising the plans of the Cathedral of Cologne, especially since the erection of that stupendous edifice was commenced during his residence in the city.

To him, too, has by some writers been ascribed the invention of the Gothic style of architecture, of which the Cathedral of Cologne was one of the earliest and most magnificent specimens.

Those who have believed that he invented the plans for the construction of the Cologne Cathedral, have founded their belief on the profound symbolism of the plan, and on the supposition that Albertus was, according to the views of Heidelof,¹ the one who restored the symbolic language of the ancients and applied it to the principles of architecture.

But this seems to be but the exchanging of one conjectural hypothesis for another. It would be as difficult to prove that Albertus was the discoverer of the principles of symbolic architecture, which certainly does constitute, or at least among the mediaeval Masons did constitute the distinguishing element of their style, as it would be to prove that he was the deviser of the plans for the construction of the cathedral.

If either of these hypotheses were satisfactorily proved, it would give much plausibility to the other, but, unfortunately, the required proof is wanting.

Hence Boisserée, who has carefully discussed the question, refuses to adopt the opinion which attributes the plan of the Cathedral to Albertus.² He does not believe that ecclesiastics alone were the possessors of symbolic ideas, but he is sure that an architect only could give expression to those ideas.

He therefore supposes that the plans of the Cathedral must have been devised by an architect. But Albertus Magnus, though justly

¹ In his "Bauhütte des Mittelalters," quoted by Findel.

² "Histoire et Descrip. de la Cathedral de Cologne," p. 12.

venerated for his vast erudition, never practiced architecture, and could not therefore have made the plans or superintended their execution.

The other person to whom has been ascribed the honor of being the architect of the Cathedral of Cologne is one Maître Gérard, or Master Gerard.

"Historians," says Boisserée, "are silent concerning this Gerard, as they are concerning all other architects of the Cathedral. I, however, consider him as being the first of them and consequently as the author of the admirable plan which is not less bold than it is ingenious. If the plan had been furnished by another architect, we must suppose that he died at the very beginning of the work, and this we have no reason for believing.

"There is still less reason for supposing that the plan was the production of some man of genius, versed in the knowledge of the art but not himself a professional architect; for the plan of an edifice so immense, of a composition so rich and bold, calculated with so much wisdom in its minutest details and with such a due regard to the execution, could have been invented only by an artist who, to great experience, added the most exact knowledge of all technical methods and the certainty of being able to realize in practice his happy conceptions."¹

Hence it is that he declines to attribute the position of first architect of the Cathedral to Albertus Magnus, and assigns it to Master Gerard.

In the volume of the *prods verbaux*, or reports of cases of the Senate of Cologne, commenced in 1396, there is a list of the founders and benefactors of the Hospital of St. Ursule at Cologne, the name of Master Gerard is found and he is there described as the *Werk-Meister von Dom*, or "Master of the Work of the Cathedral."²

The *Livre Copiai* of the Chapter of Cologne is preserved, says Boisserée, in the archives of the city of Darmstadt. On page 92 of this book is a copy of a charter in which the Chapter grants to Master Gerard a spot of ground on which he had erected at his own expense a house built of stone, in consideration of the services performed by him.

¹ Boisserée, ut supra, p. 10.

² Ibid., p. 12.

In this charter he is styled "a stonecutter, the director of our Cathedral."¹

As the date of the charter is 1257, which is only eight years after the commencement of the Cathedral, it is, as Boisserée has maintained, not probable that there had been an earlier architect who had died or been dismissed. And as the charter distinctly calls him a *lapicida*, a "stonecutter," and designates him as the *rector fabricæ*, "the director, or ruler of the Cathedral," I think the question may be considered as settled that Gerard was the name of the first architect of the Cathedral of Cologne and that he was a Mason by profession.

As to the influence which this building and the artists engaged in its construction had upon the organization of the fraternity of Stonemasons of Germany, historical records are silent, and we are left mainly to conjecture.

It is said by Winzer that Albertus Magnus altered the constitution of the Fraternity and gave them a new code of laws. But as at the same time, and almost in the same passage, he ascribes to the same person the designing of the plans for the Cathedral, we may be inclined to give no more credit to the one assertion than we do to the other.

But as the Cathedral is one of the grandest and most elaborate of all the works of Gothic architecture, and as that style was, it is admitted, the invention of the Freemasons of the Middle Ages, we arrive at the legitimate conclusion that the workmen who were members of that Fraternity, which came into Germany about the 10th century from Italy, but of the nature of whose organization, of the customs they practiced, and of the laws which they adopted for their government we have no documentary evidence, until the 15th century, when we find the ordinances of the Stonecutters adopted at Strasburg in the year 1459.

We have documentary evidence of the existence of guilds in Germany before the middle of the 12th century. "At that time," says Mr. Fergusson, "all trades and professions were organized in the same manner, and the guild of Masons differed in no essential

¹Magistro Gerardo, lapicede (says the charter), rectori fabricæ nostre, propter meritoria obsequia nobis facta, unam aream latiore et majorem aliis prout ubi jacet, et comprehendit magnam domum lapideam, quam idem Magister Gerardus propriis edificavit sumptibus, duximus concedendam, etc.

particulars from those of the shoemakers or hatters, the tailors or vintners, all had their Masters and Past Masters, their Wardens and other officers, and were recruited from a body of apprentices who were forced to undergo years of probationary servitude before they were admitted to practice their art."¹

There is no doubt that this statement is substantially correct, although there were some important differences between the guilds of Masons and those of other crafts, to one of which (the nomadic character of the former) he subsequently alludes.

We have a right, therefore, to conclude that at Cologne, during the construction of the Cathedral, the Freemasons who were engaged in that labor were already organized as a corporation and had their regulations, usages, and laws, though they have not been preserved to us in a written form.

But as it has been observed by a writer on this subject,² we have no reason to doubt the existence of such associations even before the 12th century, because we have no positive documentary evidence of the fact in the transmission of written constitutions; because it was not until they had succeeded in obtaining formal recognition, and when they were desirous of obtaining some special privilege that the necessity of a written Constitution was felt, so as to give it, as it were, a superior sanction.

Hence, though the Cathedrals of Cologne and Strasburg and some others of less grandeur were begun in the 12th century, the earliest extant written Constitution is that of Strasburg, whose date is about the middle of the 15th century.

Whether these Statutes of the Strasburg Masons were enacted for the first time in 1459, which is wholly improbable, or whether they were only confirmations of other regulations, are questions which will be mooted in a subsequent chapter.

This much, however, I think has been determined as historically plausible, even if not historically demonstrable.

The most important essay of the Freemasons of Germany as a corporate guild, in the development of their peculiar style of architectural symbolism, was the Cathedral of Cologne. This fabric must then at that time have been the central point of German

¹ "History of Architecture in all Countries," vol. i., p. 2. B. II., chap. viii., p. 477.

² Winzer, "German Brotherhoods of the Middle Ages," quoted by Findel, "History," p. 57.

mediaeval Masonry. Nineteen years afterward the Cathedral of Strasburg was begun. Then it is probable that the jurisdiction was divided and both Cologne and Strasburg became the separate centers in Lower and in Upper Germany whence other *bauhütten*, guilds or lodges emanated.

In time, however, probably from the suspension of the labors on the Cologne Cathedral in 1509, that Cathedral was shorn of its importance as a Masonic head,¹ and the power and jurisdiction of the Fraternity was concentrated in the *Haupt-Hütte* or Grand Lodge of Strasburg, which in 1549 modified the old regulations and preserved them in the form of a written Constitution which has been handed down to the present day.

¹This decadence of Cologne as a Masonic power affords another argument against the genuineness of the Charter said to have been issued in 1535.

CHAPTER XX

CUSTOMS OF THE GERMAN STONEMASONS

HATEVER knowledge we can obtain from existing documents of the customs and regulations of the Stonemasons who wrought at the building of Cathedrals and other religious edifices in Germany during the Middle Ages, will be so much in the way of enabling us to understand the theory which derives the present institution of Speculative Masons from the Operative Masons of that period.

The two most frequently cited authorities among the German writers on the subject of these customs of the Middle Ages are Fallon in his *Mysteries of the Freemasons as well as their only true Foundation and Origin*,¹ and Winzer in his work entitled *The German Brotherhood of the Middle Ages*.²

These works contain much interesting matter, and the general conclusion to which the authors have arrived, as to the origin of the institution, are in accordance with the opinions already expressed in this work. But like some of our older English writers on the history of Freemasonry, Fallon especially has indulged in some speculations which are by no means calculated to increase our respect for his accuracy as an historian. Both these authors have, however, been freely and favorably cited by Findel, who is himself conservative and but little inclined to take any theory on trust.

The theory advanced by Fallon and Winzer is that the German Stonemasons were fraternities in possession of secrets which related to the craft or mystery which they exercised. They have sought to prove that the Freemasons of the present day have derived the ritual which they practice from the mediaeval Stonecutters, a point which I do not think that they have successfully maintained in its

¹ "Die Mysterien der Freimaurer, sowie ihr einzig wahrer Grund und Ursprung," Leipzig, 1859.

² "Die Deutschen Bruderschaften des Mittelalters," Giessen, 1859.

full extent. There is, however, undoubtedly evidence that certain words and signs have been handed down, but slightly changed, if changed at all, in their transmission, to the Freemasons of this day.

Another point advanced by these authors is that the German Stonecutters borrowed their customs and laws partly from other corporations contemporary with them, and partly from the regulations of the monastic order, which becomes a very plausible theory when we remember the close connection which originally existed between the monks and the architects.

Their last proposition is that the English Stonemasons received their mysteries from the German *Steinmetzen*, a proposition which is, I think, only partly true, as the English Masons undoubtedly were reinforced from time to time by the accession of Continental workmen who came from Italy and France as well as from Germany.

I have always believed that the earliest of the old English Constitutions, that, namely, known as the Halliwell MS., is a translation from a German original, and is a pregnant proof of the introduction in the 14th century of German Stonemasonry into England.

A most invaluable aid to the scholar engaged in researches into the character of the mediaeval Stonemasons, is the work of George Kloss, entitled *Freemasonry in its real meaning as shown by ancient and genuine records of the Stonecutters, Masons and Freemasons*.¹

In this work we will find details of all the known laws and written Constitutions of the mediaeval Stonemasons of Germany and England chronologically arranged and so collated as to show the progress of the gradual transition from the Operative to the Speculative institution.

Kloss, as the result of his labors, comes to the conclusion that the Freemasonry of the present day is a transition from the Stonemasonry of the Middle Ages, and that no distinction can be maintained between the old Operative and the recent Speculative system, the old laws, usages, and charges being the same with but slight, if any, modern alteration.

¹"Die Freimaurerei in ihrer wahren Bedeutung aus den alten und ächten Urkunden der Steinmetzen, Masonen und Freimaurer, nachgewiesen," Leipsic, 1845.

With some reservations, this hypothesis may perhaps be accepted in its second clause, and unreservedly in its first.

But the great value of the work of Kloss consists in the mediaeval German Constitutions which it contains and from which and from some other sources we may derive a competent knowledge of the usages of the German Stonemasons of the 13th, 14th, and 15th centuries, which is the subject of the present chapter.

The two oldest Constitutions extant of the German Stonemasons are those enacted at Strasburg, in 1459, and those enacted at Torgau, in 1462.

The ancient laws of the brotherhood were first given a permanent form in the code adopted at Ratisbon on Easter day, in the year 1459, by the Masters and Fellows there assembled in the manner of a Chapter.¹ This code of regulations was soon after ratified at Strasburg and then promulgated as the "Ordinances of the Stonecutters of Strasburg." Heldmann published them in the year 1819 in his book entitled *The three most ancient historical Memorials of the German Freemasons' Brotherhood*.¹ They were subsequently published by other writers, but to Heldmann must be attributed the honor of first giving this important document to the public.

Heldmann tells the story of how it came into his possession. All, he says, who have written of the Cathedral of Strasburg speak of the old statutes of the Grand Lodge there, without imparting them to their readers, or, indeed, being able to do so, since they have always been carefully preserved under a triple custody. While passing through Strasburg in the year 1817, he took extraordinary pains to get possession of a copy of these statutes, but in vain. But he afterward obtained a copy of the Statutes of 1459 from an architect, who had caused it to be made during an accidental residence at Strasburg in the beginning of the revolution, and also got possession, through another architect, of a copy of the revised code of 1563. Bro. Osterneth, who was a member of the Grand Lodge of Strasburg, and who had in his possession a copy of the Statutes of

¹ Kapitelsweise is an expression borrowed, says Findel, from the Benedictine monks, whose convent meetings were called "capitula." But the word and the thing were common to all the Monastic Orders. See Forbrooke, "Brit. Monachism," ii., 133.

² "Die drei ältesten geschichtlichen Denkmale der Deutschen Freimaurerbruderschaft," Arau, 1819.

1459, collated it with Heldmann's exemplar and authenticated the latter.

It appears, therefore, that the Statutes of 1459, as published by Heldmann in 1819, have the mark of genuineness and may be accepted as a faithful exposition of the usages of the Craft at the time of their adoption.

The Constitutions of Torgau are the next authentic document in the history of the German Fraternity of the 15th century. Torgau is a town in the Prussian province of Saxony, and has an historical reputation as being the place where the Lutherans and the Elector Frederick concluded a league. The Stonemasons, whose seat was there, had accepted the Statutes of Strasburg when first promulgated, but three years afterward thought it necessary to modify them to some extent, and therefore drew up, in 1462, a code of 112 articles, which are known as the "Constitutions of Torgau."

A duplicate of these Constitutions was deposited in the Stonemasons' lodge, or *Hütte*, at Rochlitz, in 1486. Steiglitz published, in 1829, a copy of these Constitutions in a work written by him *On the church of St. Kunigund at Rochlitz, and on the Stonemasons lodge at the same place.*¹

These two Constitutions, those of Strasburg and Torgau, are the only authentic statutes of the Stonemasons which are known, and from them only can we derive any reliable information on the subject of the usages of the Craft at that period.

We learn in the first place from these Constitutions that there were in former times unwritten regulations by which the whole Craft had been governed; that these regulations had been much neglected, in consequence of which dissensions and differences had arisen among the workmen, which evils it was the object of these Constitutions to avoid in future by the adoption of statutes for the government of those who should unite in the establishment of a fraternity.

In Germany, therefore, as we have seen, in England, in France, and in other countries, the work of building was carried on by two distinct classes of workmen; one class who were not associated in

¹"Ueber die Kirche der heiligen kunigunde zu Rochlitz und die Steinmetzhutte daselbst."

a guild, corporation, or society; and another class who, by these Constitutions, had formed themselves into a brotherhood.

In the English Constitutions this distinction of classes is very forcibly expressed, and the Freemason who is a member of the Guild is forbidden to hold any communication with the layer, rough mason, or Cowan, all of which names are used to designate a Stonemason who has not been admitted into the Fraternity.

The German Statutes also show this distinction very clearly. "No craftsman or Master," say the Constitutions of Strasburg, "who does not go to the holy sacrament shall be received into the fraternity," and in repeated places they speak of "Masters and Craftsmen who are of the fraternity," which, of course, involves the contrary proposition, namely, that there were Masters and Craftsmen who were not of the fraternity.

What were the peculiar ceremonies which accompanied the reception into the fraternity, or whether there were any such ceremonies or not, are questions that can never be settled in such a satisfactory way as we should desire all historical problems to be solved.

That there were some ceremonies it is natural to suppose; these *Steinmetzen* had architectural secrets at least, and admission into all secret societies is attended by some form of initiation.

Fallon asserts that it was imitated from the rite of consecration practiced by the Order of Benedictine monks. But we need authority to sustain the assertion.

Findel, in his *History of Freemasonry*, gives a very detailed account of the mediæval initiation into German Freemasonry. I shall make use of his account of the ceremonies used on that occasion, without admitting that I am satisfied as to the correctness of every detail.

The Fellow Craft, as we style him, the *Gesell* of the Germans, before he could be admitted into the fraternity was required to prove that he was born in wedlock, of respectable parents, and that he himself bore a good reputation, with due mental and physical capacity. He was then presented with his mark, which thenceforward he had to cut into every stone on which he was engaged.

I give the account of the succeeding ceremonies in the words of Findel, as translated by Lyon.

"On the day fixed the candidate went into the house where the assemblies were held, where the Master in the Chair had everything

prepared in due order in the Hall of the Craft; the Brethren were then summoned, of course bearing no weapons of any kind, it being a place dedicated to peace, and the Assembly was opened by the Master, who first acquainted them with the proposed inauguration of the candidate, dispatching a brother to prepare him. The messenger, in imitation of an ancient heathen custom, suggested to his companion that he should assume the demeanor of a suppliant; he was then stripped of all weapons and every thing of metal taken from him; he was divested of half his garments, and with his eyes bound and breast and left foot bare, he stood at the door of the hall, which was opened to him after three distinct knocks. The Junior Warden conducted him to the Master, who made him kneel and repeat a prayer. The candidate was then led three times round the hall of the Guild, halting at last at the door and putting his feet together in the form of a right angle, that he might in three upright steps place himself in front of the Master. Between the two, lying open on the table, was a New Testament, a pair of Compasses, and a Mason's square, over which, in pursuance of an ancient custom, he stretched out his right hand, swearing to be faithful to the duties to which he pledged himself, and to keep secret whatever had been or might be thereafter made known to him in that place. The bandage was then removed from his eyes, the three Great Lights were shown him, a new apron bound round him, the password given him, and his place in the hall of the Guild pointed out to him. The manner of knocking and gripe of the hand were and are the same as those now used by the Apprentices in Freemasonry. After the Master had inquired if any one had anything else to submit to the decision of the Assembly, he closed the proceedings with the usual knocks of the Stonemason's hammer.

"At the banquet which invariably succeeded the reception of the candidate, which feasts were always opened and closed with prayer, the chief Master proposed to drink the health of the newly accepted Brother in the drinking-cup of the Brotherhood called *Willkommen*, to which the Brother replied by drinking to the welfare of the whole Fraternity. At that time, as now, and in all other Guilds, healths were drunk with three times three; the cup was taken hold of with a glove or pocket-handkerchief, the cover lifted off, and lastly it was carried to the lips; the cup was emptied in three separate draughts and replaced on the table in three separate motions."

The minuteness with which these details are given makes them very interesting, but at the same time it makes them very suspicious, and we require to relieve our doubts with the full authentication of the fact, by contemporary documents which shall be just as full and complete in the detail, and this is a want that has not been supplied.

Some points, however, in this described initiation, are supported by satisfactory evidence, beside which we are enabled to draw legitimate conclusions from contemporary authority or relevant and connected circumstances which satisfactorily support and confirm other points.

Thus, that the mediæval Masons, at least from the middle of the 15th century were a secret society, that is to say, an association of craftsmen, who were in possession of certain secrets that were imparted only to those who were members of the fraternity, and were withheld from all other persons, though they might be of the same craft, but who had not been made free of the fraternity or guild, is a fact that is duly substantiated by the ordinances, statutes, or constitutions, French, English, and German of that period.

Thus in the French regulations of Stephen Boileau it is said that Masons may employ as many assistants and servants as they please provided they do not show them any point of their trade.

The Statutes of Strasburg forbid any workman to instruct any one in any point if he be not of the craft.

And the English Charges impress upon the Mason to keep secret the counsels "of Lodge and Chamber and all other Counsels that ought to be kept by way of Masonhood."

Now the fact that there were secrets to be kept by the association, necessarily required that there should be some safeguard imposed upon the members, by which they should be reminded of the importance and necessity of preserving their exclusiveness and their identity as a secret society.

But there could not possibly be a better method of securing such a safeguard than to impart to the admission of each member into the fraternity a deeply impressive character derived from the solemnity of a formal initiation.

That method has been adopted in all ages and in all countries, and the ancient formula: "Depart, ye Profane," has been pronounced whenever secrets, however valueless, were to be communicated to an aspirant.

It may, therefore, be accepted as an undoubted fact, substantiated by direct allusions in the old Statutes that the mediæval fraternity of Stonemasons or stonecutters was in Germany, as well as in every other country where they had penetrated, a secret society.

What these secrets were, presents an enterprising inquiry, but which must, however, be deferred to a future chapter.

That this initiation was accompanied by an oath or obligation of secrecy is not only a natural conclusion which we are authorized to deduce from the lessons of experience but is a fact thoroughly substantiated by the old statutes and regulations.

Thus in most of the English charges we have this sentence, curiously enough put in Latin, as if the administration of this ceremony was to be concealed under the veil of a dead language. "Then one of the elders shall hold the book so that he or they (the candidate or candidates) shall place his or their hands on the book. and then the charges should be read."¹

In the *Steinmetzen Ordinances* of 1462 it is provided that when the *Parlirer*, or Warden, is inducted into office he takes an oath to the Saints. But it is very worthy of remark that this oath was not taken as in modern times on the square and compasses, but on the gauge and square.² This would impugn the correctness of the description given by Findel that on the table was a New Testament, and on it a square and compass. The gauge and square seem to have been the mediæval symbols which accompanied the book in the solemnity of the obligation.

There is no evidence of the existence in the *Bauhütten*, or lodges, of such a system of government as is found in the lodges of the Modern Freemasons, where as an invariable rule there are a Master and two Wardens.

But the regulations of Strasburg and Torgau describe an officer between the Master of the work and the Fellows or workmen who was called the *Parlirer*.³

¹ Tunc unus ex senioribus teneat librum ut ille vel illi potiat vel potiant manus super librum et tunc ex precepta deberent legi. "York MS., No. I." We have the same passage in other manuscripts, but the Latin is no better.

² Die eide strebe mit Maszstable und Winkelmas zu den Heyligen, die gebende und dess Meisters Schaden zu bewaren. Ord., 1462, No. 18.

³ The duties of a *Parlirer* are elaborately explained on the authority of the Constitutions, by Kloss in his "Freimaurerei in ihrer wahren Bedeutung."

From these regulations it is very evident that the *Parlirer* performed many of the duties which we are accustomed to attribute in English Masonry to the Warden, and which have been figuratively commemorated in the symbolic duties of the Warden of a lodge of Speculative Masons.

Thus the *Parlirer* was to be present in the morning at the opening, and in the evening at the closing of the lodge, and he was with the craft at their noontide meal.

The *Parlirer* paid the craftsmen their wages, which was generally done at sunset of each day.

He is also supposed to have performed the duties of Secretary and Treasurer, that is to say he kept the roll of the members and had charge of the finances of the lodge.

The *Parlirer* was appointed by the Master, but in the appointment he was restricted by certain regulations. Thus the Strasburg Constitutions provide that no Master shall promote one of his apprentices to the office of *Parlirer* who is still in his years of apprenticeship. A similar rule is found in the English charge which says that "no Brother can be a Warden until he has passed the part of a Fellow Craft."

Being thus invested with such important functions it may be supposed that the *Parlirer* was inducted into office with impressive ceremonies. We know that his installation was sanctioned by the administration of a solemn oath on the Gospels and on the twenty-four-inch gauge and the square.

In the Stonecutters' *Bauhütten* of Germany, as in the modern Speculative lodges, the office of Master was one of paramount importance.

All the Fellows or journeymen who were employed in the construction of the same building constituted a single lodge and were under the government of the same Master. The Strasburg Constitutions are very express on this point and leave no doubt of the fact. "Two Masters shall not share in the same work or building."¹ An exception is made in the case of a small building which can be finished in the space of a year. In such a work two Masters might engage.

¹ Es sollent auch nit zevey Meister ein Werk oder einen Gebaue gerne in mit einander haben. "Ordnungen der Strassburger Haupthütte," art. 9.

The Master was enjoined to keep his lodge free from all discord and to administer justice in it between the Fellows. For this purpose he was invested with absolute power to rule his lodge, provided only that he governed it according to the ancient usages of the Craft, and did not arbitrarily oppress the brethren.

In every district there was a lodge over which a Master presided, and over all these there was a still higher officer, to whom appeals might be made, where there was complaint of injustice or wrong.

These were the Masters who presided over the work—the *Magistri Operis*,¹ Master of the Work, called in the German Constitutions, the *Werkmeister*. One of these heard both parties and appointed a day when the trial should take place, which was always in the place where the offense had been committed and before the nearest Master who kept the Statutes.²

After an Apprentice had been promoted to the rank of Fellow, he was required, or permitted, to travel throughout Germany and to visit the most important towns and cities. The years employed in this pilgrimage were called his *Wanderjahre*—his years of travel.

During his travels the Fellowcraft was always received with kindness and treated with hospitality by every lodge which he visited. A formula of salutation and reception was prescribed by which, with certain signs of recognition and passwords, the stranger could make himself known to his brethren and secure a welcome.

When a traveling Fellow visited a lodge for the first time, in some town where he had arrived, he knocked three times distinctly, and on being admitted approached the Master, or in his absence the *Parlirer*, with three regular steps, all the brethren standing around.

The salutations of the traveling craftsman were such phrases as these: "God guide you," or "God reward you, Master, *Parlirer*, and all good Companions." The Master or *Parlirer* having returned thanks, the Fellowcraft was submitted to an examination,³ which

¹ This title of "Magister Operis," or Master of the Work, came to the Stonemasons from the monks, and is a relic of the original ecclesiastical control of architecture. Duncange (Glossarium) says that it was "officium monasticum"—a monastic office, exercised by one who had the charge of public work. In the Masonic usage of the Middle Ages, it was synonymous with the architect or Chief Builder of an edifice.

² "Statutes of Strasburg," article 17.

³ The examination given in the Constitutions-Buch of the lodge Archimedes and which will be found in Krause, Fallon, Findel and other German writers, does not, I think, bear internal evidence of a date so early as the 13th or even the 14th century.

proving satisfactory he received such assistance as he needed, either in work, or if work could not, then and there, be obtained, in money sufficient to supply his immediate wants and to send him on to the next lodge.

The regulations that relate to Apprentices are very explicit in the Strasburg Constitutions, much more so indeed than those of the English or Scottish Masons.

In the first place, no bastard could be accepted as an Apprentice, and the Master is directed to inquire earnestly whether the parents were duly united in lawful wedlock.

An Apprentice could not be made a *Parlirer*. On the same principle the English Statutes required a Warden to have passed the grade of Fellowcraft.

Apprentices, after they had served their years of apprenticeship, were required to travel for at least one year.

If one had served with a *Maurer*, that is to say with a common Mason who was not of the guild, and desired to learn still more of his profession of a Freemason he was required to serve three years as an Apprentice.

The term of apprenticeship was not to be less than five years.

An Apprentice who left his Master without sufficient reason, before serving out his full term of service, was put under the ban. No other Master was to receive him nor was any fellow to work with him, until he had returned and completed his time, giving satisfaction to his Master.

An Apprentice wishing to marry must obtain the consent of his Master.

Apprentices do not appear to have met with the same consideration in the German regulations as they did in the English and in the Scottish, where they are spoken of as constituting a part of the great body of the Craft, and seem to have been intrusted with many of the mysteries of the trade, since they are warned not to divulge them.

An Apprentice who believed that he had not been justly dealt with might appeal for redress to the Masters and Fellows of the district in which his lodge was situated.

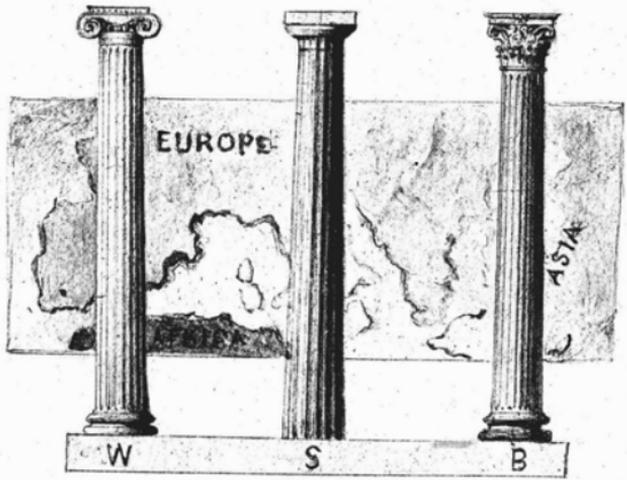

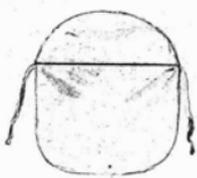

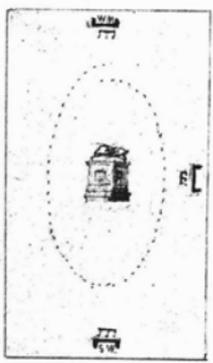

But no one can correctly understand the usages and customs of the mediæval Masons of Germany unless he has made himself acquainted with the Statutes enacted by the Assembly held in 1459 at

Strasburg and modified by statutes subsequently enacted at other places and by various confirmations of the German Emperors.

Of all these laws, the Constitutions of Strasburg are the foundation, as they were the earliest written Constitutions. Like the old English Charges they were probably, for the most part, the committal to writing of usages which had prevailed long before. Their similarity to the English Constitutions, to the Scottish Statutes and to the French Regulations, prove, very conclusively, that all these laws were at one time peculiar to a Fraternity of Builders who existed at a much earlier period and from whom the Guilds or Corporations of Freemasons in all these various countries sprang as from a common stock.

As the reader has already been put in possession of the English, Scottish, and French Constitutions, it is proper, for a thorough comprehension of the subject of the connection existing between all these bodies of Freemasons that he should be able to compare those laws with those which prevailed among the German *Steinmetzen*.

I devote therefore the next chapter to a translation of the Constitutions of Strasburg, appending such marginal remarks as may be necessary for their elucidation.

CHAPTER XXI

THE SECRETS OF THE MEDIÆVAL MASONS

THAT the Stonemasons of the Middle Ages had in their possession certain very important secrets, which they religiously abstained from communicating to any other Masons who were not of the fraternity, is a fact of which there cannot be a doubt. But to discover what these secrets were is a task that has puzzled the brains of more than one investigator.

We have seen that there were passwords, signs, and other methods of recognition which were established to enable the members of the Craft to make themselves known in strange places and to strange brethren, and which were simply matters of convenience forming the part of a system not peculiar to the Masons, but which has, in all ages, been practiced by every association of men who desired to preserve an exclusive organization.

But these modes of recognition did not constitute the secrets of the Freemasons, which bound them together as a united sodality having in every country the same aims and objects. Such secrets were of far more value and importance than any arbitrary code of signals adopted as a means of communication and mutual recognition.

The evidence is very patent, in all the old Constitutions and Regulations, that the Freemasons were in possession of secrets which the members of the fraternity were strictly forbidden to communicate to outsiders. Thus the Strasburg Constitution forbid any Master or Fellow Craft to instruct anyone who is not of the Craft in any part belong-ing to Masonry.

There was in the lodge a certain book which was kept by the Master under an oath that he would permit no part of it to be copied. It is evident that this book must have contained something besides the Statutes, because a book of mere regulations would hardly have been invested with such a character of sanctity.

But the earliest of the English Constitutions, that known as the Halliwell MS., is still more explicit on this subject. The third point — *tercius peonctus* — is an admonition to Apprentices to keep the secrets of the Craft which have been entrusted to them. He was to keep close the counsel of his Master and his Fellows; he was to reveal to no man matters which had been privately discussed (the prevystye of the chamber), nor what had been done in the lodge.

"The thrydde poynt most be severele,
 With the prentes knowe hyt wele.
 Hys Mayster counsel he kepe and close
 And hys felows by hys goode purpose;
 The prevystye of the chamber tell he no man,
 Ny yn the logge whatsoever they done;
 Whatsoever thou heryst or syste hem do,
 Telle hyt no mon, whersever thou go;
 The counsel of halle and yeke of boure,
 Kepe hyt wel to gret honoure
 Lest hyt wolde torne thysel to blame,
 And brynge the craft ynto gret shame."¹

It seems scarcely capable of a doubt that these secrets were of an architectural nature. The architects and builders who invented the Gothic style of architecture, and built all the religious edifices of the Middle Ages, and who, as Mr. Hope says, whatever might be the locality in which they were placed, either north, south, east, or west, derived their science from a central school, must have been in possession of certain principles of their art, which they kept exclusively to themselves. From the most distant points whither these "Traveling Freemasons" might have wandered, they maintained, with their brethren of the Craft, a constant correspondence, and communicated to each other the minutest improvement in their art.²

It was in the 10th century that the science of geometry is supposed to have first given its aid to architecture by the learned Gerbert, who from the archbishopric of Ravenna had been advanced, in

¹ "Halliwell MS.," t. 275-286.

² Hope, "Historical Essay on Architecture," p. 238. The whole object of this part of Mr. Hope's work is to show that the Masons who issued from Lombardy and spread over Europe after the 10th century were in possession of rules of construction which constituted the secrets of the great Fraternity which they formed.

the year 999, to the papacy, under the name of Sylvester II. Mosheim says of him that his genius was extensive and sublime, embracing all the branches of literature, but more particularly mathematics. His studies in geometry were so far beyond the attainments of the age in which he lived that his geometrical figures were regarded by the monks as magical operations, and he himself considered as a magician and a disciple of Satan.

To him Europe is said to have been indebted for the introduction of the Arabic numerals, which he brought from Cordova, in Spain, where he spent several years in acquiring the language and the learning of the Arabians.

I am not ready to subscribe to the opinion of some writers who suppose that the builders of the 10th century were placed in possession of the method of applying geometric science to the secrets of architecture. But I think it highly probable that by his learning as a mathematician he gave the first impetus to the study of geometry by the monkish and the lay architects of his times. This led to the application of the principles of that science at a little later period to the art of building, so as to develop into the system of geometrical secrets, which distinguished the builders of the Gothic style, or the Freemasons of the Middle Ages.

Lord Lindsay, in his *Sketches of the History of Christian Art*, significantly alludes to this possession of architectural secrets as an important element in the strength of these mediaeval Masons. His language is well worth quotation.

Speaking of the symbolic style of architecture—an architecture in which everything was made subservient to the expression of religious ideas by means of symbolism, which, beginning in Lombardy, had been diffused over all Europe, both north and south of the Alps—Lord Lindsay assigns the following as the cause of that diffusion:

"What chiefly contributed to its diffusion over Europe, was the exclusive monopoly in Christian architecture, conceded by the Popes toward the close of the 8th century, to the Masons of Como, then, and for ages afterward, when the title of *Magistri Comacini* had long been absorbed in that of 'Free and Accepted Masons,' associated as a craft or brotherhood in art and friendship. A distinct and powerful body, composed eventually of all nations, concentrating the talent of each successive generation, with all the advantages of accumulated experience and constant mutual communication — im-

bued, moreover, in that age of faith, with the deepest Christian reverence, and retaining their advantages unchallenged till their proscription in the 15th and 16th centuries—we cannot wonder that the Freemasons should have carried their art to a pitch, which now that their secrets are lost, it may be considered hopeless to attempt to rival."¹

Mr. Paley, in his *Manual of Gothic Architecture*, touches rather tenderly on this subject, for he thinks that little or nothing has ever transpired of the secret system which the Freemasons adopted in building, nor of the organization of their body, except that it was ecclesiastical and under the jurisdiction and benediction of the Pope. He supposes, however, that there was some central school whence emanated all the rules which were developed in a positive identity of architectural details in the minutest points; or if there were no such school, that the Master Masons went about like missionaries teaching these principles.²

Elsewhere, in the same work, he becomes more explicit in respect to these secrets, and thinks that they consisted in an application of the principles of geometry to architecture. It is, he says, certain that geometry lent its aid in the planning and designing of buildings, and the methods of application were, he thinks, evidently "profound secrets in the keeping of the Freemasons."³

He expatiates on this theory and supposes that the equilateral triangle was probably the basis of most formations, as it is exhibited in a majority of pointed arches as well as in the *vesica piscis*, a prominent mystic symbol of the mediaeval Masons.

And this theory is greatly strengthened by the fact—which was probably not known to Mr. Paley, or at least he does not refer to it—that the equilateral triangle is one of the most important and significant of the symbols of the Speculative Masons, who indeed have founded most of their symbolism on geometrical principles borrowed from or suggested by the practices of the mediaeval Operative Masons, who were their predecessors.

Michelet, in his *History of France*,⁴ has some very profound re-

¹ "Sketches of the History of Christian Art," ii., p. 14.

² "Manual of Gothic Architecture," chap. vi., p. 210. ³ *Ibid.*, chap. iii., p. 78.

⁴ "Histoire de France," par M. Michelet. Bruxelles, 1840. The same views had been previously announced by Boisserée in his description of the Cathedral of Cologne, and Michelet acknowledges his indebtedness to that writer.

marks on this subject of the secret of the mediæval Masons. He shows that it was geometrical and consisted in an application of the science of numbers, used in a mystical sense to the art of building according to the principles of Gothic architecture, which was the peculiar style of the Freemasons.

He illustrates this view from examples furnished by cathedrals built by the fraternity from the 11th century onward. His views are worth consideration.

He says that this geometry of beauty, as he calls it, is conspicuous in the type of Gothic architecture as exhibited in the Cathedral of Cologne. This is a regular body which has grown in its appropriate proportions with a regularity equal to that of the formation of crystals. The cross of this church is strictly deduced from the figure by which Euclid constructs the equilateral triangle. The numbers 10 and 12, with their divisors and their multiples, were the numbers which guided and controlled all the measures of the edifice.

Of these, 10 was the human number, because it was that of the fingers; 12 was the divine number, being astronomical in its relations. To these 7 were added as the number of the planets. The inferior parts of the building are modeled on the square, and subdivided into the octagon; the superior are modeled on the triangle and are developed in the hexagon and the lodocagon.

The arcade, thrown from one pillar to another, is fifty feet wide. and this number is repeated throughout the building in some of its multiples. Thus the side-aisles are 25 feet, or one-half the width of the arcade; the façade is thrice its width, or 150 feet. The entire length of the church is three times its entire breadth, or nine times the width of the arcade. The breadth of the whole church is equal to the length of the choir, of the nave, and to the height of the middle of the roof.

The proportion of the length to the height is as 2 is to 5. Finally, the numbers of the arcade and the side-aisles are repeated externally in the counter-foils and buttresses. There are seven chapels of the choir, which is the number of the gifts of the Holy Ghost and of the Sacraments, according to the Catholic Church, and the choir is supported by twice seven columns.

This predilection for mystical numbers occurs in all the churches of the mediæval period. Thus the Cathedral of Rheims has 7

entrances, and both it and the Cathedral of Chartres have 7 chapels around the choir. The choir of Notre Dame, at Paris, has 7 arcades. The cross-aisle is 144 feet long, which is 16 times 9, and 42 feet wide, which is 6 times 7. The towers of Notre Dame are 204 feet high, which is 17 times 12, the astronomical number. The length of the church of Notre Dame at Rheims is 408 feet, or 34 times 12. The Cathedral of Notre Dame has 297 columns; but 297 divided by 3 gives 99, and this divided by 3 again produces 33. The naves of St. Ouen. at Rouen, and of the Cathedrals of Strasburg and Chartres, are of the same length, or 244 feet. The Saint Chapelle, at Paris, is 110 feet long and 27 feet wide, but 110 is 10 times 11, and 27 is 3 times 9.

In these few examples we have developed the numbers 3, 7, 9, 10, 11, and 12, all of which have been retained in the mystical system of the Speculative Freemasons, and their appearance among the mediæval Masons could have been neither by an accident nor a coincidence, but must have arisen from a predetermined selection.

"To whom, then," says Michelet, "belonged this science of numbers, this divine mathematics? To no mortal man, but to the Church of God." Under the shadow of the Church, in chapters and in monasteries, the secret was transmitted together with instruction in the mysteries of Christianity. The Church alone could accomplish these miracles of architecture. She would often summon a whole people to complete a monument. A hundred thousand men labored at once on that of Strasburg, and such was their zeal that they did not suffer night to interrupt their labors, but continued them by the light of torches. The Church would often expend centuries on the slow accomplishment of a perfect work. Renaud de Montauban, for instance, bore stones for the building of the Cathedral of Cologne, and to this day it is still in process of erection.¹

Michelet has found, in the geometrical proportions observed in the construction of religious edifices, a conformity to the principles of art laid down by Vitruvius and by Pliny, and thus in the Gothic style of architecture the Freemasons have preserved the traditions of antiquity.² Here, then, we see apparently another link in the chain which connects the Middle Age Corporations of Craftsmen with the Roman builders of the *Collegia Artificum*.

¹ "Histoire de France," liv. iv., chap. ix., p. 369. (The Cathedral of Cologne has since been completed.)

² Ut supra.

in defining the secret or secrets of the mediæval Masons to have consisted in an application of the principles of geometry to the processes of building, M. Michelet has taken that view of the subject which is now very generally accepted by Masonic and archæological writers.

Findel says that the secrets of the Stonemasons consisted of instruction in architecture and in mystical numbers; of these he says that 3, 5, 7 and 9 were especially sacred. But Michelet has shown that while the numbers mentioned by Findel were venerated, the numbers 10 and 12, or the human and divine numbers, were deemed the most important, and were the most used in symbolization. He says, also, that the colors gold or yellow, blue and white, were sacred as having especial allusions to the art.

The symbolization of colors, as well as of the implements of the Craft, which have been described by Findel and some other German writers, did not constitute any part of those secrets of the Craft the knowledge of which distinguished the members of the Guild or Fraternity of Freemasons from the common workmen, to whom these secrets were never communicated, and to whom they never could be imparted except by a positive violation of the Guild law.

It is therefore a matter of but very little importance—in fact of none at all—whether M. Michelet is or is not correct in assigning to the Church the office of inventing the architectural symbolism which pervaded all the religious edifices of the Middle Ages. It is true that the Christian Church had scarcely emerged from the chrysalis state in which it had existed during the apostolic age, when dogmas were taught without figurative illustration, before it began to impress its religious instructions upon its disciples by means of symbols.¹

But as early as the 12th century, at least, the Freemasons had begun to cut adrift from their monastic and ecclesiastic connections, and had established themselves as an independent body of Craftsmen. It would be safe to suppose, as Boisserée contends, that both geometrical architecture and architectural symbolism were the invention rather of skilled professional architects than of monks or

¹This is not the place to discuss the question of how much the Freemasons were indebted to the Church for their symbolism. It will be hereafter treated on a more appropriate occasion.

prelates who were not practical Masons. The Church, however, must have undoubtedly exercised some influence in early times in moulding the system.

At first, in the earliest periods of the rise of ecclesiastical architecture, the abbots and bishops, taking, as Fergusson says, some former building as a model, made their designs and verbally corrected its mistakes or suggested their improvements to the builder.¹

But afterward the professional architects and Masons usurped to themselves the task of designing as well as erecting the churches and other buildings. The methods of geometrical and mathematical construction became *arcana*, to be confined to the members of the Guild of Freemasons and to constitute those secrets, so often spoken of, which were lost at the dissolution of the fraternity.

The gradual disseverance of the professional Masons from their ecclesiastical relations, and the improvement in the science of architecture which—of course, developed that geometrical system which the wiser craftsmen kept to themselves—has been described by Mr. Whittington in his *Historical Survey of the Ecclesiastical Antiquities of France*; and though what he says has direct reference to that kingdom, it can, with perfect correctness, be applied to Germany.

The ancient writers often mention instances of an abbot giving a plan which his convent assisted in carrying into execution, and this was certainly the case in the beginning of the revival of learning after the decadence of the Roman Empire, when the arts were almost exclusively cultivated by the clergy.

But it is equally certain that the ecclesiastics patronized the professors of the arts among the laity, and especially in the arts of building there were men of superior skill and intelligence who, being brought from distant places by the liberality of the prelates, were added to the common Masons and carpenters who were found in the different cities, and whose mere manual labor was made use of by the monks in the construction of religious edifices. This association, elevated by the intermixture of the superior intelligence of the more skilled workmen, and patronized by the authority of the Church, secured employment and protection. The members gradually increased in numbers and improved in science until, at length, they produced the most able artificers among themselves.

¹ "History of Architecture in all Countries," i., p. 480.

Thus it was that the builders were, about the 12th century, enabled to withdraw altogether from their dependence on, and from their connection with, the ecclesiastics. They formed that fraternity of Freemasons who were distinguished in every country where they appeared, from the common herd of craftsmen—the *Maurer* of the Germans and the "rough Masons"¹ of the English—by the possession of important secrets connected with the art of building.

"So studiously," says Mr. Halliwell, "did they conceal their secrets, that it may be fairly questioned whether even some of those who were admitted into the Society of Freemasons were wholly skilled in all the mysterious portions of the art."²

Doubtless in this, as in every association of men, must have been a diversity of skill and talent. But the fraternal spirit of the Craft led to a willingness on the part of the best instructed to supply the needs of their less informed brethren. Thus in one of the earliest of the old English Constitutions it is provided that if a Mason be wiser and more subtile than his fellow working with him in his lodge or any other place, and he perceives that he must leave the stone upon which he is working for want of skill, and he can teach him how to work the stone better, he shall instruct him and help him, that the more love may increase among them, and that the work of the Lord be not lost.³ A similar regulation will be found in the Constitutions of Strasburg.

Thus, though there were of course some workmen more skilled than others, and though they were strictly exclusive in confining their knowledge of the secrets of their art to their own fraternity, yet those secrets were freely imparted to every member who desired the knowledge.

The theory that the secret of the mediæval Freemasons consisted in an application of the principles of geometry to architecture enables us to explain many things otherwise inexplicable in the old records of the Operative Masons and in the modern rituals of the Speculative Free and Accepted Masons. We are thus enabled to understand all the allusions made to geometry as the most important of the sciences and as the synonym of Masonry. Dr. Anderson, most probably with some old manuscript before him, the suggestions of

¹ Called also "roughlayers."

² "Archæologia," vol. xxviii., p. 445.

³ Cooke MS., line 888.

which he followed, commenced the *Book of Constitution* with a eulogium, not on Masonry, but on Geometry, which he declared was the foundation of Masonry and Architecture.

In the second edition of the *Constitutions* he says that the Masons always had a book in manuscript which, besides the Charges and Regulations, contained the history of architecture, in order to show the antiquity of the Craft or Art, "and how it gradually arose upon its solid foundation, the noble science of Geometry."¹ The discovery since his time of many copies of this manuscript book of *Constitutions* confirms what he here says of the connection of Geometry with Masonry.

Elsewhere he writes in the same strain of Geometry and Masonry as identical arts. Thus he says: "No doubt Adam taught his sons Geometry," and "Seth took equal care to teach Geometry and Masonry to his offspring." But the best illustration in the work of Anderson, of the theory that the secret of the Freemasons consisted in the application of the principles of Geometry to Architecture, is his statement that Noah's ark "was certainly fabricated by Geometry and according to the rules of Architecture."

All the old English manuscript Constitutions maintain the same idea of the very close connection, and, indeed, identity, of Geometry and Masonry.

Thus in the earliest of them, the Halliwell MS., whose date is supposed to be about the year 1390, it is said:

"In that time through good Geometry,
The honest craft of good Masonry
Was ordained and made in this manner."

In the Cooke MS., whose date is about a hundred years later, we are told that "Isidore saith in his *Etymologies*, that Euclid calleth the craft geometry." In the York MS., of the date of 1600, we are still more distinctly told that "Euclid was the first that gave it the name of Geometry, the which is now called Masonry."

But it is hardly necessary to multiply the instances in which the

¹ Anderson's "Constitutions," second edition, 1738, p. vii. Krause says ("Kunsturkunden," i., 23) that Geometry is to be here taken in a double sense: 1, as the foundation of architecture, and, 2, as the social design of the brotherhood of Freemasons. But this appears to be really a "distinction without a difference." Architecture and the design of the Masons are, in the present view of the subject, one and the same thing.

old Constitutions have referred to Geometry as the foundation of Masonry, or as an art indeed identical with it. All of these references to Geometry are but corroborating proofs of what has been already said, that the great secret of the mediæval Masons consisted in the application of the principles of Geometry to the art of building by methods known only to themselves, and which they developed in the Gothic style of architecture which they invented. This secret perished with the dissolution of the Operative Fraternity, or by its transmission into the Speculative Association.

Yet this Speculative Association, the Free and Accepted Masons of the present day, have retained the memory of their descent from these Operative Masons of the Middle Ages by a sacred preservation in their ritual of a reference to Geometry as the "fifth and noblest of the sciences and the one on which the superstructure of Masonry is founded."

The retention in the ritual of the letter G, the earliest and the most extensively propagated of all the symbols of Speculative Masonry, is an ever-present and a loudly speaking testimony in every lodge that the brethren there congregated have not forgotten that the great secret of their predecessors was a geometrical one.

Indeed, if there were no other proof that the mediæval Freemasons did all their work according to certain principles of Geometry, the method of applying which was known only to themselves, and that therefore the science of Geometry was to them a most important and indispensable part of their Craft, and which entitled it peculiarly to the appellation of a "mystery," a word applied indifferently to designate a trade or a secret.¹

But the very fact that these Freemasons were possessed of important secrets in reference to the art and practice of building, and to preserve their own pre-eminence, it became necessary that they should have some method of securing these secrets to themselves and of preventing the intrusion of strangers and workmen who were not of their guild or fraternity into a community of

¹ There is doubt among philologists whether "Mystery" is derived from the French "mestier," a trade, or from the Latin "mysterium," a secret. The word has always been used in both senses. Thus Chaucer says the reeve had learned "a good mester, he was a well good wright a carpenter" ("Canterbury Tales," Pro. 613), and Wiclif speaks of "the mysterie whych was kepte secrete since the worlde beganne." The legal term, at this day, for an art, trade, or occupation is "Mystery."

labor with them and the acquisition of any part of their mystical knowledge.

Now the only method by which these ends could be attained was that of a code or system of signs and words by which any one of these Freemasons could make himself known to the others, when he might be in a strange place, and thus secure to himself a participation in the benefits of the association. A form of reception or initiation would also, probably, be adopted, either for further security or for the purpose of giving solemnity to the admission of new members.

We have the best historical records to prove that modes of recognition were adopted for the purpose named by the mediaeval Freemasons, and that they had a form of initiation, though what that form precisely was I am disposed to think we are ignorant of, notwithstanding the authority of recent German writers, some of whom have pretended to give it in full.

The English and Scottish authorities—that is to say, the contemporary manuscript records—certainly supply us with no information on that subject, save that there was some formula of reception for an Apprentice, a Fellow, and a Master, the authorities indicating that the same formula was used on each occasion, or perhaps that one form of reception only was used, and on only one occasion. There is a great amount of obscurity on this subject which can be removed only by future investigations and by the discovery of more explicit manuscripts, which, if any such exist, have not yet been brought to light.

The German writers, however, have furnished from documents in their possession many almost minute details of the usages of the Traveling Freemasons of that country and which in the course of time must have extended into other lands.

In the *Book of Constitutions* of the Lodge Archimedes, at Altenburg, is contained an examination of a German *Steinmetzen*, which has been copied by Krause, by Findel, and by other writers, and which is declared by all of them to be a genuine document. I do not see any reason to doubt its genuineness and I give it as it has been published in Findel's *History of Freemasonry*, with a few alterations or amendments, on the authority of Krause's copy of the same document.

When a Fellow, traveling in his "Wander Year," or at any time

in search of employment, arrived at a strange *Hütte* or Lodge, he approached, says Findel, by three regular steps, and knocking three times was admitted, when, the brethren all standing around, their feet placed at right angles, he saluted the Master, or in his absence, the *Parlirer* or Warden, with the following salutations, which were, "God greet you—God guide you—God reward you—Master, *Parlirer* and Fellows." After some other mutual courteous greetings, the examination proceeded as follows:

Q. Worthy Fellow-craftsmen, are you a letter Mason (*ein Briefler*) or a salute Mason (*ein Grüsser*)?

A. I am a salute Mason.

Q. How shall I know you to be such?

A. By my salute and the words of my mouth.

Q. Who has sent you?

A. My worshipful Master, the worshipful townsmen, and the worshipful Craft of Masons at N.N.

Q. For what purpose?

A. For honorable advancement, instruction, and honesty.

Q. What are instruction and honesty?

A. The customs and usages of the Craft.

Q. When do they begin?

A. As soon as I have honestly and faithfully finished my Apprenticeship.

Q. When do they end?

A. When death breaks my heart.

Q. How shall we know a Mason?

A. By his honesty.

Q. What kind of a Mason are you?

A. A Mouth-mason (*ein Mund-Maurer*).

Q. How shall we know that?

A. By my salute and mouth speech.

Q. Where was the worshipful Craft of Masonry in Germany instituted?

A. In Magdeburg, at the Cathedral.¹

¹ It was a tradition of the German Masons that they were first formed into a brotherhood at the building of the Cathedral of Magdeburg, which was commenced about the year 1211. Bishop Lucy, a few years before, in 1202, created a company of builders for the construction of the Cathedral of Winchester. Hence Findel suggests that they were most probably the founders of the Fraternity of Freemasons in England. We have no positive authority for this, but the coincidence of time is, at least, remarkable.

Q. Under what monarch?

A. Under the Emperor Charles II., in the year 876.

Q. How long did that Emperor reign?

A. Three years.

Q. How was the first Mason called?

A. Anton Hieronymus, and the working tool was invented by Walkan.

Q. How many words has a Mason?

A. Seven.

Q. What are for the Words?

A. *Riganische, Riganse, Rigaische.*

Q. How do they run?

A. God bless honesty.

God bless honorable wisdom.

God bless a worshipful Craft of Masons.

God bless a worshipful Master.

God bless a worshipful *Partirer* (or warden),

God bless a worshipful Society.

God bless an honorable advancement here and there and everywhere, on the water and on the land.

Q. What is secrecy in itself?

A. Earth, fire, air, and snow, through which to a Worshipful Master's advancement I go.

Q. What do you carry under your hat?

A. A praiseworthy wisdom.

Q. What do you carry under your tongue?

A. A praiseworthy truth.

Q. Why do you wear an apron?

A. To do honor to the Worshipful Craft and for my profit.

Q. What is the strength of our Craft?

A. That which fire and water cannot destroy.

Q. What is the best for a Mason?¹

A. Water.

Such was according to the *Konstitutions Buch* of the Altenburg

¹ Findel gives this last question and answer thus: "Q. What is the best part of a wall? A. Union." There is certainly more sense apparently in this than in the formula as I have given it. Yet it is the language of Krause, who quotes the "Konstitutions Buch" in his "Drei Altesten Kunsturkunden," and it is from him that I have made my translation.

Lodge of "Archimedes of the three Tracing Boards," the catechism or examination of a Freemason in the Middle Ages in Germany.

It is very evident that its only design was to establish a system of questions, the capacity of giving the correct answers to which were to prove the just claim of the person questioned to be a member of the guild. In this respect this catechism resembles that which was in use among the English Masons at the time of the organization of Speculative Masonry.

One of the answers in this mediæval catechism presents the doggerel form of verse which is so common in the early English catechisms, and hence we find another resemblance. In the original German catechism we find this answer:

*"Was ist Heimlichkeit an sich selbst?
Erde, Feur, Luft, und Schnee,
Wodunt ich auf eines Ehrbaren Meisters Beforderung geh."*

Which may be translated:

*"What is Secrecy in itself?
Earth, Fire, Air, and Snow,
Through which to a worshipful Master's advancement I go."*

This must strongly remind us of the doggerel verses in the English catechisms. So common indeed was this practice of doggerel versification in all the old rituals that its presence may be deemed a proof of relative antiquity, as its absence would be a proof of want of genuineness. The long ritual of the Royal Order of Scotland, which is among the oldest of the High Degrees, is made up almost entirely from beginning to end of doggerel verses, which even for doggerel are for the most part very inferior in structure.

The secret words in this catechism are also worthy of remark. Of *Riganse*, with its variations, it is impossible to trace the origin. The supposition in the Constitution Book that it is a corruption of the English "wriggle," is too puerile for consideration. It is said that the number of the letters being seven is significant, and hence Krause, who admits that this is a mutilated word, thinks the letters may be composed of the initials of the names of the seven liberal arts and sciences. But this hypothesis is, I think, wholly untenable, and it must remain as another instance of the numerous irreparable corruptions of the old Masonic manuscripts.

Not so, however, with the other words in this catechism, *Adon*

Hieronymus and *Walkan*. The former, evidently, is a corruption of Adonhiram, who, Krause says, has been confounded with either Hiram, the King of Tyre, or with Hiram Abif; I think most probably the latter, because the person described by that name in the Books of Kings and Chronicles is called "Adon" in some of the English Constitutions.

The word *Walkan*, evidently, is a corruption of Tubal Cain. Mossdorf thinks it was meant for Vulcan. But this is untenable. Vulcan is never mentioned in any of the old Masonic records, and it is not probable that the Freemasons were at all acquainted with this pagan god of blacksmiths. On the other hand, the old Constitutions had made them familiar with the name of Tubal Cain, whom the *Legend of the Craft* had placed with the other children of Lamech as the founders of Masonry.

We see, therefore, the close connection between the *Steinmetzen* of Germany and the Freemasons of England. They were both, evidently, branches of the same common body of artists, and had, if we may judge from these two words, the same legend.

The Altenburg Constitution Book asserts, indeed, that the forms of initiation and the ritual used by the German Stonemasons came originally from England.

This may have been so, though we have no direct or distinct proof of the fact. If it were so it would not militate with the fact that the other and greater secret of the Craft, that of building in the Gothic style and on geometric principles, came to both England and to Germany from the school of Lombardy and the Masters of Como.

We have thus seen that the Freemasons of the Middle Ages—the *Steinmetzen*, Stonecutters or Stonemasons, as they have been indifferently called, were in possession of and were distinguished by two classes of secrets.

One of these classes consisted in the possession of certain methods of recognition by which one Mason might know another, as the modern rituals say, "in the dark as well as in the light."

Now this class of secrets is not of any historical importance, nor was it peculiar to the fraternity of Masons. At all times and in all countries, men, when they unite into a brotherhood for the pursuit of any special object, certain details of which they desire to conceal from the world, protect their exclusiveness and their secrecy by

some method of signs or pass-words which will secure them from the intrusion of those who are not of their sodality, and are therefore to them as profanes. We have ample proof that those who practiced the Pagan Mysteries of antiquity had this secret method of protecting their ceremonies and the dogmas which they taught from the uninitiated.

"Every trade, art, and occupation," said Harris, "has its secrets, which are not to be indiscriminately communicated to all who seek to obtain them without having undergone the necessary probation, and have not thus become members of the sodality, guild, or craft."

The Freemasons of the Middle Ages did not, therefore, differ in this respect from other associations of a similar kind. Their possession of signs and words, by which they made themselves known to each other, is of no special importance in the history of the Craft, except insomuch as that if there can be shown to be any similarity or analogy between those used by the Freemasons of the present day and those which were practiced by the mediæval Masons, we should have another proof of the descent of the former as a fraternity from the latter.

Such a similarity or analogy has, I think, been already shown in the course of our present investigations. The use among the German Stonemasons of such words as *Walkan* and *Adon Hieronymus*, which are evidently corruptions of "Tubal Cain" and "Adon Hiram" or "Adoniram," together with some similar analogies among the English and the Scotch Stonemasons, render it very probable that the secret methods of recognition which were in use among the Stonemasons or Masonic Corporations of the Middle Ages, have for the most part been preserved, and are to this day employed by their successors, the Speculative Freemasons.

But the real secrets of the mediæval Masons were those whose loss are still deplored, and whose importance is testified to by the fact universally admitted, that from the knowledge of them, and from their practical application, have resulted the magnificent architectural works of the Middle Ages, some of which, as the Cathedrals of Cologne and Strasburg, still remain, while of others, though time-worn and dilapidated, the ruins still attest the skill and the taste (unsurpassed in modern times) of their builders.

These secrets, which were the application of Geometry to the art of building, intimately connect the history of Freemasonry with

the history of Gothic architecture, and thus they acquire an importance far surpassing that of the former class, or the methods of recognition.

The use by the Masons of the Middle Ages of Geometry in the practice of their profession as architects gave rise to geometrical symbols, the preservation of many of which by the Speculative Freemasons of our day is another proof of the succession of the later from the older society, and is in this way again of great historical importance in the history of the institution.

The geometrical symbols which are found in the ritual of modern or Speculative Freemasonry, such as the triangle, the square, the right angle, and the forty-seventh problem, may be considered as the débris of the "lost secrets" of the mediæval Stonemasons. As these founded their operative art on the application to architecture of the principles of Geometry, of which they were wont to say that "there is no handycraft that is wrought by man's hand but it is wrought by Geometry," so the modern Freemasons, imitating them in their reverence for that science (though not possessing the same knowledge of its principles), have drawn from it their most impressive symbols.

Thus we may easily explain the origin and the meaning of the phrase, "Geometrical Masons," which was applied in the beginning of the 18th century to the Speculative Freemasons, who thus claimed to be considered as the successors of the Masonic Guilds of the Middle Ages, who had called themselves Freemasons and whose secrets were of a geometric character.

This claim, too often rejected or laid aside for the sake of seeking a more ancient but wholly mythical origin of Freemasonry, either from the Pagan Mysteries or from the Temple of Solomon, is rapidly gaining ground among the Fraternity.

It is evident that the Speculative Freemasons of the last century sought to strengthen the claim by applying to themselves the title of "Geometrical Masons," by which they intended to distinguish themselves from the Operative Masons of their own time, just as the old Freemasons of the Middle Ages distinguished themselves, by the possession of geometrical secrets, from the "rough layers" or "rough Masons"—workmen who were not entitled to be called, and who were not called, "Freemasons" because they were not freemen of the Guild, were not in possession of those geo-

metrical secrets, and were not therefore admitted into the brotherhood.

There are, however, between the Speculative Masons, who date their organization from the year 1717, and the Freemasons of the Middle Ages some very significant differences and some equally significant resemblances.

The consideration of these differences and of these resemblances will come into view when treating, in another chapter, of the transition of Operative into Speculative Masonry.

CHAPTER XXII

GOTHIC ARCHITECTURE AND THE FREEMASONS

FROM what has been heretofore said, the reader will readily perceive that there was a very close connection between the Freemasons of the Middle Ages and that system of architecture which has been called the Gothic style.

It is not my intention to enter into any elaborate discussion of the character and the origin of that style. Such a discussion would be irrelevant to the design of the present work, which is a history not of architecture but of Freemasonry.

But as it has been, by general consent, admitted that the Gothic style, if not absolutely invented by the mediæval Freemasons, was exclusively cultivated by them as the style of the ecclesiastical buildings which they erected in every country of western Europe, during the period of from four to five centuries or perhaps more, in which they flourished as a well-organized fraternity.

Gothic architecture has, therefore, very justly been called the architecture of the Freemasons.

It has, however, received other names, some of which have less appropriateness, whether we look to the character of the style or to the history of its origin and its progress.

Sir Christopher Wren, indulging in the hypothesis that this style was introduced into Europe by the Crusaders, called it the Saracenic style.

He maintains his theory with great ingenuity, and I shall quote the passage from the *Parentalia*, at the expense of some repetition, because, whatever may be thought of the Saracen origin attributed to the Gothic style, we have the important testimony of this great architect to the guild or corporation character of the Stonemasons of the Middle Ages. We find the following passages in the *Parentalia*;

"The Holy War gave the Christians who had been there an idea of the Saracen works; which were afterward by them imitated in the West; and they refined upon it every day, as they proceeded in building churches. The Italians (among which were some Greek refugees), and with them Frenchmen, Germans, and Flemings, joined into a fraternity of architects; procuring Papal bulls for their encouragement and particular privileges; they styled themselves Freemasons, and ranged from one nation to another, as they found churches to be built."¹

Britton, an architect of much reputation, rejecting the Saracenic theory of Wren, uses the term "Christian Architecture" in preference to Gothic, as more analogous, more correct, and more historical. He defines this phrase, "Christian Architecture," as one "applied to all the classes of buildings which were invented and erected by the Christians, and which essentially varied from the Pagan architecture of the Egyptians, Greeks, and Romans. It includes all the varieties of designs used in churches and monasteries, from the 6th to the end of the 16th century."²

Mr. T. G. Jackson, a professional architect, who has written a very readable little work on *Modern Gothic Architecture*, dissents from this view. He asserts that Gothic architecture was not exclusively connected with the system of the Christian Church, nor intended by its forms to symbolize Christian doctrine.

Gothic architecture is not, he says, the creation of any religious creed or doctrine. It is the offspring of modern European civilization. It is Christian, only because modern Europe is Christian. It is connected with the Church only so far as the Church enters into the composition of our social state as one among many elements.³

But a previous admission of the author contradicts the theory which he has here advanced that Gothic architecture was not Christian architecture, except incidentally, and that its forms did not symbolize Christian doctrine.

"It is true," he says, "that this style was at first nurtured in the Church," and he assigns as a reason for this fact that "amid the turmoil and confusion of society during the 11th and 12th centu-

¹ Wren's "Parentalia," p. 304.

² Britton, "Dictionary of the Architecture and Archæology of the Middle Ages," in voce.

³ "Modern Gothic Architecture," by T. G. Jackson, Architect, London, 1873, p. 103.

ries it was only in the kindly shelter of the cloister that learning and the peaceful arts were able to live and grow; but it did not develop itself into a perfect style, it never shook off the traditions of that classic art from which it was derived, it never merged into an independent, energizing life, till the 13th century, when it passed from the hands of the clergy into those of the laity. Till then, all those great architects were clerks; since then they have mostly been laymen."¹

Now this admission is all that the most zealous advocates of the close relation borne by the Freemasons to Gothic architecture could require. It is not denied that in the earlier periods of the revival of art, the monastic institutions and the prelates of the Church, in whose hands were deposited all the seeds of learning, and who were the architects of that period, cultivated, almost as a necessity, the classic style which they borrowed from the Roman artificers.

But neither the Gothic style nor the corporations of Freemasons existed. They both sprung into active life at the same time. Paley, in his classification, traces Gothic architecture in its different styles from the middle of the 12th to the middle of the 16th century.² This embraces the very period in which the Freemasons of the Middle Ages present themselves as guilds or a fraternity.

It was then that architecture passed out of its classic form, whether you call that form Roman, Byzantine, Norman or what you please, and assumed that more symbolic form which has received the name of the Gothic.

This style, coming into existence at the very time that the lay builders had emerged from the control of the clergy, and established themselves as an independent body of architects with the organization of a guild and under the name of Freemasons, was, it can not be doubted, from the coincidence of time and circumstances, the invention of that Fraternity.

It may therefore be accepted as an historical fact, capable of demonstration, that the Gothic style of architecture was the invention of the mediaeval Freemasons.

And this style, so full of high art, developed in the profoundest symbolism, was that peculiar characteristic of the Freemasons of

¹ "Modern Gothic Architecture," by T. G. Jackson, Architect, London, 1873, p. 99.

² Paley, "Manual of Gothic Architecture," p. 29.

the Middle Ages, which distinguished them from the artisans of every other trade or profession, and in time when as a body of operatives they were dissolved, enabled them to transmute themselves into a Speculative association founded on the teaching of moral and religious doctrines by architectural and geometrical symbols.

We can not properly or fairly appreciate this mediaeval architecture if we confound it with the mere practice of building by laying one stone on another. The Freemasons, justly appreciative of the high aims of their profession, held themselves proudly aloof from the ordinary rough masons, who could do no more than build a wall or construct a house.

"Mediæval architecture," says Paley, "was the visible embodying of the highest feelings of adoration and worship, and holy abstraction; the expression of a sense which must have a language of its own and which could have utterance in no worthier or more significant way."¹

So these Freemasons became the preservers and the teachers of the doctrines of their religious faith, and gave a moral in every sculptured form. Among their works, the moralizing Jacques might have well said that he could find "sermons in stones."

The Freemasons of the Middle Ages, coming originally from Lombardy and extending over Europe in the 12th and succeeding centuries, thus applied to their works the taste and skill and spirit of symbolism which they had originally learned from their Masters on the borders of the Lake of Como. Congregating in the *bauhütten*, the hut or lodge which they had erected near the building about to be constructed by their skill, they devised the plans for the future edifice, which in almost every instance was one intended for religious purposes, for to nothing secular or profane would they devote their art.

Hence arose the monasteries, the churches, and cathedrals, which although now for the most part in ruins, present, even in wreck, such wonderful evidence of architectural beauty as to excite the admiration of every spectator, as well as the envy of modern artists, who have sought in vain to rival or even to imitate these old builders.

¹ "Manual of Gothic Architecture," p. 5.

Speaking of them as the inventors of the system of architectural symbolism, Lord Lindsay calls the humble lodges in which they held their consultations and produced their designs, "parliaments of genius."¹

They were possessed of wondrous skill in art, and were actuated purely by elevated religious thought. Yet have they passed away unknown save as component parts of that vast association which had spread over all civilized countries, and who labored at the great works in which they were engaged with a noble abnegation of self. Of the wholly disinterested zeal with which they worked, Michelet cites one striking proof. "Ascend," he says, "to the top-most points of those aerial spires which they were constructing, to heights which only the slater mounts with fear and trembling, and you will often find some masterpiece of sculpture, on which the pious workman had perhaps consumed his life, without the remotest expectation that the eye of man would ever behold its delicate, artistic tracing. On it there is no name, not a mark or a letter. He had worked not for human praise, but only for the glory of God and the health of his soul."²

An English historian has thus expressed a similar view of the self-abnegation of these old builders:

"The elaborate and costly ornaments which were lavished on architecture were meant to do God honor, though spending their beauties perhaps on some remote and secluded wilderness, to be witnessed only by the rude peasants of the neighborhood and the birds that hovered about the pinnacle."³

Mr. Paley has been led to say, with great truth, that these ancient builders, working as a body and not as individuals, cared less about personal profit or celebrity than about the good of the Church, and hence he concludes that if they had intended only to please the eye of man they would not have let their finest works stand alone in the midst of the marsh and the moor.⁴

The name of Gothic Architecture, applied to the style of building adopted by the Freemasons of the Middle Ages, is by no means suggestive of its true origin or character. The opinion once enter-

¹ "Sketches of Christian Art."

⁴ "Manual of Gothic Architecture," p. 82.

tained that it was the invention of the Goths, has long since been exploded; and notwithstanding the various hypotheses that have been advanced at different times, it is now generally conceded that this distinct style was the system of building applied by the mediæval Freemasons to the erection of cathedrals and other religious edifices.

Of this style, the distinguishing features are the pointed arch, long lancet windows, clustered columns, and a general tendency to vertical and ascending lines. Comparing it with the preceding styles, we see the whole contour and composition of building changed from the horizontal to the perpendicular, "we might almost say," to borrow the words of Paley, "from earthly to heavenly, from Pagan to Christian."¹

It began to make its appearance toward the close of the 12th century, and having been adopted, or more properly speaking invented, by the association of Freemasons spread from Italy into France, into Germany, and into England, as well as every other country of Europe where these architects and builders penetrated.

Governor Pownall, toward the close of the last century, wrote a very able article containing *Observations on the Origin and Progress of Gothic Architecture, and on the Corporation of Free Masons, Supposed to be the Establishers of it as a Regular Order*,² in which he admits that William of Sens had used the same style a century before in the reconstruction of the Cathedral of Canterbury, yet he asserts that the Corporations of Freemasons "were the first architects who reduced it to and introduced it as a regular order."

He further asserts that the Corporation which existed in England was instituted by a similar corporation from abroad, and that all these corporations had been created by the Pope, by bull, diploma, or charter, about the close of the 12th or the commencement of the 13th century. This statement of the existence of a Papal bull bestowing certain privileges on the Freemasons has been repeatedly made since the date of Governor Pownall's article, by other writers, who most probably borrowed his authority for the statement.

I think that it will be admitted that the Freemasons, who were at first exclusively ecclesiastics, and whose schools of architecture

¹ "Manual of Gothic Architecture," p. 76.

² Published in the "Archæologia," vol. ix., pp. 110-126.

were originally established in the monasteries, were under the protection and patronage of the Church. But that any especial bull in their favor was ever issued, though not at all improbable, has never yet been established as an historical fact. Governor Pownall, anxious to prove the truth of his statement, caused application to be made to the librarian of the Vatican, and the Pope himself is said to have ordered a minute search to be made.

The search was a vain one. The official report was that "not the least traces of any such documents could be found." Pownall, however, persistently believed that some record or copy of this charter or diploma must be somewhere buried at Rome amid forgotten and unknown bundles or rolls of manuscripts—a circumstance that he says had frequently occurred in relation to important English records.

Unfortunately, therefore, for the settlement of the historic question, it by no means follows, because the Roman Catholic librarian of the Vatican, a few centuries ago, could not find a bull granting special indulgences to an association which the Popes had at a later period denounced, that no such document is in existence. Besides the too common result of an unsuccessful search for old manuscripts which has occurred, and is continually occurring, to investigators, we have in this particular case the other factor to contend with, the policy of the Roman Church. That policy has always overruled all principles of historic accuracy. Hence in subjects over which that Church has had control, suppressed documents are of no uncommon occurrence.

This question of a Papal charter, therefore, still remains *sub lite*. Krause, for instance, on the supposed authority of a statement of Ashmole, which had been communicated by Dr. Knipe to the author of the life of that antiquary, admits the fact of Papal indulgences, while Steiglitz, accepting the unsuccessful result of the application of Pownall as conclusive evidence, contends for the absurdity of any such claim.

But whether there is or is not in existence such a charter, diploma, or bull, it is very evident from history that the Freemasons of the Middle Ages first enjoyed the protection and afterward the patronage of the Church extended to them by ecclesiastical chiefs.

CHAPTER XXIII

TWO CLASSES OF WORKMEN, OR THE FREEMASONS AND THE ROUGH MASONS

THE art of building in the Middle Ages is presented to us by authentic history as being practiced by two distinct classes of workmen; first, the association of builders who have already been repeatedly described under the name of "Freemasons;" and, secondly, another class of workmen who were not members of the fraternity, though they were often in the cities incorporated as independent bodies.

Thus we find that in London in the 14th century, during the reign of Edward III., there was an incorporated Company of Masons who sent four delegates to the Common Council, and a Company of Freemasons, which being a smaller, and probably a more select body, sent only two.¹

The Strasburg Constitutions prohibited those who had been admitted as members of the Fraternity of Freemasons from working with any other craftsmen,² evidently referring to other Masons whether incorporated or not, and who had not been made free of the Guild or Fraternity.

The old English Charges furnish the evidence that the same distinction of workmen existed in England as in Germany. For instance the "Mason, allowed," that is, he who had been accepted by the Fraternity, is forbidden to instruct the "layer" by furnishing him with moulds or patterns for work. "Also," says the York MS., "that no Master or Fellow make any mould, rule, or square of any layer nor set any layer (within the Lodge) or without to hew any mould stones."

¹ Herbert, "History of the Twelve Great Livery Companies," vol. i., p. 34.

² "Strasburg Ordinances," No. 2, mit keinem Antwerk dienen: thus interpreted by Krause—daher sollen sie auch mit keinem andern Handwerke dienen.

The date of the York MS. is about the close of the 16th century. But the same regulation is found in all the subsequent manuscripts. In the Landsdowne MS., however, as well as in the Antiquity MS., which appears to be only a copy of the Landsdowne, the word is Lowen. This is evidently a blunder of a careless or an ignorant copyist, who has retained the initial capital, because in it there could have been no chance of confounding it for C, but has changed the rest of the word layer, badly written most probably in the exemplar from which he copied, into Lowen.

The correct word is, therefore, layer; and from this regulation we learn that the division of the builders in the Middle Ages was into two classes: a superior one, who are always designated in the English manuscript Constitutions and Charges as Masons, and an inferior class called layers, and sometimes, as in the Alnwick MS., rough layers. In contemporary works of the same period, not Masonic Constitutions, we also find the distinction of free mason and rough mason, being no doubt the same thing as a stone layer in contradistinction to a brick layer, a craft which belonged no more than the carpenter to the great body of Masons.¹

Now what is the meaning of this word layer, which is to be classed among "the lost beauties of the English language," being retained only in the compound bricklayer?

There can be no difficulty in answering this question. In the *Promptorium Parvulorum*, the oldest dictionary of our language extant, which was compiled in the year 1440 by a Dominican Friar of Norfolk, and the latest edition of which was published in 1865 by the Camden Society, with copious and learned annotations by the late Mr. Albert Way, is the following:

"*Leyare*, or werkare wythe stone and mortere." And the Latin equivalent given for it is *Cæmentarius*.

In classical Latinity, as well as in the Low Latin of the Middle Ages, a *cæmentarius* was a builder of walls, who handled the *cæmenta* or rough stones as they came from the quarries. St. Jerome, in one of his Epistles (53), defines a *cæmentarius* as one who builds rough walls of *cæmenta*, or unhewn stones. A layer or stonelayer

¹In a work published in 1559, entitled "The Booke for a Justice of the Peace," is the following passage: "None artificer, nor labourer hereafter named, take no more nor greater wages than hereafter is limited . . . that is to say, a free mason, master carpenter, rough mason, bricklayer," etc., fol. 17.

(the word "stone" being understood), which the *Promptorium* Latinizes by *cæmentarius*, was a rough mason whose business was simply to follow the plan of the architect, and in the erection of the walls of an edifice to lay one stone upon another, just as the bricklayer does at the present day with bricks.

Mr. Way has this interesting note on the word *Leyare* and its definition in the *Promptorium Parvitorum*:

"In the account of works at the palace of Westminster and Tower during the 14th century, preserved among the miscellaneous records of the Queen's Remembrancer, mention is made continually of *cubatores*,¹ or stone layers. See also the abstract of accounts relating to the erection of St. Stephen's Chapel in the reign of Edward III., printed in Smith's *Antiquities of Westminster*. In this contract for building Fotheringhay Church, the chief mason undertakes neither to 'set more nor fewer freemasons, rogh setters ne leye(r)s' upon the work but as the appointed overseer shall ordain."

The same distinction between the two classes is preserved in a statute passed in the reign of Edward VI., anno 1548. It is then enacted "that noe person or persons shall at anye tyme after the firste daye of Aprille next comynge, interrupte, denye, lett or disturbe any Freemason, rough mason, carpenter, bricklayer, playsterer," etc.²

The appellation of rough masons, rough setters, or rough layers bestowed upon these workmen of an inferior class was derived from the German. In the Strasburg Ordinances *ruh* or *roh* is applied to an unskilled or ignorant apprentice. In the German rituals *rohenstein* is the rough ashlar. Richardson defines the word rough as meaning "coarse, unpolished, savage, rude, uncivil." When the English Charges speak of a "rough mason," they mean one whose work is coarse and unpolished, and who has not the skill in stonecutting possessed by the members of the fraternity of Freemasons.

To the Freemasons, who were a brotherhood devoted to the erection principally of cathedrals and other religious edifices, every other Mason was looked upon with a species almost of contempt

¹ To make "cubator" signify a man who lays stone, a layer, because a poet in the iron age of the Latin language, Plotinus, of Nola, had used the same word to designate a man who lies down (that is to denote a liar and a layer by the same word), is a travesty well calculated to astound an etymologist. But the Low Latinists were not purists.

² "Statutes of the Realm," vol. iv., p. 59.

as rude and ignorant; he was called a rough Mason, and they refused to work with him or to impart to him any information which would assist him in his own work.

Now as to the higher class, called by historians the "Freemasons," but who in the English Constitutions are always designated as "Masons."

But in other documents of the Middle Ages we frequently meet with the word "Freemason," used in a sense evidently denoting a particular class of artisans.

As early as the year 1350, in the reign of Edward III., of England, an act of Parliament was passed in which the wages of a Master Freemason are fixed at 4 pence and that of other Masons at 3 pence. This is the earliest date for the use of the word, but it was subsequently used in other statutes, in monumental inscriptions, and in old records, and always so as to indicate that the Freemason was of a class differing from other Masons.

Whence then comes the term, from what is it derived, and what was in former times its exact meaning? These are questions that have greatly exercised the minds of Masonic etymologists who have arrived at three very different conclusions.

The first of these conclusions, namely, that free in the word Freemason was originally *Frère* or Brother, which was prefixed by the workmen who used the French language to the word Mason, so as to make the word *Frère* Mason or Brother Mason, which was afterward corrupted into Free Mason, is mere etymological fancy hardly worth a serious refutation.

Paley says, quite dogmatically: "The name Freemasons is a corruption of *Frères Maçons*, or fraternity," and he quotes Dallaway as his authority for the opinion.¹

But Dallaway, in his *Historical Account of Master and Freemason*, has expressed an opinion the reverse of this. He admits that a passage in the Leland MS. authorizes the conjecture that the denomination of Freemasons in England was merely a corruption of *Frère Maçons*, but immediately afterward he says, "but I am not borne out by their appellations on the continent," and he gives their appellations such as *Franc-Maçon* in French, *Frei Maurer* in German, and *Libero Muratore* in Italian.² None of these titles could

¹ "Manual of Gothic Architecture," p. 211.

² Dallaway, "Master and Freemason," p. 434.

of course have been translations of *Frère*, but must have been intended to convey, in each of these languages, the idea conveyed in English by the word Free.

It is strange, too, that Dallaway should have laid any stress on the Leland MS. as authorizing even a conjecture (admitted afterward to be unplausible) that Freemason was originally *Frère Maçon*.

Now the word *Frère Maçon* does not occur in the Leland MS. Only once do we meet with *frères*, in its usual sense of brothers or members of a *confrerie* or confraternity, a sense in which it is still employed. The word invariably used is Masons, or rather Maconnes and Maconrye. There is no mention of either Freemasons or *Frère Maçons*, and nothing can be learned from it of the derivation or original meaning of the word Free.

But in fact the Leland MS. is now very generally admitted to be of no value as an historical document. Purporting to have been written in the reign of Henry VI., and by the king himself, it is now known to have been a forgery in the middle of the last century.

I think we may dismiss the attempted derivation of Free from *Frère*, as one of those allusions to which etymologists are unfortunately too often addicted.

Again it has been supposed that Freemasons were so called because they worked in Freestone, and because they were thus distinguished from other Masons, who were called Rough Masons, because they worked in rough stones. But for several reasons I cannot accept this derivation, although it is not as objectionable as the preceding one.

In the first place, if the name of the class was derived from the character of the stone worked, the proper words would be Free Stone Mason and Rough Stone Mason, and Free Mason and Rough Mason.

Again, Free Stone is not the apposite or antithesis of Rough Stone. There is no relation, contradictory or otherwise, between them.

Free Stone is any stone composed of sand or grit, which, on account of its softness, is easily cut or wrought.

Rough Stone is any stone, no matter what may be its geological character, that is still in its native state, and has not been formed or polished by the hands of the workmen. A stone may be at the same time free stone and rough stone. The word *ruh* or *roh*—

English rough—is used in the German Constitutions to signify unskilled or unpolished. An Apprentice is spoken of in them as being taken "from his rough state" (*von Ruhem auff*), which Krause interprets as "one still wholly ignorant."¹ And so, also, the unpolished stone which we call the rough Ashlar, the German rituals name *das rohen Stein*.

By a "rough Mason" or a "rough layer," the old English Masons meant a Mason who had not been thoroughly educated in the art, one who was ignorant of the principles and geometrical secrets which were possessed by the higher fraternity.

The etymology is, therefore, I think, not tenable, which would derive the two appellations Free-Mason and Rough Mason from the different geological nature of the stones on which the two classes worked. The Rough Mason often used free stone in building his walls, but he did not thereby become a Free Mason.

It must be observed that the word Free Mason is never employed in the English, German, or French Constitutions or Regulations of the Craft. There the simple word Mason or its equivalent is used. The appellation is to be found only in statutes and contracts.

But it is not to be supposed that the framers of these were acquainted with the fact that there was a distinction between the two classes founded on the possession of certain secrets. They simply intended, by the words "Free Mason" and "Rough Mason," to recognize the fact that there were two classes of workmen, one of superior skill and superior station to the other.

But though the word "Free Mason" is not to be found in the Masonic Constitutions, it is evident that the Masons themselves had recognized it as a distinguishing title as early as the 14th century, because in the year 1377 we meet with the Company of Freemasons and the Company of Masons in the Catalogue of those which were authorized to send delegates to the Common Council of London.²

It is then evident that the word "Free" was employed, no matter what was its original meaning, to designate a superior class. I think it may justly be considered as referring to the fact that the persons called "Freemasons" were men of superior abilities, who, by being accepted into the fraternity, had become free of the guild or corporation. Masons who were not possessed of this amount of skill, and

¹ Als einen noch ganz Unwissenden Krause, "Kunsturkunden," ii., 284.

² Herbert, "History of Livery Companies," i., 34.

WILLIAM HUTCHINSON

who were employed in labors of a less artistic character, were not permitted to work with these Freemasons—were not accepted into their fraternity; in other words, were not made free of the guild.

A writer in the *London Freemason* says: "Originally the Operative Mason was free of his guild, and probably we have in the word a remembrance of emancipation through honest labor in towns of those who were originally *villani adscripti glebæ*"—serfs who were attached to the soil, and who could not be admitted to the freedom of the guild because the lord who owned them might at any time reclaim them.

In the earliest periods of the feudal system, before the municipalities began to assert their rights, the handicrafts were for the most part pursued by slaves. At a later period freemen also practiced the trades, but there was always a distinction between the free and the servile craftsman—a distinction which the Masons apparently retained after the cause had ceased. Krause says that these Masons were called Free because they possessed certain municipal privileges.¹ These privileges, according to Hope, Pownall, and many other writers, consisted in the monopoly of building churches, cathedrals, and other religious edifices, and in certain franchises granted them by Popes and other sovereigns.

Dallaway, it is true, denies, at least so far as England is concerned, that any such privileges existed. "No proof," he says, "has been as yet adduced from any chronicle or history of this country that as a fraternity or guild the Freemasons in England possessed or held by patent any exclusive privilege whatever."²

But if there is no positive testimony extant of patents or charters granting such privileges, the whole course of history, the phraseology of contract between Masons and their employers, the distinction made between the Freemasons and the Rough Masons in the matter of wages and many other incidental circumstances, clearly show that the Freemasons were looked upon as a superior class, and were in possession of certain privileges, social as well as professional, which were denied to the lower order of workmen.

A proof of the rank and estimation which Master Masons, Architects, or Freemasons held in society during the Middle Ages is to be found in the contract made in the year 1439 between the Abbot

¹ Krause, "Kunsturkunden," i., p. 74.

² "Master and Freemasons," p. 425.

of St. Edmundsbury and John Wood, "Masoun," for the repairs and restoration of the great towers "in all manner of things that longe to Freemasonry."

In this contract, Wood, the Master Mason, is allowed "borde for himself as a gentilman and his servant as a yeoman, and thereto two robys, one for himselfe after a gentilman's livery."¹

Though in the English Constitutions we do not meet, as I have already said, with the word "Freemason," yet its equivalent is found in the constant use of the phrase "Mason allowed" to designate one who had become a member of the fraternity; that is, who had been made "free of the guild." But I have heretofore shown that the meaning of "allowed" is "accepted," and therefore a Freemason was a Mason who had been accepted into the Fraternity.

The founders of Speculative Masonry, who in the year 1717 seceded from the operative branch of the Institution and formed the Grand Lodge of England, seemed to be aware of this signification of the word "Free," as designating one who had been "allowed" or "accepted" into the fraternity, for they assumed for themselves the title of "Free and Accepted Masons." In this way they meant to put forward the claim that they were Freemasons who had been Accepted into the Fraternity. "Free and Accepted Masons" now denoted Speculative Masons, and by this title they distinguished themselves from the lower class of Operative Masons.

Just in the same way, when they were all Operatives, the higher class were called "Freemasons" to distinguish themselves from the lower class, who were known as "Rough Masons."

Toward a perfect understanding of the true organization of the mediæval Masons, it is not necessary that we should know the correct derivation of the word Free. It is not material to this purpose that we know whether it comes from the French *frère*, and consequently that the word "Freemason" signifies a Brother Mason; or from freestone, and that it means a Mason who works on that material; or lastly that it is derived from freeman and denotes one who had been made free of the fraternity.

All that is really material to be known on this subject is that there was always a division of the mediæval builders into two

¹ "Anthologia," vol. xxiii., p. 331.

classes, distinctly separate the one from the other; and that the Freemasons occupied the superior place, superior in skill, superior in the possession of certain privileges, and therefore superior in social standing.

There are, however, two points worthy of notice in connection with this subject.

In the first place, the word "Freemason" was confined as a descriptive term to the workmen of England. Neither this nor any equivalent of it is to be found in the Masonic documents of France or Germany. The words *Franc-Maçon* and *Frei Maurer*, now so common in these languages, were not known until after the organization of Speculative Masonry in England and its propagation in those countries by the "Grand Lodge of Free and Accepted Masons" established in 1717 in London.

The words *Franc-Maçon* and *Frei Maurer* were never applied in any document, Masonic or non-Masonic, to any of the builders of the Middle Ages in France or Germany, as Freemason was in England.

The growth of those words in those languages appears to have been in this way. There were in England, as early as the 14th century, a class of skillful builders who excluded from their companionship all other builders whose standard of knowledge and skill was lower than theirs.

This exclusive and more skillful class were recognized in the statutes of the realm, in contracts made with them, in sepulchral inscriptions, in church registers,¹ and in some other documents by the title of "Freemasons."

In the 17th century, at least, if not before, the word began to be used by the Masons themselves as a distinctive appellation. Thus in 1646 Ashmole wrote that he had been "made a Freemason at Warrington," and he calls those who had been just received into the fraternity, "new Accepted Masons."²

In 1717, when the Speculative Institution was established, the founders adopted both the words "Free" and "Accepted," and called themselves "Free and Accepted Masons." In the "Charges

¹ Thus in the church register of the parish of Astbury are the following entries:

"1685. Smallwod, Jos. fils Jos. Henshaw Freemason bapt. 3 die Nov.

"1697. Jos. fils Jos. Henshaw, Freemason, buried 7 April."

² Ashmole's "Diary," October 16, 1646, and March 11, 1682.

of a Free-Mason," published in 1723 in the first edition of the *Constitutions*, the word "Freemason" is adopted as the recognized title of the members of the Fraternity, being there adopted in place of the simple word "Mason," which was used in all the Old Charges. Thus the Old Charge which forbade "Masons to work within or without the Lodge with rough layers," reads in the *Book of Constitutions* of 1723 that "Freemasons shall not work with those that are not Free."

The title "Freemason" afterward came quite commonly into use. In 1734 a book was published called the "*Free Masons Vade Mecum*" and it is several times employed in Masonic publications of that period. "Free and Accepted Masons" and "Freemasons" were then, as it appears from contemporary publications, terms adopted by and in common use immediately after what has been called the Revival, in the beginning of the 18th century.

Now when deputations began to be "sent beyond sea" to establish lodges in foreign countries—beginning with the Deputation granted in 1728 by the Earl of Inchiquin, Grand Master, "to some Brothers in Spain to constitute a lodge at Gibraltar," succeeded very rapidly by others in Germany, Holland, France, and other countries—the title of "Freemasons," which had been adopted by the Speculative Masons of England to distinguish themselves from the purely Operative Masons, from whom they had separated, was carried into these foreign countries by those who had been appointed under the various deputations to disseminate the system.

Necessarily the English word was in each of these countries translated by those who entered the Order into an equivalent word in their own language.

So "Freemason" became in Germany "*Freimaurer*," in France "*Franc-Maçon*" in Italy "*Libero Muratore*" and so on. In all of these it will be seen that the expression "Free" has been translated by a word that has no relation either to *frère*, brother, or to freestone.

Freimaurer, in German, and *Franc-Maçon*, in French, like Freemason in English, conveys the idea of a freeman, who is a Mason; originally indicating a freeman of the guild, and afterward, and now, a man of a superior class.

For example, in the 17th century a Freemason was a Mason of great skill, engaged in the designing and erecting of cathedrals, as

distinguished from the common workman, who only built walls and laid or set stones.

In the 18th century a Freemason was a Speculative Mason, engaged in the erection of a spiritual temple, as distinguished from the purely Operative Masons, who labored without symbolism or philosophy at the construction of material edifices.

This same distinction into two classes was still more explicitly marked in the mediæval Masonry of Germany.

If, for instance, we refer to the Strasburg Ordinances, we find a very distinct reference to two classes of Masons under various names.

The fraternity of Masons who were united together for the construction of Cathedrals and other religious and important edifices, was called the Craft of Stonework.¹ Each member of this body is denominated in the ordinances either a *Meister*, Master, a *Gesell*, Companion or Fellow, or a *Werkmann*,² Workman, or, as it has been generally translated, a Craftsman. The word *Maurer* (in the old German, *Murer*) is the name given to those Masons of the lower class who in the English Constitutions are designated as rough layers. They were permitted to work only on inferior tasks, in cases of necessity.

Thus one of the ordinances of Strasburg provides as follows: If there be a need of Masons (*Murer*) to hew or set stone, the Master may employ them, so that the employers' work may not be hindered, and the men so employed shall not be subject, except with their own free will, to the regulations of the Craft.³

But the exclusive position maintained by this higher class is distinctly expressed in the second of the Strasburg Constitutions in the following words:

"Whosoever wishes to be received into this fraternity as a member, according to these regulations as they are written in this book, must promise to keep all the points and articles of our Craft of Stonework, which consists only of Masters (*Meyster*) who are skilled in constructing costly buildings and works which they have

¹ Das Handwerk der Steinwerk. "Strasburg Ordinances."

² In that old English dictionary of the 15th century, the "Promptorium Pavulorum," *Masone* is defined to be a *werkemann* with the Latin equivalent *lathomus*.

³ Wer es auch das man der Murer, es were Stein zu bauen oder zu muren . . . die mag ein Meister wol furdern, u. s. w. "Strasburg Ordinances," No. 8.

been made free¹ (have the privilege to erect). They shall not work with the men of any other Craft."

The distinction between the *Werkmann*, or Freemason, and the *Murer* (*Maurer*), or Wall Builder, is expressly made in one of the Strasburg regulations which relates to Apprentices. It is there said that "if any one who has served with a *Murer* comes to a *Werkmann* to learn of him, the *Werkmann* can not receive him as an Apprentice unless he consent to serve for three years."²

But the Freemasons of Germany had another and a still more significant method of distinguishing themselves from the lower class of rough Masons; while these latter were known as *Maurer*, literally wall builders (for the German for wall is *maurer*), the higher class, the Freemasons, the men who invented and practiced Gothic architecture, called themselves *Steinmetzen*.

Now in German the verb *metzen* signifies to cut with a knife, a chisel,³ or any other cutting instrument.

A *Steinmetz* is, therefore, a Stonecutter—one who with the chisel cuts the stone into various forms or decorates it with objects in relief. On the other hand, a *Maurer* is a builder of walls—a mason who roughly sets or lays one stone upon another, without any reference to beauty of design or skill of art.

The *Steinmetz*, or Stonecutter, was the Freemason; the *Maurer*, or wall builder, was the rough mason or rough layer.

Now the adoption of this word *Steinmetzen*, or Stonecutters, by the Masons who invented Gothic architecture in the Middle Ages, throws a flood of light upon the history of Masonry at that period.

A Master Stonecutter was an honorable term, and whoever wished to become an architect had to begin by learning to cut stone.⁴

The cutting of stone ornaments was not used before the 12th century. In the early Norman work, says Parker, the chisel was very little employed. Most of the ornaments in the churches ante-

¹ Uffgefreyget, befreiheitel, made free, that is, as Krause interprets it, authorized and privileged to do these things; and such, I think, is the true meaning of the word free in the word Freemason.

² Wer es auch das einer vor einem Murer gedient und hun zu einem Werkmann kumen, u. s. w. "Strasburg Ordinances."

³ Thus a knife is *messer*, a chisel *meisel*, and a butcher one who cuts flesh, a *metzger*.

⁴ Boisserée, "Histoire de la Cathedral de la Cologne," p. 14.

rior to that period are such as could have been readily wrought by the axe, and could have been readily produced by stone hewers. Whatever sculpture there is appears to have been executed afterward, for it was a general practice to execute sculptured work after the stones were placed in position.¹

We do not find that the chisel was used, as it must have been, for deep cutting, and especially under-cutting, in any buildings of ascertained date before the year 1120.² Carving in stone occurred in Italy and the south of France at an earlier period; later in northern France and Germany, and still later in England.

This gradual extension northwardly of the art of stonecutting—the Freemasons' art—confirms the theory maintained by Mr. Hope and other writers, that the Freemasonry of the Middle Ages arose in Lombardy and spread thence over the rest of Europe.

The monk Gervase, in his description of the reconstruction of the Cathedral of Canterbury,³ tells us that in the old work there was no deep sculpture with the chisel. He says that in the old Cathedral, "the arches and everything else were plain or sculptured with an axe and not with a chisel."

But when with their geometrical system of building the Freemasons had introduced the art of deep stonecutting with the chisel, they reveled in the art and the profusion of sculptured ornaments; most of them having a symbolic meaning, became wonderful in the churches and cathedrals which they erected.

Rightly, therefore, did the Freemasons of Germany, the builders of the great Cathedrals of Magdeburg, of Cologne, and of Strasburg assume the title of Stonecutters, and held themselves above the mere wall builders, who only hewed stone.

The *Steinmetz*, or Stonecutter in Germany, like the Mason or the Freemason of England, was of a higher class than the *Maurer* or builder of walls, the rough Mason or the rough layer.

¹ Parker, Introduction to the "Study of Gothic Architecture," p. 41.

² Ibid., p. 66.

³ The work of the monk Gervasius Dorobornensis, or Gervase of Canterbury, is contained in the collection of the "Decem Scriptures Angliæ."

CHAPTER XXIV

MASONS' MARKS

THE subject of Marks forms an interesting episode in the history of Masonry, both Operative and Speculative.

A Mason's Mark is a monogram, a symbol, or some other arbitrary figure chiseled by a mason on the surface of a stone for the purpose of identifying his own work and distinguishing it from that of other workmen.

Mr. Godwin, in an article "On Masons' Marks observable on Buildings of the Middle Ages," published some years ago,¹ has given, perhaps, the best definition that we possess of the true character of these Sculptural figures.

He says that it can perhaps hardly be doubted that these marks "were made chiefly to distinguish the work of different individuals. At the present time the man who works a stone (being different from the man who sets it) makes his mark on the bed or other internal face of it so that it may be identified. The fact, however, that in the ancient buildings it is only a certain number of stones which bear symbols—that marks found in different countries (although the variety is great) are in many cases identical, and in all have a singular accordance in character—seems to show that the men who employed them did so by system, and that the system, if not the same in England, Germany, and France, was closely analogous in one country to that of the others."

He adds that many of these signs are evidently religious and symbolical, "and agree fully with our notions of the body of men known as the Freemasons."

That there should be a purpose of identification so that the particular work of every Mason might, by a simple inspection, be recognized by his Fellows and the Lord or Master of the Works might

¹ In the "Archæologia," vol. xxx.

be enabled to attribute any defect or any excellence to its proper source, was essentially necessary to constitute a Masonic Mark.

By observing this distinction we avoid the error committed by several writers of calling every device found upon a stone a mark, and thereby giving to the system of marks a greater antiquity than really belongs to it.

Thus it has been said by one writer that "Masonic Marks have been discovered on the Pyramids of Egypt, on the ruined buildings in Herculaneum, Pompeii, Greece, and Rome, and on the ancient cathedrals, castles, etc., that are to be found in almost every country of Europe."¹

But the fact is that the inscriptions and devices found on stones in buildings of antiquity were most probably mythological, symbolical, or historical, being a brief record of or allusion to some important event that had occurred. If any of them were proprietary—that is, intended to identify the work or the ownership of some particular person—there is no evidence that any well-organized system of proprietary marks existed in that very early period.

Lord Lindsay, in his *Letters on Egypt, Edom, and the Holy Land*, inserts a description of a square building or monumental chamber, near Baalbeck, given to him by Mr. Farren, Consul-General in Syria, which was covered with small marks, on which Mr. Farren makes the following remarks:

"It is very remarkable that the faces of this monument are covered with small marks cut on the stones—hieroglyphics I can not call them—they are too numerous to be accidental. I was convinced that they were not from the mere process of chiseling."²

On this statement, Mr. Godwin remarks: "Whether or not they were analogous to the marks under consideration (Masons Marks) I do not pretend to say."³

I can not myself doubt that they were not. The fact that innumerable monuments of the ancient East have been found covered with devices and hieroglyphics which the comparatively recent labors of learned mentalists and antiquaries have deciphered and shown to be mythological or symbolical, and very often historical,

¹ Lyon, "History of the Lodge of Edinburgh," chap. ix., p. 67.

² Lord Lindsay, "Letters on Egypt, Edom, and the Holy Land," vol. ii., p. 361.

³ Two letters to Mr. Ellis on Masonic Marks, by George Godwin, in the "Archæologia," vol. xxx., p. 120.

would lead us to infer that those on the monument near Baalbeck were of the same character.

The sculptures on the Pyramids, which Lyon refers to as "Masonic Marks," are really inscriptions, mostly.

Thus Mr. Ainsworth tells us that in the ruins of Al-Hadhr, in Mesopotamia, "every stone, not only in the chief building, but in the walls and bastions and other public monuments when not defaced by time, is marked with a character, which is for the most part either a Chaldean letter or numeral. Some of the letters resemble the Roman A, and others were apparently astronomical signs, among which the ancient mirror and handle ♀ were very common."¹

Ainsworth's description is too meager to supply the foundation for an hypothesis, but we are hardly warranted in ascribing to the Chaldean letters and astronomical signs the character of proprietary marks, such as those practiced by the Freemasons of the Middle Ages.

The sculptures on the Pyramids which Mr. Lyon refers to as "Masonic marks," are, as we have reason for believing, inscriptions, mostly in the cursive character generally recording the names of the different kings in whose reigns they were constructed.

Again, the Messrs. Waller, in a work on *Monumental Brasses?* describe a monument to Sir John de Creke and Lady Alyne, his wife, at Wesley Waterless, in Cambridgeshire, about 1325, which is inscribed with a monogram or device consisting of the letter N, with a half moon on one side, and a star, or more probably the sun, on the other, and a mallet above. This is supposed to have been the device of the artist. But the same is found on a seal attached to a deed dated 1272, wherein Walter Dixi, called *Cæmentarius de Bernewelle*, conveys certain lands to his son Lawrence. The seal has for its legend the words, *S. Walter: Le: Massune.*

Messrs. Waller think that the occurrence of a similar device in two instances seems to show that it was not an individual mark, but that it may have been the badge of some guild of Masons. On the contrary, the use of it as a seal on a deed of conveyance proves that

¹ Ainsworth's "Travels," vol. ii., p. 167.

² "A Series of Monumental Brasses from the 13th to the 16th Century," by J. G. and L. A. B. Waller.

it was a family device. It is probable that the monumental brass referred to above was the work of the son or grandson of the *Cæmentarius* or Mason who conveyed the land fifty-three years before, and whose family seal as well as his profession was retained by his descendant.

Mr. Godwin gives from the Gloucester Cathedral a mark or device in the form of a seal, consisting of a mallet between a half moon and a sun. This will give some show of probability to the hypothesis that this device was the badge of some early Masonic guild. But the interpolation of the letter would also tend to show that Walter Dixi had adopted the guild device with the addition of the letter, to form his own private seal, which he also used as his mark.

If this be so, then this would be a very early specimen of a proprietary mark. While, however, it presents the characteristic of a mark used to designate the personality of a workman who constructed the brass, it differs in its complicated form from the more simple marks used by the mediaeval Masons. The Messrs. Waller, whose theory was that it was the badge of a guild of Masons, say that this will suggest "that the same minds that designed the architectural structures of the Middle Ages also designed the sepulchral monuments." Without accepting the truth of the premises there can be no doubt of the correctness of the conclusion. The same artistic skill and taste that were displayed in the exterior construction of churches and cathedrals was also employed in their interior decorations, sepulchral and otherwise, and the same class of artists were engaged in both tasks.

If the profession and the "seal of Walter the Mason" were retained, as we may well suppose, by his descendant, then we have the very best evidence that the sepulchral brass of Sir John de Creke and his wife were designed and constructed by a Mason, who used his family seal as his proprietary mark.

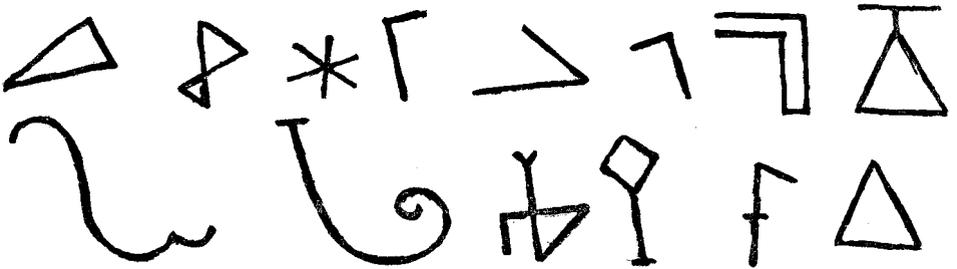

Letters, as initials of the names of the workmen, are repeatedly found among the mediaeval Masons' marks. This letter N is met with on stones in the Church of St. Rudegonde, at Poitiers, in France, and in different churches in Scotland.

Mr. Lyon gives, from the Minute Book of the Lodge of Edinburgh, and Mr. Godwin, from personal observation of stones in the churches of England and the continent of Europe, many marks

consisting only of letters, single and double, of which the following are specimens:

Besides this class of what may be called literal marks, being evidently the initials of the names of the workmen who inscribed them, there was a second class of marks which were geometrical, consisting of angles, curves, circles, and other mathematical figures. These were far more common than the literal, and have been found in great variety. The following are a few specimens taken from English, Scottish, and Continental churches:

The great prevalence of these marks, composed of mathematical lines, is a strong confirmation of the truth of the opinion entertained by Paley, Lindsay, and many other writers, that the secret of the mediaeval Freemasons was the application of the principles of geometry to the art of building. This secret, the magnificent results of which were exhibited in the great Cathedrals and other massive edifices erected during the Middle Ages in the Gothic style, has been lost to the professional or Operative Masons of the present day. But its influence is still felt by the Speculative Freemasons, who succeeded the Operative Lodges as organized bodies,

and who, when they abandoned the operative art, or rather transmuted it into a science, still retained, so far as they possibly could, the relics of the older institution.

Hence we find these Speculative, or, as they called themselves, "Free and Accepted Masons," made "right angles, horizontals, and perpendiculars" the basis of all their manual modes of recognition, and declared that "geometry was the foundation of Masonry."

A third class of marks may be designated as the symbolical. And here I am compelled to dissent from the views of Bro. Lyon, who says that "there is no ground for believing that in the choice of their marks the 16th century Masons were guided by any consideration of their symbolical quality or of their relation to the propositions of Euclid."¹

Symbolism, as a means of giving a language and a spiritual meaning to their labor, was a science thoroughly understood and practiced by the Masons who invented the Gothic style. Findel says that they symbolized their working tools, a custom in which they have been closely imitated by their Speculative successors.

The symbolism of the Gothic architects has already been sufficiently discussed in a previous chapter, and it is now necessary to advert to it only in reference to the fact that the symbols used by the builders in the ornamentation of the churches furnished them, also with a fertile supply of marks.

We must not, therefore, confound the more complicated decorations used as symbols on the exterior and in the interior of churches, such as gargoyles, rose windows, cathedral wheels, etc., with the simpler forms of some of these symbols which were adopted by the builders as proprietary marks.

As these symbolic marks presupposed that those who adopted them to designate their work must have understood their meaning, it would not be a very bold assumption to believe that the use of them for that purpose was confined to the more intellectual portion of the workmen. The adoption of a symbol for a mark would, in general, indicate that the person who adopted it was one who had extended his studies to the highest principles of his art and had made himself conversant with the science of symbolism.

¹ "History of the Lodge of Edinburgh," p. 68.

If this reasoning were accepted, we should then recognize another class lower in culture than the former and less familiar with the occult elements of their profession, though perhaps equally skillful in all its practical operations. Being therefore familiar with the method of applying geometry to the art of building, these workmen would be likely to select mathematical figures for marks.

Pursuing the same train of reasoning we would find a third and still lower class, far inferior to either of the two preceding classes in intellectual culture and having sluggish minds wholly uninspired by anything that was not purely practical in their profession. As they would be compelled, by the regulations of the guild or as they were guided by their own inclination, to distinguish the stones which they had wrought from those of other workmen, we might suppose that they would be content to achieve that object by using the simplest method that could present itself, which, of course, would be the initial letter of their name.

We would thus have, if we accepted this theory, an easy method of detecting when we inspected the stones of a mediaeval edifice constructed by the old Gothic Freemasons, not only the practical skill in architecture of the builders whose works have been individualized by their proprietary marks, but also the intellectual cultivation of each workman. This one we might say was high in art, for he had cultivated the symbolism which was its highest development; this one had not aspired so high, but had confined himself to its geometric formula; but this one was low in intellectual cultivation, with little if any identity or imagination, for he had contented himself with no more ingenious device to designate his labor than the simple sculpture of a letter of his name.

The acceptance of such a theory as this would, I confess, very readily relieve the antiquary from all the embarrassments which he encounters, in the attempt to explain the reason of this diversity in the character of the Masonic marks of the Middle Ages, and would enable him to explain why they are not all of one kind—not all monogrammatic, or all geometrical, or all symbolic.

Unfortunately, however, for the easy solution of the problem another theory has been proposed by M. Didron, to which further reference will be directly made, which ascribes the monogrammatic marks to the higher class of workmen or overseers, and the symbolic and mathematical to the inferior class of masons.

This theory is not untenable, because it is based upon the well-known fact that in the Middle Ages the art of writing was not so generally diffused as it is now. Many persons of high station were unable to sign their names, and there are instances where kings have affixed the sign of the cross to charters, assigning as a reason *pro ignorantia literarum* in consequence of their ignorance of writing. Now, it is not to be supposed that the lower order of Masons were any better instructed, and as the use of initials would indicate a knowledge of letters, it may be inferred that only the more educated part of the fraternity used this method of making their proprietary mark, while crosses, angles, shoes, triangles, and other similar figures would be adopted by those who were unacquainted with the use of letters.

But reasonable and plausible as this theory may at first glance appear, neither it nor the former are sustained by the facts that are within our knowledge.

In Mr. Lyon's most valuable work on the Edinburgh Lodge we will find several fac-similes of minutes of the lodge, in which are the signatures of the officers and members. Now, a careful inspection of these marks does not reveal any such arraignment as is indicated in either of the two theories, and, therefore, supports neither.

Let us take, for instance, a minute of the lodge in June, 1600. Here there are thirteen signatures and thirteen marks. Of these but one, that of the Warden, Thomas Vier, or Weir, is a monogram; the twelve others, all of them *Maisteris*, or Masters, are mathematical, or symbolical. Here we might infer that the chief officer alone used a monogram, which would, to some extent, sustain M. Didron's theory.

But on the inspection of another minute of the year 1634 we find that the Deacon and Warden use initial letters for their marks, while Anthony Alexander, the highest Masonic officer in the kingdom, being the King's Master of the Work, adopts a symbolic mark, a practice that was imitated by Sir Alexander Strachan, who had just been admitted as a Fellow Craft.

There is so much contradiction in these records, in reference to any appropriation of marks of a particular kind to distinctive classes of workmen, that we are compelled to leave the whole question "under advisement."

It is, perhaps, a plausible solution to suppose that the choice of

a mark being left entirely to each workman it became a mere matter of taste, and that while some were contented with a monogram or merely an initial letter, others, more imaginative, would select a symbol, or, if they were peculiarly mathematical in their notions, would take a geometrical figure.

It was probably only to one of the first class that could be truthfully assigned the title borne by that skillful architect, who had been summoned from Germany by Ludovic Sforza to complete the Cathedral of Milan, and who, doubtless for his skill in symbolic architecture by which he gave to stones an instructive voice, was called *Magister de vivis lapidibus* — "Master of living stones."

Four of these symbolic marks, which are of comparatively frequent occurrence, are the pentalpha, the double triangle, the fylfot, and the *vesica piscis*, which are delineated in that order in the following cut:

It is worthy of note that not one of these four marks here delineated are of purely Masonic origin. The first, which is the Pentalpha, is derived from the Greek, and was, in the school of Pythagoras, a symbol of health. Among the Orientalists it was deemed to be a talisman against evil, and is often seen on old coins of Britain and Gaul, where it is supposed to have been a symbol of Deity. It was finally adopted by the early Christians, who referred its five points to the five wounds of Jesus, and it is probable that through this character as an ecclesiastical symbol it passed over to the Freemasons, whose organization, as we have seen, was at first purely ecclesiastical.

The second is a Hebrew symbol and known as the shield of David, and sometimes as the seal of Solomon, and was considered by the ancient Jews as a talisman of great efficacy, because it had a recondite allusion to the Tetragrammaton or four-lettered, incommunicable name of God. The early Christians adopted it and made the two intersecting triangles symbols of the two natures of Christ,

the divine and human. Thence it became a favorite decoration of the Gothic architects and is to be found in most of the mediaeval churches.

The third mark, here delineated, is what is known as the Fylfot, or Mystic cross of the Buddhists. It is found in Egypt, in Etruria, on the Scandinavian Runic stones, and on British and Gaulish coins.

The fourth of these marks is known as the *Vesica Piscis*. The fish was universally accepted among the early Christians as a symbol of Jesus, and is found constantly inscribed on the tombs in the Catacombs. The fish was adopted as an emblem of Jesus, because the letters of the Greek word for fish form the initials of the words in the same language which signify "Jesus Christ, the Son of God, the Saviour." At first, as it appears in the Catacombs, it presented the correct, though rudely drawn, shape of a fish. It afterward assumed the abbreviated form of an oval. In this latter form it was frequently employed by the Freemasons of the Middle Ages as a symbolic decoration, and the seals of all religious communities and ecclesiastical persons were made of the same shape.

Albert Dürer, who was a distinguished architect of the 15th century, wrote a work on Geometry in which he says that the *vesica piscis* is formed by two intersecting circles which produce two pointed arches, one above and one below. It is probable that it was in reference to this idea, which was not confined to Albert Dürer, that the pointed arch, the peculiar characteristic of the Gothic style, was suggested by the intersection of the two circles which also form the *vesica piscis*, that the Freemasons adopted it as a mark, though its early religious origin would also sufficiently account for the introduction of it into church or Gothic architecture.

But the further discussion of these symbolic marks appertains more properly to a subsequent portion of this work which is to be specially devoted to the investigation and interpretation of Masonic symbolism.

Various other classifications of these marks have been made by different writers who have investigated this interesting subject.

M. Didron, who collected a great many of these marks in France, thought that they were divided into two classes, namely, those of the overseers of the works, the *magistri operum*, and the men who wrought the stones. The marks of the first class, he says, consist

generally of monogrammatic characters and are placed separately on the stones; while those of the second class partake more of the nature of symbols, such as shoes, trowels, mallets, and other objects of a similar kind.

Other writers have divided these marks into three classes, and suppose that some were peculiar to the Apprentices, others to the Fellows, and others again to the Masters.

There is abundant historical evidence, especially in the Ordinances of the German Masons, that Apprentices were sometimes invested with a mark, particularly when, for certain reasons, they were permitted to travel, before the expiration of their time, in search of employment.

But I do not find any authentic means by which we can distinguish from the appearance of any mark, or from any other cause, the marks which were peculiar to any grade, or by which we can authoritatively distinguish the mark of an Apprentice from that of a Fellow or Master.

Speaking of the traditional arrangement of marks into distinctive classes for each of the three grades of Masters, Fellows, and Apprentices, Mr. Lyon says that "the practice of the Lodge of Edinburgh, or that of Kilwinning, as far as can be learned from their records, was never in harmony with the teachings of tradition on that point."¹

What is thus said of the Scottish Masons may, I think, be said with equal correctness of those of Germany and England. Indeed if, as will hardly be denied, the system of proprietary marks was originally derived from the German Masons, who perfected, if they did not invent, it at Strasburg, it is reasonable to suppose that the same or very similar regulations must have prevailed in every country into which the system was introduced. There might have been some modifications to suit local circumstances, but there would have been no radical changes.

We must, therefore, reject the theory that there was any distinction of marks appropriated to the three ranks of workmen. Certainly, at the present day, we have no authority for recognizing any such distinction.

There are, however, outside of any question as to the classifica-

¹ "History of the Lodge of Edinburgh," p. 69.

tion of the marks many circumstances and conditions connected with them which are of a highly interesting character.

In the first place, the antiquity of the custom among architects and builders of placing marks upon stones is worthy of notice. But in treating this question of the early origin and use of marks by builders, we must not forget the distinction, which has already been referred to, between such marks as were used simply as symbols, and intended to express some religious idea, and those which were adopted by builders to designate and claim the proprietorship in a stone, and which have hence been called proprietary marks.

There is the very best evidence, that of the stones themselves, to prove that symbols were sometimes represented by hieroglyphics, and sometimes by pictured representations of objects. The hieroglyphical inscriptions on the monuments of ancient Egypt and the emblems sculptured in profusion on the topes or Buddhist towers of Central India,¹ though often resembling the more modern Masonic marks, are known to have been used only as the expressions of religious ideas. They were symbols and not marks.²

The proprietary marks may, however, be traced as far back as the end of the 10th century, and are to be found upon the walls of the Cathedral of St. Mark in Venice. As this edifice was constructed after the Byzantine method and by Greek architects brought to Venice by the government for that purpose, we may safely adopt the conclusion of Mr. Fort, that Masonic proprietary marks were first introduced into western Europe by the corporations of Byzantine Masons.³

It is very probable that the use of Masonic marks at that period was regulated by a system similar to that which prevailed at a later time among the German Masons. But this can be only a matter of conjecture. No regulations on the subject have been preserved, if any such existed. All that we can presume from the testimony of the stones themselves, is that as the design of these marks was to

¹ See Fergusson's "Tree and Serpent Worship; or, Illustrations of Mythology and Art in India," *passim*.

² Belzoni, in his narrative of his operations in opening the second pyramid, had said that he got a clew to the entrance by certain marks on the exterior stones, and this has been fancifully accepted as a proof that proprietary marks were used by the pyramid builders, although it is very evident that those marks were only hieroglyphic inscriptions.

³ Fort, "Early History and Antiquities of Masonry," ii., p. 325.

afford the means of distinguishing the work of each artisan, each mark must have been the exclusive property of the mason who used it.

It is not until the organization of the fraternity of Freemasons, which took place at Strasburg Cathedral in the 15th century, and the adoption of their Ordinances, that we obtain any documentary information of the mode in which the proprietary marks of the mediæval builders were regulated.

The universality of these marks is another point in their history that is worthy of notice. By their universality is meant their prevalence in every country into which the Freemasons penetrated, and into which they extended their peculiar system of architecture. From the northern parts of Scotland to the island of Malta, we will meet with these marks sculptured on the stones of buildings which had been constructed by this brotherhood of builders. It is curious says Mr. Godwin, to find these marks exactly the same in different countries, and descending from early times to the present day.¹

The fact that in a great many instances identical marks have been found in countries widely separated, proves, as Mr. Godwin claims, in a passage already quoted, that the men who employed them did so by a system which must have prevailed in all essential points in all those countries.

M. Didron gives the following illustration of this fact. He found stones marked in the Cathedral of Rheims with a certain monogrammatic character, and the outline of the sole of a shoe; other stones with the same monogram and the outline of two soles, and others again with the same character and the outline of three soles.

The use of the same monogram would indicate a close connection, perhaps in the same guild or lodge, while the variation in the number of soles would indicate that each of the marks belonged to a different person.

This mark M. Didron calls the shoe mark—a very proper designation. As he found the same shoe mark at Strasburg, and in no other place, he accounts very reasonably for that fact by supposing

¹ "History in Ruins; a Handbook of Architecture for the Unlearned," by George Godwin, F.R.S., London, 1858.

that certain of the workmen at Rheims had been brought from Strasburg.

Dr. Krause has given in his great work a plate of marks found in the church of Batalha in Portugal, and which he says are similar to marks found  in a church near Jena in Germany.¹ One of them of a rather complicated form is also to be seen among the marks recorded in the minute book of the Lodge of Edinburgh, copies of which are contained in Mr. Lyon's History of that lodge.

Amid the immense variety of marks suggested to the mind of the Mason, by an unlimited number of objects, it is very likely that sometimes two stonemasons, living at remote distances from each other, might, by a mere accident of caprice, select the same object for the mark of each. This especially might happen in the case of figures well known, from some religious or symbolic use to which they had been applied. Such, for instance, were the pentalfa, the mystical *vesica piscis*, or fish, the shield of David, the square and compass, and others of a like import, which were familiarly known in the Middle Ages as religious symbols.

Hence the fact that any one of these figures is found to be inscribed on stones in two or more places, would not necessarily indicate that the same workman had migrated from one of these places to the others and carried with him his own peculiar mark. Two, three, or more Masons, living in different places and who had never seen each other, might each have selected, without reference to the others, so familiar a figure as the pentalfa or the fish,² for his proprietary mark. And this undoubtedly did occur, for we find these figures used as marks in buildings very remotely distant from each other, and sculptured at such different epochs as to make it impossible that they could all have been the work of one and the same man.

But, as a general rule, when we meet with the same mark in two

¹ "Drei altest. Kunsturkunden," iii., 311.

² The *vesica piscis*, at first in the form of a fish, was placed by the early Christians on the tombs in the Catacombs of Rome, as a symbol of salvation by the waters of baptism. It was adopted, afterward, as a symbol in Christian art of the Saviour, and was so used by the Freemasons in the decoration of churches. Then some of the workmen, impressed with a religious feeling, took it as a proprietary mark, and it is found as such on stones of many mediæval buildings.

places, between which there may have been a possible connection, and at times not far separated, it is a legitimate presumption that the marks belonged to the same person, and that he had migrated from one place to the other and had carried his skill and the mark of his skill with him.

The method by which these marks were obtained by the workmen or bestowed upon them is perhaps the most important and the most interesting part of their history.

The knowledge of the Regulations of the Strasburg Masons and of the customs of the same fraternity in Scotland has been transmitted to us, and we are at no loss to describe the method of bestowing marks which was practiced in Germany and Scotland.¹

It is, however, singular that neither in the Regulations of Etienne Boileau in France, nor in any of the old Constitutions in England, is there the slightest reference to the subject of Masonic proprietary marks.

We learn, however, from the inspection of buildings still remaining, that the custom of using proprietary marks was practiced by the Masons in both those countries, and we may justly presume that the same or analogous regulations as to their government existed among the French and English Masons as did among the German and Scottish.

Among the German Freemasons of the Middle Ages, when an Apprentice had served his time he became a Fellow, and on being admitted into the Fraternity he received a mark, which he was to carve on the stones which he wrought, so as to identify his work.

The peculiar form of the mark may, we suppose, have been selected by the workman, though the statutes speak of it as having been "granted and conceded to him by the craft or corporation," and having been once selected or granted, he was never, as we learn from a clause in the Strasburg Ordinances of 1563,² permitted afterward to change it—wherever, in the course of his nomadic life as

¹ It is very true that the existence of marks is recognized only in a single passage of the Ordinances of Strasburg, but we have ample information as to the regulations on the subject in the writings of Steiglitz, Fallon, Winzer, and other German authors who have thoroughly investigated the subject.

² Es soll auch keiner sein ehrenzeichen, das irne von einem Handtwerck verlichen und vergont worden ist, für sich selbs und eigens gewaltz nicht endern "Ordnung der Steinmetz," anno 1462, art. 73.

a wandering artisan, he might travel—into whatsoever region he might go in search of work, however distant it might be, he was bound to use the same mark in designating the materials which he had wrought.

Hence it is that we account, in a great many instances, for the repetition of the same mark in various places widely separated. Sometimes it might happen that, by a casual coincidence, two masons, in different places and wholly unknown to each other, would choose the same figure for a mark, but, as a general rule, especially where the mark was at all complicated or peculiar in shape, it would be right to infer that the stone so marked in two places must have been the work of the same artisan who had immigrated from one place to the other.

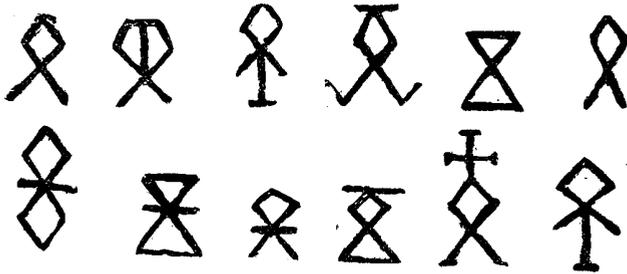

Thus, as it has already been shown, the "shoe marks," as they have been called, which are very peculiar and complex, accompanied as each is by a monogram, having been found in the Cathedral of Strasburg and also in that of Rheims, it has been justly assumed by M. Didron that they were the proprietary marks of certain Masons of Strasburg who had been brought to Rheims and who continued to use there those marks of proprietorship which they had originally adopted at the former place.

From this necessity of identification, so that the stones wrought by one Mason might be easily distinguished from those which were worked by all the others, it followed that no two workmen who were attached to the same sodality or lodge ever selected precisely the same mark. There were some forms, such as angles, crosses, squares, and triangles, which, being familiar to these geometric Masons, would naturally be suggested to the mind as appropriate figures for marks, and such figures were, accordingly, often selected. But in every case some modification of the original form has been made, which, however minute, has been sufficient to show a distinct difference, so as to easily enable every inspector to recognize it.

Thus of ninety-one proprietary marks copied by Mr. Lyon in his *History of the Lodge of Edinburgh* from the minute-book of that lodge, no two can be found which are precisely alike. Yet it will be also found that certain forms seem to have been suggested to different minds, but, as has been already said, the original form has always been adopted, with some addition or change necessary to preserve its character and usefulness as a token of proprietorship.

Thus the figure of a lozenge with two sides extended inferiorly, which I am inclined to think was at first suggested by the *vesica piscis* given in a preceding page of this work, with the circle changed into straight lines for the greater facility of being carved on stone, appears to have been a favorite mark.

Of this mark I have found no less than eleven variations, all of them completely distinct, each from the others, and yet every one preserving evident traces of the original type. Of these marks the following copies are here inserted, taken from the two plates in Bro. Lyon's work. The first is the original type, and it will be readily seen, by inspection, how much and yet how little all the others differ from it.

This is a very striking instance of the manner in which these old Masons often fabricated their proprietary marks. One would select some popular and well-known symbol, and several others of less inventive genius would copy his design with some slight modification, or, in the language of the heralds, each would bear his mark "with a difference."

And as the heralds invented and used these "differences" in coat armor, to indicate a descent of all the bearers from one common ancestor, so might we not, with the aid of a very little romance, suppose that the owners of these similar marks bore some close affinity by relationship or friendship and intimacy to the owner of the original type.

But this thought is scarcely worth pursuing, though the results of an investigation on this point would be very interesting if we had any authentic method of making it.

As a general rule, Masters and Fellows only were entitled to use marks. But in Germany there were certain circumstances under which the privilege was extended to Apprentices. Thus according

to the Statutes of 1462, when a Master had no employment for his Apprentice, he permitted him to go forth in search of work, and on such occasions a mark was assigned to him.¹

But this was only a temporary loan to be used by the Apprentice while away. It was still the Master's mark. Apprentices in Germany were not invested with marks during their *Lehrjaren* or time of apprenticeship.

This appears from the next statute in the same Ordinances, where it is expressly stated that "no Master shall be permitted to bestow a mark upon his Apprentice until he had served out his time."²

It will be noted that in the former of these regulations which have just been cited, the verb "to lend," *verleihen*, is used, and in the latter the verb is "to grant or bestow," *verschenken*. The Apprentice might get the temporary loan of a mark for a special purpose, but under no circumstances could he be permanently invested with one. That prerogative belonged only to the Masters and Fellows.

It was different with the Scottish Freemasons. The Schaw Statutes, promulgated by William Schaw, Master of Work in 1598 and in 1599, had the same authority with the Masons in Scotland as the "Old Charges" had in England, the Ordinances of Strasburg and Torgau had in Germany, or the Regulations of Etienne Boileau had in France.

Accepting the authority of these Statutes we can be at no loss on the subject of marks. They say nothing about the marks of Apprentices, but they direct that on the reception into the fraternity of a Master or Fellow, his name and mark shall be inserted in a book kept for the purpose, together with the date of his reception.

But the minutes of Mary's Chapel Lodge and of Kilwinning Lodge furnish ample evidence that the privilege of the mark was sometimes extended to Apprentices, that their marks were also registered, and that they paid a fee for the registration.

It is probable that a satisfactory reason may be assigned why the Apprentices in Scotland received the privilege of marks which, as far as can be learned, was not conferred upon them in other countries.

Apprentices elsewhere were always under the immediate control of their Masters, and did no work independently and for which they

¹ "Ordnung der Steinmetzen vom Jahre, 1462," No. 30.

² *Ibid.*, No. 31.

were responsible to the owners, the Masters of course assuming all responsibility for the acts of their Apprentices.

But in Scotland, Apprentices were sometimes permitted to undertake work for themselves, and thus for a time they became as Masters, and were therefore, like them, required to have a proprietary mark.

Thus in the Schaw Statutes for 1598 we meet with this clause, which is here, however, transferred from the archaic Scottish idiom of the original to our modern intelligible vernacular:

"Item, it shall not be lawful for an Entered Apprentice to take in hand any greater task or work than will extend to the sum of ten pounds, under the penalty aforesaid, namely twenty pounds, and that task being done, he shall undertake no more without the license of the Masters or Warden where they dwell."

Here the position of the Scotch Apprentice was similar to that occupied by the German, when the Master, having no work for him, permitted him to travel in search of employment and at the same time loaned him his mark; that is, gave him permission to use it and to inscribe it on the stones which he finished.

But the Scotch Apprentice was more liberally treated. His mark became a permanent possession, and like those of the Masters and Fellows was registered in the book of the lodge.

As to the formality with which the Mason was invested with his mark, the custom varied in Scotland and in Germany. What it was in England and France we can not tell, as no records touching this subject are extant.

In Scotland the registering of the mark as well as the name of the Fellow Craft appears from the Schaw Statutes to have been a necessary part of the form of reception. But it does not follow that he was at that time invested with it, for he may have selected it while an Apprentice, for the minutes of the Lodge of Edinburgh show that any Apprentice might have a mark if he was willing to pay for it.¹ There is no evidence that any especial ceremony beyond that of registration accompanied what in Scottish phraseology was called the giving, choosing, taking or receiving of a mark. In none of the Scottish records, says Bro. Lyon, is there anything pointing to a special ceremony in connection with their adoption.²

¹ "History of the Lodge of Edinburgh," p. 68.

² *Ibid.*, p. 74.

The custom was otherwise in Germany. Findel describes the ceremony of reception, which resembled, in many respects, the modern form of initiation into the First degree. Of this rather impressive ceremony the investment with a peculiar mark constituted a preliminary part.¹

The Ordinances of 1462 prescribed that when a mark is presented there shall be a banquet given by the Master of the Lodge, to which a few ecclesiastics and not more than ten Fellows shall be invited. The cost of this feast was to be very moderate, and if the workman who received the mark, and in whose honor it was given, desired to have a larger provision, it was to be provided at his expense.²

Dr. Krause, in commenting on this article of the 1563 Ordinances, says that everyone who was to be admitted a Fellow received at the time a mark which was to be peculiar to himself, consisting of straight lines and curves joined together in the form of angles.³

According to Heldmann this mark was called the *Ehrenzeichen*, or distinctive mark of a Fellow, and that a copy of it was appended to the margin of the register or record of his admission.⁴

Krause calls it also "*Namenchiffer*" the cipher of the name, and adds, that with it the Fellow marked all stones in the making of which superior skill was employed.

"Hence we find," he says, "in every country of Europe in the buildings which were constructed by Gothic art on single stones, and also on the outside of the edifice, such name, ciphers, or marks."

Krause also says that at the time of giving the Fellow his mark, he probably also received a particular name.

But of this circumstance, which, after all, Krause relates as only a probability, I have met with no substantiating testimony in any other authority.

I am inclined to believe, contrary to the opinion of some writers, that there was but little or indeed no ceremony of any secret nature accompanying the bestowal of the mark. The only formality appears to have consisted in the giving by the lodge of a banquet

¹ "History of Freemasonry" (Lyon's Translation), p. 65.

² "Ordnung der Steinmetzen vom Jahre, 1563."

³ "Kunsturkunden," iii., p. 311.

⁴ "Die drei ältesten geschichtlichen Denkmale der Deutschen Freimaurerbrüder» Schaft," Aman, 1819, s. 282.

But that there were exoteric ceremonies accompanying this is to be inferred from the fact that a few ecclesiastics were admitted among the guests.

The giving of a banquet by the lodge was also prescribed by the Schaw Statutes of 1599 to be given by and in the lodge on the entry of Apprentices and the admission of Fellow Crafts.¹ But Mr. Lyon thinks that the custom was afterward abolished and the feast compounded for by a sum of money paid by the entrant to the lodge.²

The Masons often made use of their marks as seals, and Steiglitz has given, in his work on *Old German Architecture*,³ several specimens of marks used as seals. We have already seen, in a preceding part of this chapter, that the mark of Walter Dixi, the English Mason, was adopted by him as a family seal and affixed as such to a deed of conveyance in the 14th century.

Lastly we have to inquire whether proprietary marks were hereditary. We have no evidence that there was any statute or Ordinance regulating this matter, but there can hardly be any doubt that in many instances the son voluntarily adopted the mark of his father. The case of the family of Dixi, just referred to, is an instance in point where a mark appears to have descended through at least three generations.

But a circumstance occurred during the Session of the Archaeological Association at Canterbury in September, 1844, which it would seem ought to set this question of the descent of marks by voluntary inheritance completely at rest.

It is stated in the *Archæological Journal* that a member of the Association, believing that marks were quite arbitrary on the part of the workmen and had no connection either one with another or with Freemasonry, requested Mr. Godwin to accompany him to the Mason's yard which was attached to the Cathedral. When there he called one of the elder men and asked him to make his mark upon a piece of stone. The man complied, and being asked why he made that particular form, said that it was his father's mark

¹ All bankattis for entrie of prenteis or fallow of craftis to be maid within the said Lodge of Kilwinning, Schaw Statutes, 1599.

² "History of the Lodge of Edinburgh," p. 44.

³ "Von altddeutscher Baukunst." C. S. Steiglitz, Leipzig, 1820.

and his grandfather's mark, and that his grandfather had received it from the lodge.¹

Doubtless if the inquiry had been continued it would have been found that many other marks had passed from father to son. Indeed, nothing is more natural where the latter has pursued the profession of the former.

Our investigations have led to the following conclusions:

1. The existence of proprietary marks on European buildings may be traced as far back as the 10th century, and they were probably brought over at that time by the Greek artists who introduced the Byzantine style of architecture, for which the Freemasons afterward substituted the Gothic.

2. But it was not until the 15th century that we were furnished with any historical evidence that there was an organized system of laws by which the imparting, owning, and using of these marks was regulated. Doubtless such a system had been in existence long before, but its practice was regulated by oral and traditional usages, until old customs, having begun to be neglected or forgotten, it was found necessary to renew them by written Constitutions.

Hence it is in the German Ordinances of 1462 that we are to look for the first written laws regulating the subject of proprietary marks.

If we have no authentic documents which refer to this subject anterior to the 15th century, it is not because a system of giving and receiving marks, and a prescribed method of using them, did not exist anterior to that period, but because, to use the language of Bro. Findel,² it was only when the ancient forms had begun to fall into disuse, when the taste for forming leagues and confederacies was on the wane, and when the true comprehension of the signification of the ancient ritual, usages, and discipline was beginning to disappear, that the Masons felt the necessity of reviving the ancient landmarks and of giving them authority by written Constitutions.

Of these "ancient landmarks" not the least important was the

¹ "Archæological Journal," vol. i., p. 383, note, cited by Mr. Pryor in the "Freemasons' Quarterly Review," 1845, p. 441.

² "History of Freemasonry" (Lyon's Translation), p. 73.

use by Stonemasons of proprietary marks, and hence we find that regulations for their government were not revived or re-established, but transferred from oral tradition to a written document, so that there might be no defense or palliation of a disobedience or infringement of them.

3. As we find this system of marks prevailing in Germany, in France, in England, and in Scotland, as well as in many other places, we have a right to infer that as the marks were often of the same form, the same system of regulations prevailed in all those countries.

4. The marks were not arbitrarily selected, and liable to be changed at the fancy or caprice of the owner, but were only obtained after laborious study of the principles of the Gothic art and adequate proofs of skill; and having been bestowed with some formal ceremony, however brief, the proprietor was not permitted at any time or for any cause to change the form or character of the mark, but was obliged always after its acceptance to retain it and to affix it to all stones which he fabricated with superior skill and care.

5. These marks were sometimes monogrammatic, sometimes geometrical, and sometimes symbolic, but, notwithstanding some few writers have entertained a contrary opinion, there is no authentic evidence that the choice of the character of the mark was governed by any rules which bestowed the marks with either of these characteristics upon different classes or ranks of the workmen. Yet it is not improbable that some such rules may have prevailed, though there is no documentary evidence extant of their existence. It must, however, be confessed that the fact that in Germany Apprentices were permitted, under certain circumstances, to employ the marks of their Masters, would seem to indicate that there could not have been any difference in the character of the marks used by different ranks of Masons.

6. In some cases proprietary marks were hereditary, and there are instances known where the son or the grandson has assumed the mark of his father or grandfather. But there does not seem to have been any law making such hereditary transmission obligatory. If the son adopted the mark of his father it was because he chose to do so, and he might, with perfect propriety, and most frequently did, select a different mark. All Statutes and Ordinances are silent on the subject.

Very intimately connected with this subject of proprietary marks is that of the Mark degree, which, whatever was the date and the place of its origin, was undoubtedly founded on and to be traced to the usages of the Operative Masons.

The fact of the existence of this degree, which continues the usage of marks in modern rituals, is another important link in the chain which connects the Operative Masonry of the Middle Ages with the Speculative Masonry of the present day.

As such it is entitled to due investigation, and it will therefore be made the subject of the succeeding chapter, though the continuity of our researches into the progress of mediaeval Masonry will, by this course, be to some extent interrupted.

But I know no better plan than to let the history of Speculative Mark Masonry immediately and continuously follow that of Operative Mark Masonry. It is but the transfer from the treatment of a cause to that of its effect.

CHAPTER XXV

THE MARK DEGREE

HERE is no stronger or more convincing proof of the connection between the Operative Freemasons of the Middle Ages and those of the present day, and of the regular descent of the one from the other, than that furnished by the existence in the modern rituals of a degree the ceremonies of which have been evidently founded on the system of proprietary marks which prevailed among the Stonemasons of Germany, and which passed from them into all the other countries of Europe.

If all the other authentic testimonies of the fact that about the beginning of the 18th century there was a transmutation of an Operative Art into a Speculative Science, were expunged from the record, the apparently extraordinary phenomenon that there exists in the latter, and in the latter only, a peculiar and extraordinary system, which also prevailed in the former, and in the former only, would be sufficient to warrant the conclusion that there must have been a very intimate relation between the two associations with which this system was connected.

Therefore, as a connecting link of that great chain which, beginning with the Roman Colleges of Artificers, extended to the early Masons of Gaul and Britain, to the Traveling Freemasons of Lombardy and Germany, and finally terminated in the Free and Accepted Masons of modern times, a thorough consideration of the rise and progress of the Mark degree must be deemed essential to the completeness of any work on the history of Freemasonry.

In pursuing this investigation it will be necessary to inquire, firstly, what is the position of the Mark degree in the modern rituals; secondly, what is its character and legendary history; and, thirdly, what was its real historical origin as distinguished from the mythical account of its fabrication, as it is given in its legends.

EXECUTION OF JAMES DE MOLAY

At Paris, March 11, 1314

To an investigation of these important and, to the student of Masonic Antiquities, interesting, points, the present chapter will be devoted.

The Mark degree, or to define it more accurately according to the received phraseology, the degree of Mark Master, constitutes the fourth degree or the first of what are called the capitular degrees in the American Rite as it is practiced in the United States. In Scotland and Ireland it is a degree recognized under the jurisdiction of the Grand Chapter. In England it is not recognized by the Grand Lodge. The articles of Union, adopted in 1813, defined Ancient Craft Masonry to consist only of the first three degrees, including the Royal Arch. Hence, there being no place provided for the Mark degree, it was ignored in English Masonry until its introduction a few years ago, when it was placed under an independent jurisdiction called the Mark Grand Lodge, a body which was established in 1856.

On the Continent of Europe and in all countries the Freemasonry of which is not derived immediately from and is in intimate connection with the Masonry of England and America, the Mark degree is entirely unknown. There is not in any of the German, French, Italian, or Spanish rituals the slightest allusion to it.

In the Ancient and Accepted Scottish Rite the Mark degree at one time held a distinct position, though it has ever since the beginning of this century or the close of the last, been stricken from its ritual. Of this fact there is undeniable proof.

I have in my possession an original Warrant or charter, granted in the year 1804 by the Grand Council of Princes of Jerusalem to American Eagle Master Mark Masons' Lodge No. 1, in Charleston, South Carolina, and there is in the archives of the Supreme Council for the Southern Jurisdiction of the United States, the ritual of the degree as at the time conferred, which appears to have been only on Past Master Masons of the Scottish Rite who were recognized by the possession of Scottish degrees as Past Masters.¹

There is no evidence, however, that other lodges were established

¹That is, on Master Masons who had received the preliminary degrees of the Scottish Rite, who were assumed in their own Rite to be Past Masters. In the Circular of the Charleston Supreme Council, issued in 1802, it is said that "throughout the Continent of Europe, England, Ireland, and the West Indies, every Sublime Mason is recognized as a lawful Past Master."

by the same authority. At least no other Charters have to my knowledge been discovered.¹

At the time of the establishment of the Supreme Council at Charleston, in 1801, the jurisdiction over the degree had probably been assumed by the Scottish Rite Masons, for the Warrant just mentioned was granted by the Council of Princes of Jerusalem, which was a body subordinate to the Supreme Council.

At the present time the Mark degree constitutes a part of the Rite practiced in the United States, and is under the jurisdiction of the Grand Chapter, being the fourth of the capitular degrees.

Up to nearly the middle of the present century the degree was conferred sometimes in a lodge working under the Warrant granted by the Grand Chapter to a Chapter of Royal Arch Masons, and sometimes in a Mark Masters' lodge working under a special and distinct charter from the Grand Chapter. But in 1853 this system was abolished by the General Grand Chapter, and independent Mark Masters' lodges no longer exist in America.

In Scotland, after the transition of Operative into Speculative Masonry, the Mark degree was worked originally by a few lodges under their Craft Warrant, and it was then conferred as an appendage to the Fellow-Craft degree. This was done as late as 1860, by a lodge at Glasgow, which action, however, attracted the notice of the Grand Chapter, and having in conference with the Grand Lodge thoroughly investigated the subject, the following report was made, which as giving a summary of the rise and progress of the degree in Scotland, and of the changes of position to which it was subjected, is well worthy of quotation.

In this report it was unanimously agreed by the Committee of Conference "that what is generally known under the name of the Mark Master's degree was wrought by the Operative lodges of St. John's Masonry² in connection with the Fellow-Craft degree before the institution of the Grand Lodge of Scotland. That since that date it has continued to be wrought in the Old Operative lodges, but in what may be called the Speculative lodges, it was never worked at all—or at all events only in a very few. That this

¹ The American Eagle Master Mark Masons' Lodge was in existence at least as late as 1807, and a list of its officers is given in the register published in that year by J. J. Negrin, and appended to his "Free Masons' Vocal Assistant," page 25.

² By St. John's Masonry is meant in Scotland the three symbolic degrees.

degree being, with the exception of the Old Operative lodges above mentioned, entirely abandoned by the lodges of St. John's Masonry, the Supreme Grand Royal Arch Chapter assumed the management of it as the Fourth degree of Masonry, in order to complete the instruction of their candidates in the preliminary degrees, before admitting them to the Royal Arch. And, finally, that this degree, whether viewed as a second part of the Fellow-Craft degree or as a separate degree, has never been recognized or worked in England, Ireland, or the Continent, or in America, as a part of St. John's Masonry."

It was also stated by a delegate of the Grand Lodge of Scotland at a conference on the subject of the Mark degree, held at London in 1871, that long anterior to the institution of the Grand Lodge of Scotland two classes of lodges existed in that kingdom; namely, those which worked only the First and Second degrees and of which the Mark Master or Overseer was Master, and those which worked the First, Second, and Third degrees, over which the Master Mason presided.

In both of these statements there are errors in respect to the Mark degree, which have been corrected by subsequent investigations. Bro. Lyon, whose authority on this subject is unquestionable, says that the statements in regard to an organization for conferring the Mark under Mark Masters or Overseers are unsupported by any existing records. The lodges previous to the 18th century "knew nothing of the degrees of Mark Men, Mark Master, or Master Mason."¹

As a degree of Masonry, in the sense which we give to the word degree, the system of Mark Masonry was wholly unknown to the Operative Masons of the Middle Ages. It has been shown that in Germany every Apprentice who had served his time, on being admitted as a Fellow Craft received a Mark, which was to be his unchangeably during his life. The reception of this was generally accompanied by a banquet, furnished to a certain extent of expenditure by the lodge which admitted him; but there is not the slightest allusion in any document extant to the fact that the bestowal of the mark was accompanied by esoteric ceremonies which would give it the slightest resemblance to a degree.

¹ "History of the Lodge of Edinburgh," p. 71.

In Scotland the Statutes of William Schaw required all Fellows, and sometimes Apprentices, to select their marks, which were to be recorded, and a fee was paid for their registration; but as Bro. Lyon says, there is not anything in the records of the period which points to a special ceremony in connection with their adoption.

In England preceding the middle of the 18th century we have nothing in reference to marks in the Old Charges or to the Mark degree in the minutes of lodges, either in Operative or Speculative Masonry.

We are indebted to Bro. Hughan, that indefatigable investigator, for the earliest authentic record we possess of the existence of the Mark degree in Scotland. It is contained in an extract from the minutes of the Operative lodge at Banff, the date of which is January 7, 1778. The minute is in the following words:

"That in time coming all members that shall hereafter raise to the degree of Mark Mason, shall pay one mark Scots, but not to obtain the degree of Mark Mason before they are passed Fellow-Craft. And those that shall take the degree of Mark Master Masons shall pay one shilling and sixpence sterling into the Treasurer for behoofe of the lodge. None to attain to the degree of Mark Master Mason until they are raised Master."

From this record we learn that at that time there were two degrees in connection with the mark—one called "Mark Mason," probably the same which was distinguished elsewhere as "Mark Man," to which degree Fellows were eligible, and another called "Mark Master Mason," which was conferred only on Master Masons.

We are not, however, to ascribe the year 1778, the date of the record, as the date of the institution of either of the degrees. The minutes only prove that the degrees were then in existence, and show the regulation by which they were governed.

Their fabrication must have taken place at an earlier period, but how much earlier we are unable to say. But I imagine that we would be safe in saying that neither of the degrees was fabricated anterior to the middle of the 18th century. If earlier, some notice of them would occur in the minutes of the Lodges of Mary's Chapel and Kilwinning. But those minutes have been thoroughly digested by Bro. Lyon, and no such notice has been met with,

The earliest mention of the two Mark degrees in England is

found in the Minute Books of St. Thomas Lodge No. 142 in London.

The minutes of the lodge in connection with this subject were transcribed by Bro. H. C. Levander, Secretary of the lodge, and are contained in a letter from Bro. T. B. Whytehead, Past Master of York Mark Lodge, which was inserted in the Report of the Committee on Correspondence to the Grand Chapter of Pennsylvania, and published in the proceedings of that body for the year 1879. From the minutes of the lodge, of August 14, 1777, we are put in possession of important facts bearing on this subject. The minute is as follows:

"August 14, 1777.

"Regular Lodge night, the W. M., the Wardens, the Secretary, and Treasurer present worked in the First and Second degrees, made the following brothers Mark Masons and also Mark Master Masons, opened at 6 o'clock."

From this and from other minutes of the lodge of subsequent date but of the same purport, we glean the facts that in 1777, and no doubt earlier (the lodge was warranted in 1775), the two degrees of Mark Man and Mark Master were worked in the South of England as an appendage to the Fellow-Craft's degree.

The Lodge of St. Thomas received its Warrant from the Grand Lodge of "Ancients," or Athol Grand Lodge, which held close and amicable relations with the Grand Lodge of Scotland. But there is also evidence that at a later period, the Mark degree was worked by an English lodge holding its Warrant from the Grand Lodge of "Moderns," or the legitimate Grand Lodge of England, though that body religiously repudiated all degrees except the three symbolic degrees.

Bro. Whytehead, in the article before referred to, supplies us with an extract from the minutes of the Imperial George Lodge of Middleton in Lancashire, which had been warranted in 1752 by the Grand Lodge of "Moderns." The minute is dated March 9, 1809, and is in these words:

"This lodge was opened in due form at 8 o'clock, in peace and good harmony.

"When the following Brethren were made Mark Masons."

Bro. Whytehead also cites the Directory of Minerva Lodge

No. 250 at Hull, as showing that in the year 1802 that lodge conferred, besides several other degrees, those of "Ark, Mark, and Link."

Though there was no regular book of the Mark Lodge, yet the Secretary, Bro. M. C. Peck, states that the marks were entered in the Craft minute book.

In Kenning's *Masonic Cyclopædia*, Bro. Woodford says: "It is undoubtedly true that in Scotland the 'Falows of Craft' took up their marks, but we are not aware, so far, of any corresponding use in England."¹

But the records of St. Thomas Lodge of Lancashire in 1775 and of Minerva Lodge of Yorkshire in 1809, marks were regularly selected and recorded by brethren when they received the Mark degree. The mark was always appended to the name of the brother.

So that if, by the expression "Taking up their marks," of which, he says, there was no "corresponding use in England," he means that the English Mark Masons did not select and register their marks, just as they did in Scotland, these records show that he is clearly in error.

Bro. Woodford also says, in the same article, "Mark Man, in our humble opinion, is historically synonymous with Mark Mason."

But the same records prove that in 1775 the degree of Mark Man was distinct from that of Mark Master, though in 1809 the Minerva Lodge does not appear to have practiced the former.

Whether we call the first of these degrees Mark Man or Mark Mason, and the latter Mark Mason or Mark Master Mason, the words Mark Man and Mark Mason, in the meaning given to them at the present day, are not synonymous, and never could have been, because they indicate two distinct things.

These minutes also show that in the 18th century the Mark degree was worked independently by certain Blue lodges under their Grand Lodge Warrants. It was, however, rejected as a degree, or rather not recognized by the United Grand Lodge, in the articles of union adopted in 1813. It has, however, always been recognized in Scotland and in Ireland as a part of Speculative Masonry necessarily preparatory to the Royal Arch.

The Mark degree was introduced into the United States at a

¹ Kenning's "Cyclopædia," in voce. Mark Man, p. 453.

time subsequent to the middle of the last century. In the sparseness of authentic documents, it is impossible to affix the precise date of the introduction of the Mark degree into America, but it would be, I think, more correct to place that date at about the close rather than immediately after the middle of the century. "Independent Mark Lodges," says Bro. Hughan,¹ "were scattered throughout the United States of America during the latter part of the last century and early in the present one." This, I have no doubt, as the result of my own investigations, is the proper date of the introduction of the degree in this country.

The late Bro. F. G. Tisdall, who was the Master of St. John's Lodge No. 1 in the city of New York, asserted in an address delivered at the Centennial of the lodge, in 1857, that the lodge received its original Warrant from the Grand Lodge of England in the year 1757, under the Grand Mastership of Lord Aberdour, and that to its Warrant was "annexed a Warrant with power to make Mark Masons."

If this assertion were true it would establish two important historical facts: first, that the Mark degree was recognized in the middle of the last century by the Grand Lodge of England (Moderns), and secondly, that it was practiced at the same period in the United States.

Unfortunately, Bro. Tisdall has verified neither of these statements by authentic documents, and we are compelled to relegate them to the regions of the mythical, where so many hundreds of hap-hazard statements of Masonic history have found at last a quiet resting-place.²

He has, however, cited an extract from the minutes which shows that in the year 1796 there was a Mark lodge, connected in some way with the Craft Lodge, St. John, and that at that time the Mark degree was conferred by it.³

It must be admitted as a well-proven historical fact that Mark

¹ Mackey's "National Freemason," February, 1873, vol. ii., p. 348.

² In the article just cited from Mackey's "National Freemason," Bro. Hughan has written an able criticism on the address of Bro. Tisdall as well as some Essays on the same subject published by Tisdall in Pomeroy's "Democrat." Hughan has very conclusively proved that the claims of Tisdall for so early an existence in America of the Mark degree have no historical foundation.

³ The minute reads as follows: "The accounts of St. John's Mark Lodge No. I, made up to December 23, 1796, show a balance due to the treasury of £3 18s."

lodges existed in America and that the Mark Master's degree was conferred at the earliest about the close of the last century.

It was most probably introduced from Scotland or from the Athol Grand Lodge of England. St. John's Lodge of New York, already mentioned, though it was originally warranted by the Grand Lodge of "Moderns," afterward attached itself to the Grand Lodge of New York which was established by the "Ancients" under the Duke of Athol in 1781. It will be remarked, as has been proven by Bro. Hughan, that notwithstanding the assertion of Tisdall, there is no mention in the records of a Mark lodge or of the Mark degree in the records, until after it became connected with the "Ancients."

Though it is probable that in America, as in Scotland and in England, the Mark Master's degree was conferred in connection with Craft lodges, we learn by authentic testimonies that it was about the beginning of the present century, perhaps a few years earlier, conferred in Mark lodges, which seem to have been under the charge of Chapters.

Webb, in the 1812 edition of his *Freemasons Monitor*, records two Mark lodges as existing in Rhode Island and seventeen in New York. The Grand Chapters of both of these states were organized in 1798. But there were Royal Arch Chapters in existence before this date, and Mark lodges also.

The first constitution adopted in 1798 by the Grand Royal Arch Chapter of the Northern States of America, which body afterward became the General Grand Chapter of the United States, recognized the Mark Master Mason's degree as a part of its system of degrees. The Constitutions adopted in 1799 expressly provided for the granting of warrants to hold Mark Master Masons' Lodges separately.

For a long time afterward Mark lodges were held generally in the bosom of the Chapters and under Chapter Warrants, and sometimes in distinct lodges under Warrants issued by the State Grand Chapters. Perhaps the last of these was St. John's Mark Lodge No. 1, in the city of Charleston, South Carolina.

But in the year 1856 the General Grand Chapter abolished independent Mark lodges, and ever since the degree has been conferred in a lodge working in the bosom of a Chapter and under the Chapter Warrant.

The theory entertained by some that the Mark degree was introduced into America by the Masons of the Scottish Rite, founded on the isolated fact that in the year 1803 a Mark lodge had been warranted in the city of Charleston by the Grand Council of Princes of Jerusalem, is wholly untenable. It is more probable that the jurisdiction over the degree was assumed in that case by the Council, the degree having existed long before in this country, whither it had been brought from Scotland and England through Charters issued for the establishment of subordinate lodges of Craft Masons.

The Mark degree appears, indeed, to have been something of a waif floating on the waters—a sort of flotsam and jetsam—without any lawful owner, and claimed and seized sometimes by Royal Arch Chapters, sometimes by Craft lodges, sometimes by independent Mark lodges, and lastly by the Grand Council of Princes of Jerusalem of the Ancient and Accepted Scottish Rite. The degree was traveling about during the close of the last and the beginning of the present century like Marryat's "Japhet," in search of a father. Fortunately, it has at last found a parent in Scotland, Ireland, and this country, in the Grand Chapter, which has assumed the paternity. In England, maternal relations are exercised by the Grand Mark Lodge, which is nursing the bantling until such time as the Grand Chapter shall acknowledge a fatherhood.

From this indicative sketch of the position occupied by Mark Masonry in the series of Masonic grades, we pass to a consideration of its legend—that mythical history fabricated at the time of its adoption, as a part of the system of Speculative Masonry.

In pursuing our further investigations in this way we necessarily abandon the functions of the historian and assume those of the fabulist. Yet the investigation is of great importance, for the fact of the direct descent of Speculative Masonry from the Operative art practiced by the mediaeval builders, is by no circumstance more clearly and positively proved than by the modification of the system of Marks peculiar to the latter, which was invented by the former.

This modification was, however, a very important one. The practice of using proprietary Marks, which was in use among the Operative Masons of the Middle Ages, and which lasted longer in Scotland than in any other country, undoubtedly suggested to the Speculative Masons the thought which resulted in the fabrication of

the Mark degree. At first the idea of a proprietary mark may have occurred to the inventors of the different legends. If so, it gradually became obsolescent, and at this day the Mark of a Speculative Mark Master bears in its accepted character and use a much nearer resemblance to the *tessera hospitalis* of the Ancients than to the proprietary mark of an Operative Mason of the Middle Ages. To this particular point I shall have occasion hereafter to revert.

As the government of the Mark degree differed in different countries and at different times, so the legend seems also to have varied, and we find several forms of it in the rituals of the degree.

In the middle of the last century, or a little later, when in Scotland and in England the Mark system was divided into two grades or ranks, that of Mark Man and that of Mark Master, the design of the Mark was supposed to be very different from that of indicating a proprietorship.

The duty of the Mark Men is said in the ritual to have been to examine the materials as they came out of the hands of the workmen, and then to place a Mark upon them so as to enable them to be put together with greater facility and precision when brought from the quarries, the forest, and the clay-grounds to the city of Jerusalem. These marks were mathematical figures, name squares, levels, and perpendiculars which were used by command of King Solomon.

The Mark Masters were to examine the materials when they were brought to the Temple to see that every part duly corresponded, and thus to prevent confusion and mistake in fitting the respective parts to their proper places.

In doing this they were, of course, guided by the marks which had been placed upon the stones and other materials by the Mark Men. The Mark Masters then placed an additional Mark upon them to show that they approved the work which had been previously examined by the Mark Men.

In all this there is not the slightest notion of a proprietorship. The stones were marked by the mediæval Mason, so that the work of each man might be identified and he be made responsible for its imperfection or receive due credit for its merit.

But the stones and timbers were not according to this legend marked for any such purpose by the workmen, who "hewed, cut, and squared" them. The Mark was placed upon them by the Mark

Masters, who superintended the Masons and carpenters in the quarries and the forests, and who placed a Mark on each stone and timber so that when transported to Jerusalem, the Mark Masters would find no difficulty, when guided by these Marks, in placing those materials together which were intended to be in juxtaposition.

Such a system prevails at the present day among stonemasons, carpenters, and joiners, so as to point out precisely the positions to be occupied by the different parts of the work upon which they are engaged when they are to be put together.

But this is altogether different from the system of proprietary Marks which was pursued by the Operative Masons of the Middle Ages.

There was another legend introduced at a later period, for the preliminary degree of Mark Man appears to have been omitted by that time from the system. It was most probably the ritual practiced in this country before the close of the last century. It is that which was used by the Mark lodge in Charleston, which had been chartered in 1804 by the Grand Council of Princes of Jerusalem. We have every reason to believe that this was the ritual used at that time by the Mark lodges in America, from whom the Charleston Mark lodge must have received it, as there is no other source known from which it could have been derived.

The legend in this ritual differs very materially from the former, which has been just described. There is no longer a pretension that the Mark was used as a means of indicating that two distinct pieces of material were when brought together to be put in juxtaposition. That idea has now been entirely eliminated from the degree.

In this more modern legend, the Mark is said to have been used for two purposes. In the first place, Hiram Abif, seeing that it was impossible to superintend so large a number of workmen as were employed in the building of the Temple, appointed overseers to the different classes. He was careful to select only men of irreproachable character for this responsible office.

He was particularly attached to the Giblemites or Stonecutters, whom he formed into a body, whose duty it was, as overseers, to procure from the Treasurer-General such sums of money as were necessary to pay off the workmen over whom they presided, which was done at a particular time and in a particular place.

To expedite the task of payment, and to prevent confusion and imposition among the workmen, the Giblemites were ordered to provide for themselves a particular Mark by which they and the amount due to each one were easily recognized; and presenting this Mark in a particular manner, each Mark Master received at once the wages due to him.

But the Mark thus selected was to be used not on the stone as a proof of who was the cutter of the stone, but only as a jewel to be employed at the hour of paying wages, so that the paymaster might commit no error in the payment.

But the Mark was used also for another purpose. This purpose was one utterly unknown to the Operative Masons or to the Speculative Masons who first founded the degree.

A Mark Master being in distress or danger, has a talisman for relief in his Mark. He sends it, says the ritual, to a Mark Mason, who instantly obeys the summons and flies to his relief with a heart warmed with the impulse of brotherly love.

The Mark might also be put in pledge if the owner was "in the utmost distress;" and he was to redeem it as soon as it should be in his power.

In this way the Mark of the Speculative Masons began to cease to bear any analogy to that of the Operative Stonecutters whence it was originally derived. It was no longer a device placed by a builder upon the stone which he had wrought, and the proprietorship of which he by this token claimed—not a proprietorship in the material, but in the workmanship with which his skill had fitted it for the building.

In the first ritual of the Mark degree, adopted at the time, most probably, of its institution, though this design of a proprietary Mark was not exactly observed, still the Speculative Mark referred to an architectural purpose, that of indicating the proper position of the materials.

There was enough of analogy to the Operative preserved by the Speculative Mark to indicate and to clearly prove the one was the outcome of the other.

But now all analogy or resemblance to the operative art was obliterated, and the more recent Mark Masters began to look outside of the Craft of Operative Masons for characteristics to apply to the Mark. It became to him, as it is called in the ritual quoted

above, a "talisman," a means of obtaining relief, either by summoning with it a brother Mark Master to his assistance, or by pledging it to obtain the loan of money.

In plain words it ceased to have any relation to the proprietary mark of the Cologne and Strasburg Masons, and found its true analogy in the *tessera hospitalis* of the ancient Greeks and Romans.

The *tessera hospitalis*, or "hospitable die," was a piece of bone, of stone, or ivory, or any other material. It was a custom among the ancients that when two persons became allied as friends, they took such a die, which they divided into two parts, each one inscribing his name upon one of the halves, which were then interchanged. The Scholiast on Euripides says that if at any future period either needed assistance, on showing his broken half of the die to the other the required aid was, if possible, granted.

Plautus, the Roman dramatist, gives an interesting instance of the use of the *tessera* in the interview between Agorastocles and his unknown uncle, Hanno, described in the play of "Pœnulus."

"Hanno. Hail, my countryman.

"Agorastocles. Whosoever thou art, I hail thee also in the name of Pollux. If thou needest anything, speak, I beseech thee, and ask it for the sake of thy country.

"Hanno. I thank thee, but I have a lodging here. Show me, if you know him, Agorastocles, the son of Antedamas. Knowest thou here a certain youth called Agorastocles?

"Agorastocles. If thou art looking for the adopted son of Antedamas, I am the one thou art seeking.

"Hanno. Ha! what do I hear?

"Agorastocles. That I am the son of Antedamas.

"Hanno. If this be so, compare with me, if thou pleasest, the hospitable die (*tessera hospitalis*); here it is, I have brought it with me.

"Agorastocles. Come then, let me see it; it is the exact counterpart of that which I have at home.

"Hanno. Much I greet thee, oh, my friend! for thy father, Antedamas, thy father, I say, was bound to me by the ties of hospitality. This hospitable die (*tessera hospitalis*) was in common with him and me.

"Agorastocles. Therefore thou shalt lodge with me. For I

deny neither the rights of hospitality nor Carthage where I was born."¹

The early Christians also had their *tesseræ*, which they carried about in their journeys from one place to another as a means of introduction to their fellow-Christians whom they might meet. Dr. Mason Harris, in a dissertation on this subject, says that the use of these *tesseræ* in the place of written certificates of character lasted until the nth century.

It is very evident that the fabricator of the Mark ritual which we are considering was well acquainted with the nature of these Greek, Roman, and Christian *tesseræ*, and that they suggested to him the idea of transmuting the proprietary Mark of the Operative Masons which had given origin to the Mark degree from a token of ownership in the work of the stone to a badge of fraternity, and a means of claiming brotherly assistance.

In the early part of the present century, perhaps even much earlier, the ritual was again changed, and that form adopted which being either invented or approved by Thomas Smith Webb, the most prominent ritual maker of his day, is now the form universally practiced in this country.

The legend attached to this ritual enters into several details not embraced in the former ones, but it continues to maintain the theory that the Mark is a token of friendship, a theory which I have already said a dozen times was utterly unknown to the old Operative Masons.

The legend is to this effect. At the building of the Temple of Solomon, a young craftsman found in the quarries a stone of a peculiar form and beauty, and on which was inscribed certain mystical characters the meaning of which was wholly unknown to him. Nevertheless, he carried it up to the inspectors of the materials brought up for the construction of the temple, and disingenuously but unsuccessfully attempted to pass it off as a stone wrought by himself. Some time afterward this very stone, which had been prepared by Hiram Abif, for a special purpose in the building, was found to be wanting. After a strict search it was discovered among the rubbish and applied to its original destination. In honor of

¹ Plautus, "Pænulus," Act V., Scene 2, ver. 80.

Hiram Abif, who had constructed the stone and placed his own mark upon it, a representation of this stone in gold or silver is used as the decoration of the degree; it is worn by Mark Masters, and the traditional mark of Hiram being a circle of letters, each brother is directed to select his own mark and place it within the circle. This mark is inscribed by the lodge in its register or Book of Marks. The representation of it in metal is often, but not always, nor by any obligation, worn upon his person. It is sometimes used when in distress as a means of obtaining aid and relief.

To be more precise in the description: the American ritual requires the jewel, as it is called, to be "made of gold or silver, usually of the former metal (sometimes of a precious stone, as opal or agate), and in the form of a keystone. On the obverse or front surface the device or mark selected by the owner must be engraved within a circle composed of the letters H.T.W.S.S.T.K.S. On the reverse surface the name of the owner, of his chapter, and the time of his advancement to the degree may be inscribed, though this is not legally necessary.

In Scotland the usage is a little different. The jewel must be of mother-of-pearl and wedge-shaped. In a circle on one side are the Hebrew letters $\psi \ \mu \ \var� \ \aleph \ \beth \ \epsilon \ \eta$; on the other side are letters conveying the same meaning in the vernacular language with the wearer's mark in the center.¹

In this ritual and legend, as in the preceding one, the Mark has altogether lost the proprietary character which it had among the Craft in the Middle Ages. It has become a Masonic decoration and a means of proving the claims of its owner to certain prerogatives peculiar to Mark Masters.

In one point, however, all the legends agree. Each fixes the time and place of instituting the degree at the building of Solomon, and they attribute the establishment of the regulations which then governed it to the wisdom and foresight of Hiram Abif, though according to the most modern ritual, the circumstances which are commemorated in the ceremony of initiation occurred after the death of that distinguished artist.

As the result of our investigation, I think that we are forced to come to the conclusion that the Mark degree first made its ap-

¹ Laws of the Supreme Grand Chapter of Scotland, cap. vii., 4.

pearance in Speculative Masonry about the middle of the 18th century. We can find no records in which such a degree is mentioned previous to that period.

In a report made to the Grand Lodge of Mark Masons of England in 1873, it is said, with a great deal more of boldness than of accuracy, that "there is probably no degree in Freemasonry that can lay claim to greater antiquity than those of Mark Man or Mark Mason and Mark Master Mason." It is a very great pity, for it is vastly detrimental to the intelligent study of Masonic history, that men otherwise accurate and trustworthy should indulge in such fanciful speculations. To say nothing of the Fellow-Craft and Master's degrees which antedate all allusions to Mark degrees by about half a century, all the degrees of the Chevalier Ramsay's system and many other high degrees were known and practiced at a time when Mark Masonry as a Speculative degree or degrees had been unheard of.

There can not, I think, be any doubt that Scotland was the place where the Mark degree was instituted. "It is to Scotland," says Bro. Whytehead (in the letter heretofore cited), "that we must look for the birthplace of the Mark degree as a Speculative working;" and he feels sure that the degree "came into working existence toward the close of the last century, when there was a rage for the multiplication of Orders."

In both of these opinions I concur, except that I would prefer to make the time of birth about the middle, rather than toward the close, of the last century. But in either way the difference would not be much more than a score of years.

We must also, I am sure, ascribe the fabrication of the degree to suggestions derived from the use of proprietary marks by the Freemasons of Germany, whence they were introduced into Scotland. There they remained long after they had ceased to be employed in other countries.

It has been shown that in Operative Masonry the Mark was bestowed upon the Fellow-craft or sometimes upon the Apprentice, unaccompanied with any other ceremonial than that of a modest banquet in Germany at the expense of the lodge, and that of a registration of the mark in Scotland at the expense of the candidate.

Notwithstanding this, when the inclination to create a new degree in Speculative Masonry took possession of the minds of cer-

tain Scottish Masons, the very fact that the Mark was bestowed without any ceremonial, inspired the thought that this manifest want of any formality in the bestowal might be well supplied by the fabrication of a degree in which the ceremony might take place.

Whythead supposes, but I can not agree with him, that "it may have even been the case that originally some kind of Mark working, though, of course, not the same as at present, once formed an integral part or complement of the Second degree, just as some Masons imagine the Royal Arch did of the Third degree, and that for the sake of abbreviating the ceremonies both were divorced and fashioned into separated and distinct workings under newly invented names."

But it is not necessary to indulge in any such supposition, which, besides, is not sustained by the records. The mere fact that there was in Operative Masonry a Mark, which every Fellow received upon his admission to the Craft and preparatory to his going to work as a journeyman, would have been sufficient to suggest to an inventive genius the most fitting points of a new degree, at a time when the manufactory of degrees had been established as a popular and successful branch of business in Speculative Masonry.

Notwithstanding that the use of proprietary Marks by the German and Scottish Operative Masons had furnished the suggestion for the invention of a degree in Speculative Masonry, the fabricators of that degree did not strictly preserve the system by which the use of Marks had always been regulated, which was simply to each stone-cutter the means of identifying the stones which he had cut.

I do not believe that the Mark was employed simply to give the Overseers and Masters of the works a ready means of calculating the amount of pay due to each workman. Nothing of this is to be found in any of the old statutes or regulations.

Besides, the Mark was not placed on all stones indiscriminately, and if the calculation of wages was made by the marked stones only, the workmen would be constantly defrauded of a part of their dues.

It was a regulation that those stones only should be marked which were of importance in the building and which required skill and dexterity in their construction.

The inscribing of a Mark on a well-cut and polished stone was rather intended to secure to the stonecutter a just reputation for his

work than to enable an overseer to calculate the amount of wages which were due.

If I am correct in my views, the Masons placed their Marks upon the stones which they cut in the same spirit in which the early printers affixed, each one, a peculiar device on the title-pages of the books which were issued from his press.¹

It is evident from what has been here said that the design of the Mark has been greatly changed in its adoption by the Speculative Masons from that of the Operative Builders, from whom, however, the former derived it.

In one respect the various rituals of Mark Masonry agree, without the slightest variation. They all placed the institution of the system of giving Marks to a portion of the Craft at the time of building King Solomon's Temple, and the legend connects them with Hiram Abif, whose supposed personal Mark, surrounding that of the wearer, constitutes the decoration of the degree of Mark Master according to the modern ritual.

I need hardly say that this story of the Temple origin of the Mark degree is a mere myth, having no more foundation in history than the Hiramic legend of the Third degree.

Its adoption in the Mark Master's degree is, however, a conclusive proof that that degree in Speculative Masonry was fabricated after the invention of the Third degree, in the first quarter of the 18th century.

In conclusion, as it has been shown that the Mark of the modern Speculative Freemason was evidently suggested by that of the German and especially the Scottish Operative Masons, and as the employment of Marks by the latter has evidently suggested their adoption by the Mark Masters when fabricating their degree, so I may repeat what was said in the beginning of this chapter, that there is no stronger or more convincing proof of the connection between the Operative Freemasons of the Middle Ages and the Speculative Freemasons of the present day, and of the direct descent of the latter from the former, than that which is furnished by the Mark Master's degree.

¹ Some of these old printers' devices bear a very striking resemblance to the stone-cutters' marks. That resembling an inverted 4 is very common to both. See Fosbrook's "Encyclopædia of Antiquities," p. 445, or the title-page of any old book.

But we must be careful to repudiate as simply a myth of modern origin, the notion that there was ever a Mark degree before the middle or toward the close of the last century.

Still the Mark degree, though it has no antiquity, has its historical value as a factor in determining the true origin of the Speculative system, no investigation of which could be correctly or usefully conducted without a due consideration of the modern Mark degree.

CHAPTER XXVI

TRANSITION FROM OPERATIVE TO SPECULATIVE FREEMASONRY

THE history of the institution of Freemasonry is naturally divided into two distinct yet closely connected periods. The first period embraces the history of Operative Freemasonry; the second that of Speculative Freemasonry.

But the first of these periods did not pass at once and, as it were, by a leap into the second. The change which took place was a gradual one. The steps which led from the one to the other were almost imperceptible. The progress was slow and gradual. There was a time when all Freemasonry was purely Operative, and there was a time when it became solely Speculative. We have abundant facts to prove this statement. But it is impossible from any records in our possession to define the precise epoch when the change took place.

The naturalist with all the science in his possession is at a loss to determine the precise limits which bound the different kingdoms of nature. The mineral passes by an imperceptible gradation into the vegetable, and the highest species of the vegetable assimilate with a remarkable likeness of organization to the lowest tribes of the animal kingdom. It requires even in this advanced state of science, the largest amount of professional knowledge and experience to determine in certain instances to which division of nature certain specimens rightly belong.

So in the history of the Masonic institution, there are well-marked eras in its annals when we are at no loss to define the distinctive character of its workings. There are again points on the extreme limits of its two periods, when the Operative and the Speculative elements are so intimately connected and clash so confusedly together, like the prismatic colors of the spectrum, that it becomes extremely difficult, if not absolutely impossible, to define the precise line of demarcation.

Thus we know with certainty that the Freemasonry of the 12th century, which had penetrated every country of the Continent of Europe, was wholly Operative, without a particle of the Speculative element in it; we know, too, that the Freemasonry of the 19th century, which prevails over the whole civilized world, is entirely Speculative and has ceased to have any social connection with the Operative Craft.

But at what precise period the Operative art ceased to form a part of the institution of Freemasonry, and when the Speculative science threw off all connection with it, are historical questions which admit hardly of a possible conjecture, certainly not of any positive solution.

A great difficulty which we encounter in the discussion of this subject is that the change from one to the other branch began to assume a distinct form in different countries at different periods.

Thus, in London, Speculative Freemasonry had assumed a distinct and independent form many years before the lodges of Scotland had divested themselves of the Operative influence, and even in the same kingdom there were English lodges in the provinces which mingled Operative and Speculative Freemasonry in their work, long after the former system had been wholly abandoned by the lodges in the Metropolis.

Though it is probable that most readers understand the distinction between Masonry and Freemasonry, it may be well to impress that distinction upon their minds, that during this investigation they may perfectly appreciate the train of reasoning that is pursued.

Masonry is merely the art of building. It has existed from the earliest historic times, when men began to need places of shelter from the inclemency of the seasons, and must continue to exist so long as they require houses for their habitation. With its history we have no concern.

Freemasonry is the art of building connected in its practical operations with a Guild organization. It was always a confraternity or corporation constructed on the plan of a guild, and maintaining throughout all its progress that idea derived first from the Roman Colleges of Artificers, until finally it was merged in the non-operative system of Freemasonry, which exists at the present day and whose history it is the object of the present work to treat.

This distinction, it will be remembered, never ceased to be main-

tained by the Operative Freemasons, who always held themselves aloof as a higher class from the lower body of "rough masons" who were not "free" of the guild.

In pursuing our researches into that indefinable period during which the Operative organization was slowly advancing to a transformation into a Speculative society, it will be necessary that we should first thoroughly understand one of the characteristics which marked the Freemasons of the Middle Ages, and which rendered them unlike every other class of contemporary craftsmen.

This was the admission into their ranks and into full fraternity with them of non-professional persons, whose only claim to a connection with the craft was derived from their learning, their rank, or their wealth, which gave them the means of elevating the character and promoting the interests of the fraternity.

We have seen the existence of the same system in the Roman Colleges of Artificers, who strengthened their corporations by the adoption of men of rank and political influence as Patrons.

The early Freemasons were patronized by the Church, and were engaged almost solely in the construction of religious edifices. Hence there was a close and friendly connection between them and the ecclesiastics of that period. Lodges were for the most part held in the vicinity and under the patronage of monasteries, and the monks were often architects and builders. At a later period, when the Freemasons became independent of monastic influence, the primitive alliance was not completely dissolved, and the clergy, especially in France, in Germany, and in England, were often admitted, though not professional Masons, into the corporation of the Craft. They were among the first of non-masons who received from Operative Lodges the compliment of honorary membership.

The result of thus securing the patronage of bishops and other high ecclesiastics was, of course, favorable to the interests of the corporations of workmen and was, to a great extent, the controlling motive with them, as it had previously been with the Roman Colleges, for introducing into their guild men who were not of the Craft.

It was seen in the 12th and 13th centuries, when the corporations, not only of Masons but of other crafts, having sought to exercise undue power in the cities, incurred the displeasure of the government. Many sanguinary contests ensued, with alternate successes. But

when the Emperors Frederick II. and Henry VII. of Germany sought to end them by abolishing the corporations of workmen, these associations had grown so strong that they were able to successfully resist the Imperial power.¹

Dr. Anderson, in the second edition of the *Book of Constitutions*, gives repeated instances of bishops, noblemen, and even kings, who were admitted to the privileges of the Craft and exercised authority over the Operative Masons as members and patrons of the guild. But as the accuracy of Anderson as an historian has ceased to be respected through the researches of modern scholars, his authority on this subject need not be pressed. Elias Ashmole, however, whose truthfulness and minuteness as an annalist has never been doubted, furnishes unquestioned instances in which he and other gentlemen had been made members of an Operative Lodge in the 17th century. Nor does he speak of these admissions as if they were of unusual occurrence. Indeed, he leads us, by his silence, to the contrary inference.

But it is in the annals of the lodges of Scotland that we find the most satisfactory history of the rise and progress of the custom of admitting persons who were not Operative Masons as members of the guild. For this we are indebted to the researches of Bro. Murray Lyon, whose *History of the Lodge of Edinburgh* is of invaluable use to the scholar who is seeking to trace the authentic history of Freemasonry outside and independent of its mythical elements. To that work I shall have constant occasion to refer in the course of this part of the present investigation.

Lyon says that the earliest authentic record of a non-operative being a member of a Masons' lodge is contained in a minute of the Lodge of Edinburgh under date of June 8, 1600, where John Boswell Laird, of Achinflek, is mentioned among the members of the lodge. His name with his mark is signed to the minute with the names and marks of twelve others who evidently were Operative Masons.²

But twelve years anterior to that, in 1598, we find that William Schaw, who was also a non-operative,³ acted as Master of the Work,

¹ Lacroix, "Le Moyen Age et la Renaissance," tom. iii., Part I., art. 3.

² Lyon, "History of the Lodge of Edinburgh," p. 51.

³ Lyon thinks that there is no proof that he was an Operative Mason, and says there can be little doubt that he was an honorary member of the fraternity. "Hist.," p. 56.

and that a year afterward he signed his name to the supplementary statutes issued by him, as "Master of the Work, Warden of the Masons."

His predecessor in that office was a nobleman, and in his own time the Wardenship over the Masons in Aberdeen, Banff, and Kincardine was held by a country gentleman, the Laird of Udaught, which shows, says Lyon, "that it was not necessary that either appointment should be held by a Craftsman." But there is just reason for inferring that to hold such offices it was necessary to have honorary membership in the fraternity.

At a later period in the 17th century the practice of admitting non-operatives appears to have begun to be common.

In July, 1634, the Lodge of Edinburgh admitted as Fellow-Craft the following gentlemen: Lord Alexander, Viscount Canada, Sir Anthony Alexander, and Sir Alexander Strachan. The two first were sons of the Earl of Stirling, and the last a well-known public man in his time.

"These brethren," says Lyon, "seem from their subsequent attendance in the lodge to have felt an interest in its proceedings. In the month immediately succeeding their initiation they were present, and attested the admission of three Operative Apprentices and one Fellow of Craft. They attended three meetings of the lodge in 1635, one in 1636, and one in 1637. In signing the minute of their own reception each appends a mark to his name."¹

Throughout the rest of the 17th century there are repeated records in the minutes of the Lodge of Edinburgh of the admission of non-operatives to the rank of Fellow-Crafts and sometimes of Masters.

Thus, in 1637, David Ramsay, a "gentleman of the Privy Chamber," was admitted; in 1638, Henry Alexander, another son of the Earl of Stirling; in 1640, General Alexander Hamilton; in 1667, Sir Patrick Hume; and in 1670, the Right Honorable William Murray, son of Lord Balvaird, and Walter Pringle and Sir John Harper, both members of the Scotch Bar.

It is not necessary to cite any more instances to show that in the 17th century the practice existed of admitting non-operative persons into the brotherhood of the Craft. In the 18th century it had be-

¹ Lyon, p. 86.

come so common as finally to give to the Speculative element a preponderance over the Operative in the fraternity.

The following remarks of Bro. Lyon on the subject of the admission of non-operatives into the membership of the Craft are of great value in connection with this subject:

"It is worthy of remark that with singularly few exceptions, the non-operatives who were admitted to Masonic fellowship in the Lodges of Edinburgh and Kilwinning during the 17th century were persons of quality, the most distinguished of whom, as the natural result of its metropolitan position, being made in the former lodge. Their admission to fellowship in an institution composed of operative Masons associated together for purposes of their craft, would in all probability originate in a desire to elevate its position and increase its influence, and once adopted the system would further recommend itself to the Fraternity, by the opportunities which it presented for cultivating the friendship and enjoying the society of gentlemen, to whom, in ordinary circumstances, there was little chance of their ever being personally known.

"On the other hand, non-professionals connecting themselves with the lodge by the ties of membership would, we believe, be actuated partly by a disposition to reciprocate the feelings which had prompted the bestowal of the fellowship, partly by curiosity to penetrate the arcana of the Craft, and partly by the novelty of the situation as members of a secret society and participants in its ceremonies and festivities."¹

The members thus admitted received various designations, such as "Gentlemen Masons," "Theoretical Masons," "Geomatic Masons," and "Honorary Members." The use of these terms evidently shows that the Working Masons—the "Domatic Masons,"² as Lyon styles them—recognized that there was a very palpable dif-

¹ "History of the Lodge of Edinburgh," p. 81.

² The words domatic, used for an Operative Mason, and geomatic, for a Theoretic Mason, I have met with only in the work of Bro. Lyon. They are not to be found in the Scottish dictionary of Jamieson, nor in any English Dictionary from Phillips to Webster. Neither are they used in any of the old Constitutions, Scotch or English, nor have I encountered them in any Masonic work that I have read. Lyon derives domatic from the Latin *domus*, a house, and says it means "of or belonging to a house." Geomatic he derives from the Greek *gea*, land, and he says Geomatic Masons were "landed proprietors or men in some way or other connected with agriculture." I do not like the words. I like less the definitions, and still less the etymology.

ference between the two classes of members. It is well to remember this fact, as it supplies one of the motives for the result which afterward occurred in the complete separation of the Speculative from the Operative element.

The Scotch Constitutions of 1598 and 1599 were certainly constructed solely for the government of Operative Masons. Yet there is no prohibition, express or implied, of the admission of non-operatives as members of lodges. The fact that Schaw, the framer of the Constitutions, was himself present at a meeting of the Lodge of Edinburgh, where a non-operative took a part in the proceedings, shows that he did not view such admissions as illegal innovations on the usages and laws of the fraternity.

We are not without the requisite information as to the status of these "Honorary Members."

The form of initiation or admission must have differed in some respects from that prescribed for an Operative Mason. The presentation of an "essay" or Master-piece of work, as a trial of skill, must have been dispensed with in the case of candidates whose previous education and profession had not supplied them with the necessary mechanical knowledge.

"It can not now be ascertained," says Bro. Lyon, "in what respect the ceremonial preceding the admission of theoretical, differed from that observed in the reception of practical Masons; but that there was some difference is certain, from the inability of non-professionals to comply with the tests to which Operatives were subjected ere they could be passed as Fellows of Craft. The former class of entrants would, in all likelihood, be initiated into a knowledge of the legendary history of the Mason Craft, and have the Word and such other secrets communicated to them as was necessary to their recognition as brethren."¹

At first they were not chargeable with admission fees; but in 1727, when an attempt was made to exclude them on account of this exemption, a fee of one guinea was exacted as entrance money. But this was done at so late a period that we may infer that exemption from fees was the usage with respect to all "Theoretic Masons," while the lodges were purely Operative in character.

Notwithstanding this exemption, Theoretic Masons were quali-

¹ Lyon, "History of the Lodge of Edinburgh," p. 82.

fied to hold the highest office in the lodge. Lyon says that "for a time the occupancy of the chair alternated between the two grand classes into which its membership was divided. Though to Speculative concurrence the Operative section owed the more frequent possession of the coveted honor."¹

In Scotland the Operatives and Speculatives do not appear to have lived always in peace and concord; some jealousy seems to have existed at times, which finally culminated in the year 1727 in an attempt by the Operatives to exclude Theoretical Masons from the lodge. "Exclusion" is the word used by Lyon, by which I suppose he means not only the expulsion of the Theoretic Masons who had been already admitted, but also the discontinuance in future of the custom of admitting them.

The attempt did not succeed. Speculative Masonry was already the preponderating element in the lodges, which a few years afterward abandoned in Scotland, as they had long before done in England, the Operative character.

It is admitted that the earliest authentic record of the admission of "Gentlemen Masons" into the lodges of England, or in other words the introduction of the Speculative element, occurred in 1646, when Elias Ashmole, the celebrated antiquary, and Colonel Henry Mainwaring were made "Free-Masons" in a lodge at Warrington in Lancashire.

But it does not, by any means, follow, because this is the first recorded instance, that Theoretical Masons had not been admitted in England long before. But the records have not come down to us, because of the loss or disappearance of the ancient minute books of the English Operative lodges.

"Why," says Bro. W. J. Hugan, "so many minute books are still preserved in Scotland, dating long before the institution of the Grand Lodge, even some in the 17th century, and yet scarcely any are to be found in England, seems inexplicable."²

We have a right to presume, judging by the usages of the sister kingdom, that the initiation of Ashmole and Mainwaring in 1646 was not the introduction of a new custom, but only the continuation of an old one.

¹ Lyon, "History of the Lodge of Edinburgh," p. 201.

² "Masonic Sketches and Reprints," p. 19.

If we have not the names of those gentlemen who had previously been admitted to the fellowship of English lodges, it is because the records are not extant.

Many brave heroes, says the Roman poet, have lived before Agamemnon, but they have died unwept, because there was no poet to sing their deeds.

The same thing may be said of the corporations and lodges of France and Germany. Though the records are not extant, we have collateral evidence that in both of them, as well as in other countries of the Continent, Theoretical or Honorary Members were admitted among the Operative craftsmen.

We may therefore lay it down as an authentic historical statement, which if not supported in other places as in Scotland by positive testimony, is yet sustained by the strongest logical inference, that from the earliest period Speculative Masons who were not practical workmen, builders, or architects, began to be admitted into the ranks of the Operative Craft. As time passed on the number of these Speculatives increased, as in the nature of things must have occurred, until they predominated over the Operatives. Finally, when this predominance became sufficiently powerful, the control of Freemasonry passed into their hands, and as a necessary result the institution ceased to be Operative and became wholly Speculative in its character.

The terms "Gentleman Mason," "Theoretical Mason," and "Honorary Member," formerly employed to distinguish a non-Operative from an Operative, are no longer in use. For them has been substituted the word "Speculative." The thing itself was in existence long before the word which was to define it.

The first place in which we find the word Speculative in connection with Masonry is in the Cooke MS., whose conjectural date is about 1490. In this document it is said that the youngest son of King Athelstan, being a master of the Speculative science of geometry or masonry, added to it by his connection with the Craft of Masons a knowledge of the practical science.¹

It must be admitted, as Bro. Cooke says, that "no book or

¹ He "lovyd well the sciens of Gemetry and he wyst well that hand craft had the practyke of the sciens of Gemetry so well as masons wherefore he drewe hym to conseil and lernyd practyke of that sciens to his speculatyf. For of speculatyfe he was a master and he lovyd well masonry and masons."—Cooke MS., lines 615, 626.

writing so early as this manuscript has yet been discovered in which Speculative Masonry is mentioned."¹ It is equally certain that the word appears to have been used in the sense given to it at the present day, and the writer of the manuscript drew a distinction between Practical or Operative and Speculative Masonry.

The word, however, is not repeated in any of the subsequent Constitutions, and we do not hear of it again until the time of Preston, who is the first to give its definition in these words:

"Masonry passes and is understood under two denominations; it is operative and speculative. By the former we allude to the useful rules of architecture, whence a structure derives figure, strength, and beauty, and whence result a due proportion and just correspondence in all its parts. By the latter we learn to subdue the passions, act upon the square, keep a tongue of good report, maintain secrecy, and practice charity."²

The lexicographers define Speculative as opposed to Practical. Hence, "Speculative Masons," the term used at the present day, is precisely synonymous with "Theoretic Masons," the term which was applied by the Scotch Masons of the 16th and 17th centuries to those persons who were admitted into their lodges though they had no practical knowledge of the Operative art of building.

In contemplating that period in the history of Freemasonry when the institution was gradually preparing for the important change in its organization from an Operative Art to a Speculative Science, which period may be called, borrowing a term from the language of geology, the transition period, we must first properly appreciate what was its real condition just previous to the change.

In the first place, we find that before the present organization of Grand and Subordinate Lodges, the Society was an Operative one whose members were actually engaged in the manual labor of building, as well as in the more intellectual task of architecture or the designing of plans.

But not every man who was engaged in building or in handling stones was a member of this society or entitled to its privileges. In every country were two distinct and well-recognized classes of workmen.

¹ Cooke MS., lines 615, 626, note K.

² Preston, "Illustrations of Masonry," 2d edit., p. 19. In subsequent editions he enlarged the phraseology without materially changing the sense.

In Germany the Craftsman (*Werkmann*) of the Corporation was distinguished from the *Maurer* or wall builder, the man who simply hewed and set stones. The Craftsman, the Stonecutter, was employed in the higher walks of the art. These Craftsmen formed a fraternity of themselves, and no workman was permitted to work with a Mason who was not a member, except under special circumstances which were provided for by the regulations. These facts are well authenticated in the Strasburg and other German Ordinances.

In France, the regulations of Etienne Boileau prescribe a similar difference between the Masons and Stonecutters who were members of the Corporation and those who were not. The former could employ the latter only as assistants and servants (*aides et vallis*), but were forbidden to instruct them in any of the secrets of the mystery or trade.

In Scotland the Masons of the Guild, who were called, certainly as early as the middle of the 17th century, Freemasons,¹ were distinguished from the Masons who were not "free of the Guild," and who were called "Cowans," a term which has been preserved in the ritual of modern Speculative Freemasonry with a similar meaning. With the Cowans the Freemasons were forbidden to work.

In England the distinction was between Masons or Freemasons and "Rough layers," and the same prohibition as to fellowship in labor prevailed there that did in other countries.

Though all were Operative workmen and all were engaged in the practical art of building, there was in every country a broad line of demarcation between the Freemasons who were instructed in the highest principles of the art and the lower class of Masons, who were without any pretension to a knowledge of the sciences of architecture and geometry which were cultivated by the higher class.

"Those only," said the Strasburg builders, with an excusable pride in their elevated position, "shall be Masters who can design and erect costly edifices and works for the execution of which they are authorized and privileged, nor shall they be compelled to work with any other craftsmen."²

But this higher class of Freemasons were, as we have already

¹ See Lyon's "History of the Lodge of Edinburgh," p. 79.

² "Strasburg Constitutions," art. 2.

seen, divided also into two classes, the Operative and the non-Operative members of the Guild, Corporation, or Fraternity.

It is not difficult to suppose how this division into two classes originally arose. In the earliest times of the society of Freemasons it was closely connected with and under the patronage of the Church. Among its practical members were often monks who were skilled in the manual labor of the Craft, and the architectural designs for the construction of Cathedrals and monasteries were often drawn by bishops or abbots who were well skilled in the theory of architecture. These sometimes from choice, and sometimes from necessity, in consequence of the intimate relations they held with it, became members of the Fraternity.

Subsequently, when the Operative Masons had released themselves from the rule of their ecclesiastical superiors and had established an independent brotherhood, they found it politic, if not positively necessary, to secure the patronage of wealthy nobles, and men of rank and science, who by their social position secured protection to the association and elevated its character.

The same process had occurred in the Roman Colleges of Artificers, from whose peculiar organization the Freemasons had derived the idea of their own.

Thus it happened that the Fraternity of Freemasons consisted from the very earliest period of its history of two classes, the Operative Masons who did the work, and the Theoretic, or, as we now call them, the Speculative Masons.

The word "Speculative," as has been already shown, is of very modern origin. If the single passage in the Cooke MS. be excepted, it is never met with in any Masonic writing until after the organization of Grand Lodges.

I use it, in the present work, as a mere matter of convenience, because it is most familiar to the general reader as a recent synonym of the old word "Theoretic."

Thus there always existed, we may say, from the earliest times, so far as we can trace authentic history, two classes of Freemasons, namely, Operative and Speculative.

The Speculative Masons, however, though very definitely distinguished after the separation of the Fraternity from its monastic connections, from the Operative, by their want of practical skill, did not form an independent and distinct class.

In the lodges into which they were admitted they mingled with the members on a common footing. We presume that this was the case in all countries; we know that it was so in Scotland. They underwent a modified initiation into membership, in which of course the presentation of an essay, piece, or *chef d'œuvre* was omitted; they assisted in the admission of new members, took part in the deliberations of the society on affairs of business, voted, and even held office.

Starting with our inquiries from the time when the Fraternity dissolved its connection with the monasteries, where it really played the rôle of a subordinate, we may well suppose that at first the number of these Speculative Masons or Honorary members must have been very small.

But they never could have been an insignificant element. The Operative Masons held the ascendancy in members, but the Speculative Masons must have always exerted a powerful influence by their better culture, their wealth, and their higher social position.

These two elements of Freemasonry continued to exist together for a very long period of time. But at length, from causes which must be attributed to the increasing power and influence of the Speculative element, as well as to intellectual progress, there came a total and permanent disseverance of the two.

The precise time of this disseverance must be placed at the beginning of the 18th century, though it is evident that for some years previously the feeling which eventually led to it must have been gradually growing. The men of culture and science who were in constant communion with their operative associates, were getting dissatisfied with a society of mechanics who had lost much of that skill as architects which had given so bright a reputation to their predecessors of the Middle Ages, and who were now not very much superior to the "Cowans," the "wall builders," and the "rough layers" whom these skillful predecessors had so much contemned—contemned so much that the Freemasons would not work in common with them on the same building.

The first act of severance occurred in England in the year 1717, when the Grand Lodge of "Free and Accepted Masons" was organized, an event that has been very generally designated by Masonic writers by the rather questionable title of the Revival.

This was followed nineteen years afterward by the organization of the Grand Lodge of Scotland with similar methods.

Both of these bodies were formed by lodges that were Operative, but in each case the Operative character was abandoned, and the Grand Lodges and the lodges under them became entirely Speculative; that is to say, they ceased to cultivate practical Masonry, and were composed for the most part of members who were totally ignorant of the Mystery of the handicraft of building.

In other countries the process of disseverance did not take place according to the English and Scottish method. Elsewhere than in those two countries the organization of Freemasonry as it prevailed in the Middle Ages had long ceased to exist.

In France the *Corporations des Metiers* and in Germany the *Hütten* had been abolished, though in both countries the Stonemasons still continued to maintain an organization, which, however, was outside of the law, and without legal protection or recognition.

But we must look for the real causes of the change from Operative to Speculative Masonry to England, for it was in that country that the change was first developed and consummated.

CHAPTER XXVII

THE REMOTE CAUSES OF THE TRANSITION

THE transition from Operative to Speculative Freemasonry was not a spontaneous and sudden act, commencing and completing itself by an instantaneous movement, through which that which was the peculiar characteristic of the institution was at once changed into another and entirely different one.

On the contrary, the epoch of the change can not be precisely determined within the period of six years at least during which the Speculative Masons were engaged in slowly perfecting it. The fortress of Operative Freemasonry, which had derived its strength from its comparative antiquity and from the imperishable labors of the mediaeval architects, was not to be taken by storm. It was only by gradual approaches that its stronghold in the lodges was to be overcome.

We are not to suppose that on that eventful festival of St. John the Baptist, when the members of the Four Old Lodges of the Metropolis of England met at the Goose and Gridiron, and elected for the first time a Grand Master to preside in their new organization, that the special and well-understood design of that meeting was at once to change the entire character of the fraternity.

The fact is that the beginning of the 18th century was in England, and more especially in London, the age of clubs. We shall soon see how associations of men for all sorts of purposes, but principally for convivial ones, were established in that city.

Now the Masonic lodges, consisting as they did and as they had done for many years past of professional Masons and of non-professional gentlemen, and the latter preponderating, perhaps in numbers, certainly in influence, would seem to have afforded an admirable opportunity, by their coalition into one body, for the establishment of a club of the very highest rank, one indeed of a

rank and prestige very far superior to that of the obscure and often ridiculous coteries of that day, such as the "No Nose Club," or the "Ugly Faced Club."

We know that for many years previous to 1717 the Operative lodges contained many non-operative or "Gentlemen Masons," and that outside of London and its suburbs this condition lasted for many years afterward. And yet during all that period we have no record of any attempt on the part of the latter to infuse a Speculative element into those lodges.

Even the organization of the Grand Lodge on St. John the Baptist's day, 1717, does not seem, if we may judge from the meager details of that event which Anderson has transmitted to us, to have been intended to accomplish at once a total severance of the Speculative from the Operative element. The "Charges of a Freemason," which were adopted in 1718, for the government of the new form of the institution, were only a collation of the old laws which had formerly regulated the Operative lodges, and were wholly inapplicable to a system from which practical Masonry had been eliminated.

Nor was there any pretense that these were new laws, framed for a new society. It was thus acknowledged that the old Constitutions of the Operative were to be preserved. The disruption was not to be suddenly effected. Anderson, recording the transactions of 1718, under the Grand Mastership of George Payne, says that "this year several old copies of the Gothic Constitutions were produced and collated."¹

The preservation and publication of these "charges" as the standard of Masonic law very clearly show that at that time the thought of a purely Speculative institution, fully dissolved from any association with Operative Masonry, had not yet entered the minds of those who were engaged in the establishment of a Grand Lodge.

The most that we can say of their ulterior views at that early period, was that they intended to enforce, with greater rigor, the usage which had long before prevailed, and to interpret with the utmost liberality the standing regulation which admitted persons who were not Masons by profession to the privileges of the Society.

It was not until 1721, four years after the organization of the

¹ Anderson, "Constitutions," 2d ed., p. 110.

Grand Lodge, that a set of "General Regulations," which had been compiled by Payne the year before, were adopted, which were applicable to the requirements of a purely Speculative association, in which the Operative element was wholly ignored.

It will be seen hereafter, when the early records of the Grand Lodge are brought under review, that though no Operative Mason was ever elected Grand Master, yet until the year 1723 that class was recognized by being chosen to the high office of Grand Warden on several occasions.

After that year the Operative Masons appear to have retired either voluntarily or involuntarily from all prominence, and probably from all participation in the concerns of the Society. It had by this time assumed a thoroughly speculative character; its laws and usages were such as were appropriate to a non-operative system; and its offices were given only to noblemen, to scholars, and to men of high social position.

The immediate cause of these changes has with very great certainty been attributed to the efforts of three persons—John Theophilus Desaguliers, a philosopher, James Anderson, a clergyman, and George Payne, an antiquary. To them are we to attribute the influences which gradually but successfully led between the years 1717 and 1723 to the complete separation of the Speculative from the Operative Order, and to the birth of that system which, after many subsequent accretions, modifications, and improvements, has been developed into the widely extended Freemasonry of the present day.

But there were other causes in operation which assisted in the accomplishment of those results, in which these celebrated persons played so important a part, and without which their labors would hardly have been successful.

The first and perhaps the most important event which prepared the way for the transition was the decadence of architecture in England, where in the 17th century the principles of the Gothic style with all its symbolism began to give way to the corrupt forms of the Renaissance, which was a revival of the Roman style. It was on Gothic architecture that the Freemasons of the Middle Ages had founded that school of symbolism which gave to every stone a living voice, and supported the claim of the Fraternity to the elevated position which it had long held above all other handicrafts.

But when the Craft had abandoned this so long honored art and the lodges ceased to be, as Lord Lyndsay has called them, "parliaments of genius," there must have been some, as there are now, who deplored the change from high to low taste, and who were anxious to perpetuate, if not the practical part of the art, as it has been pursued by the Gothic Masons, at least to preserve the spirit of symbolism which had been in mediaeval times its principal and peculiar characteristic.

Thus the way was gradually prepared in the 17th century for that spiritualizing of the labors and implements of Operative Masonry which resulted finally, after many slow steps, in the formation of that system of purely symbolic Masonry which exists at the present day, wholly distinct from the body of working Masons.

The science of symbolism had been originally practiced only by the Church and by the Gothic Freemasons. When it had been abandoned in the former by the Reformation and in the latter by the decay of architecture, it was still preserved in some of its forms, not in all its excellence, by the Rosicrucian society which sprung into existence in the 17th century. Though the mystical association of Rosicrucianism was not, in any way, connected with Freemasonry, it can not be doubted that it played an important part in inspiring many members of the Masonic lodges of Operative Masonry with a renewed taste for the mystical symbolism of their predecessors, which in its progressive cultivation led to the inauguration of a purely symbolic association founded on architecture.

Another important cause is to be found in the intellectual revolution which took place in the 17th century, and toward which the Reformation in religion had contributed essential aid. The writings of Bacon had produced a school of experimental philosophy in England, one result of which was the organization of the Royal Society, in whose bosom a race of thinkers was nursed who, in their search for the attainment of knowledge, were ever ready to convert an art such as Operative Masonry into a Speculative Science.

At one time it was a favorite theory with some Masonic historians that the origin of Speculative Freemasonry was to be traced to the Royal Society. Though the theory was a fallacious one, as has been shown in a preceding part of this work, its very existence proves that that Society must, in an indirect way, have had some

influence upon the birth and the growth of the Speculative institution.

It is singularly pertinent to this question that Dr. Desaguliers, to whom, beyond all other men, we must ascribe the organization of Speculative Freemasonry in England, was a distinguished experimental philosopher of the Baconian school and a Fellow of the Royal Society.

It can not, however, be doubted that as the low state of morals, the general depression of learning, and the decay of art, which distinguished the close of the 17th century, had a very unfavorable effect on the character of Operative Masonry; so the improvement of the moral and intellectual condition of England, and the cultivation of a refinement in literature and science which sprang up soon after the beginning of the 18th century, must have awakened a new spirit in the thinkers of the age.

Dr. Oliver, in an essay on this subject,¹ attributes this revolution principally to the influence of Addison, Steele, and the other periodical writers of the day. He quotes the opinion of Foster,² who had said that "it is incredible to conceive the effect these writings have had on the town; . . . they have set all our wits and men of letters upon a new way of thinking of which they had little or no notion before." Hence Oliver says, "It will not be conceding too much to the influence of these immortal productions, if we admit that the Revival of Freemasonry in 1717 was owing, in a great measure, to their operation on public taste and public morality."³

As of the two most important and effective of these periodical essays by Steele and Addison, the *Tatler* was begun in 1709, and the *Spectator* in 1711, while the organization of the Grand Lodge which was the prelude to the establishment of Speculative Freemasonry has the date of 1717, the inference of Oliver as to their influence will hardly be deemed untenable.

Another cause leading directly to the establishment of Speculative Freemasonry has been adduced by Kloss in his German work

¹ Introductory Dissertation on the State of Freemasonry in the 18th century, affixed to his edition of Hutchinson's "Spirit of Masonry," p. 5.

² Essays, in a series of "Letters to a Friend," by John Foster.

³ Intro. Dissertation, p. 6.

on the *History of Freemasonry in France*, which is well worth consideration. He says:

"When Wren had completed the building of St. Paul's Cathedral in London, in 1708, and thus the workmen had no common center remaining, their corporate customs, like those of many other bodies, would, in the course of time, have been lost and wiped away, if the brotherhood had not been sustained as such by the power of that ancient addition—the non-professional members, taken from the various grades of society. The religious contentions, which had prevailed for two centuries, were at last compelled to recede before the spirit of toleration. Hence the necessity of some place of rest, where political discussions could not enter, was the cause and the reason for the formation and adoption of, about the year 1716, an organized system, then first appearing as Freemasonry."¹

Of the correctness of two assertions made in this paragraph we have convincing proofs. The decay of the Operative branch of Freemasonry is evident, since, according to Oliver, there were in 1688 only seven lodges in existence, and of them there were but two that held their meetings regularly.² There was some improvement at the beginning of the next century, which, however, it would be but fair to attribute to the influence and the energy of the honorary or non-professional members.

In respect to the question of religious toleration, it is very evident that in the matter of a creed there was a very great difference between the two systems, the Operative and the Speculative. The early Operative Freemasons were, of course, Roman Catholics. After the Reformation in England they became Protestants, but strict adherents to the church. This is apparent from the older and the more recent Constitutions.³

There was another cause which must have exercised a very potent influence in hastening the establishment of a Grand Lodge of Speculative Freemasonry. This was the universal passion for the formation of clubs which took possession of the English people toward the close of the 17th and at the beginning of the 18th century.

¹ "Geschichte der Freimaurer in Frankreich," i., 13.

² Introductory Essay on the State of Freemasonry.

³ In the oldest of the Old Constitutions which are extant, the Halliwell poem, there are directions for hearing Mass.

The word Club, as signifying a society or assembly of persons each contributing his share of the expenses, came into the English language, as the thing itself did into English social customs, at the period specified. Dryden is the first writer who speaks of political clubs, but the word is in familiar use in the pages of the *Tatler* and *Spectator*. These new organizations had in a short time become so important as to claim a place in literary history; and in 1709 a work of some magnitude was published in London, entitled *The Secret History of Clubs, particularly of the Golden Fleece. With their Original: And the Characters of the most noted Members thereof*.¹

Dr. Oliver, to whose indefatigable industry and research (however they were sometimes illy regulated) we are indebted for an admirable *Essay on the Usages and Customs of Symbolical Masonry in the 18th Century*,² supplies us with the following information on the subject of Clubs:

"The 18th century was distinguished by the existence of numerous local institutions, which periodically congregated together different classes of society, for divers purposes, the chief of which appears to have been the amusement of an idle hour, when the business of the day was ended. Few of these ephemeral societies aimed at a higher flight. Some met weekly, while the members of others assembled every evening. Each profession and calling had its club, and in large towns the trade of every street was not without its means of thus killing the evening hour.

"Such societies embraced every class of persons, from the noble to the beggar; and whatever might be a man's character or disposition, he would find in London a club that would square with his ideas. If he were a tall man, the tall club was ready to receive him; if short, he would soon find a club of dwarfs; if musically inclined, the harmonic club was at hand; was he fond of late hours, he joined the owl club; if of convivial habits, he would find a free and easy in every street; if warlike, he sought out the lumber troopers; if a buck of the first water, he joined the club of choice spirits; and if sober and quiet, the humdrum. If nature had favored him with a gigantic proboscis, an unsightly protuberance on his shoulders, or

¹ I give this title on the authority of Dr. Kloss. It is numbered 237 in his *Bibliography der Freimaurerei*, and is said to have extended to 392 octavo pages.

² Prefixed to the third volume of his "Golden Remains."

any other striking peculiarity, he would have no difficulty in finding a society to keep him in countenance."¹

Before the middle of the century the number of clubs had increased amazingly. Dermott gives in his *Ahiman Rezon* the names of thirty-eight, besides "many others not worth notice."²

Most of these clubs were of a convivial character. There were, however, some whose members aimed at higher pursuits and devoted themselves to the cultivation of art, science, and literature. It must not be forgotten that the Royal Society was originally formed on the pattern of a club.

Dermott mentions a circumstance connected with these clubs which is worthy of notice as showing the popularity of Freemasonry at the time, and the existence then, as at the present day, of societies which sought to imitate its forms, if not always its principles.

"Several of these Clubs or Societies," he says, "have, in imitation of the free-masons, called their club by the name of lodge, and their president by the title of grand master or most noble grand."³

Addison, speaking in the *Spectator* of these associations, says:

"Man is said to be a social animal, and as an instance of it we may observe that we take all occasions and pretenses of forming ourselves into those little nocturnal assemblies which are commonly known as clubs. When a set of men find themselves agree in any particular, though never so trivial, they establish themselves into a kind of fraternity and meet once or twice a week on account of such a fantastic resemblance."⁴

The presumption will not, then, be a violent one that the first successful effort toward a secession from Operative Freemasonry, must have been stimulated by the usage among men of all classes, in the early part of the last century, of inaugurating separate societies or clubs.

The meeting in 1716 consisting of honorary or non-professional members of the London Operative lodges, being held, too, at a tavern, as was the custom with all clubs, might very properly and with the utmost respect, be looked upon as a club of the highest class. This club of scientific and literary gentlemen who were desirous of separating from the coarser and less intellectual materials

¹ "On the Usages and Customs of Symbolic Masonry in the 18th Century," page 2.

² "Ahiman Rezon," p. xii. ³ "Ahiman Rezon," ut supra. ⁴ *Spectator*, No. IX.

which composed the lodges of practical Masons, was not long afterward, in June, 1717, resolved into a Grand Lodge, the mother of all the Speculative lodges in the world, Scotland excepted, just as the club of philosophers who first met in the latter part of the preceding century, was finally developed into the Royal Society, the most prominent institution of learning in England.¹

That such was the opinion of the learned Dr. Oliver may be justly inferred from the language used by him in his essay *On the Usages and the Customs of Symbolical Masonry in the 18th Century*. Speaking of the character of the Clubs in which conviviality appears to have been always carried to an excess, he says:

"There was, however, one society in that period, which, if it did indulge its members with the enjoyment of decent refreshment, had a standing law which provided against all excess; declaring that 'they ought to be moral men, good husbands, good parents, good sons, and good neighbors, not staying too long from home, and avoiding all excess.' This society was Freemasonry; the exclusive character of which excited the envy of all other periodical assemblies of convivial men."²

Five causes appear to have been instrumental in producing that separation of the Speculative from the Operative element in Freemasonry which led to the organization of the Grand Lodge of England and to the establishment of the present system. These, which have been fully treated in the present chapter, may be briefly summarized as follows:

1. The gradual decay of Gothic architecture and the abandonment of scientific methods by the Operative Masons.
2. The intellectual revolution in Europe, which led to the more general cultivation of science and literature.
3. The loss of a common center and a commencing disintegration of the Operative Masons in England, after their last great work, the Cathedral of St. Paul's, had been finished.
4. The growing desire among men of culture and refinement to

¹From the year 1716, when the Speculative Masons first met at the Apple Tree Tavern, until June, 1717, when the Grand Lodge was organized at the Goose and Grid-iron, a period of more than six months elapsed. During that time it is not unreasonable to suppose, from contemporary custom, that the members met under a club organization. But this subject will be fully discussed in a future chapter.

²"On Usages and Customs," etc., p. 7.

establish an association from which the spirit of political partisanship and of religious intolerance should be banished.

5. And, lastly, the social example given in the beginning of the 18th century by the universal formation of clubs and private societies for all sorts of purposes.

But none of these causes could have been productive of a society of philosophers whose formulas of instruction were derived from the principles of Operative Masonry, had not the way been prepared for the establishment of such a society by relations which had previously existed between the two elements.

To this subject I shall accordingly invite the attention of the reader in the following chapter.

CHAPTER XXVIII

THE WAY PREPARED FOR THE TRANSITION

THE very great change from an Operative art to a Speculative Science, by which the whole practical character of the former was abandoned and a system of philosophy was established on its basis, could never have been accomplished by any human efforts, if there had not been some previous provision, which, though undesigned originally for that purpose, rendered the transition from the one to the other practicable, if not easy of execution.

In the process of locomotion, the act of removal from one point to another can not be effected unless there be a pathway which will render the removal possible. If there be no pathway, there can be no removal; and the more direct the pathway is, and the less it is encumbered by obstructions, the more readily will the removal be accomplished.

So in the intellectual transmutation of an old society into a new one, it is just as necessary that there should be a way prepared by which the change may be effected. The old society may be of such a nature that it would be impossible to convert it into the contemplated new society. The design and objects of the former might be such as to be antagonistic even, and not favorable to the transformation.

Thus it would be impossible to convert a guild of Weavers or of Mercers into an association having the character of a lodge of Speculative Freemasons. The way is not open to such a conversion. The foundation-stone upon which the system of modern Freemasonry is built must have been a fraternity of Operative Builders in stone. It is useless to look for it elsewhere, because the symbolism of Freemasonry is derived altogether from the art of architecture.

This is the best reason that we possess for the rejection of the

theory that the origin of Freemasonry is to be sought in the ancient mysteries of Egypt, of Greece, or of Persia. There is no passable way leading from these Mysteries to Speculative Freemasonry. In the secret doctrines and in the usages of these Mysteries we find no reference to architecture. They were simply systems intended to teach in a mystical way what they supposed to be religious truth. Their organization was so different from that on which the Freemasonry of the present day is based, that we can find no road directly connecting the two.

Those who have sought to make the Speculative Freemasons the legitimate descendants of the Crusaders and the Knights Templars, must meet with the same difficulty in connecting the two. Military associations could never give rise to sodalities, all of whose principles are those of peace and brotherly love. It would have been utterly impossible to transform a camp of knights in armor, thirsting for the blood of their Saracen foes, into a peaceful lodge of Freemasons, engaged, as the French song says, in erecting temples for virtue and dungeons for vice.

It is true that at a later period, when Craft Masonry was supplied with new rituals and when what are called the high degrees were invented, a great deal of dogma was borrowed from or rather found to be identical as to the unity of God and the immortality of the soul with those of the ancient Mysteries, and something like the usages of chivalry was introduced into the developed system of Freemasonry.

But the Speculative Freemasonry which at the beginning of the 18th century was boldly separated from the Operative Masonry, within which it had quietly slept, waiting patiently for its time of birth, knew nothing—recognized nothing—imitated nothing of the Mysteries of Osiris, of Dionysus, or of Mithras, and cared still less for the daring deeds of the warriors of Palestine.

In 1716, when the resolve was first made to segregate Speculative from Operative Freemasonry, and in 1717, when that resolve was carried into effect by the organization of the Grand Lodge of England, those who undertook the enterprise, looked only to the usages and principles of the English Stonemasons for the pattern on which they were to construct the new edifice in which they were thereafter to dwell. Hence it is that the pure, Speculative Freemasonry at its origin borrowed and spiritualized, not the sacred baskets and

phallic emblems of the Mysteries, nor the glittering swords and invincible armor of the Crusaders, but the working tools and professional phrases of the sodality of builders, whence they sprang.

They even, in deference to and in memorial of their descent, preserved the name of the association to which they thus unequivocally ascribed their origin.

They did not profess to be Free Mystagogues or Hierophants, nor Free Knights, but simply, as they then spelt the word, Free Masons, Builders free of the Guild, who still continued to build. They only transmuted the material cathedral, where God was to be worshipped in all the splendor of art, to the spiritual temple of the heart, where the same worship was to be continued in purity and truth.

It is true that we thus materially abridge the pretensions of the institution to a profound antiquity. But unfounded claims never win honor or respect from the honest inquirer. If we were disposed to treat the rise and progress of Freemasonry as a romance, we might indulge the imagination in its wildest flights, with no other object than to make the narrative interesting. But as the purpose is to write a history, we must confine ourselves to authenticated facts, and take the result, whatever it may be, without reservation.

Accepting, then, as true the theory that the Freemasons who commenced the organization of the Speculative system in the year 1716 at the "Apple Tree" Tavern in London, and afterward completed it in 1717 at the "Goose and Gridiron," framed their association after the model of the Stonemasons of the Middle Ages, whose fraternity was still preserved, though in a degenerated form, in the four Operative Lodges of London, we must inquire what were the circumstances that prepared the founders of the new Order which they were instituting for this transition from an Operative art to a purely Speculative science? We must go over the road which they traversed in making the transition from one system to the other.

If we carefully inspect the organizations of the two associations, we will observe that while between them there are some very important differences, there were, on the other hand, some equally important resemblances.

The differences present that well-marked line of demarcation which gave to each an independent individuality. They show that there have been two very distinct fraternities, while the resemblances

between the two, directly considered, show also the dependence of one upon the other and the relation that existed between them.

The differences between them were only three, and were as follows:

1. The mediaeval Freemasons were exclusively a body of Operative builders. They admitted, it is true, as honorary members a class of persons who were not stonemasons by profession. This did not, however, in the slightest degree affect the purely Operative character of the institution.

The modern Speculative Freemasons are not Operative builders. No member is necessarily a stonemason. Stonemasons, it is true, are admitted into the brotherhood, just as persons of any other Craft may be, if morally and intellectually qualified.

2. The mediæval Freemasons constituted a guild which was restricted to men of one peculiar handicraft. No one could be admitted into the guild except the Honorary Members, or Theoretic Masons, as they were sometimes called, unless he had served a long apprenticeship to the mystery, extending from one to seven years.

The Speculative Freemasons have no such provision in their Constitution. Although they derive their existence from an association of Stonemasons, and though they preserve much of the language and use all the implements of Operative Masonry in their own association, yet men of every craft and profession, and men without either, are freely admitted, without distinction, into their Brotherhood.

3. Another difference is in the religious character of the two associations. This difference is a very important one, and has already been assigned as one of the causes that led to the separation.

The mediaeval Masons were at first Roman Catholic, and afterward, when the Reformation had gained a foothold, and become the religion of the country in which they resided, the Freemasons professed to be Protestants, but in all their regulations a strict allegiance to the Church was required. The mediæval Operative Freemasons all professed and maintained the Christian religion.

But one of the first acts of the Speculative Freemasons after their organization was to establish a system of toleration in respect to religious doctrines. The Mason was required to be of "that religion in which all men agree." Consequently atheists only were precluded from admission to the Brotherhood. In Speculative

Masonry every member is permitted to enjoy his own peculiar views on religious matters, provided that he does not deny the existence of a personal God and of a future life.

These are the essential differences which exist between the two associations. To counterbalance them, there are several very important and significant resemblances. These are as follows:

1. Both systems had some form of initiation into the Brotherhood, and certain methods of recognition by which one member could make himself known to another. These forms and methods were exceedingly simple in the older fraternity, and varied then as they do now in different countries. They afforded only the germ from which in the newer fraternity was developed, by slow steps, the full fruit of a perfect form of initiation and more complicated methods of recognition.

It must be very evident that when the first movement was inaugurated toward the separation of the Speculative from the Operative element, the existence in the latter of a form of initiation and modes of recognition, however simple they may have been, must have suggested the policy of continuing, and as the organization became more mature, of improving them.

That the Modern Order of Free and Accepted Masons is a secret society, in the meaning usually but not accurately ascribed to that phrase, arises from the fact that the Operative Freemasons of the Middle Ages were of the same character. Of the fact that the Operative Freemasons were a secret association there is not the least doubt.¹

If the Operative Masons had not practiced these forms and methods, we may safely infer that nothing of that nature would have been adopted by the Speculative Masons. No other of the contemporary clubs or societies which at that day were springing abundantly into existence had adopted any such methods of organization until a few of them, which were established after the year 1717, such as the Gormagons, followed the example of the Freemasons.

These forms were peculiar to the Operative Freemasons, and that they were adopted by the Speculatives is one of the strongest

¹"So studiously did they conceal their secrets," says Halliwell, "that it may be fairly questioned whether even some of those who were admitted into the Society of the (Operative) Freemasons were wholly skilled in all the mysterious portions of the art."—"Archæologia," vol. xxviii., p. 445.

proofs that could be presented that the latter are the direct descendants of the former.

2. Both the Operative and Speculative Freemasons held Geometry in the greatest esteem as being the most important of the sciences. Indeed, in the Old Constitutions, the words were held to be synonymous. The secrets of the mediaeval Architects are admitted to have been geometrical, that is, they consisted in an application of the principles of geometry to the art of building.

Mr. Paley, in a sentence that has heretofore been quoted, says that "it is certain that geometry lent its aid in the planning and designing of buildings . . . which were evidently profound secrets in the keeping of the Freemasons."¹

When Speculative Freemasonry arose out of the declining condition of the Operative system,² this respect for geometry was retained as the basis of the symbolic science, as it had been of the building art. "Right angles, horizontals, and perpendiculars," which had been applied to the construction of edifices, received now a spiritual signification as symbols. But seven years after the organization of Speculative Freemasonry, we find the "Free Masons' Signs" depicted in the oldest ritual extant³ as acute, obtuse, and right angles. The equilateral triangle which Palfrey says was probably the basis of most of the formations of the Operative Freemasons has become the most sacred of the symbols of their Speculative descendants.

In fact, all the geometrical symbols (and there are very few others) which are found in the rituals of modern Freemasonry, such as the triangle, the square, the right angle, and the forty-seventh problem of Euclid may be considered as the débris of what has been called the "lost secrets" of the old Freemasons. As these founded

¹ "Manual of Gothic Architecture."

² When an allusion is made to the "decline" of Operative Masonry, it must be understood that the reference is to that system of elevated art which was founded and practiced by the Freemasons of the Middle Ages. Pure Masonry, or the mere art of building, is so necessary to the wants of man, that it must flourish in every civilized Society. But there is the same difference between Operative Freemasonry and Operative Masonry as there is between the gorgeous Cathedral erected for God's worship and the unassuming house built for man's dwelling. That Freemasonry in the sense here given was in a declining condition and had "fallen from its high estate" at the close of the 17th and the beginning of the 18th century, is the concurrent record of all architectural historians.

³ "The Grand Mystery Discovered," London, 1724.

their art on the application of the principles of Geometry to the art of building, declaring in their veneration for the science that "there is no handicraft that is wrought by man's hand but it is wrought by geometry," so the Speculative Freemasons, imitating them in that veneration, have drawn from it their most important symbols and announced it in all their rituals to be "the first and noblest of the sciences, and the basis on which the superstructure of Freemasonry is founded."

Of the various links of the chain which connects the Operative Freemasonry of the Middle Ages with the Speculative system of the present times, there is no stronger one than this common cultivation of the science of geometry by both—in the one, as the aid to a style of architecture; in the other, as the foundation of a profound system of symbolism.

Moreover, it supplies an unanswerable objection to the theory which seeks to deduce Freemasonry from the Ancient Mysteries. Between the two this common bond is wanting. The hierophants of Egypt, of Greece, and of Persia presented no geometric teachings in their religious systems, and a modern mystical association which was derived from the Osirian, the Dionysiac, or the Mithraic secret culture, would have been as devoid as its original to any allusions to the science of Geometry.

3. A third point of resemblance is that both the Operative and the Speculative Freemasons cultivated the science of symbolism as an important part of their systems.

There is no one of the resemblances between the mediaeval and the modern Freemasons which is so full of suggestion as to the descent of the one from the other, as is the existence of this fact that a science of symbolism was common to both.

That the Freemasons of the Middle Ages cultivated with consummate taste and skill the science of symbolism and infused its principles in all their works, is an authentic fact of history which admits of no denial. The proofs of this are at hand, and if it were necessary might be readily produced.

Findel, whose iconoclasm as an historian never permits him to accept conclusions without a careful investigation, has contributed his authority to the statement that the German Stonemasons made abundant use of symbols in the prosecution of their art.

According to him the implements, and especially the compasses,

the square, the gavel, and the foot-rule, were peculiar and expressive symbols. Other crafts may have symbolized the instruments of their trade, but the Freemasons, above all others, "had special reason to invest them with a far higher value and to associate them with a spiritual meaning; for it was a holy vocation to which they had devoted themselves. By the erection of a house to God's service, the Master Mason not only perpetuated his own name, but contributed to the glory of the greatest of all Beings by spreading the knowledge of Christianity and by inciting to the practice of Christian virtue and piety."¹

But it was not to the mere implements of their work that they confined this principle of symbolization. They extended it to the work itself, and every church and cathedral erected by Gothic art is full of the symbolism of architecture. "On all the buildings erected by them," says Findel, "are to be found intimations of their secret brotherhood and of the symbols known to them."

Michelet, the historian of France, always eloquent and florid, becomes especially so when he is referring to the architectural symbolism of the Old Freemasons.

According to him the church, as erected in all the significance of its architectural symbols, is not a mere building of stones, but the material presentation of the Christian drama. "It is," he exclaims, in the fervor of his admiration, "a petrified Mystery, a Passion in stone, or rather the Sufferer himself. The whole edifice, in the austerity of its geometrical architecture, is a living body, a Man. The nave, extending its two arms, is the Man on the cross; the crypt, or subterranean church, is the Man in the tomb; the spire is still the same Man, but above, ascending to heaven; while in the choir obliquely inclining in respect to the nave you see his head bent in agony."²

Now this science of symbolism so assiduously and so gracefully cultivated by the mediæval Freemasons was handed down, like an heir-loom, to their modern successors, who in slow process of time developed it into the beautiful system which now forms the vital force of Speculative Freemasonry.

One of the legal and accredited definitions of modern Freemasonry is that it is "a system of morality veiled in allegory and illus-

¹ Findel, "Geschichte," in Lyon's Translation, p. 68.

² Michelet, "Histoire de France," liv. iv., ch. ix., p. 364.

trated by symbols."¹ As the architecture of the old Freemasons differed from all other architecture in the symbolism which it impressed on every stone, so the morality of the modern Freemasons differs from every other code in the symbolism with which it clothes its instructions.

But in all fairness it must be confessed that the mere fact that the science of symbolism has been cultivated both by the Operative and Speculative Freemasons furnishes no satisfactory evidence that the one has been derived from the other.

Symbolism was the very earliest method by which men sought to convey religious thought. It is believed, with some share of plausibility, that it existed even in pre-historic times. It was common to all nations, and exercised its influence even in the construction of language, for words are merely the symbols of ideas.

The Phallic, supposed to be the most ancient of all worships, was pre-eminently a religion of symbolism. Much of that symbolism has been retained in modern customs and religious observances, though its origin has been forgotten and its application been perverted.

Nearly all the ancient schools were secret, like that of Pythagoras, and clothed their lessons of wisdom with the covering of symbolism. As with the philosophical, so was it with the religious sects called the Mysteries. Their secret dogmas were concealed beneath symbols and allegories.

It is evident, then, that in regard to the single point of symbolism, the modern Freemasons might as well have derived their symbolic usages from the ancient institutions of philosophy or of religion as from the mediæval builders.

But the symbols which were adopted by the modern Freemasons, in the beginning of the 18th century, under their Speculative system, were all based on geometry and on architecture and on its implements.

Now the symbols of the old Operative Freemasons were of precisely the same character. Geometry and architecture were the foundation of both of them.

But the hierophants and mystagogues of the Pagan mysteries employed, in the illustration of their doctrines, symbols, like the

¹ English Lectures of Dr. Hemming, adopted by the Grand Lodge of England.

phallus, or the serpent, that had no connection whatsoever with the art of building or with the science of mathematics. It is evident that the Speculative Freemasons, when they were instituting their new Society as "a system of morality which was to be illustrated by symbols," could not have derived any suggestions from the Pagan mysteries.

The winged globe or the handled cross of the Egyptians, the mystic van of Eleusis, and the bleeding bull of the rites of Mithras found no place as symbols in the system of the first Speculative Masons.

It is true that at a later period, and especially after the invention of what are called the "high degrees," the original ritual was supplemented by the addition of many symbols culled from these ancient sources.

Among the Operative Freemasons there were also a few symbols which were not connected with Geometry or Architecture, which were, it is supposed, borrowed from the Gnostics, with whom these old builders appear to have had some intercourse. But these symbols were chiefly confined to the proprietary marks, and consequently never were incorporated into the ritual of the Speculatives.

But the society which in 1716 seceded or separated from the Operative Lodges of London, and in less than a year after organized the "Grand Lodge of Free and Accepted Masons," when adopting its unimposing ritual, gave the most ample testimony in its construction of the unmixed influence of an association of builders. The symbolism employed in the beginning by the Speculative Freemasons therefore furnished all the evidence that is necessary, if no other were forthcoming, of their direct descent from the Operative Freemasons of the Middle Ages.

4. A fourth resemblance between the two associations is found in the fact that both were divided into three classes, bearing the same name, namely, Masters, Fellows, and Apprentices.

In the Operative system these were mere ranks or classes, which do not appear, from any evidence we possess, to have any distinct form of initiation or methods of recognition by which the classes were esoterically separated from each other. In other words, there was no such thing as a series of degrees, as that term is now masonically understood, but only one degree or form of initiation common to all—to the Apprentice as well as to the Master.

This was precisely the system adopted by the Speculative Freemasons at the outspring of the separation. For at least three years they pursued the old Operative method, and had but one esoteric form of admission for all their members. The fabrication of the three degrees was an afterthought, which did not take place until at least the year 1720.

Bro. W. J. Hughan, who on this subject will be willingly recognized as of the highest authority, has made this positive statement on the subject:¹

"The reference to Masonic degrees (as we understand the term now) never occurs in the ancient minutes, no rituals of degrees prior to 1720 are in existence; and whatever esoteric customs may have been communicated to craftsmen before the last century, they do not appear to have necessitated the temporary absence of either class of members from the lodge."

But as this has long been, and even now is, a mooted question among masonic scholars, a very few inclining to give to the series of Craft degrees a greater antiquity than they seem entitled to, the subject will be discussed in all its bearings in a future chapter of this work, when the judgment expressed by Bro. Hughan will, I think, be sustained by the clearest historical evidence.

In respect to the inquiry which we are now pursuing, the decision of the question is unimportant. For whether we consider that the Masters, Fellows, and Apprentices represented three degrees of esoteric Masonry or only three classes of workmen, there is no doubt that the Speculative Freemasons derived the idea of such a division from the Operatives. They could not have got it from any of the religious or philosophic systems of antiquity. They could not have found it in the Mysteries of Osiris nor in the school of Pythagoras, in neither of which does any such division occur.

Whatever changes the Speculatives may have made after their organization by transmuting what were classes in the Operative system into degrees, the change could not obliterate the evidence that the former was the successor of the latter, and could have an origin only in an association of craftsmen to whom such a division into classes or ranks of workmen was common and necessary.

5. Another resemblance is found in the common reference of

¹ In a letter in the *London Freemason* for June 27, 1874.

both to the Temple of Solomon as a pattern or type on which much of their symbolism has been founded.

It is not intended to maintain the theory that the Institution of Freemasonry has descended from the Tyrian and Jewish builders at the Temple erected by King Solomon. It has already engaged our attention in a preceding part of this work, and I have sought, I hope and think successfully, to show that the Solomonic legend as it has been formulated in the third degree of our modern Freemasonry, though accepted in the lodge rituals, is a mere myth without a particle of historical authority to sustain it.

Yet as a part of the great *Legend of the Craft*, the connection of King Solomon's Temple with the supposed history of Masonry was not unknown to the Operative Masons of at least the 15th and succeeding centuries, since they were familiar with the Old Constitutions in which this Legend was embodied.

Notwithstanding that the details of the construction of this Temple by the Jewish and Tyrian Masons contained in the *Legend of the Craft* are very brief, these details, unsatisfactory as they are, were enough to inspire the Freemasons of the Middle Ages with the belief that the building had been erected by the aid of their predecessors. Hence their Master Builders preserved a reverential reference to it in many of their architectural symbols.

But there is no evidence that the Hiramic legend, such as met with in the lodges, was ever known to the architects of the Middle Ages.

Still, the history of the Temple, inaccurately as it was given in the *Legend*, was accepted by them as a part of the history of the Craft, and the building of the magnificent structure was esteemed by them as one of the most glorious works of the ancient Brotherhood.

From the Operative Freemasons the Temple idea passed over to their Speculative successors. From no other source could the latter have derived it. Its presence among them, coupled with the other resemblances, especially that of the division into three classes, is a most irrefragable proof of the intimate connection of the two associations.

The founders of Speculative Freemasonry found the simple *Legend of the Craft* ready at hand. They adopted it—incorporated it into their new association—and in a short time, with great ingenu-

ity, developed it into the beautiful and impressive allegory of the Third degree.

6. A very significant resemblance between the Operative and the Speculative Freemasons is shown in the fact that all the written laws and usages of the latter are founded upon those which were enacted for the government of the former.

The oldest code of laws for the government of Speculative Freemasons is that contained in the document entitled "The Charges of a Free-Mason," which were adopted in 1722 by the Grand Lodge and published in the first edition of the *Book of Constitutions*. In this edition it is said that they have been "extracted from the ancient records of lodges beyond sea and of those in England, Scotland, and Ireland for the use of the lodges in London."¹

The statutes which governed the Operative Freemasons are contained in the old manuscript Constitutions, which range in date from the end of the 13th to the beginning of the 18th century. The regulations which they contain are wholly inappropriate to the government of a non-Operative society.

Still, as the Speculative was founded upon the Operative association, and was only a development of the principles of the latter in an application of them to moral and philosophical purposes, the laws of the Operative society were largely made use of by the Speculative Fraternity in the construction of their new code.

It is true that the statutes contained in the manuscript Constitutions have not, with a few exceptions, been copied word for word in the "Charges" adopted for the regulation of the newly born Brotherhood. This was hardly to be expected. That which is justly appropriate for a mechanic pursuing a mechanical occupation, would be very absurd and incongruous when applied to a philosopher engaged in a philosophical inquiry.

Still, the spirit of the old laws has been rigidly observed. There is not a regulation in the "Charges" adopted in 1722 which does not find an analogy in the Constitutions of the Operative Craft con-

¹ The "Charges" printed in the 2d or 1738 edition of the Constitutions are of little or no value as an exponent of the common law of Freemasonry, as they were unauthoritatively altered in many important respects by Dr. Anderson. But as an historical document it is worthy of consideration, as it shows the gradual outgrowth of the Speculative from the Operative system and indicates the mode in which the laws were modified in order to accommodate the application of the old laws to the new association.

tained in the old manuscript records, beginning, so far as we have any trace of them, with the *Constitutions of the Art of Geometry according to Euclid*, which was written, it is supposed, in the year 1399, and which was in all probability a copy of some older manuscript, now, perhaps, irrecoverably lost. The old law has been retained, but in its spirit and application there has been a material change.

Thus, by way of example, we find in the "Charges" of 1722 the following clause:

"No Master shall give more wages to any Brother or Apprentice than he may deserve."

Now this most certainly could not have meant that in a lodge of Speculative Freemasons the Master should not pay more than a certain justly earned amount of wages to an Entered Apprentice. In 1722, when this regulation was adopted, the Masters of lodges did not pay wages, in the ordinary acceptance of the word, to any of the members.

The French Masons have retained the use of this word in their technical language, and show us very clearly what meaning was intended to be conveyed by these "Charges," when they spoke of paying a Speculative Freemason his wages.

What the English and American Freemasons call "advancement from a lower to a higher degree," the French Freemasons designate by the expression "increase of wages." When we say that an Entered Apprentice has been advanced to the degree of Fellow-Craft, the French express the same fact by stating that the Apprentice has received an increase of wages.

This, then, is the idea intended to be conveyed in that clause of the "Charges" of 1722 which has just been quoted. Translated into the language of the present day, we find it in that law which exists in all Masonic jurisdictions and under the sanction of all Grand Lodges, that no Mason shall be advanced to a higher degree until he has shown suitable proficiency in the preceding one.

Now this law of Speculative Freemasonry has been derived from and finds its analogy in the Old Constitutions of the Operative Freemasons, where the following law is extant:

"Every Master shall give pay to his Fellows and servants as they may deserve, so that he be not defamed with false working."¹

¹ Lansdowne MS., anno 1560.

It is very manifest that here the literal meaning of the law as it was applicable to Operative Freemasonry has been abandoned, but the spirit has been preserved in a symbolical interpretation.

Again, in the "Charges" adopted by the Speculatives in 1722, the following regulation will be found:

"None shall discover envy at the prosperity of a Brother nor supplant him, nor put him out of his work if he be capable to finish the same; for no man can finish another's work so much to the Lord's profit, unless he be thoroughly acquainted with the design and draughts of him that began it."

No one, on the mere reading of this regulation, can hesitate to believe that it must have been originally intended for the government of working Masons, and that the Speculative Masons must have derived it from them.

Accordingly, if we look into the Old Constitutions of the Operative Freemasons we shall find the same law, though not expressed in identical words. The Operative law is thus stated in the Sloane MS., whose date is about 1645.

"Noe Maister nor Fellowe shall supplant others of there worke (that is to say); if he have taken a worke, or stand Maister of a Lord's work, you shall not put him out of it; if hee bee able of cunning to performe the same."

Now we can very easily understand the meaning of this last regulation as applied to an association or fraternity of working Masons. It was intended to prevent the unfair interference of one Operative Freemason with another, by seeking to wrest employment from him in surreptitious and underhanded ways. It is not, even at this day, considered by craftsmen to be an honorable act, though not forbidden, as it was to the old Freemasons, by an express statute.

But what can be the meaning of such a law when applied, as it is in the "Charges" of 1722, to Speculative Freemasons? They have no "Lord's work" to do, in which they might be supplanted by a rival craftsman.

If the literal meaning of the law were to be accepted, we should verify the truth of Scripture that it is the letter which killeth. But if we apply the symbolic interpretation, which must have been the one given to it by the Speculative Freemasons, we shall find that the spirit of the old Operative regulations is still preserved and obeyed by all the Grand Lodges in the world. It is in fact the very law that

applies to and is the foundation of the well-known and often discussed doctrine of Masonic jurisdiction.

The law as it is now understood is that no lodge shall interfere with another lodge in conferring degrees on a candidate; that when he has received the First degree in any lodge, he becomes, masonically, the work of that lodge and must there receive the rest of the degrees. No other lodge shall be permitted to supplant it, or to take the finishing of that work out of its hands. The Apprentice must be passed and raised in the lodge wherein he was initiated.

Thus the law of Speculative Freemasonry which is everywhere accepted by the Craft as the rule of courtesy for the government of lodges in their relation to each other, was evidently founded on the principles of Operative Freemasonry, taken, in fact, from the law of that older branch of the Institution and, as it were, spiritualized in its practical application to the government of the Speculative branch.

Viewed in their literal meaning, it is very evident that the whole of the "Charges" adopted in the year 1722 by the Grand Lodge of England, just after its severance from the Operative lodges, are laws which must have been intended for an association of working Masons.

They were the statutes of an Operative guild, and were adopted in the bulk by the Speculative Freemasons at the time of the separation, to be subsequently and gradually interpreted in their meaning and modified in their purpose to suit the Speculative idea.

Other points of difference and other points of resemblance might be found on a more minute investigation, but the connection between the two branches has, I think, been sufficiently shown.

The differences have enabled us to give to each association a personality and an individuality which manifestly separate the one from the other. The guild of Operative and the guild of Speculative Freemasons were and are entirely distinct, in their character and design. The parent and the child are not the same, though there will be resemblances which indicate the common lineage.

Now the resemblances which have been described as existing between the two Fraternities, while they paved the way for the easy outgrowth of the one from the other, furnish also the most incontestable evidence of the influence that was exerted by the guild of mediaeval Freemasons on the organization of the Speculative Free-

masons who sprang into existence in England at the beginning of the 18th century. To use a Darwinian phrase, the change might be said to have been produced by a sort of evolution.

In other words, if there had been no guilds of Operative Freemasons, such as history paints them, from the 10th to the 17th centuries, there would have been no lodges of Speculative Freemasons in the 18th and 19th centuries.

Thus we establish the truth of the hypothesis which it has been the object of this work to maintain, that the Freemasonry of the present day is derived solely, in its primitive organization, from the Building Corporations of the Middle Ages; and that its rites, its doctrines, and its laws have suffered no modification except that which naturally resulted from a change of character when the Operative Fraternity became a Speculative one.

This is, I think, about the sum and substance and the true solution of the historical problem which refers to the connection of the Speculative with the Operative association; of the Freemasons of to-day with the Freemasons who came from Lombardy and who flourished in the Middle Ages; of the men whose lodges have now passed into every country where civilization has extended, and everywhere exerted a powerful moral influence, with the men who erected monuments of their artistic skill at Magdeburg, and Strasburg, and Cologne, at Canterbury and York, at Kilwinning and Melrose.

Our attention must next be directed to the historical events that took place immediately after the separation in England, and afterward in Scotland and in other countries—events which make up the narrative of the rise and progress of Speculative Freemasonry.

To these events the following chapters will be devoted.

CHAPTER XXIX

ORGANIZATION OF THE GRAND LODGE OF ENGLAND

WE have now reached the most interesting portion of the history of Freemasonry. We are getting away from the regions of legend and tradition, and are passing into the realm of authentic records. And though at this early period there is a sparseness of these records, and sometimes a doubtfulness about their meaning, which will occasionally compel us to build our hypothesis on the foundation of plausible conjecture and reasoning, still, to whatever conclusions we may come, they will, of course, be more satisfactory to the mind than if they were wrought out of mere mythical and traditionary narratives.

It has already been shown that the Guild or Fraternity of Freemasons from the earliest period of its history had admitted into its connection persons of rank and influence who were not workmen of the Craft.

In this usage it followed the example of the Roman Colleges of Artificers, whose patrons were selected to secure to the corporations a protection often needed, from the oppressive interference of the government.

Thus, when after the decadence of the Roman Empire, architecture, which had fallen into decline, began to revive, the Masons were employed in the construction of religious edifices, the dignitaries of the Church naturally became closely connected with the workmen, while many of the monks were operative masons. Bishops and abbots superintended the buildings, and were thus closely connected with the Guild.

This usage was continued even after the Freemasons had withdrawn from all ecclesiastical dependence, and up to the 18th century non-operatives were admitted into full membership of the Fraternity, under the appellation of Gentlemen or Theoretic Masons, or as

Honorary Members. The title of Speculative Freemasons was a word of later coinage, though it is met with, apparently with the same meaning, in one of the oldest Records, the Cooke MS. But this is a solitary instance, and the word never came into general use until some time after the organization of the Grand Lodge in 1717.

It is here used for the sake of convenience, in reference to the early period, but without any intention to intimate that it was then familiar to the Craft. The fact existed, however, though the special word was apparently wanting.

The natural result of this commingling of Operative and Speculative Masons in the same Fraternity, was to beget a spirit of rivalry between the two classes. This eventually culminated in the dissolution of the Guild of Operative Freemasons as distinguished from the Rough Masons or Rough Layers, and the establishment on its ruin of the Society of Speculative Freemasons, which at London, in the year 1717, assumed the title of "The Grand Lodge of Free and Accepted Masons."

We are without any authentic narrative of the rise and progress of the contentions between the rival classes in England, because in that country the records of the Operative Lodges before the close of the 17th century have been lost. But the sister kingdom of Scotland has been more fortunate. There the minutes of the Lodges of Edinburgh and Kilwinning exhibit abundant evidence of the struggle for pre-eminence which terminated in the year 1736 in the establishment of the speculative "Grand Lodge of Scotland."

As the subject-matter to be treated in this chapter is the history of the establishment at London, in the year 1717, of the Grand Lodge of England, it will be proper as a preliminary step that some notice should be taken of the condition of Freemasonry during the first decade of the 18th century in the south of England.

The lodges then existing in the kingdom consisted, it is supposed, both of Operative and non-Operative members. We have positive evidence of this in some instances, and especially as respects the lodges in London.

Preston gives the following account of the condition of the institution in the beginning of the 18th century:

"During the Reign of Queen Anne, masonry made no considerable progress. Sir Christopher Wren's age and infirmities drawing off his attention from the duties of his office (that of Grand

Master), the lodges decreased, and the annual festivals were entirely neglected. The old Lodge of St. Paul and a few others continued to meet regularly, but consisted of few members."¹

Anderson, upon whose authority Preston had made this statement, says that "in the South the lodges were more and more disused, partly by the neglect of the Masters and Wardens and partly by not having a noble Grand Master at London, and the annual Assembly was not duly attended."²

As the statement so often made by Anderson and other writers of his school, that there was, anterior to the seventeenth year of the 18th century, an annual Assembly of the Craft in England over which a Grand Master presided, has been proved to be apocryphal, we must attribute the decline of Operative Freemasonry to other causes than those assigned by Dr. Anderson.

I have heretofore attempted to show that the decline in the spirit of Operative Freemasonry was to be attributed to the decadence of Gothic Architecture. By this the Freemasons were reduced to a lower level than they had ever before occupied, and were brought much nearer to the "Rough Masons" than was pleasing to their pride of "cunning." They thus lost the pre-eminence in the Craft which they had so long held on account of their acknowledged genius and the skill which in past times they had exhibited in the art of building.

But whatever may have been the cause, the fact is indisputable that at the beginning of the 18th century the Freemasons had lost much of their high standing as practical architects and had greatly diminished in numbers.

In the year 1716 there were but four lodges of Operative Masons in the city of London. The minutes of these lodges are not extant, and we have no authentic means of knowing what was their precise condition.

But we do know that among their members were many gentlemen of education who were not Operative Masons, but belonged to the class of Theoretic or Speculative Freemasons, which, as I have previously said, it had long been the custom of the Operative Freemasons to admit into their Fraternity.

Preston, in his *Illustrations of Masonry*, in a passage already

¹ "Illustrations of Masonry," Jones's edit., 1821, p. 189.

² "Constitutions," edit. 1738, p. 108.

cited, speaking of the decline of the lodges in the first decade of the 18th century, makes this statement:

"To increase their numbers, a proposition was made, and afterwards agreed to, that the privileges of Masonry should no longer be restricted to Operative Masons, but extend to men of various professions, provided they were regularly approved and initiated into the Order."

For this statement he gives no authority. Anderson, who was contemporary with the period of time when this regulation is said to have been adopted, makes no allusion to it, and Preston himself says on a preceding page that "at a general assembly and feast of the Masons in 1697 many noble and eminent brethren were present, and among the rest, Charles, Duke of Richmond and Lennox, who was at that time Master of the lodge at Chichester."¹

The statement appears, therefore, to be apochryphal. Such a proposition would certainly have been wholly superfluous, as there is abundant evidence that in England in the 17th century "men of various professions" had been "regularly approved and initiated into the Order."

Elias Ashmole, the Antiquary, states in his *Diary* that he and Colonel Mainwaring were initiated in a lodge at Warrington in 1646, and he records the admission of several other non-Operatives in 1682 at a lodge held in London.

Dr. Plott, in his *Natural History of Staffordshire*, printed in 1686, states that "persons of the most eminent quality did not disdain to be of the Fellowship."

In the first and second decades of the 18th century Operative Freemasonry appears, judging from extant records, to have been in the following condition:

In the northern counties there were several lodges of Operative Freemasons, which had a permanent character, having rules for their government, and holding meetings at which new members were admitted.

Thus Preston speaks of a lodge which was at Chichester in 1697, of which the Duke of Richmond and Lennox was Master; there was a lodge at Alnwick in Northumberland, whose records from

¹ "Illustrations of Masonry," p. 189, Jones's edit.

1701 are extant;¹ and there was at least one lodge, if not more, in the city of York whose preserved minutes begin on March 19, 1712.² We have every reason to suppose that similar lodges were to be found in other parts of the kingdom, though the minutes of their transactions have unfortunately been lost.

In London there were four operative lodges. These were the lodges which in 1717 united in the formation of the Speculative Grand Lodge of England, an act that has improperly been called the "Revival."

All the lodges mentioned consisted of two classes of members, namely, those who were Operative Freemasons and who worked in the mystery of the Craft, and those who were non-Operative, or, as they were sometimes called, Gentlemen Freemasons.

The ceremony of admission or initiation was at this time of a very simple and unpretentious character. There was but one form common to the three ranks of Apprentices, Fellows, and Masters, and the division into degrees, as that word is now understood, was utterly unknown.³

From the close of the 17th century the Operative lodges were gradually losing their prestige. They were no longer, as Lord Lindsay has denominated their predecessors of the Middle Ages, "parliaments of genius;" their architectural skill had decayed; their geometrical secrets were lost; and the distinction which had once been so proudly maintained between the Freemasons and the "rough layers" was being rapidly obliterated.

Meantime the men of science and culture who had been admitted into their ranks, thought that they saw in the principle of brotherhood which was still preserved, and in the symbolic teachings which were not yet altogether lost, a foundation for another association, in which the fraternal spirit should remain as the bond of union, and the doctrines of symbolism, hitherto practically applied to the art of architecture, should be in future directed to the illustration of the science of morality.

¹ Bro. Hughan has published excerpts from the minutes. See Mackey's "National Freemason," vol. iii., p. 233.

² See Hughan's History of Freemasonry in York, in his "Masonic Sketches and Reprints," p. 55. See also an article by him in the *Voice of Masonry*, vol. xiii., p. 571.

³ This subject will be fully discussed in a future chapter on the history of the origin of the three Craft degrees, and the statement here made will be satisfactorily substantiated.

Long afterward the successors of these founders of Speculative Freemasonry defined it to be "a system of morality, veiled in allegory and illustrated by symbols."

Feeling that there was no congenial companionship between themselves and the uncultured men who composed the Operative element of the Association, the gentlemen of education and refinement who constituted the Theoretic element or the Honorary membership of the four lodges then existing in the city of London, resolved to change the character of these lodges, and to withdraw them entirely from any connection with Operative or Practical Masonry.

It was in this way that Speculative Freemasonry found its origin in the desire of a few speculative thinkers who desired, for the gratification of their own taste, to transmute what in the language of the times would have been called a club of workmen into a club of moralists.

The events connected with this transmutation are fully recorded by Dr. Anderson, in the second edition of the *Constitutions*, and as this is really the official account of the transaction, it is better to give it in the very language of that account, than to offer any version of it.

The history of the formation of the Grand Lodge of Free and Accepted Masons of England, is given in the following words by Dr. Anderson, who is said to have been one of the actors in the event:

"King George I. entered London most magnificently on 20 Sept., 1714, and after the rebellion was over, A.D. 1716, the few lodges at London, finding themselves neglected by Sir Christopher Wren, thought fit to cement under a Grand Master as the centre of union and harmony, *viz.*, the lodges that met.

"1. At the 'Goose and Gridiron Ale-house' in St. Paul's Churchyard.

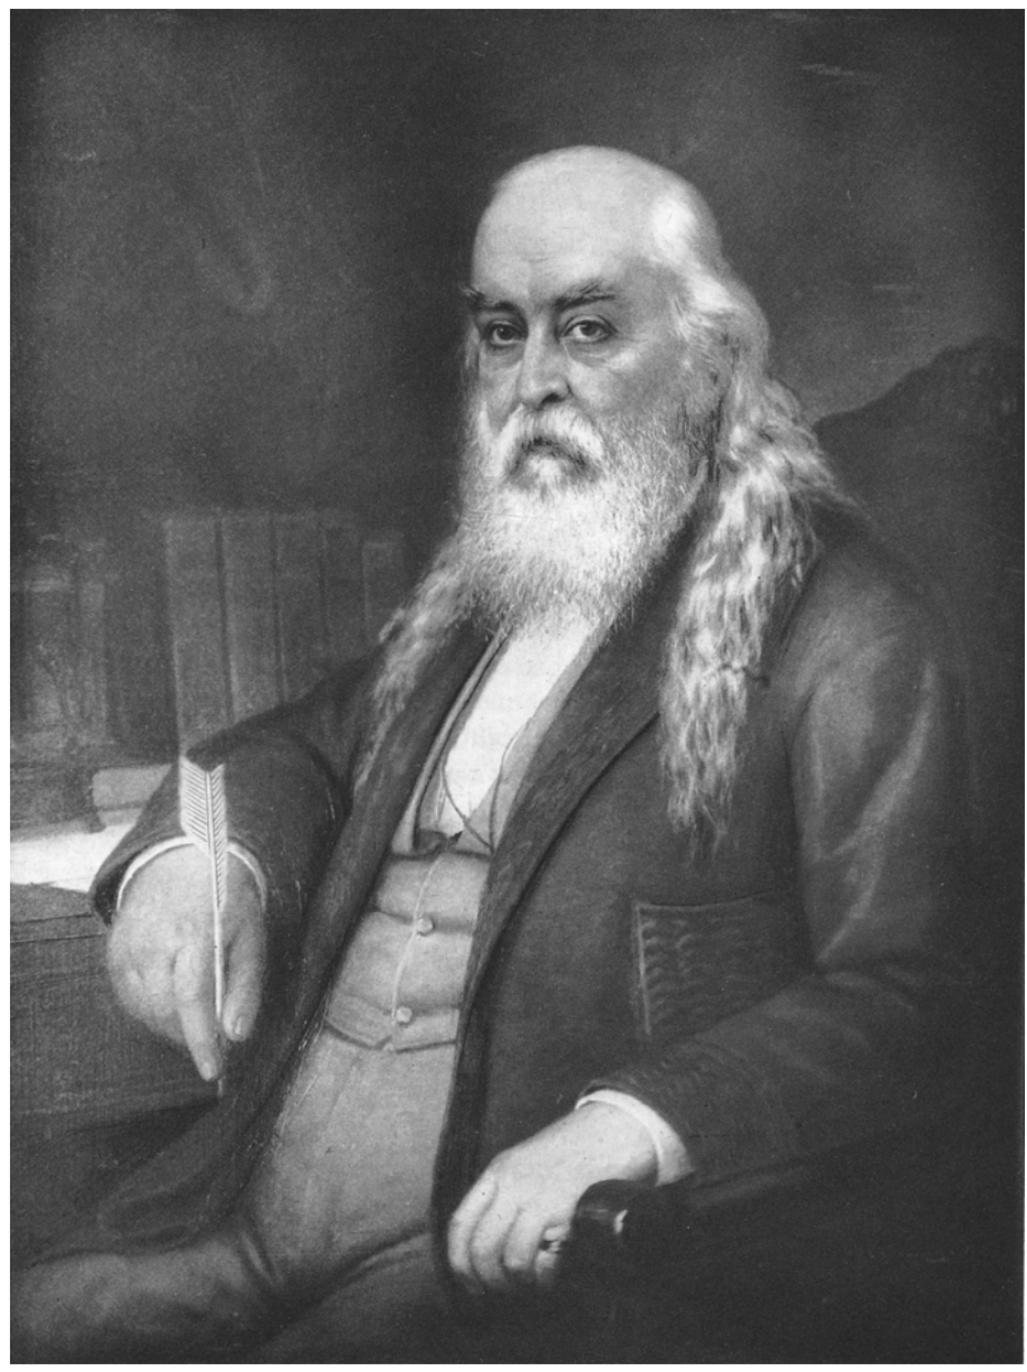

"2. At the 'Crown Ale-house' in Parker's Lane near Drury Lane.

"3. At the 'Apple Tree Tavern' in Charles Street, Covent Garden.

"4. At the 'Rummer and Grapes Tavern' in Channel Row, Westminster.

"They and some old brothers met at the said Apple Tree, and having put into the chair the oldest Master Mason (now the Master

ALBERT PIKE

of a Lodge) they constituted themselves a Grand Lodge, *pro tempore*, in Due Form, and forthwith revived the Quarterly Communication of the Officers of Lodges (called the Grand Lodge) resolved to hold the Annual Feast and then to choose a Grand Master from among themselves, till they should have the honor of a noble brother at their head.

"Accordingly

On St. John Baptist's day, in the 3d year of King George I., A.D. 1717, the Assembly and Feast of the Free and Accepted Masons was held at the foresaid 'Goose and Gridiron Ale-house.'

"Before dinner, the oldest Master Mason (now the Master of a Lodge) in the Chair, proposed a list of proper candidates, and the brethren by a majority of hands elected

"Mr. Anthony Sayer, Gentleman, Grand Master of Masons,

{

 Capt. Joseph Elliott
 Mr. Jacob Lamball, Carpenter

}
Grand Wardens,

who being forthwith invested with the badges of office and power by the said oldest Master, and installed, was duly congratulated by the Assembly who paid him the homage.

"Sayer, Grand Master, commanded the Masters and Wardens of Lodges to meet the Grand Officers every quarter in communication at the place appointed in his summons sent by the Tyler."¹

Such is the account of the transmutation of the four Operative to four Speculative lodges, given by Dr. Anderson, who is believed, with George Payne, Esq., and Dr. Desaguliers, to have been principally instrumental in effecting the transmutation.

Meager as are the details of so important an event which Anderson, as a contemporary actor, might easily have made more copious, they suggest several important points for our consideration.

We see that the change to be effected by the establishment of the Speculative Grand Lodge was not too hastily accomplished.

The first meeting in which it was resolved to organize a Grand Lodge took place some months before the actual organization occurred.

Anderson says that the four lodges met in 1716 and "revived the Quarterly Communication of the officers of lodges."

Preston says that they met in February, 1717, and that at this

¹ "Constitutions," 1738 edition, pp. 109, 110.

meeting "it was resolved to revive the Quarterly Communications of the Fraternity."

This is a more accurate statement than that of Anderson. The meeting in February, 1717, was merely preliminary. A resolution was adopted, or perhaps more correctly speaking, an agreement was entered into, to organize a Grand Lodge. But this agreement was not carried into execution until four months afterward. There could have been no Grand Lodge without a Grand Master, and the Grand Master was not elected until the 24th of June following. The apparent disagreement of the dates assigned to the preparatory meeting, Anderson saying it was in 1716, and Preston that it was in February, 1717, is easily reconciled.

Anderson in his narrative used the Old Style, in which the year began on March 25th, consequently February would fall in 1716. Preston used the New Style, which begins the year on January 1st, and thereby February fell in 1717. The actual period of time referred to by both authors is really the same.

In an anonymous work¹ published in 1764 it is said that six lodges were engaged in the organization of the Grand Lodge, but as the two additional lodges are not identified, it is better to reject the statement as untruthful, and to abide by the authority of Anderson, who, as Bro. Hughan says, "clearly wrote at a time when many personally knew as to the facts narrated and whose *Book of Constitutions* was really the official statement issued by the Grand Lodge."

The fact that four lodges were engaged in the act of transmuting Operative into Speculative Freemasonry by organizing a Grand Lodge, while admitted as an historical fact by Lawrence Dermott, is used by him as an objection to the legality of the organization.

"To form," he says, "what Masons mean by a Grand Lodge, there must have been the Masters and Wardens of five regular lodges, that is to say, five Masters and ten Wardens, making the number of installed officers fifteen."²

But although Dermott very confidently asserts that this "is well known to every man conversant with the ancient laws, usages, customs, and ceremonies of Master Masons,"³ there can be no doubt that this point of law so dogmatically proclaimed was the

² "Ahiman Rezon," p. 13.

³ *Ibid.*, p. 14.

pure invention of Dermott's brain, and is entitled to no weight whatever.

As the Grand Lodge which was established in 1717 was the first one ever known, it was impossible that there could be any "ancient laws" to regulate its organization.

It is noteworthy that each of these premier lodges met at a tavern or ale-house. During the last century Freemasons' lodges in England almost universally had their lodge-rooms in the upper part of taverns. The custom was also adopted in this country, and all the early lodges in America were held in the upper rooms of buildings occupied as taverns.

The custom of meeting in taverns was one that was not confined to the Masonic Brotherhood. The early part of the 18th century was, in London, as we have already seen, the era of clubs. These societies, established some for literary, some for social, and some for political purposes, always held their meetings in taverns. "Will's Coffee House" is made memorable in the numbers of the *Spectator* as the rendezvous of the wits of that day.
